SOCIOLOGICAL ABSTRACTS is published by Sociological Abstracts Inc, a nonprofit corporation The six issues are published monthly in April June, August, and October and semimonthly in December Subscriptions are $400 per year Please remit by check to Sociological Abstracts, Inc When paying by UNESCO Book Coupons, please add 10% for bank charges If paying by International Money Order include library order number and/or SA invoice number

POSTMASTER Send address changes to Sociological Abstracts P O Box 22206, San Diego CA 92192-0206

Second Class Postage paid at San Diego, CA, and additional mailing offices

NOTICE Claims for missing issues must reach the editorial office within 90 d of date of publication, for FOREIGN subscribers, within 120 days Notify us, well as the U S Post Office, of change of address as early as possible The U Post Office does not forward journals It destroys them, unless specifica instructed not to do so Issues missing as a result of failure to inform us in time a change of address will not be replaced free of charge

An Annual Cumulative index may be purchased by subscribers for an addition $75, which is then sent by Third Class/Library Rate mail upon publication

SOAB-A Publication No. USPS 500340 ISSN-0038-0202

Bailey, Kenneth D. (Dept Sociology U California, Los Angeles 90024), **Globals, Mutables, and Immutables: A New Look at the Micro-Macro Link**, *Quality and Quantity*, 1992, 26, 3, Aug, 259-276.
¶ In dualistic approaches to micro-macro phenomena, macrophenomena are aggregated microphenomena, the unintended consequences of microphenomena, or nonemergent, but accomplished, in microsocial action. These dualistic approaches are being replaced by integrative approaches; here, one such approach, a micro-macro link that is sensitive to the theory-research group, is explored. This integrative approach operationalizes global, immutable, & mutable variables. Six global variables, representing the total amount of a variable that the society as a whole possesses, are identified. Immutable variables, eg, age, gender, race, & ethnicity, are microsociological in nature, & cannot change at the individual level. The mutable distribution, eg, occupation & education, is the true external link between micro & macro. Such distributions have dual micro-macro properties, being formed from the allocation of the individuals in the population into the positions of the respective globals. An individual's position in the multidimensional global structure depends on his/her particular set of mutable characteristics 1 Figure, 43 References. Adapted from the source document. Braaten, Jane (Dept Philosophy Coll Charleston, SC 29424), **Review Essay: The Succession of Theories and the Recession of Practice**, UM *Social Theory and Practice*, 1992, 18, 1, spring, 81-111.
¶ A review essay on books by: David Ingram, *Habermas and the Dialectic of Reason* (New Haven: Yale U Press, 1987); & Tom Rockmore, *Habermas on Historic Materialism* (Indianapolis: Indiana U Press, 1989 [see listings in IRPS No. 66]). These volumes focus on the theory/practice question in Jürgen Habermas's work. Ingram approaches it through an investigation of the nature of reason, Rockmore's investigation focuses on Habermas's reconstruction & replacement of Marx's scientific theory of history. Also included is a defense of Habermas's understanding of communication & practical discourse & his views regarding the universalism of rationality. Both books are lauded as important secondary texts. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Bradburn, Norman M., A Response to the Nonresponse Problem, *The Public Opinion Quarterly*, 1992, 56, 3, fall, 391-397.
¶ Despite the seriousness of the nonresponse problem in public opinion research, concern about it is lacking. Three factors are cited to explain this: the competitive market for survey studies; overconfidence in the robustness of the survey method; & a belief that weighting–or statistical adjustment–can resolve the problem. A low-cost method that anticipates low response rates & builds in an accurate weighting procedure is proposed. 1 Reference. J. Sudler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Cartwright, Nancy (Dept Philosophy Stanford U, CA 94305), **Can Wholism Reconcile the Inaccuracy of Theory with the Accuracy of Prediction?**, *Synthese*, 1991, 89, 1, Oct, 3-13.
¶ Although social constructionists despair that our system of science could ever be a mirror of nature, realists argue that the amazing success of modern science at precise prediction & control indicates just the contrary. In response, social constructionists contend that these successes seldom apply to the world as it comes naturally, but only as reconstructed in the scientist's laboratory. This does not explain, however, how scientific accounts, which are as wide of the mark as constructionists suppose in their general descriptions of the natural world, could be so effective in a limited environment, even if that environment is as benignly constructed as possible. It is suggested here that a more holistic view of nature than modern science usually presupposes may provide an answer. 7 References. Adapted from the source document. Christakis, Nicholas A. & Panner, Morris J. (RWJ Clinical Scholars Program, 3615 Chestnut St Philadelphia PA 19104), **Existing International Ethical Guidelines for Human Subjects Research: Some Open Questions**, UM *Law, Medicine and Health Care*, 1991, 19, 3-4, fall-winter, 214-221.
¶ It is contended that international guidelines regarding ethics–in particular, the ethics of clinical research–are not suited to perform a normative function; in fact, international machinery has not been sufficiently developed to accomplish this objective. This deficiency is especially apparent when the failure of international guidelines to provide a workable mechanism for dispute resolution is recognized. This difficulty is magnified when alternative ethical visions must be reconciled with the broad, predominantly Western orientation of existing international guidelines. To address such situations, a type of international ethical guidelines is proposed that has a different objective. Instead of emphasizing the content of research ethics, emphasis is placed on the process by which any disagreement over content might be settled. The primary objectives of international guidelines thus become: to discover local ethical expectations, to assess the good faith & legitimacy of the representatives, to ensure adequate expertise on the part of the subject representatives, & to foster peaceable negotiation. Colombo, Maddalena (Dipt sociologia U Milano, I-20122 Italy), **La valutazione nella ricerca sociologica: dalla metodologia alla pratica** (Assessment and Social Research: From Methodological to Practical Considerations), *Studi di Sociologia*, 1991, 29, 3, July-Sept, 281-296. (ITA)
¶ To investigate how evaluation processes are applied in sociological investigations, a contrastive analysis is presented of economic evaluation, focusing on cost/benefit theory, & educational evaluation, oriented toward the ratio between efficiency & efficacy. A. Sardone's *Valutazione di impatto ambientale in USA* ([Evaluation of Environmental Impact in the US] Milan: Clup, 1988) is reviewed as an experimental model derived from both these approaches. Special attention is given to the strong character of evaluation in sociology in terms of its logical system, functionalism, & methodological individualism. The role of the sociologist in assessment processes is stressed. 61 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z3930
Doody, Rachelle Smith (Baylor Coll Medicine, Houston TX 77030), **Sense and Non-Sense: Dissemination and Empiricism in Practice**, UM *Ethos*, 1992, 20, 2, June, 220-229.
¶ Discussions about discourses are the basis of many academic pursuits, but such discussions are very different from discourse practices. Postmodern anthropology, eg, operates in text-based descriptive modes & in practice modes that have to do with politics, life practices, & fieldwork. In its descriptive modes, postmodern anthropology provides a compelling critique of our representations, institutions, & behaviors that is based on the deconstruction of ontology & epistemology. But postmodern anthropology is problematic in its practice modes, opening it to critique by feminists who are otherwise sympathetic to postmodernist ideas. Postmodern practices seem ambivalent about systems & systematicity, whereas feminist & scientific anthropologies use these concepts to advantage. Although postmodern descriptiveness clearly points out the limitations of scientific theories, scientific practices may be more successful than postmodern practices because they resist the totalization of meaningfulness. 20 References. Fielder, Klaus (U Mannheim, D-6800 1 Federal Republic

Germany), **Heuristics and Biases in Theory Formation: On the Cognitive Processes of Those Concerned with Cognitive Processes,** *Theory & Psychology*, 1991, 1, 4, Nov, 407-430.

¶ In an attempt to reveal similarities between heuristics & biases in theoretical & everyday thinking, four variants or heuristics of theoretical thinking are outlined & interpreted: deductive reasoning, empirical generalization, metaphorical reasoning, & ordinary-language games. Most attention is devoted to the last variant, which seems to be prominent in the cognitivist approach & which highlights the fact that theorists are subject to the same semantically-based heuristics & biases as lay people. The facets of theory formation through ordinary-language games are illustrated & elaborated with reference to the availability heuristic in general & an availability account of illusory correlations in particular. It is argued that specific variants of theory formation are associated with characteristic problems & assets, but that successful & fruitful theories emerge from all four scores, largely independent of how rationally the theory has been derived or inferred. 1 Table, 82 References. 93Z3932

Maruyama, Magoroh, Epistemological Heterogeneity and Subsedure: Individual and Social Processes, *Communication and Cognition*, 1991, 24, 2, 255-271.

¶ It is contended that epistemological types are heterogeneous not only among cultures, but also among individuals in each society. Some aspects of each type are innate, while others are learned, & cultural differences consist in the way some types become dominant & influence other types. Nondominant types undergo various transformations: (1) channeling; (2) masking in a camouflaged form; (3) subsedure & ability to operate in two types; (4) reversible suppression into various unconscious forms; & (5) irreversible loss. 31 References. Adapted from the source document.

Miller, Steven I. & Fredericks, Marcel (School Education Loyola U, Chicago IL 60611), **Some Notes on the Nature of Methodological Indeterminacy,** *Synthese*, 1991, 88, 3, Sept, 359-378.

¶ The term "methodological indeterminacy" is coined to extend the meaning of the concept of indeterminacy for the human sciences, arguing that it is better understood when linked to specific methodological techniques. Paradoxically, while specific research techniques demonstrate that the issue of indeterminacy is complex, yielding the possibility of types & degrees, it does not eliminate the problem of "translation" first raised by W. V. O. Quine (*Word and Object*, Cambridge: MIT Press, 1960). However, the authors go on to argue that, from a research perspective, indeterminacy can & must be approached in such a way that it is possible to reduce cases of it, even though never completely eliminating it in the human sciences. 20 References. Adapted from the source document.

Moore, James A. (Dept Philosophy U Pittsburgh, PA 15260), **Knowledge, Society, Power, and the Promise of Epistemological Externalism,** *Synthese*, 1991, 88, 3, Sept, 379-398.

¶ Most critics claim that epistemological externalism fails because it does not adequately explicate ordinary notions of knowledge & justification, but such criticisms are of little help to the externalist, because he or she may not even intend the theory in question to be such an explication. A criticism is presented here that avoids this difficulty. Achieved en route to this criticism is a refutation of a dogma of contemporary epistemology–that the primary end of epistemic endeavors is truth–thereby bringing to light the many other important goals there are for such endeavors in addition to truth, eg, of these goals pertaining to the power of knowledge in social contexts. The criticism ultimately made of externalism is that externalist knowledge is defective because it fails to achieve these extraverific goals of epistemic endeavors. 19 References. Pereboom, Derk (Dept Philosophy U Vermont, Burlington 05401-3404), **Why a Scientific Realist Cannot Be a Functionalist,** *Synthese*, 1991, 88, 3, Sept, 341-358.

¶ It is contended that two central claims of a prominent type of scientific realism conflict with functionalism–that natural kinds in a mature science are not reducible to natural kinds in any other, & that all dispositional features of natural kinds can be explained at the type level. These claims, when applied to psychology, mean that at least some mental state types consist not merely in relation to inputs, outputs, & other mental states, but also in nonrelational properties that play a role in explaining functional relations. Consequently, a scientific realist of the sort described here must reject functionalism. 22 References. Adapted from the source document.

93Z3936

Pierce, Sydney J. (School Library & Information Studies U Oklahoma, Norman 73019), **On the Origin and Meaning of Bibliometric Indicators: Journals in the Social Sciences, 1886-1985,** IM *American Society for Information Science, Journal*, 1992, 43, 7, Aug, 477-487.

¶ A content analysis of 8,634 research articles published in core journals in sociology, political science, & economics, 1886-1985, demonstrates that, as disciplines mature, research articles in such journals become increasingly similar in their bibliometric features. Variation in levels of use of footnotes & of visuals within the same discipline declined over time, even though the means about which the variation was measured changed throughout the period. It is suggested that authors, editors, referees, & others come to view prevailing practices in the use of footnotes & visuals as disciplinary standards for the presentation of research. Comparison of change in levels of variation vs consensus described in disciplinary histories suggests an association between levels of agreement on presentational standards & levels of cognitive consensus. 5 Figures, 61 References. Adapted from the source document.

93Z3937

Raudonis, Barbara M. (11515 SW Center #6, Beaverton OH 97005), **Ethical Considerations in Qualitative Research with Hospice Patients,** *Qualitative Health Research*, 1992, 2, 2, May, 238-249.

¶ A discussion of three ethical issues in qualitative research on hospice care: participation by vulnerable populations, the inherent role conflict in clinical nursing research, & traditional informed consent vs a process consent. The analysis is illustrated by examples from B. M. Raudonis's "A Nursing Study of Empathy from the Hospice Patient's Perspective" (unpublished doctoral dissertion, U of Texas, Austin, 1991). It is suggested that in protecting the patient's human rights regarding participation research, a patient may be prevented from or restricted in exercising his or her right of self-determination. It is concluded that studies to systematically investigate the benefits of research participation to terminally ill or dying patients are needed. 21 References. Adapted from the source document.

Rodríguez, Darío (Instit Sociología Pontificia U Católica, Santiago Chile), **El nuevo paradigma sistémico: desafíos metodológicos** (The New Systems Paradigm: Methodological Challenges), IM *Revista Paraguaya de Sociología*, 1991, 28, 82, Sept-Dec, 99-103. (SPA)

¶ Systems theory appeared in response to two problems in science–the discovery of the complexity of the atom, & the elaboration of universal theories–which analytical-reductionist theory could not handle. Systems theory created paradigmatic changes in the social sciences, but also had its own problems, primarily that it was obligated to include the observer in the framework of the observed, which discontinued the subject-object dichotomy. The means by which various theoreticians have dealt with this methodological problem are discussed, with primary emphasis on the idea that objectivity in the scientific method comes to be understood as a fit to the compendium of validity criteria approved by the community of observers. 11 References. M. Pflum

Shames, Morris L. (Concordia U, Montreal Quebec H4B 1R6), **Intentionality and the Problem of Discovery in Scientific Epistemology,** *Theory & Psychology*, 1992, 2, 1, Feb, 5-28.

¶ Discovery in scientific epistemology has been largely ignored. Hypothesis testing mitigates against discovery, & the scientific epistemology tasks of description, critique, advisement, & justification are demarcated from discovery. In the analysis of the epistemology of discovery, the interpretation of intentionality is important. In scientific discovery, there

0038-0202/93 $1.50

unmistakable intentionality, but it employs metaphors, not analogies, it is an unconditional, nonpurposive intentionality. Here, a psychofigurational model of scientific epistemology is presented with a hierarchical treatment of symbols & metaphors, from literal to descriptive, to formal, to archetypal or anagogic. It is argued that discoverers are exegetic, able to grasp similarities better than others, or experience dream imagery; the capacity to discover is aptitudinal. Scientific discovery, emphasizing nonpurposive intentionality & being more consonant with an empirical-analytical view of science, is contrasted with historical/hermeneutic & critical science through historical examples. In these other realms, discovery does not occur serendipitously, because the constructionist project & purposive intentionality are at work. 73 References. Adapted from the source document.

93Z3940

Shames, Morris L. (Concordia U, Montreal Quebec H4B 1R6), **On Data, Methods, and Theory: An Epistemological Evaluation of Psychology,** *Canadian Psychology/Psychologie Canadienne,* 1990, 31, 3, July, 229-238.

In a multidisciplinarian, transcendental realist call for scientific discovery within the discipline of psychology, epistemological stagnation & theoretical impoverishment are at the heart of psychology's inability to discover. While discovery is crucial for the advance of science, psychology's subservience to a praxis based on operationism, & unreflexive pursuit of a single methodology, prevents essential discoveries. The methodology monolith of hypothetico-deductivism (ie, the null hypothesis testing procedure) was adopted from more traditional sciences that study independent, real, & discoverable phenomena. Considering the rejection of competing methodologies, & the ambiguous stand on underlying assumptions of scientific realism & positivism, it follows that very little coherent psychological theory has emerged. As a synthesis of antipositivist critiques that focus on the social character & stratification of science, & that fuse classical empiricism & transcendental idealism, transcendental realism may help emancipate psychology. 65 References. Adapted from the source document.

Sperry, Roger W. (California Instit Technology, Pasadena 91125), **Paradigms of Belief, Theory and Metatheory,** *Zygon,* 1992, 27, 3, Sept, 245-259.

¶ In response to criticism (Jones, J., "Can Neuroscience Provide a Complete Account of Human Nature: A Reply to Roger Sperry," *Zygon,* 1992, 27, June, 187-202) of "Search for Beliefs to Live By Consistent with Science" (see SA 40:1/92Y4718), the recent turnabout in the treatment of mental states in science & its basis in a modified concept of causal determinism are reaffirmed, along with the claim that this opens the way for belief & values consistent with science. Contested issues are reviewed to better clarify the main thesis. An inherent weakness in respect to deep spiritual needs is recognized & tentative remedial measures explored. 37 References. Adapted from the source document.

Valois, Pierre, Godin, Gaston & Bertrand, Richard (Dept Education Sciences U Québec, Trois-Rivières G9A 5H7), **The Reliability of Constructs Derived from Attitude-Behavior Theories: An Application of Generalizability Theory in the Health Sector,** *Quality and Quantity,* 1992, 26, 3, Aug, 291-305.

¶ An examination of two methods for assessing the reliability of theories of reasoned action, interpersonal behavior, & self-efficacy for research into health-related behavior: the test-retest method & generalizability theory. It is demonstrated with a numerical example that the traditional test-retest coefficient has an anatomical link with the generalizability coefficient. Next, generalizability theory is applied in order to identify the number of occasions each construct must be measured to assure its reliability. This procedure was applied to questionnaire data collected in an investigation of psychosocial factors influencing exercising & smoking behaviors among pregnant women (N = 63). Measuring the constructs of direct attitude, habit, & intention on only one occasion was sufficient to ensure high levels of reliability; moreover, reliability of other constructs would be ensured if they were measured on several occasions. 2 Tables, 40 References. Allen, Karen (6158 Knollway Dr #202, Willowbrook IL 60514), **Establishing Reliability of the Community Oriented Program Environment Scale on Chemically-Dependent Black Females,** *The International Journal of the Addictions,* 1992, 27, 1, Jan, 93-106.

Chemically-dependent black females (N = 30) from 3 inpatient treatment programs were chosen as Ss to determine reliability of the Community Oriented Program Environment Scale for this population. They were administered the instrument, & reliability was obtained using the Kuder-Richardson 20 internal consistency test. Findings showed low overall reliability & extremely low subscale reliability on this sample. It was concluded that this instrument would yield uninterpretable data in looking at attrition & treatment environment with black F addicts. 4 Tables, 1 Appendix, 15 References. Aquilino, William S. (Center Demography & Ecology U Wisconsin, Madison 53706), **Telephone versus Face-to-Face Interviewing for Household Drug Use Surveys,** *The International Journal of the Addictions,* 1992, 27, 1, Jan, 71-91.

Data from 2 surveys conducted 1986/87 of probability samples of NJ households (total N = 1,906 respondents ages 18-34) were used to evaluate the impact of interview mode–face-to-face vs telephone–on self-reported tobacco, alcohol, & drug use. A lower overall response rate was obtained in the telephone mode than in the personal interview mode, though item nonresponse was lower by telephone. Data suggest that the exclusion of households without telephones in the random digit dial telephone surveys led to a downward bias in the estimation of alcohol & drug use, compared to self-administered interviews. With household telephone status controlled, significantly lower estimates of alcohol, marijuana, & cocaine use were obtained by telephone than by self-administered methods. Mode of interview effects was stronger for blacks than for whites. 5 Tables, 35 References. Modified AA

Auriat, Nadia (Instit national études démographiques, 27 rue du Commandeur F-75675 Paris Cedex 14 France), **Who Forgets? An Analysis of Memory Effects in a Retrospective Survey on Migration History,** *European Journal of Population/Revue européenne de démographie,* 1991, 7, 4, 311-342.

¶ Memory errors in retrospective surveys need to be compared with an objective source of information, but finding a nonbiased external source is often problematic. Here, data from interviews conducted in 1988 with 500 couples living in Wallonie, Belgium, are used to track memory errors by comparing migratory memories of the couples with the well-documented migration history in the Belgian population register. Findings suggest that: (1) higher mobility rates lead to confusion in recall, (2) no gender differences exist in recall of emotional events, (3) women input more into couple's memory, & (4) the conferred register was less reliable for residences that lasted less than one year. 14 Tables, 26 References. Adapted from the source document.

Berg, Bruce L. & Rounds, Delbert (Dept Criminology Indiana U, PA

15701), **Sociometric Applications in Criminology and Other Settings: A Reexamination of a Traditional Method,** *Sociological Practice Review*, 1992, 3, 3, July, 126-132.

¶ Sociologists & organizational researchers in the 1940s & 1950s made extensive use of sociometric strategies in their studies of youth gangs, groups, & institutions. During the past 30 years, however, such strategies have fallen from popularity among most sociologists & have not expanded into criminological research, but have been adopted by educational & psychological researchers to examine concepts of self & attitudes about others in the social world of children. Here, some basic elements of sociometry are reviewed, & a case is made for their methodological utility in criminological research. 1 Figure, 38 References. Adapted from the source document. Burchell, Brendan & Marsh, Catherine (Social & Political Sciences Dept U Cambridge, CB2 1TN England), **The Effect of Questionnaire Length on Survey Response,** *Quality and Quantity*, 1992, 26, 3, Aug, 233-244.

¶ Data are presented from a lengthy survey administered in 1987 to 300 adults, 257 of whom refused to respond, in England & Scotland. Analysis of reasons for nonresponse suggests that length may indeed have been a significant disincentive to respond for many. However, no effect of length was found on item quality as measured by the number of responses given to open-ended questions. Unexpectedly, the variance in number of responses was greater when the questions were asked later in the questionnaire. The findings are interpreted as resulting from the greater power that respondents gain as the survey proceeds. 2 Tables, 43 References. Adapted from the source document. Fowler, Floyd Jackson, Jr. (Center Survey Research, 100 Arlington St Boston MA 02116), **How Unclear Terms Affect Survey Data,** *The Public Opinion Quarterly*, 1992, 56, 2, summer, 218-231.

¶ A 60-question health survey instrument was developed using questions taken from instruments developed by academic & governmental survey groups to find out how data are affected by the presence of poorly defined terms in survey questions. Telephone interviews with 110 people were coded to determine, among other things, the rates at which respondents (Rs) asked for clarification & gave inadequate answers. Questions associated with high rates of these behaviors were examined, & 7 were deemed to include key terms that were poorly defined. The questions were rewritten, a comparable sample of 150 Rs was interviewed using the new questions, & results were compared. Even though the new questions were supposed to have the same objectives as the originals, the resulting data were consistently different. In general, the new questions also induced fewer requests for clarification & inadequate answers. It is concluded that when key terms are poorly defined, the resulting inconsistent interpretation of questions by Rs will produce response error, & that reporting errors are likely to produce biased estimates. Better pretesting of questions, through intensive individual interviews & coding interview behavior from tape recorded pretest interviews, is recommended to identify unclear questions in advance & thereby improve the quality of survey estimates. 3 Tables, 20 References. Greenleaf, Eric A. (Leonard Stern School Business New York U, NY 10003), **Measuring Extreme Response Style,** *The Public Opinion Quarterly*, 1992, 56, 3, fall, 328-351.

¶ In a report of research on extreme response style (ERS) in rating scale responses, it is proposed that, when ERS is defined as a proportion of extreme responses, an ERS measure will be more accurate if the items are uncorrelated & have equal extreme response proportions. Further, appropriate stochastic models should be used to assess the internal reliability & convergent validity of these measures. An ERS measure is created & validated with this method, using data from 1975 & 1987 surveys of large samples of US adults serving on a consumer panel. Findings show that ERS is stable over a lengthy survey compared to a benchmark stability for a "perfect" measure. Further, the distribution of ERS over this population is stable over time. Respondents' ERS is related to their age, education level, & household income, but not to their gender. 4 Tables, 1 Appendix, 46 References. Adapted from the source document. Lacy, Michael G. & Greer, Donald L. (Dept Sociology Colorado State U, Fort Collins 80521), **Conceptualizing Attitudes toward Play: The Game Orientation Scale and the Context Modified Webb Scale**, *Sociology of Sport Journal*, 1992, 9, 3, Sept, 286-294.

¶ A test of the relative merits of two alternative instruments designed to assess game orientation. Fourth- & fifth-grade students (N = 471) in a midwestern metropolitan area responded to a questionnaire containing both the Game Orientation Scale (GOS) & an adapted version of the Webb Scale-as the "Context Modified Webb Scale" (CMW). CMW & GOS scores were then compared with scores reported in previous studies using each instrument, & the relationship between GOS & CMW scores was investigated using a series of Kendall correlation coefficients. CMW scores behaved consistently with previous results, but a significant gender difference emerged, which had not been seen previously in the GOS. Despite the differences in the way the two instruments approach the specification of play context, & despite the fact that one measures relative & other measures absolute values, small but conceptually sensible correlations between the two instruments were found consistently. 6 Tables, 13 References. Linne, Gudrun (Yorkstr 11, D-5000 Cologne 60 Federal Republic Germany), **Verwendungsprobleme von Wirkungsforschung: Zur Rezeption sozialwissenschaftlicher Forschung in der politischen Diskussion um das Beschäftigungsförderungsgesetz 1990** (Problems of Applying Research Results: The Reception of Social Science Research in the Political Discussion over the Employment Promotion Law of 1990), *Soziale Welt*, 1992, 43, 1, 70-89. (GER)

¶ Proceeding from C. F. Büchtemann's & A. Holand's "Befristete Arbeitsverträge nach dem Beschäftigungsförderungsgesetz: Ergebnisse einer empirischen Untersuchung im Auftrag des Bundesministers fur Arbeit und Sozialordnung" ([Conditional Work Contracts since the Employment Promotion Act: The Results of an Empirical Study by the Federal Ministry for Labor and Social Order] in *Forschungsbericht des BMA* [Research Report of the BMA], Vol 183, Berlin, 1989) & G. Linne's & S. Voswinkel's *'Vielleicht ist ja noch alles offen.' Eine empirische Untersuchung uber befristete Arbeitsverhältnisse* (["Perhaps Everything Is Still Open." An Empirical Study on the Relationships of Conditional Employment], Hamburg, 1989), attention is focused on how the results from these two studies were manipulated by political discourse on reforming labor laws in the former West Germany. This was not a simple case of miscommunication between science & praxis; rather, ritualized political communication strategies were employed to target a highly selective group of recipients, prejudicing them toward analyzing the research results in an unobjective manner. Implications for applying the results from other studies in political science are discussed. 40 References. M. Meeks

Maguire, Bryan T. (Dept Psychology U Wales, Bangor Gwynedd LL57 2DG [Tel: 44-248-351151; FAX: 44-248-364412]), **Response to Mail Questionnaires by Health Professionals**, *Journal of Economic and Social Measurement*, 1991, 17, 2, 87-99.

¶ Although mail questionnaires are widely used to investigate behavioral & psychological attributes of health professionals, concern is expressed about the effect of response rate on the accuracy of the data obtained. Several studies are reviewed here which suggest that low response rates may not necessarily imply biased data. Nevertheless, high response rates are desirable, & a variety of techniques to stimulate response have been proposed & tested. Those that personalize the invitation to respond & convey the importance of the research project, whether through financial inducements or endorsements, have been found effective. The most important strategy, though, is the use of repeat mailings. 52 References. Adapted from the source document.

Pol, Louis G. (U Nebraska, Omaha 68121), **A Method to Increase Response When External Interference and Time Constraints Reduce Interview Quality**, *The Public Opinion Quarterly*, 1992, 56, 3, fall,

356-359.

¶ Presurvey mechanisms to increase response rates in interviewing are discussed. Although a possible source of inaccurate information due to memory lapses, two-stage interviewing is suggested when faced with time constraints or external interference from other people. The technique is illustrated in a case study: 96% of sports fans who were first targeted for an interview agreed to participate in the study; the follow-up interview had an 84% participation rate. 1 Table, 5 References. J. Sadler

93Z3966

Pool, Robert (Faculty Law Rijks U Groningen, NL-9700 AS Netherlands [Tel: 31-50-635423; FAX: 31-50-635603]), **Postmodern Ethnography?**, *Critique of Anthropology*, 1991, 11, 4, Dec, 309-331.

¶ It is contended that the critics of postmodern ethnography have been using the term postmodernism wrongly: what they refer to as postmodernism in anthropology is in fact either certain aspects of highmodernism, which is finally making itself felt in ethnography as a result of the literary turn, or a straw-man postmodernism, which has little to do with postmodernism as debated in the arts, & which the critics have constructed themselves for rhetorical purposes. It applies neither to the work of those accused of being postmodern or to so-called experimental ethnographies. Much of the criticism of so-called postmodern ethnography boils down to a poorly concealed defense of foundationalism in the face of the perceived threat of relativism. The defenders of foundationalism are either positivist-oriented–seeking to ground knowledge of reality & make it certain & objective, Marxist-oriented, or critical–attempting to ground knowledge of social & cultural phenomena in what are thought to be more fundamental political-economic & historical processes, & to relate these to the goal of human emancipation. 50 References. Presser, Stanley & Zhao, Shanyang (Sociology Dept U Maryland, College Park 20742), **Attributes of Questions and Interviewers as Correlates of Interviewing Performance**, *The Public Opinion Quarterly*, 1992, 56, 2, summer, 236-240.

¶ More than 91% of 5,619 questions monitored in a general population telephone survey were asked exactly as worded, suggesting that centralized telephone interviewing produces greater adherence to question wording than in-person interviewing. Departures from exact wording increased with increases in question length & was higher on series items (those whose wording was largely identical to the preceding question), but were unrelated to the question's position in the questionnaire & the number of times it was asked. In addition, reading errors were unrelated to interviewer experience, efficiency, & refusal rate. 8 References. AA

93Z3968

Rajaati, Taina (Research Instit Social Sciences U Tampere, PO Box 607 SF-33101 Finland), **Mikä ihmeen diskurssianalyysi?** (Discourse Analysis, What Discourse Analysis?), *Sosiologia*, 1992, 29, 1, 45-47. (FIN)

¶ The popularity of discourse analysis among Finnish sociologists today is questioned. While discourse analysis is presented as a radical alternative for existing sociological & narratological research, the methods used do not differ from analysis of rhetorics, or content analysis. Inner consistency in the use of the method & concept of discourse analysis is urged, offering the example of Michel Foucault. It is argued that sociologists have not engaged in discourse analysis because they are looking for radical alternatives to mainstream sociological thought, but rather, because they have no alternatives to offer. The focus is shifted to texts, narratives, & discourse because social reality in its postmodern stage has become an enigma to sociologists, & they refuse to meet the challenge of coming to terms with this shifting reality. Rapport, Nigel J. (U Victoria Manchester, M13 9PL England), **Writing Fieldnotes: The Conventionalities of Note-Taking and Taking Note in the Field**, *Anthropology Today*, 1991, 7, 1, Feb, 10-13.

¶ Existing critique of the practice of note-taking in participant-observation fieldwork emphasizes the exercise of power that is entailed in writing-up the subject within the structure of social-scientific reportage; it also emphasizes the conventional interpretation of fieldwork experiences within a monologic monograph. What is omitted from such critique, however, is a concomitant appreciation of fieldnotes as local documents. Writing fieldnotes should be regarded not simply as something that abstracts anthropologists from the field & ties them to a self in the academy, but also as something that simultaneously immerses them deeply in the conventions of a subject community & the self they become there. Local documentation can be understood as local actors taking note of everyday practice, & abstracting from it to maintain an overarching text of their community in comparable fashion to the note-taking of the social scientist. Stepping back from the immediate moment, taking note & reflecting, writing-up the present into an overarching, meaningful text, is a convention as indigenous to the oral community as to the academy. Thus, the fieldnotes of participant-observation are properly viewed as part of the ethnomethodology of sociation, ie, part of the way the fieldworker & local subjects come together to create & continue routine relations & contribute to the continuing task of social construction. 20 References. Reinecke, Jost (Instit Soziologie/Sozialpadagogik westfalischen Wilhelms U, Munich Federal Republic Germany), **Interviewereffekte und soziale Erwunschtheit: Theorie, Modell und empirische Ergebnisse** (Interviewer Effects and Social Desirability: Theory, Model, and Empirical Results), *Journal für Sozialforschung*, 1991, 31, 3, 293-320. (GER)

¶ Building on previous approaches explaining reactivity during the interview process, & drawing from cognitive hedonistic behavior theory & cognitive theory of action to a more general value/expectancy approach of interviewer & respondent (R) behavior, a theoretical model is developed that takes into account interviewer attitudes, social desirability of the R (method theory) & the "true" content of Rs' attitudes (substantive theory). Need for social approval & ethnocentric attitudes among interviewer & Rs are studied in a sample of 125 persons living in 2 parts of a German city with different proportions of foreign inhabitants. Results confirm that if there is a relation between interviewer & R attitudes under the condition of high social desirability, the response behavior can be interpreted as a nonrandom error of measurement & as a deviation from the "true" value. It is concluded that (1) a simultaneous test of a substantive & a method theory is possible to differentiate the "true" value & nonrandom measurement error, & (2) multiple group comparisons can be used to confirm empirically the assumptions & hypotheses of value/expectancy approaches of interview & R behavior. 9 Tables, 7 Figures, 41 References. Sanchez, Maria Elena (2971 Burlington St, Ann Arbor MI 48105), **Effects of Questionnaire Design on the Quality of Survey Data**, *The Public Opinion Quarterly*, 1992, 56, 2, summer, 206-217.

¶ While inadequate questionnaire design is perceived as likely to contribute to measurement error, scant empirical evidence is reported in the literature to support this claim or to allow estimation of the magnitude of effects attributable to questionnaire design. Here, two surveys are examined in which different questionnaire designs were used by field interviewers to administer the same set of survey questions to a randomly selected adult in households that comprised area probability samples of the Detroit, Mich, metropolitan area. The later study was designed to replicate a survey completed a few months earlier. The population & sample design were identical, & survey instruments remained the same with changes restricted to differences in the layout & formating of text on the printed questionnaire page. Both studies employed a mix of experienced & inexperienced interviewers. Empirical evidence of specific effect (questions skipped in error, unprobed answers) directly attributable to the choice of questionnaire design is presented. Further, the behaviors of experienced & inexperienced interviewers are affected in similar ways. It appears that interviewing experience does not compensate for format deficits in the design of survey instruments. 3 Figures, 7 References. AA

Varga, István, Hipotézisvizsgálat és mintatervezés (Hypothetic Survey and Sample Planning), *Szociológia*, 1989, 3-4, 275-290. (HUN)

¶ A discussion of how the size of a random sample can be planned so that the anticipated uncertainty of the possible conclusions should not surpass a certain level determined in advance. It is obvious that a relationship of function exists between primary & secondary errors, ie, between the sample size & the so-called size of the effect. When any three parameters are fixed, the fourth value can be determined unambiguously. Thus, if the minimum size of the effect is set in advance while its identification can still be meaningfully interpreted, & if the maximum extent of the secondary error is fixed, helping to establish the uncertainty of the identification of the given size of effect & the standard of significance, it is possible to obtain the optimum sample size. Sample calculations are presented for data from the Hungarian Public Opinion Instit, & common mistakes are identified. 1 Figure. Adapted from the source document.

Winship, Christopher & Mare, Robert D. (Dept Sociology Northwestern U, Evanston IL 60201), **Models for Sample Selection Bias**, IN *Annual Review of Sociology*, 1992, 18, 327-350.

¶ The significance of selection bias in social research, the problem of modeling selection, & technical issues that arise in correcting for selection bias are examined. Models that attempt to account for the impact of sample selection on outcome variables include the tobit model, the standard selection model, models for treatment effects in quasi-experimental designs, & endogenous switching models. J. J. Heckman's two-stage estimator is the most widely used approach to selection bias, but its results may be sensitive to violations of its assumptions about the way that selection occurs. Recent econometric research has developed a wide variety of promising approaches to selection bias that rely on considerably weaker assumptions including semi- & nonparametric approaches to estimating selection models, use of panel data, & the analyses of bounds of estimates. Because of the large number & difficulties of selection modeling methods, researchers should be explicit about the assumptions behind their methods & should present results that derive from a variety of methods. 1 Figure, 98 References. Zimmerman, Larry J. (Dept Social Behavior U South Dakota, Vermillion 57069), **Archaeology, Reburial, and the Tactics of a Discipline's Self-Delusion**, *American Indian Culture and Research Journal*, 1992, 16, 2, 37-56.

¶ It is argued that archaeologists have overestimated their own power & underestimated that of American Indians regarding the reburial issue. Efforts to fight reburial have often exacerbated problems & alienated both Indians & the public. Tactics have included antireburial resolutions, using a "just who do you represent?" strategy, separating Indians of the past from Indians of the present, considering Indian heritage to be universal heritage, & trying to tell Indians that their concerns about the dead should take a lesser priority to concerns about the living. Public pressure & growing understanding of Indian concerns have moved archaeologists toward compromise. Ethical codes like that of the World Archaeological Congress promise a solution to the reburial issue & broader concerns about control over the past. AA

Barron, David N. (Dept Sociology Cornell U, Ithaca NY 14853), **The Analysis of Count Data: Overdispersion and Autocorrelation**, IN *Sociological Methodology*, 1992, 22, 179-220.

¶ In the sociological analysis of event counts, Poisson regression & negative binomial regression require independent observations, making them problematic for use with time-series data. A generalized quasi-likelihood estimation (GQL) is proposed here that can model overdispersion, but also deal with autocorrelation. Several Monte Carlo simulations are presented to demonstrate the use of these estimators. A comparison of the performance of GQL with that of Poisson regression & 3 negative binomial regressions in the presence of overdispersion & autocorrelation, using data on the foundings of US labor unions 1836-1985, demonstrates the advantages of the GQL approach. 6 Tables, 2 Figures, 1 Appendix, 39 References. Camstra, Astrea & Boomsma, Anne (c/o Boomsma–Rijks U Groningen, NL-9700 AB Netherlands), **Cross-Validation in Regression and Covariance Structure Analysis: An Overview**, IN *Sociological Methods and Research*, 1992, 21, 1, Aug, 89-115.

¶ The use of cross-validation in regression & covariance structure analysis to assess the accuracy & reliability of results obtained by exploratory

data analysis is examined. Cross-validation allows researchers to test different models on the same set of data to determine which model has greatest predictive validity. To do so, the original data sample must be split into two or more theoretically identical subsamples. This can be a serious problem when sample size is small, & has led to attempts to discover single sample criteria that provide the same kind of information as the cross-validation criteria, but that do not require the use of a validation sample. Several of these criteria in covariance structure analysis are discussed. 45 References. Adapted from the source document.

Carlson-Sabelli, Linnea, Sabelli, Hector C., Patel, Minu & Holm, Karyn (Rush-Presbyterian-Saint Luke's Medical Center, 1753 West Harrison St Chicago IL 60610), **The Union of Opposites in Sociometry,** *Journal of Group Psychotherapy, Psychodrama and Sociometry*, 1992, 44, 4, winter, 147-171.

¶ An experimental exploration of the coexistence of contradictory preferences in the process of making choices, presenting a sociodynamic test that adds to the sociometric test a measure of such opposite preferences. Data obtained using both tests from a sample of 12 university women in a psychodrama course demonstrate that preferences are more predictable than choices, suggesting that preference rather than choice data should be used when measuring interpersonal perceptual accuracy. Results also illustrate nonlinear patterns of choosing & bonding by maintaining the integrity of coexisting opposites through plotting positive & negative preferences with their corresponding sociometric choices. It is shown how a new general theory of processes helps to identify a problem in clinical & experimental measurement, serves to design a method to overcome it, & offers mathematical dynamics for the analysis of nonlinear patterns 4 Tables, 5 Figures, 46 References. Manton, Kenneth G., Woodbury, Max A., Stallard, Eric & Corder, Larry S. (Center Demographic Studies Duke U, Durham NC 27706), **The Use of Grade-of-Membership Techniques to Estimate Regression Relationships,** UM *Sociological Methodology*, 1992, 22, 321-381.

¶ To estimate structural relations from multivariate discrete response data in which latent state variables may or may not be normally distributed, a grade-of-membership (GOM) model is presented. The GOM is a semiparametric latent structure model that represents state variables as a continuous mixture of fuzzy classes; the use of fuzzy classes allows representation of individual heterogeneity. Conditions for identifiability & consistency of GOM estimates are delineated, & its parameter structure & statistical assumptions are compared to those for maximum likelihood factor analysis & the latent class model. GOM techniques are generalized for structural equation modeling & illustrated in a model of health service utilization & expenditures using data from the 1982 & 1984 National Long Term Care Surveys. 7 Tables, 1 Figure, 50 References. Roncek, Dennis W. (Dept Sociology Kansas State U, Manhattan 66506-4003), **Learning More from Tobit Coefficients: Extending a Comparative Analysis of Political Protest,** UM *American Sociological Review*, 1992, 57, 4, Aug, 503-507.

¶ In its application to many sociological problems, clear procedures for interpreting tobit analysis coefficients are not available. Using John Walton's & Charles Ragin's tobit analysis of austerity protests in debtor nations (see SA 39:3/91X6654), it is shown that tobit coefficients can be decomposed into two effects representing (1) an increase in the severity of protests in countries that have experienced protests, & (2) a change in the probability of experiencing an austerity protest in countries that recorded no protests. Finally, an analogue to a fully standardized regression coefficient is defined for tobit coefficients. Decomposing tobit coefficients reveals important additional findings that could not be discerned from the ordinary tobit coefficients. 1 Appendix, 9 References. Adapted from the source document.

Satorra, Albert (Dept Economics U Pompeu Fabra, Barcelona Spain), **Asymptotic Robust Inferences in the Analysis of Mean and Covariance Structures,** UM *Sociological Methodology*, 1992, 22, 249-278.

¶ In the social sciences, structural equation models are widely used to analyze linear interrelationships among variables, though these may be latent or subject to measurement error. Two alternative estimation approaches to models that exploit different distributional assumptions are reviewed, & a general theory for the analysis of augmented moment structures under arbitrary distributions of the data is developed. This theory equips the usual parameter estimation methods with asymptotic standard errors of parameter estimates & chi-square goodness-of-fit statistics, yielding robust inferential statistics. Theoretical issues are illustrated using Monte Carlo simulations. 3 Tables, 2 Appendixes, 51 References. Adapted from the source document.

Watson, Dorothy (Indiana U, Bloomington 47405), **Correcting for Acquiescent Response Bias in the Absence of a Balanced Scale: An Application to Class Consciousness,** UM *Sociological Methods and Research*, 1992, 21, 1, Aug, 52-88.

¶ Acquiescent response bias (ie, the tendency to respond in the affirmative to survey questions) to Likert attitude scales is examined & a method to control such bias is developed using data from Erik Olin Wright's *The Comparative Study of Class Structure and Class Consciousness Public Use Codebook* (Ann Arbor, Mich: Inter-U Consortium for Political & Social Research, 1985) on respondents age 18+ from the US (N = 1,464), Canada (N = 1,785), Norway (N = 1,679), & Sweden (N = 1,142). Use of structural equation modeling techniques extracted a factor that captured the covariation among items due to acquiescence. The method for correcting acquiescence successfully purged acquiescence variation from the substantive factor & also corrected a potential bias in estimating the effect of education on class consciousness. The danger of assuming that acquiescence does not affect responses to attitude questions is discussed 9 Tables, 2 Figures, 1 Appendix, 26 References. Adapted from the source document.

Changchit, Chaweng & Mize, Joe H. (Dept Management & Marketing Northern Kentucky U, Highland Heights 41076), **World Dynamics Revisited: A Realistic World Model Simulation,** *Socio-Economic Planning Sciences*, 1990, 24, 1, 11-25.

¶ A review of J. W. Forrester's world models (*World Dynamics*, Cambridge, Mass: Wright-Allen Press, 1971), used to investigate the world system according to past & present interaction among various important world variables. Critical responses to the models are summarized, & current trends in the global modeling approach are discussed. A modified world model into which two new variables–technology & pollution abatement–are incorporated is presented, & then applied to two hypotheses concerning technology & pollution: (1) advances in technology can reduce the rate of pollution generation, & (2) advances in technology have no effect on reducing pollution. Results from the two applications indicate that there tends to be a uniform growth toward an equilibrium without the need to adopt unrealistic policies, & that technology can help to reduce the usage rate of natural resources. 8 Figures, 45 References. Conlisk, John (U California San Diego, La Jolla 92093), **Stability and Monotonicity for Interactive Markov Chains,** *The Journal of Mathematical Sociology*, 1992, 17, 2-3, 127-143.

¶ The distribution of the population by state is often of central interest in a Markov chain model of a social process. The stability question, ie, whether this distribution converges to an equilibrium value, has been answered for ordinary Markov chains (ie, with constant transition probabilities), but for interactive Markov chains, which allow the transition probabilities governing each individual to depend on the locations by state of the rest of the population, few stability results are available. New evidence is reviewed here to demonstrate that an interactive Markov chain with unique equilibrium will be stable if the chain satisfies a certain monotonicity property that is generalized from the standard definition of monotonicity for ordinary Markov chains. 13 References. Holler, Manfred J. (Instit Economics U Aarhus, DK-8000 C Denmark), **Nash Equilibrium Reconsidered and an Option for Maximin,** *Quality and Quantity*, 1992, 26, 3, Aug, 323-335.

¶ Arguments in favor of the Nash equilibrium (NE) & consistency & stability in noncooperative game theory overlook the fact that the NE is widely applied to one-shot games that exclude the potential for self-stabilization. The NE needs a dynamic interpretation that relies on communication or mutual observation between the players, so that the one-shot application is troublesome. A variant of the dynamics that supports outcomes that satisfy the concept of nonmyopic equilibrium, but not the NE, is proposed. The NE may not be an adequate solution concept for games with unprofitable equilibria; deviating from playing Nash strategy is not unfavorable given that the other player chooses Nash. The maximin as an alternative option in these cases is proposed as the prudent solution, & one that works with lower information requirements. 3 Figures, 15 References. Houshyar, Abdolazim & Al-Khayyal, Faiz A. (Coll Engineering & Applied Science Western Michigan U, Kalamazoo 49008), **A Mathematical Model for Scheduling Screening Tests for Progressive Diseases,** *Socio-Economic Planning Sciences*, 1990, 24, 3, 187-197.

¶ Based on a review of the literature, a mathematical model is developed that describes the stochastic processes underlying the etiology of noncontagious, curable, progressive diseases. The purpose is to develop more insight into modeling the disease process, & discern the interaction of screening tests with the natural behavior of the disease. To this end, more realistic screening parameters are selected, & optimum policies for mass screening programs under different reliabilities of screening tests outlined. These modifications make the model general enough to be applicable to a larger class of progressive diseases, including breast cancer. Solutions to two simplified versions of the model for childhood neuroblastoma illustrate the use of the proposed procedure. 2 Tables, 3 Figures, 1 Appendix, 19 References. Kumar, Vinod & Kumar, Uma (School Business Carleton U, Ottawa Ontario K1S 5B6), **Innovation Diffusion: Some New Technological Substitution Models,** *The Journal of Mathematical Sociology*, 1992, 17, 2-3, 175-194.

¶ Proposed are three innovation diffusion models of technology (KKKI-KKKIII). The first two are motivated by extant models of population dynamics (see respectively, Smith, F. E., "Population Dynamics in Daphnia Magna and a New Model for Population Growth," *Ecology*, 1963, 44, 651-663; & Von Bertalanffy, L., "Quantitative Laws in Metabolism and Growth," *Quarterly Review of Biology*, 1957, 32, 217-231); the first also takes into account the internal & external influences of imitators & innovators. The third model is an improvement over models by A. Floyd ("A Methodology for Trend Forecasting of Figures of Merit," in Bright, J. (Ed), *Technological Forecasting for Industry and Government: Methods and Applications* (Englewood Cliffs, NJ: Prentice-Hall, 1968, 95-109)) & J. C. Fisher & R. H. Pry ("A Simple Substitution Model for Technological Change," *Technological Forecasting & Social Change*, 1971, 3, 75-88). It takes into account the effect of promotional subsidies on the innovation diffusion. Empirical analyses using data on 3 technological innovations show that the proposed models give comparable or better results than their predecessors. 4 Tables, 3 Appendixes, 49 References. Palmquist, Bradley & Green, Donald P. (Dept Political Science U California, Berkeley 94720), **Estimation of Models with Correlated Measurement Errors from Panel Data,** IM *Sociological Methodology*, 1992, 22, 119-146.

¶ Estimates of stability for a single indicator from multiwave panel data can be greatly affected by measurement error. James A. Wiley & Mary Glenn Wiley proposed a model ("A Note on Correlated Errors in Repeated Measurements," *Sociological Methods & Research*, 1974, 3, 172-188) to consider the case of correlated errors (CE), an alternative approach to their random error (RE) model (see SA 18:7/70E5517). Using both real & simulated data sets, the CE model with only three waves of data produces implausible results. Sampling error for the RE model with the same number of waves will not typically display this instability, especially if the assumption of uncorrelated error is reasonable. Extending the dataset to 4+ waves, using secondary political polling data as illustration, produces more reliable estimates of the CE model parameters. Even so, the particular assumptions of how the correlated errors were generated can affect the results. 4 Tables, 3 Figures, 2 Appendixes, 36 References. Adapted from the source document. Petersen, Trond & Koput, Kenneth W. (Walter A. Haas School Business U California, Berkeley 94720), **Time-Aggregation Bias in Hazard-Rate Models with Covariates,** IM *Sociological Methods and Research*, 1992, 21, 1, Aug, 25-51.

¶ In an elaboration of Trond Petersen's findings in "Time-Aggregation Bias in Continuous-Time Hazard-Rate Models" (see SA 40:4/92Y9459), minimization of time-aggregation bias in hazard-rate models with measured covariates is examined through large & small sample simulations of the impact of various estimators on time aggregation. Three central findings are: (1) the likelihood that adjusts for the grouped na-

ture of the duration measures recaptures the parameters very well; (2) the estimator that assumes that the durations are exactly measured, when they are in fact rounded up to the nearest integer, is biased; & (3) the estimator that uses the midpoint adjustment suffers from the same weaknesses as the estimator that rounds up to the nearest integer, but to a lesser degree. 3 Tables, 17 References. Adapted from the source document.

Power, Michael & Jewkes, Elizabeth (Dept Management Sciences U Waterloo, Ontario N2L 3G1), **Simulating the Discovery Rate Implications of Technological Innovation in Oil and Gas Exploration,** UM *Technological Forecasting and Social Change,* 1992, 41, 2, Mar, 161-175.

¶ Outlined is a modeling framework that can be used to estimate the potential effects of improvements in available hydrocarbon exploration technologies on the discovery rate, cumulative discoveries, & costs of exploration. The modeling framework treats the probability of discovery as proportional to pool size, the number of pools remaining to be discovered, & determines predictions of future discoveries on the number of previous discoveries. The framework also includes a discovery efficiency parameter that represents the degree of technical advancement possessed by an exploration firm. The model is applied to a hypothetical play (ie, a geologically homogeneous area of exploration interest proven, or thought, to contain hydrocarbons) in west-central Alberta. Results suggest that early introductions of technological advancements were capable of improving discovery efficiency, but in terms of the amounts discovered per unit of effort, they were not capable of maximizing total discoveries. Similar technological advancements introduced later in the discovery history of a play, however, decreased discovery efficiencies but maximized total discoveries. 6 Tables, 4 Figures, 21 References. Adapted from the source document.

Schulz, Martin (Dept Sociology Stanford U, CA 94305), **A Depletion of Assets Model of Organizational Learning,** *The Journal of Mathematical Sociology,* 1992, 17, 2-3, 145-173.

¶ A hypothetical examination of how population heterogeneity with respect to intial assets affects the rate of failure (or change) of organizations & social relationships. It is suggested that the initial assets of a unit become depleted through learning experiences which incur search costs & setbacks. The effects of both a constant rate & a declining rate of asset depletion are examined, together with how the distribution of initial assets affects the failure rate of the population. It is found that the type of distribution of initial assets has a strong impact on the time dependence of the failure rate: a normal distribution leads to positive time dependence if the depletion rate is constant, & to negative time dependence if the depletion rate declines. It is concluded that population heterogeneity with respect to initial assets has effects on the time dependence of failure rates which are quite different from the popular case of population heterogeneity with respect to fit. 1 Table, 8 Figures, 1 Appendix, 32 References. Adapted from the source document.

Van der Heijden, Peter G. M., Mooijaart, Ab & De Leeuw, Jan (Dept Empirical Theoretical Sociology Rijks U Utrecht, NL-3508 TC Netherlands), **Constrained Latent Budget Analysis,** UM *Sociological Methodology,* 1992, 22, 279-320.

¶ Defining a budget as a row in a two-way table consisting of conditional probabilities adding up to one, described is a latent budget model that approximates the observed budgets of a table by a lower number of underlying, or latent, budgets. The model, originally proposed in the context of square social mobility tables (see SA 29:5/81L7934), is discussed here in the context of two-way contingency tables, & extended by imposing constraints on its parameters, focusing on multinomial logit constraints. Implications of these constraints for the interpretation of the latent budget model as a loglinear model for the latent probabilities are discussed, & two illustrative examples are offered. 6 Tables, 3 Figures, 1 Appendix, 57 References. Adapted from the source document.

93Z4001

Weakliem, David L. (Dept Sociology Indiana U, Bloomington 47405), **Comparing Non-Nested Models for Contingency Tables,** UM *Sociological Methodology,* 1992, 22, 147-178.

¶ Standard nested hypothesis tests are based on combining the alternatives in a comprehensive model to analyze contingency tables, but this is often difficult to accomplish. Proposed here is an alternative approach–nonnested hypothesis tests–extending tests that have been developed for normal regression models to models for count data. Four models of the Glass mobility table are compared, including both loglinear & latent class varieties. The nonnested tests yield definite conclusions that are not possible using conventional tests, suggesting that they are of practical value in the analysis of contingency tables & other count data. 5 Tables, 1 Appendix, 36 References. Sapir, Debarati G. & Misson, Claudine (School Public Health U Louvain, B-1200 Brussels Belgium), **The Development of a Database on Disasters,** *Disasters*, 1992, 16, 1, Mar, 74-80.

¶ The reactive nature of UN disaster relief management has prevented a global database, which would facilitate planned response. Here, the development of such a database by the Emergency Preparedness & Response Office of the World Health Organization is examined. The system identifies: (1) disaster events & their characteristics; (2) key information relevant to disasters & planned response by country; (3) disaster-related institutions & human resources by country. Among the methodological issues examined are the definition, categorization, & typology of disasters. Five variables are used for statistical information: number of persons killed, injured, homeless, & affected, & the monetary value of losses. Future directions of the project include establishing databases on donor response & physical characteristics of disasters. 1 Table, 2 Figures. I. Shagrir

93Z4007

Silver, Marc L. (Dept Sociology Hofstra U, Long Island NY 11550), **The Computer and the Classroom: Assessing the Connection between Computer-Aided Instruction and Pedagogy in the Social Sciences,** *Social Science Computer Review*, 1992, 10, 1, spring, 90-96.

¶ An examination of 28 IBM-compatible course-related software packages in sociology was conducted 1987/88, to demonstrate paradigmatic, methodological, & informational tendencies in computer-aided instruction. Type of theoretical perspective, classification of methodology, & real vs simulated data were criteria used in evaluating the packages. Most of the software reviewed used a survey research methodology & real, quantitative data, or a field research paradigm. It is suggested that social science faculty critically evaluate the content of application software to avoid unnecessary educational constraints or misdirections. 11 References. J. Sadler

Wenger, Michael J. (Dept D73 IBM Corp, PO Box 6 Bldg 3A7-7 Endicott NY 13760), **On the Rhetorical Contract in Human-Computer Interaction,** *Computers in Human Behavior*, 1991, 7, 4, 245-262.

¶ In any form of human communication, the social identity of a participant is largely determined & maintained by the patterned use of symbols. Here, the determination & maintenance of social identity in human-computer interaction is explored, focusing on the development of the rhetorical contract, or the expectation for appropriate interaction. In an experiment involving 20 introductory psychology students at the State U of New York, Binghamton, Ss used either a direct manipulation or a command interface that, at an unannounced point in the interaction, presented an error message that was either consistent or inconsistent with the interface's previous pattern of interaction. Results indicate that the direct manipulation interfaces were more likely to establish social expectations & that users of these interfaces who experienced an inconsistent error message expressed large negative affective responses. Results suggest that the social nature of human-computer interactions can be examined with reference to the constructs applicable to other forms of communication. 8 Figures, 4 Appendixes, 35 References. Davis, Nancy J. (Dept Sociology & Anthropology DePauw U, Greencastle IN 46135), **Teaching about Inequality: Student Resistance, Paralysis, and Rage,** *Teaching Sociology,* 1992, 20, 3, July, 232-238.

¶ Drawing on fifteen years of experience teaching courses focusing on inequality, three classroom climates are identified: resistance, paralysis, & rage. Students in a resisting class deny the importance of inequality or see individual rather than structural variables as responsible for it. Students in a paralyzed class see stratification systems as reified & exhibit fatalism & depression regarding ever ending inequality. Students in an enraged class are often disadvantaged themselves, & may direct anger against advantaged students. These three climates may be present at the same time, but usually one predominates. Exercises to move classes toward more critical thinking & insight in each climate are proposed. 25 References. Adapted from the source document.

Fitzgerald, Charlotte D. (Dept Sociology Randolph-Macon Coll, Ashland VA 23005), **Exploring Race in the Classroom: Guidelines for Selecting the "Right" Novel,** *Teaching Sociology,* 1992, 20, 3, July, 244-247.

¶ The novel has been routinely assigned as a supplementary text in the sociology classroom. Exploring the culture of many groups, novels can be used to allow students to experience another culture & understand the importance of being a cultural relativist. Reported here are the responses of students (N = approximately 75) at a private, predominantly white US college to 3 novels about African-Americans, Native Americans, & Hispanics. It is argued that some novels might increase racism. Guidelines for selecting the "right" novel along with assignments to orient the students to the life of the minority group member are discussed. 3 References. Modified AA

Garvey, Brian T. (Monmouth Coll, West Long Branch NJ 07764), **Technology, Society, and Literature: An Education Module,** *Bulletin of Science, Technology and Society,* 1992, 12, 1, 17-25.

¶ An education module is outlined that is designed to demonstrate the central role that technology plays in the formation of a society's economy, political structure, & values. A brief list of works recommended for student reading is presented that spans the Renaissance through the twentieth century, & is accompanied by information on obtaining 70 selected slides. 38 References. L. Dorn

93Z4012

Granovsky, Yu V., Luibimova, T. N., Murashova, T. I. & Myatlev, V. D. (Chemical Dept Moscow State U, Leninskiye Gory Russia), **Information-Based Evaluation of the Quality of Doctoral Theses,** *Scientometrics,* 1992, 23, 3, Mar-Apr, 361-376.

¶ A method of information-based evaluation of the quality of doctoral theses is presented, based on a multidimensional classification system that includes: a list of attributes to characterize theses & their authors; a means to discern the most significant attributes; calculation of a complex criterion showing the quality of a thesis on the basis of significant attributes; & ranking of the theses according to this criterion. In a test evaluation of 36 doctoral theses in chemistry (prepared in the USSR) according to 41 attributes, 4 main attributes were singled out. Based on them a complex quality criterion, termed the originality index was calculated, & the values of the originality index of the theses were ranked according to an order of magnitude. Two attributes affecting the index of originality were singled out: where the thesis was prepared, & whether the author had published any papers in journals not published by the Soviet Academy of Sciences. 2 Tables, 16 References. Grausgruber, Alfred & Mair, Alfred, Soziolog/Inn/en im Berufsleben. Wege ins Berufsleben, Tätigkeitsfelder und Beurteilung des Studiums von Linzer Soziologieabsolventinnen (The Professional Life of Sociologists. Career Paths, Areas of Work and Evaluation of Education by Sociology Graduates of the University of Linz), *Österreichische Zeitschrift für Soziologie,* 1992, 17, 2, 62-72. (GER)

¶ To investigate career paths by graduates of sociology programs since their founding at the U of Linz (Austria) in 1970, 32 interviews & 154 questionnaires were obtained from alumni in 1989. Analysis reveals that 95% chose sociology as their academic major because of a high interest level in the subject material. Male graduates enjoyed better employment prospects than their female counterparts. Only 3% of the women graduates were seeking employment in 1989, while 90% were actively employed. About 57% of all graduates felt that there was a discrepancy between the theory taught in schools & the actual demands of the job. Only 13% thought that the practical orientation of their academic training could be considered as good or very good. 6 Tables, 8 References. M. Meeks

Homan, Roger (Brighton Polytechnic, BN2 4AT England), **The Ethics of Open Methods,** UM *The British Journal of Sociology,* 1992, 43, 3, Sept, 321-332.

¶ Though covert methods of social research are generally viewed as unethical, & open methods as virtuous, it is contended that open methods have questionable ethical aspects as well. Informed consent suggests ethical conduct, but consent is used primarily to protect researchers by implying nonresponsibility for adverse consequences to participants in unprotected circumstances in which the interests & self-esteem of the researcher run counter to those of the Ss. Recognition of moral obligations, as opposed to prescriptions of acceptable procedure, is the benchmark of ethical conduct. Adapted from the source document.

Kerrou, Mohamed (U Tunis, Tunisia), **Etre sociologue dans le monde arabe ou comment le savant épouse le politique** (Being a Sociologist in the Arab World, or How the Scientist Marries the Politician), *Peuples Méditerranéens/Mediterranean Peoples,* 1991, 54-55, Jan-June, 247-268. (FRE)

¶ Contemporary Arab sociologists face the double task of critiquing Western orientalism & creating an Arab school of sociology, which require radically different vocations: scientific & political. Here, this duality is examined in light of Max Weber's discussion in *Le Savant et le politique* ([The Wise Man and the Politician] Paris, 1982). Anti-orientalism, analyses of colonialism & decolonialism, & themes of developmentalism are among the preoccupations of Arab sociologists. An alternative Arab sociology is based on a return to Ibn Khaldoun, & on the triangle power-society-scholar, where the sociologist is perceived as the prophet of social liberation. To clarify the status of the Arab sociologist, an epistemological reconstruction of sociology in the Arab world is needed. 85 References. Adapted from the source document.

Kershaw, Terry (Dept Sociology Coll Wooster, OH 44691), **Toward a Black Studies Paradigm: An Assessment and Some Directions,** UM *Journal of Black Studies,* 1992, 22, 4, June, 477-493.

¶ Traditional social science literature has treated African Americans as peripheral to the study of US social phenomena. Black studies, in contrast, emphasizes an Afrocentric perspective that is challenging to traditional disciplines. Here, a methodology for black studies is suggested that synthesizes positivist & critical methodologies, resulting in a five-step process: (1) identify the problematic relationships by studying the results of past empirical & theoretical work as well as through historical analysis; (2) develop measures & methods of collecting data based on histori-

cal & empirical interpretations of reality; (3) compare conditions with understandings; (4) participate in a program of education; & (5) alter theory in light of findings. 15 References. Modified AA

Lerg, Winifred B., Bibliographie: Hans Speier 1905-1990 (Bibliography: Hans Speier 1905-1990), *Publizistik*, 1991, 36, 2, Apr-June, 244-252. (GER)

¶ Hans Speier was born in Berlin, Germany, 5 May 1905. After studies at Berlin & Heidelberg, he contributed to several sociological journals with strong socialist leanings. When the Nazis came to power in 1933, he took his family to the US for safety, & in New York City, became involved in the University in Exile of the New School for Social Research. After lecturing at various universities, he went to work for the Office of War Information as an expert on propaganda questions. Following WWII he worked for the US State Dept's Occupied Areas Division, & later performed research for the RAND Corp (Santa Monica, Calif). He died on 17 Feb 1990 in Sarasota, Fla, from emphysema. A bibliography is presented here of 78 titles in English & German. M. Meeks

93Z4018

Najafizadeh, Mehrangiz & Mennerick, Lewis A. (Dept Sociology Mount Saint Mary's Coll, Emmitsburg MD 21727), **Sociology of Education or Sociology of Ethnocentrism? The Portrayal of Education in U.S. Introductory Sociology Textbooks**, *Teaching Sociology*, 1992, 20, 3, July, 215-221.

¶ A content analysis of chapters on education in 22 introductory sociology textbooks published 1990/91 assessed perspectives on Third World education issues. Portrayal of education was ethnocentric, focusing on the US, with Third World education usually mentioned only as a point of comparison to assess the quality or deficiencies of the US system; examples of simplistic & minimally detailed references to Third World education are cited. While northern industrialized nations' educational models have affected Third World education, they have not been entirely effective. Alternative educational ideologies are outlined to increase students' global awareness. 34 References. Adapted from the source document.

Neapolitan, Jerry (Dept Sociology Tennessee Technological U, Cookeville 38505), **The Internship Experience and Clarification of Career Choice**, *Teaching Sociology*, 1992, 20, 3, July, 222-231.

¶ The objective of most sociology departments in offering internship programs is to assist students in their career choice. Here, it is investigated whether a small-scale internship program (3-4 credits) offered at Tennessee Technological meets this objective by having 30 upper-division sociology majors complete a career decision scale (CDS) before & after their internship; 30 control (noninterning) students also completed the CDS. Analysis reveals that internship students were no more certain of their career choices than other students prior to internship. Postinternship scores differed from controls' scores on 6 items, suggesting that small-scale internships clarify career choice by providing information about occupations, reducing indecisiveness & anxiety regarding choice, & increasing confidence in the ability to choose. 2 Tables, 1 Appendix, 26 References. Adapted from the source document.

Ploch, Donald R. & Hastings, Donald W. (Dept Sociology U Tennessee, Knoxville 37996-0490 [e-mail: ploch@utkvx.bitnet]), **Cohort Surfaces: A Graphic Approach to Teaching Social Stability and Change**, *Teaching Sociology*, 1992, 20, 3, July, 192-200.

¶ Described is a graphic approach to cohort analysis using quasi-scenic rendering of cohort surfaces & contour graphs produced with GRAFTOOL as a teaching strategy for understanding stability & change in life course patterns. The lessons learned from each graphic image are summarized, noting courses & topics for which this strategy is applicable. A classroom approach to teaching cohort analysis & orienting students to graphic visualization is outlined. 4 Figures, 2 Appendixes, 50 References. Adapted from the source document.

93Z4021

Schultz, Martin (Dept Sociology & Anthropology East Carolina U, Greenville NC 27858), **Internships in Sociology: Liability Issues and Risk Management Measures**, *Teaching Sociology*, 1992, 20, 3, July, 183-191.

¶ In the past twenty years, there has been a trend to implement internship programs in social science degree programs. At the same time, litigation in fields such as education has become a greater threat than in the past. Drawing on experience coordinating & supervising social science internships at two US universities over a ten-year period, various liability issues are identified: institutional vs individual management of internship programs; variation in low- & high-risk placements, in student preparation & needs, & in risk management measures; & liabilities for negligence & students' acts & injury. Carefully crafted & legally sound contractual agreements between student, supervisor, & agency are important, as well as consulting risk management specialists to ensure appropriate & complete insurance coverage. 26 References. Adapted from the source document.

93Z4022

Smith, Laurel (U Arizona, Tucson 85721), **Reference Briefs**, UM *Contemporary Sociology*, 1992, 21, 4, July, 553-554.

¶ A bibliography of 13 suggested sociological teaching, research, & reference materials, with brief synopses of each work. Subjects include profeminist men, immigration history, oral history, comparative criminology, rural sociology, policy evaluation literature, hunger, African-American communities, women of color, families & aging, the US working class, longitudinal studies in social sciences, & concepts in critical anthropology. M. Maguire

93Z4023

Stone, Brad Lowell (Ogelthorpe U, Atlanta GA 30319), **Teaching Classical Liberalism in an Undergraduate Theory Course**, *Teaching Sociology*, 1992, 20, 3, July, 208-214.

¶ Outlined are two ways that a component on classical liberalism can be incorporated into an undergraduate sociological theory course. It is demonstrated how an understanding of this tradition illuminates the views of Emile Durkheim, Karl Marx, & Max Weber. A simple technique for incorporating original texts into such a theory course is explicated. 1 Appendix, 41 References. Adapted from the source document.

93Z4024

Thomas, P. Steven (Washburn U, Topeka KS 66621), **"Doing Sociology"**, *Teaching Sociology*, 1992, 20, 3, July, 258-259.

¶ It is argued that the research model suggested by Ali Kamali (see SA 40:2/92Y5081) omits reference to the role of the academic library's bibliographic instruction program in undergraduate research. Faculty can indeed give their own library presentations, but since many students lack basic library research skills, & with library collections & services constantly evolving, these are poor substitutes for librarian instruction. Ways that librarians can tailor their presentations to faculty & students are discussed. M. Pflum

93Z4025

Ward, Kathryn B., Gast, Julie & Grant, Linda (Dept Sociology Southern Illinois U, Carbondale 62901-4524), **Visibility and Dissemination of Women's and Men's Sociological Scholarship**, UM *Social Problems*, 1992, 39, 3, Aug, 291-298.

¶ Analysis of patterns of citations to a sample of 100 articles published in *Social Problems*, 1974-1983, provides evidence that citation rates are not gender neutral, primarily as a result of the citation practices of female (F) scholars. Fs' work & gender articles are cited more frequently than other works, especially in nonsociological sources & by F scholars. F scholarship & gender articles take longer than other works to reach peak citation years, a pattern that might disadvantage Fs & scholars of gender-related subjects when tenure decisions are made. 3 Tables, 24 References. Adapted from the source document.

93Z4026

Weitz, Rose (Dept Sociology U Arizona, Tempe 85287), **The Presentation of AIDS/HIV Disease in Introductory Sociology Textbooks**,

Teaching Sociology, 1992, 20, 3, July, 239-243.
¶ Data from a content analysis of 26 introductory sociology textbooks published in the US since 1985 that are still in print, & contain discussions of AIDS/HIV (acquired immune deficiency syndrome/human immunodeficiency virus) reveal several problem areas, including: insufficient discussion of race, class, & gender issues; failure to differentiate between gay men & lesbians; & glossing over how recent federal administrations have placed politics ahead of public health. Focus is on increasing professors' awareness of topics that the textbooks do not cover well & that might require supplementation. 1 Appendix, 11 References. Modified AA

93Z4027
Wetterer, Angelika (Gesamthochschule Kassel, D-2500 Federal Republic Germany), **Zur Verbesserung der Lage von Frauen in der Lehre der Soziologie** (Improving the Position of Women in the Teaching of Sociology), *Soziologie*, 1992, 1, 42-56. (GER)
¶ Recommendations made in a report to the annual meeting of the German Sociological Society in 1989 are reprinted. Despite much talk about equality, the proportion of female sociology professors at German universities stands at a dismal 7%. National reunification brought to the attention of the former West Germany the relatively advanced level of employment equality enjoyed by women sociologists in the former East Germany. Affirmative action measures need to be taken, including scholarships, the waiving of age restrictions, promotion of women to middle-rank positions, & greater emphasis on & funding for women's studies. Such urgent measures should stay in force until the % of women reaches 50%. 4 Tables. M. Meeks

93Z4028
Yager, Robert E., Myers, Larry H., Blunck, Susan M. & McComas, William F. (Science Education Center U Iowa, Iowa City 52242), **The Iowa Chautauqua Program: What Assessment Results Indicate about STS Instruction**, *Bulletin of Science, Technology and Society*, 1992, 12, 1, 26-38.
¶ Evaluated is an inexpensive inservice model for stimulating reform in K-12 science classrooms, the Iowa Chautauqua Program, developed in 1983 using National Science Foundation funds. The focus of the program is on the use of STS (science, technology, & society) materials & strategies that teachers devise to supplement their existing (traditional) programs. Perceptions of their classes, teachers, & the value of STS were assessed via pre- & posttests of 365 STS students & 359 students in traditional sections. Advantages of STS over traditional science instruction include: better concept mastery; development of process skills; & enhancement of creativity, attitude, & student ability to apply knowledge 9 Tables, 7 Figures, 8 References. L. Dorn

Akers, Ronald L. (U Florida, Gainesville 32611), **Linking Sociology and Its Specialties: The Case of Criminology**, UM *Social Forces*, 1992, 71, 1, Sept, 1-16.
¶ This presidential address to the 1992 meeting of the Southern Sociological Assoc raises some questions & makes some observations about the linkages of sociology to its specialties, focusing on the changing relationship of sociology & criminology. In the US, the development of criminology has been closely linked to the development of sociology as a discipline, & sociology has given US criminology its distinctive cast. Criminology has benefited from theoretical & methodological developments in sociology & in turn has contributed to sociology as one of its central specialties. In the past two decades, the dominance of sociology in criminology has diminished; however, sociology remains very much the intellectual center in criminology, & criminology remains an important part of sociology. Both will benefit by a continuation & reinvigoration of their prior relationship. 37 References. Adapted from the source document.

Arndt, Horst & Janney, Richard W. (Lindlacher Weg 13, D-5024 Pulheim-Stommeln Federal Republic Germany), **The Speech Roles of *Homo Sociologicus***, *Sociologia Internationalis*, 1992, 30, 1, 83-100.

¶ Ralf Dahrendorf's *Homo Sociologicus* ([The Sociological Person] Opladen, 1958) serves as the starting point for a discussion of questions about constructing theories & models for the boundary region between sociology & linguistics. Special attention is given to this concept of the real speaker & related concepts in linguistics. The status of a model person in linguistics is discussed in view of similar concepts, eg, the ideal speaker-hearer. The influence of role theory on the linguistic concept of speech roles is explained in terms of group interaction & interpersonal speech roles, including individual behavior. The problem of a sociolinguistic analysis of linguistic role behavior becomes evident in the necessary selection of a model a priori even though it does not account for the real behavior of speakers & their speech acts, just because the model agrees with the qualities & roles of the *homo sociologicus*. 67 References. Arnold C., Marcelo & Rodríguez M., Darío (Dept Antropología U Chile, Santiago), **Crisis y cambios en la ciencia social contemporánea** (Crisis and Changes in Contemporary Social Science), *Revista Paraguaya de Sociología*, 1991, 28, 82, Sept-Dec, 123-137. (SPA)

¶ For the natural sciences, the use of the scientific method brings a measure of objectivity to the investigation. Use of the scientific method in the social sciences, however, is complicated by two problems: (1) it must be applied to a very complex object; & (2) the object of the social sciences is also the subject. Using the scientific method in sociology makes the observer responsible for self-reflection, which is similar to another problem in sociology, that in which the observer interferes with the observation (ie, in participant observation). The need to justify self-reflection & interference has given sociology an inferiority complex in relation to the natural sciences. It appears that systems theory, with its new epistemology & redefinition of the scientific method, offers the social sciences a means to overcome this inferiority. M. Pflum

Blackford, Karen A. (Dept Sociology York U, North York Ontario M3J 1P3), **Enhancing Students' Recognition and Participation within the CSAA: Is a Best Paper Award a Sufficient Answer?**, *Society-Société*, 1992, 16, 2, May, 33-38.

¶ Low attendance at a student forum of the Canadian Sociology & Anthropology Assoc (CSAA) 1990 Learned Meetings suggested insufficient encouragement, recognition, or "social space" for student participation. Student opinion about the need for recognition of students' work, & possible forms such recognition might take were assessed in 1991 via a questionnaire administered to graduate students in sociology & anthropology at 1 large & 1 small university or college in each Canadian prov-

0038-0202/93 $1.50

ince. Of the 35 respondents, 28 felt that students' work should be recognized at the CSAA meetings, & that either thesis/dissertations or Learned session papers should be selected for awards: 14 students agreed that joint work should be recognized to enhance cooperation. Some students pointed out that barriers to selection fairness would arise if differences between students were not taken into account. Many suggestions were offered regarding selection criteria, procedures, & prizes, as well as alternative forms for student participation within the CSAA. Student participation was impeded by stress & burnout from two sources: competition within the academy & reduced funding for university education. 5 References. Bonnell, Victoria (U California, Berkeley 94720), **In Memory of Reinhard Bendix**, *Berkeley Journal of Sociology*, 1991, 36, i-v.

¶ Reinhard Bendix's (1916-1991) scholarly career & his impact on students & colleagues at the U of California, Berkeley, are reviewed in a memorial tribute that serves as an introduction to this journal issue dedicated to Bendix (see related abstracts in SA 41:1). Several of Bendix's books are briefly examined, & his involvement with the Group on Theory & Method at the U of California is described. A modern heir of Max Weber's sociological vision, Bendix's work will endure & remain relevant to anyone seeking to learn about comparative & historical sociological research, social theory, or methodology. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Bozzoli, Belinda (Dept Sociology U Witwatersrand, 2050 Johannesburg South Africa), **From Social Engineering to Bureaucratic Sociology: State, Authority and the Alienation of the Intelligentsia in South African Social Science,** *South African Sociological Review*, 1990, 3, 1, Oct, 69-76.

¶ Susan Olzak's informal & anecdotal report on the state of sociology in South Africa (see abstract in this section of SA 41:1) runs the risk of being taken seriously. From her positivistic outlook, she has failed to perceive the harsh realities of power in South Africa by omitting any reference to the revolutionary state of affairs there during her June 1990 visit. The Human Sciences Resource Council has been an arm of Nationalist social engineering, so it is no wonder that academic interchange between this institution & lesser universities is stilted, as she reports. Olzak has also failed to observe the critical sociology produced by non-Nationalist sociologists in the past two decades, as if she had read very little non-English South African studies. Terms such as race & ethnicity are not transferable from US sociology to South Africa, so that Olzak has missed the South African face of ethnicity studies. Olzak's report is very likely to reinforce the alienation of the oppositional intelligentsia in South African social science that she describes M. Pflum (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Braudel, Paule, Les origines intellectuelles de Fernand Braudel: un témoignage (The Intellectual Origins of Fernand Braudel: A Testimonial), *Annales*, 1992, 47, 1, Jan-Feb, 237-244. (FRE)

¶ Fernand Braudel's early scholarly career, expecially the publication in 1949 of *The Mediterranean* (no publication information provided), is reflected on from a personal angle. The influence of Lucien Febvre, Braudel's teacher & intimate friend, is noted, & the process of the book's creation while a prisoner of war described. It is suggested that Braudel's intellectual work was the fruit of solitary & independent maturation, & of his chaotic life circumstances. The discussion here focuses on three chronological/intellectual milestones: the peasant experience, the African/Maghrebian experience, & the Brazilian experience. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Brenner, Reuven (School Management McGill U, Montreal Quebec H3A 2T5), **Extracting Sunbeams out of Cucumbers: What Is Bad Social Science, and Why Is It Practised?**, UM *Queen's Quarterly*, 1991, 98, 3, fall, 519-553.

¶ An exploration of how ideas become myths & how bad ideas can become powerful ones in the social sciences, which, when applied in the political sphere, lead to persistently bad decisions & policies. By examining evidence from a wide variety of disciplines, a trend appears: an erroneous, obscure idea is offered; the mediocrity adopts it, & makes it more & more complex by pulling the heavy curtain of language around it. The obscure, vague language is mistaken by some for either truth or even science. For others, the pretentious words become a mere facade in an attempt to maintain power, be it in academia or the political sphere. Only when things finally turn bad enough is the veil lifted, & the hierarchy that built itself on the erroneous idea collapses. The passage of the social sciences through these stages is chronicled in detail. 51 References. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Breuer, Stefan (Hochschule Wirtschaft & Politik, Hamburg Federal Republic Germany), **Soviet Communism and Weberian Sociology,** *Journal of Historical Sociology*, 1992, 5, 3, Sept, 267-290.

Translated from German by John Blazek.

¶ A brief overview of Max Weber's views on socialism, communism, & the Russian Revolution. It is argued that Soviet communism is neither traditional nor neotraditional, neither charismatic in the sense of the genuine, personal charisma of its leaders, nor rational in the sense of a maximum of formal rationality. Another Weberian category that has received only limited attention–the charisma of reason–overcomes several of the difficulties of previous analyses. 49 References. Adapted from the source document. Castellano, Vittorio (U Rome, I-00185 Italy), **Notre 100 Centième anniversaire: un peu d'histoire, beaucoup de problèmes** (Our Hundredth Anniversary: A Little History, Many Problems) *Revue Internationale de Sociologie/International Review of Sociology (nouvelle serie/new series)*, 1992, 1, 3-33. (FRE)

¶ The history of the *Revue Internationale de Sociologie* is chronicled by its current editor, starting with an examination of the intellectual character & contribution of René Worms, who founded the journal in 1893. In accordance with Worms's vision, the *Revue* contributed during its first thirty years to the identity formation of sociology, while establishing interdisciplinary relations with other fields. The impact of WWI & WWII on the *Revue*'s perceptions of society & interpretations of war & peace is discussed. Structural changes in the in *Revue*, & in the role division between the *Revue* & the Instit International de Sociologie in the post war period are reviewed. Recent crises & current challenges are examined, suggesting ways to promote international & interdisciplinary collaboration. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Connell, R. W. (Dept Sociology U California, Santa Cruz 95064), **A Thumbnail Dipped in Tar, or: Can We Write Sociology from the Fringe of the World?**, *Social Analysis*, 1991, 30, Dec, 68-76.

¶ The relationship between postmodernism & cultural imperialism is dis

cussed. A discontinuous narrative using multiple styles of address explores moments in the life of a semiperipheral social scientist as he drinks tea with the Chinese & eats his way into North Atlantic academia. US dominance in world sociology is counterposed with FranÇois Lyotard, Leninism, & light snowfalls in New England coastal regions. Alternatives to Atlantocentrism are possible & are being produced, implying locally based social science with the capacity to speak globally. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4052

Darden, Donna K. (Fireside Productions, 4975 Dover St NE Saint Petersburg FL 33703), **"Thou Shalt Not...Commit a Social Science",** *Sociological Spectrum,* 1992, 12, 3, July-Sept, 217-229.

¶ To explain sociologists' problematic public image, their representation in popular literature is explored. Following a brief account of perceptions of anthropologists, journalists, psychologists, historians, & English professors in popular literature, it is shown that sociologists are often portrayed as pseudoacademics who belabor the obvious with circumlocution, unfathomable jargon, & esoteric ideas. It is suggested that sociologists could improve their image through teaching & better writing. 51 References. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Davies, Scott, Mosher, Clayton & O'Grady, Bill (Dept Sociology U Toronto, Ontario M5T 1P9), **Canadian Sociology and Anthropology Graduates in the 1980s Labour Market. Part II: 1987 Follow-Up of 1982 Graduates,** *Society-Société,* 1992, 16, 2, May, 1-6.

¶ (See abstract of Part I in SA 40:5/92Z1829.) Data from the Canadian Secretary of State National Graduate Survey are used to map the labor market outcomes of 1982 Canadian university graduates (N = 91,879) in 1987. Cross-tabular analysis suggests that these graduates were disadvantaged relative to other graduates. However, between 1984 & 1987, some relative improvement in their occupational & employment levels is evident, which is explained by greater shifts of sociology & anthropology graduates into public sector jobs during this period, though this process was less marked among females than males. Overall, sociology & anthropology graduates begin their careers more humbly than others, but have a tendency to reduce this gap over time. 5 Tables, 2 References. Eckert, Roland, Nullsummenideologien in der Gewaltforschung (Zero Sum Ideologies in the Study of Power), *Soziologische Revue,* 1992, 15, 2, Apr, 127-133. (GER)

¶ A review essay on a book edited by Peter-Alexis Albrecht & Otto Backes, *Verdeckte Gewalt. Plädoyers für eine "Innere Abrüstung"* ((Secret Power. A Plea for an "Inner Disarmament") (Frankfurt am Main: Suhrkamp, 1990 [see listing in IRPS, No. 66]). This work criticizes a study conducted by the Independent Government Commission for Reducing & Fighting Violence of the former West Germany (*Ursachen, Prävention und Kontrolle von Gewalt, Band I: Endgutachten und Zwischengutachten der Arbeitsgruppen* [The Causes, Prevention, and Control of Violence, Vol. I: The Final and Preliminary Conclusions of the Working Groups], Schwind/Baumann [Ed], Berlin: Duncker & Humblot, 1990). The main shortcomings of both the critique & the original study include the attempt to stabilize narrowly divided sides of good & evil by incorrectly portraying the positions of both sides as being perfectly clear & unambivalent. Such frustrating discourse & the resulting zero-sum ideologies could lead to actual fighting between the two sides. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4058

Ferrarotti, Franco (Corso Vittorio Emanuele 24, I-00186 Rome Italy), **In morte di Paolo Ammassari (1931-1991)** (In Memory of Paolo Ammassari [1931-1991]), UM *La Critica Sociologica,* 1991, 99, Oct-Dec, 107-108. (ITA)

¶ The Italian political scientist Paolo Ammassari of the La Sapienza School of the U of Rome died on 22 Sept 1991. He obtained his education at the Cesare Alfieri Instit in Florence & at the U of Michigan, Ann Arbor, under a Fulbright Fellowship. Noted for his emphasis on methodological soundness independent of substantive social problems, he succeeded in demystifying adventurist expectations closely tied to narrow ideology. Special attention is given to the introduction he wrote for Hans Gerth's & C. Wright Mills's *Carattere e struttura sociale* ([Character and Social Structure] UTET, 1969), giving evidence of his broad understanding of sociological issues. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4059

Freund, Julien, De Max Weber à Georg Simmel (From Max Weber to Georg Simmel), *Simmel Newsletter,* 1991, 1, 1, summer, 14-21 (FRE)

¶ If Max Weber is interesting for his treatment of irreconcilable social antagonisms, Georg Simmel by contrast is interesting for his ability to express fragmentary, subtle, & discrete facets of social relationships. Without doubt, Simmel's theories evoke the Aristotelian & scholastic philosophical distinction between form & content; however, he cannot be accused of philosophical or sociological formalism. His great methodological principle is reciprocal action inserted within a given context. Philosophical coherence & lucidity were common not only to Simmel, but to other great thinkers of the turn of the century, including Weber. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4060

Galleni, Lodovico (Faculty Agricultural Science U Pisa, I-56124 Italy), **Relationships between Scientific Analysis and the World View of Pierre Teilhard de Chardin,** *Zygon,* 1992, 27, 2, June, 153-166.

¶ The thought of Pierre Teilhard de Chardin is disucssed via an analysis of his scientific papers. His scientific work formed part of the "modern synthesis" that laid the foundation of contemporary Darwinism. His main contributions were the definition of a new branch of evolutionary sciences, geobiology; the redefinition of the term orthogenesis; & the proposal of the "scale" phyletic tree. Using these new scientific research concepts, Teilhard de Chardin attempted to solve a problem fundamental for his philosophical synthesis–evolutionary directionality. 42 References. Adapted from the source document.

García Ferrando, Manuel & Lopez-Aranguren, Eduardo (Facultad Ciencias Económicas & Empresariales U Valencia, E-46003 Spain), **Experiencia de investigación social en la universidad española** (The Experience of Social Investigation in the Spanish University), *Revista Española de Investigaciones Sociológicas,* 1991, 56, Oct-Dec, 197-201. (SPA)

¶ An empirical comparison of social science proposals formulated at the 1988 meeting of the Centro de Investigaciónes Sociológicas-Universidad in Segovia, Spain, on the implementation of national policy on scientific research & development. Numbers of social science research proposals & awarded contracts are examined, based on statistical data for 1988-1990. It is concluded that social science research does not have high priority in national policy. J. Taylor

93Z4062

Godina, Vesna V., Socializacijska teorija Talcotta Parsonsa: Oris in analiza socializacijskega modela (The Socialization Theory of Talcott Parsons: Outline and Analysis of a Socialization Model), *Anthropos,* 1991, 23, 6, 254-278. (SLV)

¶ Talcott Parsons's socialization model presented in *The Social System* (Glencoe, Ill: Free Press, 1951) & other works is a key component of his socialization theory. After a discussion of the essential component of bipolarity, attention is focused on social reproduction processes. Micro- & macrolevels of the socialization process are discussed in detail. Important components of the microlevel include social learning, object relations, & needs disposition. Discrepancies between actual & ideal socialization processes are described. Finally, a concrete scheme of socialization processes is presented. 81 References. Adapted from the source document.

93Z4063

Hanisch, Ted (Senter Internasjonal Klima- og Energipolitisk Forskning U Oslo, Blindern N-0316 3 Norway), **Om norm og kalkyle. Tilnaerming mellom sosiologi og sosialøkonomi?** (Norm and Calculation. Closing the Gap between Sociology and Economics), *Tidsskrift for samfunnsforskning,* 1991, 32, 5, 363-386. (NOR)

¶ An exploration of the relationship between economics & sociology since the 1970s, with focus on the growing interdependence between these fields. It is argued that in the 1970s the established specialization of subsystems broke down, due in part to the growing interest in studies of the borderlines between subsystems, eg, market & politics & political & cultural institutions. This is exemplified by the emergence of institutional economics in Norway & in the growing interest in negotiating game theory in economics. In the 1980s, the work of Jon Elster (*The Cement of Society,* Cambridge U Press, 1989) contributed to bridging the gap between these social sciences. The new paradigm in economics proposed by Trygve Haavelmo (no reference provided), which bases a model of actors' behavior on the existing rules & norms in a given society, is difficult to differentiate from a sociological paradigm. The prospects of closing the gap completely are considered. 25 References. Adapted from the source document.

Helmes-Hayes, R. C. (Dept Sociology U Waterloo, Ontario N2L 3G1), **'From Universal History to Historical Sociology': By J. A. Banks–A Critical Comment,** UM *The British Journal of Sociology,* 1992, 43, 3, Sept, 333-344.

¶ The discussion by J. A. Banks (see SA 38:2/90V3432) of Morris Ginsberg's view of the place of historical research in British sociological work–particularly Ginsberg's belief that sociologists should rely on historians & other disciplinary specialists for data rather than doing their own work–is challenged. Though Ginsberg was dismissive of a narrow positivist conception of empiricism, & of the sociology of science in general, he viewed empirical research as a necessary part of the sociological enterprise. Formulation of an all-inclusive theory of social development is the first purpose of general sociology & is not possible without empirical contributions from a variety of smaller-scale specialized sociologies. The question is not one of historians & sociologists pursuing separate endeavors, but one of emphasis. Adapted from the source document.

93Z4065

Heuzé, Gérard (Centre études Inde & Asie Sud CNRS, F-75700 Paris France), **Troubled Anthropologists: The Controversy over Employment Quotas in India,** *Anthropology Today,* 1991, 7, 6, Dec, 5-7.

¶ When India's National Front government under V. P. Singh recently attempted to introduce a system of employment quotas to benefit members of the middle & lower castes, locally grouped under the name of backward castes, the process provoked extreme reactions, particularly from university youth who did not benefit from the quotas. The intellectuals & civil servants, coming primarily from high-caste backgrounds, which were not affected by quotas, also tended to oppose the decision & the government, as did the big private-sector employers, who own the press. The crisis reveals significant transformation in the consciousness that people have developed of their interests & their ways of defending themselves. A number of internationally respected anthropologists have sided with the opponents of employment quotas, but their statements reveal bias & their arguments are weak, which makes their contribution doubtful. Arguments favoring & opposing the decision to employ quotas, as well as the social consequences of the controversy, are discussed from the perspectives of anthropologists involved in the debate. 1 Photograph, 14 References. S. Millett

Ireton, François, Eléments pour une sociologie historique de la production statistique en Egypte (Elements for a Historical Sociology of the Production of Statistics in Egypt), *Peuples Méditerranéens/Mediterranean Peoples,* 1991, 54-55, Jan-June, 53-92. (FRE)

¶ Statistics production in Egypt is analyzed as a function of social & cognitive mechanisms. A typology is suggested of attitudes of producers & users of statistical information, eg, positivism vs antipositivism & qualitative vs quantitative. A periodization of the history of the production of Egyptian statistics between 1840 & the 1960s is proposed, noting its institutionalization 1870-1940. Emphasized are interrelations between evolutions in society, eg, technological change & demographic mobilization & the restructuring of statistics production. 20 References. Adapted from the source document.

93Z4067

Kennedy, Ellen, Carl Schmitt and the Frankfurt School, UM *Telos,* 1987, 71, spring, 37-66.

¶ An exploration of the links between Carl Schmitt's philosophy & the contemporaneous theories of the Frankfurt school (Walter Benjamin Otto Kirchheimer, & Jürgen Habermas), with a focus on Habermas's analysis of the political paradox in Schmitt's ideas. Schmitt's antiliberalist leftist theory initially attracted the Frankfurt school thinkers. They concurred with his political analysis of law, his criticisms of the liberal democracy's positivistic elements, & the ties between direct democracy & social homogeneity. However, he was criticized for sympathizing with fascism, & was cast out from the intellectual circle following Herbert Marcuse's 1933 repudiation of his antiliberalism. Benjamin & Schmitt aligned on issues of liberalism & parliamentarism, while Franz Neumann & Kirchheimer, the political theorists of critical theory, agreed with Schmitt's critique of majority rule & the constitutional state. Although Habermas's work builds on rhetorical & structural elements of Schmitt's antiliberalism arguments, political differences lead Habermas to adopt only the normative, radical choice of legality against legitimacy J. Sadler

93Z4068

Kessler, Sanford (North Carolina State U, Raleigh 27695-8102), **Tocqueville's Puritans: Christianity and the American Founding,** UM *Journal of Politics*, 1992, 54, 3, Aug, 776-792.

¶ Alexis de Tocqueville's view (*Democracy in America*, Volumes I & 2, Mayer, J. P. (Ed), Lawrence, George (Tr), New York: Doubleday, 1969 (1835 & 1840)) of the Puritans as the founders of the US, due to their influence on American character, is compared with the views of contemporary scholars, focusing on his understanding of US Puritanism & its Biblical origins & main components. The discussion leads to a vexing question: how Tocqueville can assert that the Puritans founded a country which, as he describes it, was more secular than religious in the 1830s. It is shown that he defends his assertion by linking the demise of the religious elements of US Puritanism to certain secular tendencies fostered by Christianity. 37 References. Kroger, Rolf O. & Scheibe, Karl E. (Dept Psychology U Toronto, Ontario M5S 1A1), **A Reappraisal of Wundt's Influence on Social Psychology,** *Canadian Psychology/Psychologie Canadienne*, 1990, 31, 3, July, 220-228.

¶ Although Wilhelm Wundt's position as father of experimental psychology is undisputed in the doxographic history of psychology, the outline of social psychology in his *Probleme der Volkerpsychologie* ((Problems of Folk Psychology) Leipzig: Wiegandt, 1911) anticipates modern psychology's constructionist movement. Links can be traced from his lectures on *Volkerpsychologie* to prominent social scientists, including L. S. Vygotsky, Sigmund Freud, G. H. Mead, & Emile Durkheim, who continued the social psychology perspective in articulating their theories. In this historical perspective, the assumption that the development of US behaviorist social psychology comes directly from Wundt's experimental psychology agenda, based on the positivist preoccupation with the progressive accumulation of knowledge in psychology, is debunked. 48 References. Kruger, Hans-Peter (Instit Theorie/Geschichte/Organisation Wissenschaft, Prenzlauer Promenade 149/152 D-1100 Berlin Federal Republic Germany), **Reflexive Modernisierung und der neue Status der Wissenschaften** (Reflexive Modernization and the New State of Sciences), *Deutsche Zeitschrift für Philosophie*, 1991, 39, 12, 1310-1330. (GER)

¶ All modern phenomena are subject to scientific examination, & the sciences themselves become highly interdisciplinary. To determine how various disciplines retain at least a measure of specificity, a literature review is conducted of classical & modern sociologists & philosophers, based on the immanent criticism of communicative reason, ie, a communication-oriented way of spanning the gap between subdisciplines. Polysymbolic & polylogical origins of reflection within the communication process are emphasized. Communication is a changing of perspectives of the participants using linguistic, operationalized, or symbiotic signs that succeed in coordinating various actions. The modern distinction between communities & societies occurs through the institutionalization of communication distinguishing risks & dangers. Every type of institutionalization & symbolically generalized mediation stabilizes the coordination effect by restricting other possibilities of communication. In developed countries the traditional relations between way of life, institutional privileges, the exclusive coordination by one symbolically generalized medium, & the mode of coordinating in time have been dissolved. New proportions of all these factors will produce new nonexclusive differential criteria for various subdisciplines, including all communicative possibilities to unite all processes together. Although the sciences are dominated by objective argumentation as their primary medium, they must include all other communicative possibilities to bear a valid claim of being distinct. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Lohmann, Georg, La Confrontation de Georg Simmel avec une métropole: Berlin (Georg Simmel's Confrontation with a Metropolis: Berlin), *Critique (FR)*, 1991, 47, 531-532, Aug-Sept, 623-642. (FRE)

Translated from German by R. Rochlitz.

¶ An exploration of Georg Simmel's theory of modernity as it relates to the effects of living in a developing metropolis, exemplified by the case of Berlin, Germany, in the early 1900s. Simmel emphasized the problem of modern individualism & focused his work on the civic & intellectual phenomena of the time. His relationship to modernity is found to be ambiguous: he praised the positive aspects of the genesis of modernity, while at the same time pointing out the dangers it posed for the soul of the individual, eg, alienation & indifference. Simmel characterized three facets of modernity: (1) desubstantialization, (2) the loss of goals, & (3) the fact that everything becomes related to everything else. He predicted inevitable tragedy for modern culture if cultural & social development entered into contradiction with each other. His theories of relativism & a "new solidity" are discussed, & his views on the confrontation between autonomous individuals & big cities are examined. W. Levin (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Nedelmann, Birgitta, Profane und heilige "Soziale Welt" (Jahrgang 1989) (Profane and Sacred *Soziale Welt* (1989)), *Soziologische Revue*, 1992, 15, 2, Apr, 139-152. (GER)

¶ A review essay on the contents of *Soziale Welt*, 1989, Vol. 40 (see abstracts in SA, Vol. 38). Issue 1/2 was dedicated to the analysis of the anomie & self-identity of sociology. Key themes included the "end of sociology," vicious circles in sociology, & apathy, retrogression, & ritualism. Issue 3 focused on critical reviews of key works by editor Ulrich Beck. Issue 4 concentrated on the gray social existence of the everyday world. The difficulties of reviewing such a wide range of topics in a single article are noted. 6 References. Nisula, Tapio (U Tampere, SF-33101 Finland), **Klassikon voima: oppihistoria ja Durkheim-tulkinnat** (Doctrinal History and Interpretations of Durkheim), *Sosiologia*, 1992, 29, 2, 89-105. (FIN)

¶ The corpus of work produced by Emile Durkheim is surveyed in terms of the difficulty of its analysis & evaluation. Although some theories have criticized a lack of coherence & continuity in Durkheim's writings, it is contended here that a consistent line of argumentation can be traced from Durkheim's first work (*The Division of Labor in Society*, 1893) to his last (*The Elementary Forms of Religious Life*, 1912). The variety of other viewpoints that exist regarding Durkheim's work is explained as a result of interpretation problems of the often ambiguous & contradictory texts. The view that Durkheim's later writings represent a clear break

with his earlier work is disputed here, & five axioms that can be found in all his books are outlined: (1) the positivist ideal, (2) the organism analogy, (3) social control of cognition, (4) sociological determinism, & (5) causal social evolution. 44 References. Adapted from the source document.

Nock, David A. (Lakehead U, Thunder Bay Ontario P7B 5E1), **Star Wars: Aspects of the Social Construction of Citations in Anglo-Canadian Sociology,** UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology*, 1992, 29, 3, Aug, 346-361.

¶ Scientists studying the sociology of knowledge & science construct their interpretation of social reality as part of a social network. To illustrate this circularity, the structure of citations in two English-Canadian sociological studies (Brym, Robert J., with Fox, Bonnie J., *From Culture to Power: The Sociology of English Canada*, Toronto: Oxford U Press, 1989; & Stebbins, Robert A., *Sociology: The Study of Society* (2nd edition), New York: Harper & Row, 1990) is analyzed to determine the geographical location of the authors cited, with the assumption that authors will more commonly cite those within their own region, & those from major, highly visible universities. Six regions were identified: the Atlantic provinces, Anglophone Quebec, the Core Five universities in Ontario (with highest visibility), the rest of Ontario, the Prairies, & British Columbia. Brym & Fox have drawn heavily on their own work, & also disproportionately cited sociologists from the Core Five Ontario universities, with which Brym & Fox have been associated. Overrepresentation of the Ontario Core sociologists was not due to their publication rates in comparison to the rates of sociologists from other regions. Stebbins, a Prairie resident, also overcited Ontario Core sociologists, but cited Prairie sociologists about equally as often. Results provide evidence for regional personal networks for citations in sociological works. 8 Tables, 38 References. Adapted from the source document.

Olzak, Susan (Dept Sociology Cornell U, Ithaca NY 14853), **Report to the Human Sciences Research Council,** *South African Sociological Review*, 1990, 3, 1, Oct, 62-68.

¶ This report on the state of sociological research & teaching in South Africa notes rapid changes in focus & methods; however, the state of the art is still far behind the US & Europe. Research & teaching efforts are bifurcated, with basic research concentrated in a few top-level national institutes, eg, the Human Sciences Research Council (HSRC), & absent at the universities, where teaching loads are high. This segregation hampers academic interchange. Due to the weak research infrastructure in the university setting, there is a shortage of technical expertise in research; even political advocacy is labeled as research. The surprising absence of research in the areas of race & ethnic relations & collective action needs to be remedied. It is recommended that the conflict analysis section at HSRC broaden its scope beyond survey analysis because of biases in the sample population. 5 References. M. Pflum

Pellicani, Luciano, Weber and the Myth of Calvinism, UM *Telos*, 1988, 75, spring, 57-85.

¶ Max Weber's thesis regarding the relationship between Calvinism & capitalism is challenged by reviewing evidence testifying to the existence of a capitalist spirit well before the advent of Protestantism. Weber's thesis is also criticized for: attributing to the Calvinist concept of "calling" a modernity that it did not have; suggesting that the development of the concept of calling provided modern entrepreneurs with a rationale that justified the pursuit of profit; formulating an ideal type of Calvinist that had no basis in historical reality; & failing to acknowledge that the Calvinist bourgeoisie of the seventeenth century rejected the doctrine of predestination. It is concluded that Weber's thesis has obscured more than clarified the issue of the genesis of capitalism. W. Howard

Rajan, Nalini (12th Cross St #7, Madras 600020 India), **Gandhi and Habermas: Irreconcilable Differences,** *Indian Journal of Social Science*, 1991, 4, 3, July-Sept, 415-423.

¶ The merits of a Habermasian vs a Gandhian perspective in providing an ethical foundation in contemporary political philosphy are examined. Though the Gandhian philosophy emphasizes the therapeutic or caring aspects of collective life, it did not view the conceptualization of ethics as a collective, intersubject quest. Rather, it assumed mystical, irrational forms, & stressed the private quest for ethics & ultimate reality. The Habermasian perspective emphasizes rationality & self-reflection as basic ingredients of ethics. Ethics is not a universal given, but is hammered out through incessant validation & rational argumentation. 8 References. D. Generoli

Rammstedt, Otthein & Wagner, Gerhard (*Simmel Newsletter* U Bielefeld, D-4800 1 Federal Republic Germany), **Editorial,** *Simmel Newsletter*, 1991, 1, 1, summer, 3.

¶ Georg Simmel is gaining in interest among sociologists after being neglected for years. Today he is ranked with Emile Durkheim, Karl Marx, & Max Weber as a classical sociologist. In many subfields--eg, sociology of gender, religion, culture, philosophy, aesthetics, & literary criticism--Simmel's ideas are worthy of being pursued. The *Simmel Newsletter* was founded by the Simmel Society of the U of Bielefeld, Federal Republic of Germany, to coordinate the burgeoning international scholarship about Simmel. Information on current research, forthcoming conferences, book reviews, shorter articles, & bibliographies will be published in *Simmel Newsletter* biannually. *Simmel Abstracts* will be included in the winter issue of *Simmel Newsletter* & will also be available on disc. Suggestions about any aspect of the journal are invited. M. Meeks

Richardson, Michael, Sociology on a Razor's Edge: Configurations of the Sacred at the College of Sociology, *Theory, Culture & Society*, 1992, 9, 3, Aug, 27-44.

¶ The work of Georges Bataille & the Coll of Sociology, which he founded in 1937, should not be considered as an antecedent to postmodernism. It is argued that the activity of the Coll was not directed against surrealism, as some postmodern critics claim, but rather stands as a continuation of surrealist concerns. A brief history of the Coll is given, & its emphasis on the "sacred," a notion that has been appropriated by postmodern critics, is examined. Also discussed is the Coll's stance toward fascism, its heterogeneous composition & aims, & its manifesto positing the idea of the "poetic marvelous." It is concluded that, rather than anticipating postmodernism, the work of the Coll, in many ways, is antagonistic to postmodernism, particularly in its affirmation of differentiation. 41 References. Roussillon, Alain (Groupe sociologie politique & morale CNRS, F-75700 Paris France), **Sociologie égyptienne, arabe, islamique. L'Approfondissement du paradigme réformiste** (Islamic, Arab, Egyptian Sociology. Investigating the Reformist Paradigm), *Peuples Méditerranéens/Mediterranean Peoples,* 1991, 54-55, Jan-June, 111-150. (FRE)

¶ The persistent weakness of sociology in the Arab world is discussed in respect to three crises, related to (1) state-intellectuals rapport; (2) relations with the West; & (3) rapport among Arab social scientists. Since the 1980s, the Arab & the Islamic paradigms prevailed in social science discourse. Here, the role of an alternative reformist paradigm in mediating modern & traditional modes of thinking in the Arab world is examined, using Egyptian social sciences as a case study. The reform process is seen as correlated to an identity structuration process of Arab/Islamic social sciences. 32 References. Adapted from the source document. Rutigliano, Enzo (Dipt teoria/storia/ricerca sociale U Trento, I-38100 Italy), **Sul concetto di uomo in Max Weber. Note sul Seminario "L'uomo in Max Weber" (Trento, 25 ottobre 1991)** (The Concept of Man in Max Weber: Notes on the Seminar "Man in Max Weber" (Trent, 25 Oct 1991)), *Studi di Sociologia,* 1991, 29, 3, July-Sept, 329-332. (ITA)

¶ By focusing on people's religious beliefs & political behavior, Max Weber implicitly suggested that man is defined through his values. By phrasing his definitions in terms of values related to capitalism, science, & rationality, Weber succeeded in defining Western as opposed to universal man. Contrasts are drawn between Weber's visions & those of Friedrich Nietzsche. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4088
Salomon, Gottfried, Als Doktorand in Strassburg (As a Doctoral Candidate in Strasbourg), *Simmel Newsletter,* 1991, 1, 1, summer, 36-38. (GER)

¶ Personal memoirs are presented of a meeting with Georg Simmel at the U of Strasbourg (France) on 25 Apr 1914, during which the author's dissertation on the philosophy of religion was discussed. It is contended that modern philosophers' treatment of Christian philosophers reveals a distinct pattern of secularization. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4089
Sampson, Steven, Is There an Anthropology of Socialism?, *Anthropology Today,* 1991, 7, 5, Oct, 16-19.

¶ The theme of the 1991 conference of the Assoc of Social Anthropologists was: "Socialism: Ideals, Ideologies and Practice." The twenty-five presentations dealt with primitive communism, Marxist tradition, analysis of socialist societies, & comparable socialist experiments. Here, the papers are outlined under four headings: how states rule, survival & revival, ethnicity & nationalism, & socialism as secular religion. Areas of anthropological interest are discussed, eg, activism, nature of political revolutions, the operation of totalitarian systems, the relationship between bureaucratic states & informal structures, & socialist rituals. Ideas on an anthropology of postcommunism are introduced. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Scaglia, Antonio (Dipt teoria/storia/ricerca sociale U Trento, I-38100 Italy), **La sociologia tedesca in Italia** (German Sociology in Italy), *Studi di Sociologia,* 1991, 29, 2, Apr-June, 159-191. (ITA)

¶ Due to differences in langauge & divergent methodologies, German sociology has never been well received in Italy. German sociology is informed by James S. Dilthey's historicism, phenomenology, & the Weberian tradition. By contrast, positivism, political structuralism, & Crocian idealistic historicism have shaped Italian sociology. Although these trends still influence sociological thought in their respective countries, there is now a greater intellectual rapprochement, at least for Italian sociolgists who are now reading such German sociologists as Theodor W. Adorno, Raymond Aron, Ferdinand Tönnies, & Georg Simmel. The promotion of Italian social science in Germany has been helped by bilingual Italian-German sociological reviews & professional associations. 220 References. Adapted from the source document. Scheuch, Erwin K. (Instit angewandte Sozialforschung U Koln, D-5000 41 Federal Republic Germany), **Soziologie als Weltdisziplin: Der 30. Weltkongress des Instit International de Sociologie (IIS) in Japan** (Sociology as an International Discipline: The Thirtieth International Congress of the International Institute of Sociology (IIS) in Japan), *Soziale Welt,* 1992, 43, 1, 128-136. (GER)

¶ The International Instit of Sociology was founded in 1893 & is the oldest international sociological organization. Its Thirtieth World Congress was held in Kobe, Japan, in 1991 & was attended by 281 sociologists from 26 nations delivering about 150 presentations. Next to periodical literature, congresses are the most important means sociologists have of keeping in touch with important developments in their fields. Key themes of the 1991 congress included: ecology, resources, & quality of life. Despite the wide variety of opinions expressed & backgrounds of the experts present, it could be said that Japanese & US sociologists dominated the conference. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4092
Schmidt, Hartwig (Berliner Instit Sozialwissenschaftliche Studien, Charlottenstr 52 D-1086 Berlin Federal Republic Germany), **Weder Habermas noch Lyotard. Zwischen 'universalistischer' und 'kontextualistischer' Reaktion auf die Pathologie der Moderne** (Neither Habermas nor Lyotard. Between Universalist and Contextualist Reaction to the Pathology of Modernity), *Deutsche Zeitschrift für Philosophie,* 1991, 39, 12, 1367-1385. (GER)

¶ Proceeding from Jurgen Habermas's *Der philosophische Diskurs der Moderne* ([The Philosophical Discourse of Modernity] Frankfurt, 1985) & Jean François Lyotard's *Das postmoderne Wissen* ([Postmodern Knowledge] Vienna, 1986), it is suggested that it is time to end the debate between their opposing views on postmodernism. Habermas's concept of modernity is criticized as ambivalent, while modernist tendencies can be found beneath the surface of Lyotard's theory. Despite their differences, they both display a certain subjective freedom. Perhaps a solution could be found by defining the difference between social integration & social association. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4093
Schroeter, Gerd (Dept Sociology Lakehead U, Thunder Bay Ontario P7B 5E1), **Review,** IN *Journal of the History of the Behavioral Sciences,* 1992, 28, 3, July, 291-296.

¶ A review article on a book by Christian Fleck, *Rund um "Marienthal": Von den Anfängen der Soziologie in Österreich bis zu ihrer Vertreibung* ([About "Marienthal": From the Beginnings of Sociology in Austria to Its Banishment] Vienna: Verlag Gesellschaftskritik, 1990 [see listing in IRPS No. 66]). Fleck offers a history of sociology in Austria up to 1938, focusing on the activities of a group of young left-wing psychologists (ie, Paul Lazarsfeld, Hans Zeisl, & Karl Buhler) who collaborated on a study of the unemployed population of Marienthal. Fleck identifies seven schools of social science in Austria, & discusses Paul Lazarsfeld's use of the Marienthal study to build his career in the US. Fleck documents how Lazarsfeld reinterpreted his work at the U of Vienna to suit the image he tried to cultivate in the US. Convoluted & turbid, Fleck's book is criticized for not connecting his analysis of the Marienthal study with his overarching history of sociology in Vienna. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4094

Séguy, Jean (Centre national recherche scientifique, F-75700 Paris France), **Weber et Troeltsch...encore** (Weber and Troeltsch...Again), *Archives de sciences sociales des religions*, 1992, 37, 78, Apr-June, 191-197. (FRE)

¶ A review essay on books by: Julien Freund, *Etudes sur Max Weber* ([Studies on Max Weber] Geneva & Paris: Droz, 1990); Wolf Lepennies, *Between Literature and Science: The Rise of Sociology* Cambridge & Paris: Cambridge U Press & Maison Sciences Homme, 1988); Ernst Troeltsch, *Protestantisme et modernité* ([Protestantism and Modernity] Paris: Gallimard, 1991); & Max Weber, *Histoire économique. Esquisse d'une histoire universelle de l'économie et de la société* ([Economic History. Outline of a Universal Economic and Social History] Paris: Gallimard [(no translation or publication date information provided) see listings in IRPS No. 66]). A recent translation, Weber's book shows clearly the influence of Karl Marx & the tradition of historical materialism, within the context of a sociological view of religion. In Troeltsch's collection of texts, the differences between Troeltsch the theologian & Weber the sociologist are evident. Troeltsch explores the variety of Protestantism in history, & asserts the limited ability of religion to penetrate nonreligious aspects of social action. Although characterized by philosophical inconsistencies, Freund's work is notable for its contribution to methodological issues. Lepennies probes links between literature & sociology, discussing Weber's contributions to a scientific writing style. 11 References. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Self, Peter (School Social Sciences Australian National U, Canberra ACT 2601), **George Grant, Unique Canadian Philosopher**, *Queen's Quarterly*, 1991, 98, 1, spring, 25-39.

¶ Reflections are offered on the scholarly career of Canadian philosopher George Parkin Grant (1918-1988), exploring why his thought has special significance for Canadians. A brief biography of Grant's life is given, & his intellectual indebtedness to Allan Bloom is discussed. Two themes prominent in Grant's work–North American culture & Canadian nationalism–are examined in detail, & Grant's argument that the basis of technological society is the ubiquitous use of technique–viewed as a combination of knowing & creating–to serve human wills & appetites is explored. It is suggested that Grant's appeal to Canadians can be accounted for by the existence of a latent desire for a more satisfying philosophy than that offered by North American pragmatism & positivism. 13 References. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Simon, Donatella (Istit Luigi Sturzo, Via delle Coppelle I-00186 Rome Italy), **La presenza del "positivismo" nell'odierna sociologia; una rassegna del pensiero comtiano** (The Presence of "Positivism" in Today's Sociology; A Review of Comte's Thought), *Sociologia*, 1992, 26, 1, 205-224. (ITA)

¶ The renewed interest in Comtean studies is placed in the context of the more general renewal of interest–abroad & in Italy–for the age & the culture of positivism. Analysis of the main themes of Auguste Comte's work points out the historical & utopic vocation in his thought, whose analytical & dogmatic dimension (of illuministic origin) is the necessary premise for the historical, cultural, & ethical reflection (of a romantic nature) on the destiny of humanity. The sentiments of universality & solidarity, which pervade his work, are the main motive of interest for the contemporary consciousness, confronted with the problems of ethnic & nationalist egoism in the Western world after the fall of communism. The different readings of Comte confirm, however, the need for new interpretations with regard to how scientific interests originated & changed. Recent developments in the Italian historiography of positivism are reviewed. This historiography reaches new goals of knowledge, opens new perspectives of research, & will help reconstruct the rise & fall of early Italian sociology. Smit, Evert (Erasmus U Rotterdam, NL-3000 DR Netherlands), **De ongedekte flank in het werk van Michel Foucault en Georges Sorel** (The Unprotected Flank in the Works of Michel Foucault and Georges Sorel), *Amsterdams Sociologisch Tijdschrift*, 1992, 18, 4, Feb, 100-118. (DUT)

¶ Michel Foucault's & Gilles Deleuze's "Gesprek over intellektuelen en de macht" ([Conversation on Intellectuals and Power] *Raster*, 1979, 10) & other works show how Foucault's theory of power & criticism of the Enlightenment philosophies are combined with romantic fascination for popular insurrections. He used a genealogical method to describe the insurrection of subjugated knowledge, ie, authentic & popular types of knowledge exiled to underground social circles by scientific discourse. His support for the Iranian Shi'ite revolution is fully in line with this idea. A comparision with *Les Illusions du progrès* ([The Illusions of Progress] Paris, 1908) & other works by Georges Sorel, a romantic critic of the Englightenment who considered the French labor union movement as a popular antiutopian revolt, shows that Sorel's idea of myth as a rousing device closely resembles Foucault's idea of political spirituality. Although both thinkers rightly demonstrated the normalizing & disciplinarian effects of modern society, their political populism has some totalitarian implications. 35 References. Statera, Gianni (c/o *Sociologia e ricerca sociale*, via Savoia 80 I-00198 Rome Italy), **La professionalità sociologica tra accademia e operatività** (Sociological Professionalism between Academia and Operationalism), *Sociologia e Ricerca Sociale*, 1992, 13, 37, May,

7-12. (ITA)

¶ There are hundreds of sociologists & political scientists specializing in social policy who possess advanced degrees & who work at various jobs in the public & private sectors in Italy. Despite the many types of tasks they are called on to perform, they become operational through their ability to creatively collect & analyze sociological data. Greater recognition for the sociological professions would help to improve the quality of sociological education & ultimately raise the level of professionalism. Sociologists should take initial steps in this direction by themselves. More discipline & educational rigor are called for in education. The primary thrust of any reform should be to encourage a greater sense of responsibility. M. Meeks

93Z4102

Štefánek, Branislav, L'ud očami sociológa A. Štefánka (People in Štefánek's Sociological View), *Sociológia*, 1991, 23, 3, 237-244. (SLO)

Comments, 244-248.

¶ An overview is given of Branislav Štefańnek's *Základy sociografie Slovenská. Slovenská vlastiveda III* ([Fundamentals of Slovak Sociography: Slovak Political Science III] Bratislava: SAVU, 1944), emphasizing the basic concepts of nationalism, intelligentsia, village, & folk. He sought to replace philosophy with sociology to find a scientific solution for existing social problems. His most original ideas were linked to traditional rural society. He saw sociography as the most expedient method for empirically surveying geographical, economic, demographic, anthropological, ethnographic, cultural, moral, & political features of rural areas. In **Z bibliografie Antona Štefánka** (From the Bibliography of Anton Štefánek), L'. Turčan provides a selected bibliography of 76 titles by Štefánek. In **L'ud a narod očami slovenského sociológa** (People and Nation through the Eyes of a Slovak Sociologist), Vladimír Bakoš discusses the renewed interest in Anton Štefánek's work since the Velvet Revolution of 1989. Under the communist regime, 1948-1989, free intellectual inquiry in sociology was repressed. 79 References. Adapted from the source document.

Strecker, Manfred, Das Geld verbindet alles mit allem. Eine Ausstellung zu Georg Simmels *Philosophie des Geldes* (Money Connects Everything with Everything. An Exposition of Georg Simmel's *Philosophy of Money*), *Simmel Newsletter*, 1991, 1, 1, summer, 7-8. (GER)

¶ Georg Simmel attempted to address many philosophical, sociological, & economic aspects of money, in *Die Philosophie des Geldes* ([Philosophy of Money] see SA 8:1/606923). Interest in Simmel's concept of the value of money is virtually expolding now, as shown by the thousands of volumes of his works sold in the last few years in England, France, Germany, & Italy. Along with John Maynard Keynes, Simmel is now considered to be one of the greatest monetary theorists of the twentieth century. M. Meeks

93Z4104

Taylor, Rupert (U Witwatersrand, 2050 Johannesburg South Africa), **Sociology in South Africa: Tool or Critic of Apartheid?**, *South African Sociological Review*, 1989, 2, 1, Oct, 65-69.

Comment, 69-74.

¶ In South Africa, two professional sociological associations have evolved as a result of ideological differences between the Afrikaan, English open, & black universities, which differ in terms of the freedom that sociology researchers & lecturers have from state control. The history of sociology in South Africa is chronicled from the 1930s, showing how early sociologists functioned to shape & justify apartheid. Later, sociologists seeking a more reasoned & moral justification for apartheid came into conflict with the state. Since the 1970s, attempts to reconcile apartheid with liberalism have prevailed, & new schools grounded in historical materialism & class analysis have emerged. The current debate between Marxists & liberals is over whether apartheid is a problem of race or of class, or a product of prejudice or capitalism. State repression continues to hinder sociological research, compounded by the relatively small number of qualified sociologists, particularly blacks, & lack of critical theory & research. In **Putting the Record Straight: The Association for Sociology in South Africa**, Douglas Hindson, 1989/90 president of this organization, contends that this overview is misleading & oversimplified. An attempt is made to set the record straight regarding the accomplishments of sociologists in the Assoc for Sociology in South Africa, noting in particular its impact on black campuses. 5 References. Teraoka, Shingo, Transliterated title not available (Sociology of R. E. Park and His Study on Race and Ethnicity), *Soshioroji*, 1992, 37, 1, May, 3-20. (JPN)

¶ Though research on race & ethnicity has become more popular, the contributions of Robert E. Park remain largely unacknowledged, in part because his work has been criticized for a lack of systematic theory. Here, the dialectic system of thought that characterizes Park's sociology is introduced, & his research on "immigrant institution" is placed within this framework. His theory & research on race & ethnicity are briefly reviewed, & a critical appraisal & reformulation offered of his theory of the race relations cycle. 1 Table, 22 References. Ulin, Robert C. (Allegheny Coll, Meadville PA 16335), **The Current Tide in American Europeanist Anthropology: From Margin to Centre?**, *Anthropology Today*, 1991, 7, 6, Dec, 8-12.

¶ Drawing on a review of the scholarship that constitutes American-Europeanist anthropology, problems raised by John Cole (in "Anthropology Comes Part-Way Home: Community Studies in Europe," *Annual Reviews of Anthropology*, 1977) as an obstacle to a Europeanist anthropology are reevaluated. Cole argued that, in spite of the familiarity of anthropologists with the European continent, they still preferred Third World societies as their principal object of enquiry. Further, he contended that the growing interest in European society as an arena for conducting fieldwork should be understood as an outcome of the transformations in the world system of political economy that followed WWII. It is suggested that the very limitations on knowledge & practice that ensue from such a world system & its cultural analogues continue to shape & constrain development & recognition of a Europeanist anthropology. The current trends in American-Europeanist anthropology are those of American anthropology. The recent dramatic changes in Europe offer a special opportunity for Europeanist anthropologists to enhance their recognition. However, a Europeanist anthropology faces a problematic future within the context of American anthropology, since the focus of the latter is the Third World. 21 References. S. Millett

Welz, Frank, Maier, Uwe & Wetzel, Dietmar (Instit Soziologie U Freiburg, CH-1700 Switzerland), **Der Soziologe als Akteur auf dem Arbeitsmarkt?** (The Sociologist as an Actor in the Labor Market?), *Soziologie*, 1992, 1, 13-41. (GER)

¶ To examine the labor market for sociologists, mail questionnaire data were obtained from 123 female graduates of masters & doctoral programs in Germany 1980-1989. Results gave the following breakdown of career activities: scientific work (35%), journalism (9%), commercial activity (9%), psychosocial work (8%), teaching (7%), free professions (6%), management (3%), & other (22%). Sociology gained in popularity as an academic discipline during the 1960s & 1970s, with the annual number of bachelors & masters degress increasing from 25 in 1960 to 1,172 in 1981. This led to an excess of sociology graduates over the number of jobs available to them as early as 1974. More than 68% of the graduates are satisfied with their income, & 25 are not currently professionally active. Career paths for women are unexpectedly low. Graduates maintain a variety of attitudes toward the education they received & the careers available to them. 8 Tables, 4 Graphs. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Wincławski, Włodzimierz (U Mikolaj Kopernik, Torun), **A. Štefánek--cesta k národu a sociológii** (A. Štefánek--A Way to the Nation and Sociology), *Sociológia*, 1991, 23, 3, 213-235. (SLO)
Translated from Polish by L'. Falt'an.

¶ Anton Štefánek (1877-1964) was the founder of Slovak sociology. After studying at the U of Vienna, Austria, he worked as an editor, 1906-1918, for newspapers & journals in Budapest, Skalica, Brno, & Prague. In 1918 he became a staunch backer of the Czechoslovak republic. Later he taught at Comenius U in Bratislava & served in the national parliament. During WWII he defended the concept of a united Czechoslovakia against Slovak separatism. In 1949, under communist rule, he resigned from the chairmanship of the Comenius U Dept of Sociology, one year before sociology was abolished as a discipline. He continued sociological discussions in private with a dedicated circle of students until his obscure death in a small town in 1964. 49 References Adapted from the source document. 93Z4113

----, **Homenaje a Parsons** (Homage to Parsons), *Sociológica*, 1990, 5, 12, Jan-Apr, 291-427. (SPA)

¶ In **Presentación** (Introduction), Lidia Girola introduces five translated articles that explore the Parsonian treatment of modern society, focusing on structural differentiation & the progressive institutionalization of universalist values. It is hoped that these translations will contribute to a better understanding of Talcott Parsons's work. In **Igualdad y desigualdad en la sociedad moderna o la revisión de la estratificación social** (Equality and Inequality in Modern Society or the Revision of Social Stratification (translated from English by Laura Moya)), Talcott Parsons consolidates his previous work on the concept of social stratification, giving special attention to influences toward equality & inequality. It is argued that, in modern society, the erosion of traditional bases of inequality has given more importance to value compromises with respect to the status of individuals; inequalities have to be justified based on societal functioning. Implications for societal integration & mechanisms that govern it are considered. In **La predicción de innovaciones tecnológicas a través de una interpretatión dialéctica del paradigma tetrafuncional** (The Prediction of Technological Innovations through a Dialectical Interpretation of the Tetrafunctional Paradigm (translated from English by Angel F. Nebbia)), Ino Rossi incorporates Parsonian ideas on the four systems of action into a dialectical vision of social processes. Applications of a tetrafunctional dialectical paradigm to technological innovations are then elaborated & supported with empirical data. In **Sociedad y cultura. Reflexiones sobre una teoría de la diferenciación institutional** (Society and Culture. Reflections on a Theory of Institutional Differentiation (translated from German by Ximena J. Wolff Reyes)), Wolfgang Schluchter explores relationships between society & culture, following the thoughts of Parsons on institutional differentiation & incorporating these ideas into work by Emile Durkheim & Max Weber. Focus is on theories of action & how they inform an understanding of interpenetration processes between society & culture. In **Por qué AGIL?** (Why AGIL? (translated from German by Ximena J. Wolff Reyes)), Niklas Luhmann explores Parsons's theory of the structure of social action & discusses the AGIL (Adaptation, Goal Attainment, Integration, & Latency) schema. In **Talcott Parsons y la tradición fenomenológica en la sociología. Un debate no resuelto** (Talcott Parsons and the Phenomenological Tradition. An Unresolved Debate (translated by Rodolfo Soriano Nunez)), Benetta Jules-Rosette argues that the convergence of Parsonian methods of theorizing with the phenomenological tradition can be applied to recent interactionist perspectives in sociology. Phenomenological components of Parsons's work are outlined, & his influence on ethnomethodology is described. J. Taylor (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

----, **Simmel Abstracts**, *Simmel Newsletter*, 1991, 1, 2, winter,

145-152.
¶ Reprints are provided of twenty-two abstracts of books & articles published in 1990 on Georg Simmel, including sixteen in English, four in German, & two in French. M. Meeks

93Z4118
----, **Sosiologipäivät Jyväskylässä 27.-28.3.1992** (Sociology Conference, Jyväskylä, 27-28 March 1992), *Sosiologia*, 1992, 29, 2, 160-173. (FIN)
¶ Presented is a report of the sociology conference held 27-28 Mar 1992 in Jyväskylä, Finland. In celebration of the seventy-fifth anniversary of Finland's independence, focus was on Finland & being Finnish; the conference offered various workshops & lectures dealing with related topics. Contributions traced the history & development of Finnish sociology, including rural & urban living, the sociology of consumerism, environmental sociology, health, legal, & ethnic issues, the drug culture, feminism, & the changes in Europe in recent years. J. Sihvola

93Z4119
----, **Symposium on Weber's *The Protestant Ethic*,** UM *Telos*, 1988-1989, 78, winter, 71-108.
¶ A symposium reexamining Max Weber's Protestant ethic thesis & its status in contemporary social thought. In **Protestantism and Capitalism: Weber's Thesis in Light of Recent Social History, Richard van** Dülmen (U of Saarbrücken, Federal Republic of Germany) traces the history of the debate surrounding Weber's *The Protestant Ethic and the Spirit of Capitalism* (see SA 7:1/595444), & assess its contemporary status. In **Farewell to *The Protestant Ethic?***, Guy Oakes (Monmouth Coll, NJ) presents a reconstruction of Weber's original thesis, & argues for its continued relevance for sociological analysis. Paul Piccone, in **Rethinking Protestantism, Capitalism and a Few Other Things**, challenges Oakes's reading of Weber's thesis via an examination of the politics of the debate regarding the relationship between capitalism & Protestantism, concluding that the reason why misinterpretations of Weber's thesis have succeeded & continue to proliferate is because they reinforce deeply rooted but rapidly eroding biases necessary for Western modes of self-understanding. W. Howard

Adam, Barbara (SOCAS, 62 Park Pl Cardiff CF1 3AS Wales), **Modern Times: The Technology Connection and Its Implications for Social Theory,** *Time & Society*, 1992, 1, 2, May, 175-191.
¶ An examination of the connection between our taken-for-granted experience of time, clock technology, & social science theory & practice. The dominant time mode within modernity is based on Newtonian science & the attendant machine time of the clock. Because of the taken-for-grantedness of time in social theories & everyday life, social analyses of time must eschew essentialist epistemologies & Newtonian mechanics & rethink the use of eighteenth- & nineteenth-century conceptual frameworks that quantify time. It is argued that the technology of the late twentieth century presents people with multiple times that can no longer be understood with theoretical models based on machine time. By examining technology's production of multiple times, a first step is taken toward getting away from the mechanistic view of reality that has dominated the Western world for two centuries. 41 References. Alexander, Jeffrey C. (Dept Sociology U California, Los Angeles 90024-1551), **The Fragility of Progress: An Interpretation of the Turn toward Meaning in Eisenstadt's Later Work,** *Acta Sociologica*, 1992, 35, 2, 85-94.
¶ A survey of the development of Hebrew sociologist Shmuel N. Eisenstadt's theoretical perspectives. While his earliest analyses of social systems show the direct link with Talcott Parsons's functionalism, his later work indicates a revisionist approach concentrating on institutional & group interests, as well as contingent historical change. Greater levels of reflexivity are evident in subsequent works concerning civilizational analysis, in which greater attention is directed toward the instrumental role of autonomous & conflicting cultural codes & intellectual carrier groups, such as social protest movements, in broad social changes, rather than institutional strains. At the same time, Eisenstadt reconsidered his conception of modernity, postulating it as an inherently fragile social order motivated by explosive & endemic attempts to go beyond the cultural & institutional baggage of the present society. 38 References. Arcaya, Jose M. (John Jay Coll Criminal Justice, New York NY 10019), **Why Is Time Not Included in Modern Theories of Memory?,** *Time & Society*, 1992, 1, 2, May, 301-314
¶ Challenged is the notion that memory is stored materially in the brain. It is argued that the storage hypothesis makes any contact with the real past impossible, because the transcendent experience of remembering is presumed to issue from physical processes. Mainstream explanations of memory are critically evaluated to show that their plausibility rests on an indefensible homuncular explanation of consciousness. Drawing on Edmund Husserl's theory of temporality (Hofstader, A. [Ed & Tr], *The Phenomenology of Internal Time-Consciousness*, Bloomington: Indiana U Press, 1964 [1928]), a phenomenological explanation of remembering is offered. This model of time is then contrasted with the spatial-linear account of temporality on which many traditional theories of memory are based. The theoretical & research implications of the phenomenological approach to temporality, memory, & recollection for the field of psychology are discussed. 20 References. Adapted from the source document.

Bauman, Zygmunt (U Leeds, LS2 9JT England), **Strangers: The Social Construction of Universality and Particularity,** UM *Telos*,

1988-1989, 78, winter, 7-42.

¶ Strangers are physically near while spiritually remote; they disturb the balance of space & time & arouse anxiety. They are ambivalent about the world otherwise neatly structured into us & them, here & elsewhere. They are torn between the vain desire to assimilate & the prompted urge to self-estrange & "objectivize" their condition. Modernity is organized around the problem of strangers; so is the self-reflection of modern intellectuals. AA

93Z4127

Bell, Duran (School Social Sciences U California, Irvine 92717), **Reciprocity as a Generating Process in Social Relations,** UM *Journal of Quantitative Anthropology,* 1991-1992, 3, 3, 251-260.

¶ Discussed are the fundamental protocultural properties of reciprocity as an elementary distributive mechanism. The exact meaning of "balanced exchange" is derived & contrasted with exchanges that are satisfactory, yet not balanced, or vice versa. A set of rules is outlined by which exchange & balanced exchange can be unambiguously recognized in ethnographic investigation, & examples of error in the literature are cited. 16 References. 93Z4128

Bidet, Jacques (Centre national recherche scientifique philosophie, F-9200 Nanterre France), **Fur eine metastrukturale Theorie der Moderne** (A Metastructural Theory of Modernity), *Deutsche Zeitschrift für Philosophie,* 1991, 39, 12, 1331-1340. (GER)

¶ A general theory is developed that articulates the concept of class society with that of the social contract through a reinterpretation of the notion of "subversion by its opposite." The general form of modern society is a metastructure, ie, a "posited presupposition" of a contractual relation in three dimensions: interindividuality, centricity, & associativity. This relation is subverted in relation to domination in the structures of classes, the concrete social systems that "posit" it, ie, affirm it, in a self contractuality & domination, which are those of rational coordination of production–the market (of capitalism) & the plan (of statism)–are thus bound dialectically. Associativity presents a revolutionary alternative only in a critical relation with respect to the other two, from which it is conceptually inseparable. Modified AA

93Z4129

Binswanger, Harry, Life-Based Teleology and the Foundations of Ethics, *The Monist,* 1992, 75, 1, Jan, 84-103

¶ An examination of teleology focuses on the fundamental form of teleological causation–goal-directed action. Teleological concepts are broadened by analyzing three causal features (self-generation, value significance, & goal causation) that bring together vegetative & purposeful action & differentiate them from inanimate processes. It is maintained that: goal causation on the vegetative level is a consequence of the operation of natural selection in evolution; goal-directed action is an emergent property unique to living organisms; & telelogical causation is a form of, rather than an alternative to, efficient causation. It is concluded that goal causation, which is fundamental to teleology, is contingent on natural selection. The work of Ayn Rand (no reference) is drawn on to inform a discussion of the foundations of ethics in life-based teleology. W. Howard

93Z4130

Bogner, Artur (U Bielefeld, D-4800 Federal Republic Germany), **The Theory of the Civilizing Process–An Idiographic Theory of Modernization?,** *Theory, Culture & Society,* 1992, 9, 2, May, 23-53. **Translated by Adelheid Baker & revised by Richard Kilminster.**

¶ Examined is whether Norbert Elias's theory of the civilizing process (see IRPS No. 16/83c00199 & 83c00200) can be conceived as an ideographic theory of modernization. Several analytical differences between other theories of modernization (eg, those of Talcott Parsons & Walt W. Rostow) & Elias's theory are identified, & it is shown that Elias relies on the concept of nomological sciences as a counterconcept to his own method. The debate between Elias & Hans Peter Duerr, in which Duerr tried to refute Elias's theory by means of empirical evidence showing that peoples of the world have always had a sense of propriety & sexual shame, is discussed. Against Duerr, Elias argued that there is no absolute beginning point of the long-term process of the development of socially generated self-constraints in humans. Elias's notion of the civilizing process is then compared to the concept of modernization, & his understanding of stability & change in social figurations is discussed. 83 References. W. Howard

93Z4131

Bottani, Livio, Pensiero debole e pudore della teoria (Weak Thinking and the Decay of Theory), UM *La Critica Sociologica,* 1991, 99, Oct-Dec, 76-83. (ITA)

¶ Proceeding from A. Dal Lago's & P. A. Rovatti's *Elogio del pudore. Per un pensiero debole* ([In Praise of "*pudore.*" Toward Weak Thinking] Milan: Feltrinelli, 1990), attention is focused on the current trend away from constructing holistic theoretical systems toward mere description of the social environment. This results in a virtual humiliation of the human conscience. Special attention is given to the fear among many theorists to make explicit value judgments. Chances for recovering the ethical component in sociology are assessed through a literature review. M. Meeks

93Z4132

Brodribb, Somer (Dept Political Science U Victoria, British Columbia V8W 3P5 [FAX: (+1) 604-721-7485]), **The Birth of Time: Generation(s) and Genealogy in Mary O'Brien and Luce Irigaray,** *Time & Society,* 1992, 1, 2, May, 257-270.

¶ The work of Mary O'Brien ("Resolute Anticipation: Heidegger and Beckett" in *Reproducing the World: Essays in Feminist Theory,* Boulder, Colo: Westview Press, 1989, 83-101) & Luce Irigaray (*L'Oubli de l'air, chez Martin Heidegger* [Forgetting the Air, in Martin Heidegger], Paris: Editions de Minuit, 1983) is drawn on to critique Heidegger's understanding of temporality & to argue that both O'Brien & Irigaray oppose the masculine argument that death is the appropriate vantage point from which to view human temporality. Though Irigaray's & O'Brien's works are more authentic than Heidegger's fatal philosophy of the masculine mind, their projects differ significantly: O'Brien reclaims female periods & temporality from the empty space of "male-stream thought," while Irigaray considers masculine/time & feminine/space. It is concluded that the works of both Irigaray & O'Brien offer original visions of the present/presence of women in the world. 18 References. Adapted from the source document.

Bühl, Walter L. (Instit Soziologie U München, D-8000 40 Federal Republic Germany), **Vergebliche Liebe zum Chaos** (Fruitless Enthusiasm for Chaos), *Soziale Welt,* 1992, 43, 1, 26-47. (GER)

¶ The great hopes that the chaos theory (especially in the actual form of deterministic chaos) could help to solve the problems of disorder, unpredictability, & nondecidability are illusory, because chaos theory is a very specific theory, & the definition of chaos (nonperiodic, erratic movements; outmost sensitivity to beginning conditions, but perseverance in a stationary state & in a definite phase space; presence of strange attractors) is definitively unapplicable in the social sciences (eg, in simulation studies of economic growth, migration & elections research, the theory of conflict, & social evolution). The applicability of the chaos model for sociological explanations would first of all require a definition of the function of chaos in society; but in fact the chaos proves to be suppressed systematically &, in case of disequilibrium, cycles, fluctuations, & even catastrophes are preferred. Yet this does not contradict the convenient usability of chaos for the justification of populistic politics. 92 References. AA

93Z4134

Campbell, Colin, In Defence of the Traditional Concept of Action in Sociology, *Journal for the Theory of Social Behaviour,* 1992, 22, 1, Mar, 1-23.

¶ The traditional, Weberian-inspired conception of action is defended against the attacks made on it by post-Wittgensteinian-inspired adherents of the situationalist theory of meaning, eg, D. Rubinstein ("The Concept of Action in the Social Sciences," *Journal for the Theory of Social Behavior,* 1977, 7, 209-236). It is shown that the post-Wittgensteinian's argument–that there is no observable subjective mental event associated with human actions that serves to distinguish them from mere behavior–is founded on two assumptions: that instances of action that conform to the argument are exceptional rather than typical; &

that commonsense observations of everyday action are unaccompanied by mental states. Against these assumptions, it is maintained that it is legitimate to define action in terms of an ideal type, & that the concept of action needs to be modified to incorporate the results of recent psychological research which recognizes that attentionality, rather than intentionality, distinguishes action from behavior. 26 References. 93Z4135

Clegg, Stewart, Review Article: How to Become an Internationally Famous British Social Theorist, UM *The Sociological Review,* 1992, 40, 3, Aug, 576-598.

¶ A review essay on books edited by: D. Held & J. B. Thompson, *Social Theory of Modern Societies: Anthony Giddens and His Critics* (Cambridge: Cambridge U Press, 1989); J. Clark, C. Modgil, & S. Modgil, *Anthony Giddens: Consensus and Controversy* (London: Falmer Press, 1990); & C. G. A. Bryant & David Jary, *Giddens' Theory of Structuration: A Critical Appreciation* (London: Routledge, 1991 [see listings in IRPS No. 66]). The process by which Anthony Giddens acquired a substantial international reputation as a premier British social theorist is examined in the course of reviewing these three books. Giddens's scholarly career is reviewed, & how his work has been evaluated, institutionalized, & canonized is explored. Each of the books provides insights into the "Giddens phenomenon," illuminates his structuration theory, & clarifies key concepts in his sociology. The Bryant/Jary & Held/Thompson volumes offer a biography of Giddens, & all three texts contain substantial references to the secondary literature on his sociology. It is shown that Giddens's work follows established canons in the explication of classical theory, & that his work's reception has been aided by its focus on a particularly British concern--class relations. 97 References. Cole, David (Dept Philosophy U Minnesota, Duluth 55812-2496), **Artificial Intelligence and Personal Identity,** *Synthese,* 1991, 88, 3, Sept, 399-417.

¶ Considerations of personal identity are relevant to John Searle's Chinese Room argument, & to the opposed position that a computer itself could really understand a natural language. The notion of a "virtual person" is modeled on the concept of virtual machines familiar in computer science. It is shown how Searle's argument, & J. Maloney's attempt to defend it, fail. It is concluded that Searle is correct in claiming that no digital machine could understand language, but wrong in claiming that artificial minds are impossible: minds & persons are not the same as the biological or electronic machines that realize them. 33 References. Crozier, W. Ray & Greenhalgh, Paul (University Wales Coll, Cardiff CF1 3XA), **The Empathy Principle: Towards a Model for the Psychology of Art,** *Journal for the Theory of Social Behaviour,* 1992, 22, 1, Mar, 63-79.

¶ A critique of current approaches to psychological aesthetics, in particular, their: failure to account for both the content & form of artworks; oversimplification of artworks; & neglect of the interaction between artist, artwork, & spectator. An alternative approach is outlined, emphasizing the relationship between artwork & spectator. It is argued that the aesthetic response can usefully be conceptualized in terms of empathy, which may arise from a process of personification in which the spectator is regarded as imbuing an artwork with human consciousness. This approach is distinguished from other theories that have incorporated processes of empathy or personification in its rejection of their focus on either the object or the spectator. The advantages of adopting this approach for resolving long-standing debates within psychological aesthetics are noted. 37 References. Adapted from the source document.

De George, Richard T. (U Kansas, Lawrence 66045), **Recent Russian Social Theory,** *Praxis International,* 1992, 12, 2, July, 157-162.

¶ Following the demise of the USSR, contemporary Russian social theory is in disarray. Marxism-Leninism is dead. In its place are four strands of thought: (1) goes back to prerevolutionary Russian social theory; (2) imitates Western social theory, both analytic & continental; (3) attempts to develop an all-human perspective based on human rights; & (4) seeks a viable social theory that is Marxist in spirit but avoids the pitfalls of Soviet social development. This last idea is the most promising. AA

93Z4139

Drucker, Peter F. (Claremont Graduate School, CA 91711), **Reflections of a Social Ecologist,** UM *Society,* 1992, 29, 4(198), May-June, 57-64.

¶ The author presents himself as a social ecologist, interested in the human-made environment. The term social ecology was coined by the author, but represents a discipline with a long tradition, dating back to Alexis de Tocqueville's *Democrcy in America* (1835) & the ideas of Englishman Walter Bagehot (1826-1877). Among the basic ideas of social ecology is the tension between civilization's need for continuity & the need for innovation & change. Reviewed here are relevant concepts developed by European & US thinkers. The nature of the social ecologist's task is discussed, focusing on the objective to create a society based on dynamic balance. I. Shagrir

Dux, Günter, Macht (Power), *Soziologische Revue,* 1992, 15, 2, Apr, 153-159. (GER)

¶ A review essay on books by: Kurt Röttgers, *Spuren der Macht, Begriffsgeschichte und Systematik* ([Traces of Power, Conceptual History, and Systematics] Freiburg: Alber, 1990); Michael Mann, *Geschichte der Macht, Bd. 1: Von den Anfängen bis zur griechischen Antike* ([History of Power, Vol. 1: From Its Beginning to Ancient Greece] Frankfurt/Main, New York: Campus, 1990); & Jessica Benjamin, *Die Fesseln der Liebe. Psychoanalyse, Feminismus und das Problem der Macht* ([Chains of Love. Psychoanalysis, Feminism and the Problem of Power] Frankfurt a.M: Stroemfeld/Peter Stern, 1990 (see listing in IRPS No. 66]). A positive assessment is given of Röttger's work, considered as fundamental to any theory of society written from the standpoint of power theory. His book addresses both the concept & the history of power. Although Mann's contribution is generally informative, it is not a sociological theory of power & its development but rather an institutional history. A positive appraisal is offered of Benjamin's thesis that each gender seeks to obtain characteristics of the other. Her book is a highly readable criticism of gender relationships & of current feminist literature. M. Meeks

93Z4141

Ekström, Mats (Dept Sociology U Örebro, S-70130 Sweden), **Causal Explanation of Social Action: The Contribution of Max Weber and of Critical Realism to a Generative View of Causal Explanation in Social Science,** *Acta Sociologica,* 1992, 35, 2, 107-122.

¶ A proposal for a generative perspective on causality in the social sciences, informed by Max Weber's methodology & critical realism. After outlining problems with the prevailing & influential deductive-nomological ("covering law") model of modern positivism, it is shown how Weber's contribution puts equal emphasis on understanding & causal explanation, & considers meanings as causes. Taking a stance on issues of contextuality, abstraction, & empirical generalization, Weber's application of causal explanation as demonstrated in *The Protestant Ethic and the Spirit of Capitalism* (London: George Allen & Unwin Ltd, 1976 [1904/05]) is reviewed. The dialectical philosophy of science implied in critical realism suggests that causal properties should be uncovered, & that complex interactions of internally related tendencies, significations, intentions, social contexts, & structures are processed together into social actions. 1 Table, 54 References. Adapted from the source document.

Ertler, Klaus-Dieter, La Sociologie théorique de Niklas Luhmann (The Theoretical Sociology of Niklas Luhmann), *Critique (FR),* 1991, 47, 529-530, June-July, 540-544 (FRE)

¶ Niklas Luhmann's *Soziale System. Grundriss einer allgemeinen Theorie* ([Social Systems: An Outline of a General Theory] Frankfurt, 1987) & other works strike a balanced approach between two extreme ideologies: Marxism, viewing the individual as subordinate to the social; & the Weberian, interactionist model of the reasonable individual actor. Luhmann's sociology is based on the theory of self-referential autopoietic

0038-0202/93 $1.50

systems. Second order observation becomes important; one must observe how sociologists make observations. Luhmann is very popular in Germany, Italy, & Spain, yet the French do not share this enthusiasm despite his French literary criticism. M. Meeks

Forrester, John (Dept History & Philosophy Science U Cambridge, CB2 1TN England), **'In the Beginning Was Repetition': On Inversions and Reversals in Psychoanalytic Time**, *Time & Society*, 1992, 1, 2, May, 287-300.

¶ Investigated are issues concerning temporality in Sigmund Freud's hypothesis that the private histories that unfold in dreams are less products of memory than symptoms of desire. Freud's belief in the acquisition of causal power by a past memory through its subsequent interpretation in dreams is likened to the temporality found in fictions of causal loops connecting the present & the future, & parallels between recent cosmology & the retroactive causality of psychoanalysis are discussed. Drawing on a series of autobiographical & clinical examples taken from Freud's writings, it is argued that the symptom, transference, & memory all depend on a repetition of a past scene that acquires its causal power in the act of interpretation. 22 References. 93Z4146

Frank, Arthur W. (U Calgary, Alberta T2N 1N4), **Only by Daylight: Habermas's Postmodern Modernism**, *Theory, Culture & Society*, 1992, 9, 3, Aug, 149-165.

¶ A review essay on books by: Jürgen Habermas, *The Philosophical Discourse of Modernity* (Cambridge, Mass: MIT Press, 1987); & *The New Conservatism: Cultural Criticism and the Historians' Debate* (Cambridge, England: Polity Press, 1989); & Peter Dews (Ed), *Habermas: Autonomy and Solidarity* (London: Verso, 1986 [see listings in IRPS No. 66]). Habermas's critique of postmodernism, ideas on the emancipatory interest of theory, & understanding of the role of the social theorist are discussed. In *The New Conservatism*, Habermas defends his notion of modernity as an uncompleted project while acknowledging the fin-de-siecle ethos that has settled over late twentieth-century western culture. In *The Philosophical Discourse of Modernity*, Habermas explores Friedrich Nietzsche's abrogation of reason as a social possibility, looks at the influence of Michel Foucault & Georges Bataille on the modernity/postmodernity debate, & offers reflections on Martin Heidegger's affiliation with Nazism. Dews's book consists of interviews given by Habermas, 1977-1984, in which he responds to questions regarding his biography, accounts for his theoretical project, & discusses German politics. W. Howard

93Z4147

Franzén, Mats (Sociologiska Instit, S-75320 Uppsala Sweden), **Anthony Giddens and His Critics**, *Acta Sociologica*, 1992, 35, 2, 151-155.

¶ A review essay on books by: Anthony Giddens, *The Consequences of Modernity* (Cambridge: Polity Press, 1990); Christopher G. A. Bryant & David Jary (Eds), *Giddens' Theory of Structuration. A Critical Appreciation* (London/New York: Routledge, 1991); & Jon Clark, Celia Modgil, & Sohan Modgil (Eds), *Anthony Giddens. Consensus and Controversy* (London/New York/Philadelphia: Falmer Press, 1990 [see listings in IRPS No. 66]). *Consequences* attempts to frame a discussion of modernity in the duality of the structure problem, which is the cornerstone of structuration theory. Radicalized modernity, with its phenomena of contradictory experiences & feelings of ambivalence passing as the normal situation, constitutes the present situation. *Consensus and Controversy* is fragmentary & altogether unsuitable for a critical review of Giddens, whose noncontroversial intellectual style hinders criticisms. Bryant's & Jary's edition, on the other hand, provides a comprehensive presentation of Giddens's theory of structuration, followed by a thorough critique & explication of his intellectual style. 6 References. J. Sadler

Friedman, Jeffrey, Postmodernism vs. Postlibertarianism, *Critical Review*, 1991, 5, 2, spring, 145-158.

¶ While postmodernism refers to attempts to replace foundationalist philosophy with contextualist, immanentist forms of reason, postlibertarianism describes efforts to transcend contemporary minimal statism, questioning both its libertarian moral superstructure & its underlying consequentalist claims & seeking to determine whether the latter can be generalized in a way that displaces the former. It is contended that efforts to reach minimal statist conclusions via postmodern means aggravate the problem placing contemporary minimal statism: its failure to be true to its consequentialist foundations, reflected in its long-standing devotion to dubious arguments for the intrinsic good of laissez-faire capitalism. Rather than recovering its consequentalist roots, therefore, postmodern minimal statism relies unquestioningly on the normative foundations already accepted by the libertarian "speech community," neither responding to alternative interpretations of the value of liberty, nor transcending the arid conversation of "liberty" in favor of investigations of the real world of contemporary capitalism & the welfare state. Adapted from the source document.

93Z4149

Friend, Anthony M. (Instit Research Environment & Economy U Ottawa, Ontario K1N 6N5), **Economics, Ecology and Sustainable Development: Are They Compatible?**, *Environmental Values*, 1992, 1, 2, summer, 157-170.

¶ The so-called natural economic laws of supply & demand, which are said to determine how a market economy operates, have been fundamentally challenged by expanding knowledge of complex systems, particularly ecosystems. It is argued that neoclassical economics has in fact come up short when attempting to explain the modern social, economic, & environmental realities that result from a world of increasingly limited resources. An alternative theory–ecological economics–provides a better approach to the problems implicit in the concept of sustainable development. This new set of economic principles justifies the traditional value of thrift as it is applied to key ideas from systems theory & thermodynamics. 1 Figure, 14 References. 93Z4150

Goffman, Erving, L'Ordine dell'interazione (The Interaction Order), *Studi di Sociologia*, 1991, 29, 2, Apr-June, 95-125. (ITA) **Translated by L. Ruggerone & L. Bovone.**

¶ An Italian-language version of Erving Goffman's "The Interaction Order," which originally was published posthumously in the *American Sociological Review*, 1983, 48, 1-17 (see SA 31:3/83N0611).

93Z4151

Greenwood, John D. (Dept Philosophy City Coll New York, NY 10031), **Realism, Empiricism and Social Constructionism: Psychological Theory and the Social Dimensions of Mind and Action**, *Theory & Psychology*, 1992, 2, 2, May, 131-151. **Comments**, 153-182, **Response**, 183-192.

¶ In an effort to promote scientific realism (SR) as a viable alternative metatheory for psychological science, it is argued that SR offers a richer conceptualization of psychological theory than does traditional empiricism. It allows the theoretical psychologist to acknowledge ways that human actions & psychological states are social in nature, without abandoning the traditional scientific virtues of linguistic & epistemological objectivity that have been rejected by social constructionist & relativist theorists. In **What Is Real in Psychology: A Plea for Persons,** Rom Harré (Linacre Coll Oxford U, OX1 4JJ England) finds this account of SR unsatisfactory & its criticisms of social constructionism too narrow, & attributes this to a failure to consider a more representative selection of social constructionist perspectives. In **Rhetoric for Realism in Psychology,** W. Gerrod Parrott (Georgetown U, Washington, DC, 20057) applauds the logic & rhetoric of Greenwood's criticisms of experimental psychologists, & offers some refinements, eg, greater attention to empiricist objections to realism, a different interpretation of the theory-ladenness of observations, & a stronger attack on the relativistic aspects of constructionism. In **Constructing Realism: Seven Moves (Plus or Minus a Couple),** Jonathan Potter (Loughborough U, LE1 3TU England) suggests seven rhetorical strategies that could sustain the plausibility & coherence of Greenwood's argument: (1) construct constructionism as simple; (2) avoid empirical studies of science; (3) treat the nature of description as self-evident; (4) reconstruct scientific practice in terms of logic, inference, & deductive structure; (5) elide everyday & technical concepts; (6) replace mapping talk with accuracy talk; & (7) treat your own status as nonrhetorical. In **Social Constructionism and Realism: Adequacy or Accuracy?** John Shotter (U of New Hampshire, Durham 03824-3586) criticizes Greenwood's views from a social constructionist perspective, arguing that such a perspective, because of its radical reflexivity, confronts itself with problems that SR does not face. What is at stake is not the accuracy of social constructionist dialogue, as Greenwood suggests, but its adequacy, ie, its ability to render aspects of psychological being rationally visible. In **Realism, Relativism and Rhetoric: A Response to Comments on "Realism, Empiricism and Social Constructionism,"** Greenwood claims that the social constructionist critiques offered by Potter & Shotter fail because they (A) misrepresent SR & (B) offer no evidence to undermine the linguistic & epistemological objectivity of theories in natural & psychological science. Harré's criticisms form the basis for some qualifications of SR, supporting a form of global epistemological relativism about scientific theories, but not forms of local epistemological relativism regarding competing explanatory theories. 66 References. Grumley, John Edward (U Sydney, New South Wales 2006 Australia), **Two Views of the Paradigm of Production,** *Praxis International*, 1992, 12, 2, July, 181-204.

¶ Examined are Jürgen Habermas's & György Márkus's critiques of the Marxian paradigm of production. Habermas's critique is linked to his later & more elaborate attack on the paradigm's philosophy, claiming that it is fundamentally inadequate because it fails to provide a foundation for understanding the crucial contribution of communicative action to human self-constitution & because it effaces the problem of a normative foundation in critical theory. Márkus's qualified defense of the production paradigm is then examined as a radical alternative reconstruction. He argues that the paradigm does provide a theoretical framework for conceptualizing social intercourse, despite Karl Marx's failure to develop it theoretically. W. Howard

Huspek, Michael (State U New York, Albany 12222), **Taking Aim on Habermas's Critical Theory: On the Road toward a Critical Hermeneutics,** UM *Communication Monographs*, 1991, 58, 2, June, 225-233.

¶ An assessment of some key aspects of Jürgen Habermas's critical theory, prompted by a dissatisfaction with how Haberman situates himself with respect to the theory-practice question. It is argued that Habermas's reliance on transcendentally grounded concepts contributes to a theoretical top-heaviness that prevents him from acquiring a genuine understanding of practice-based emancipatory potentials. Studies of working-class language & communication patterns are cited which suggest that if our theories are to be critical & emancipatory in ways that are responsive to speakers' needs, they require development through critical hermeneutic inquiry. 13 References. AA

93Z4159

Isenberg, Bo (Tomegapsgatan 9, S-22350 Lund Sweden), **Die kritischen Bemerkungen von Jürgen Habermas zu Michel Foucault** (The Critical Remarks of Jürgen Habermas on Michel Foucault), *Deutsche Zeitschrift für Philosophie*, 1991, 39, 12, 1386-1399. (GER)

¶ A discussion of Jürgen Habermas's critique of Michel Foucault, which operates on three levels. (1) Habermas develops a methodological critique defining Foucault as a functionalist referring all aspects of society to a totalizing notion of power. Furthermore, Foucault's genealogies are characterized by presentism, relativism, & cryptonormativism, ie, those very features that Foucault wants to escape. (2) Habermas states that Foucault's empirical descriptions generalize & exaggerate the role of disciplinary power in modern society, thereby excluding communicative reason & acting in a twofold discourse–at once irrationally anarchistic & conservative–that encourages noncommitment & fails to establish a radical & critical basis of resistance. It is concluded that Habermas & Foucault work within different ensembles of discourses. The clash between them is in a sense an opposition between, on the one hand, the philosophy of modern age–ie, philosophy as great theory (of good society), the truth appearing as firm knowledge (*Gewissheit*)–&, on the other, the philosophy of classical antiquity, to which Foucault returns via Martin Heidegger & Friedrich Nietzsche–ie, the philosophy of praxis, truth as practical consideration (*Denken*). Modified AA

93Z4160

Johnson, Gregory R. (153 Georgia Ave #8, Athens GA 30606), **A Friend of Reason: José Guilherme Merquior**, *Critical Review*, 1991, 5, 3, summer, 421-446.

¶ A posthumous overview & assessment of José Guilherme Merquior's principal English language contributions to liberal social & political theory. Merquior's greatest strength was his recognition that one can neither understand nor defend liberalism without first understanding & defending modernity. The greatest weakness of his work was his overly oppositional conception of the relationship between modernity & its postmodern critics, particularly his failure to recognize that both the positive & negative features of postmodernism are simply radicalizations of the positive & negative features of modernity itself. It is argued that the strengths of Merquior's work are best affirmed & its weaknesses best overcome by appropriating it within the context of a critical modernist approach to understanding & legitimizing the institutions & practices of modernity & liberalism. Adapted from the source document.

93Z4161

Kelly, Colm Joseph (Dept Sociology York U, North York Ontario M3J 1P3), **"If I Say: 'The Child Has Eaten Enough'": Durkheim's Pedagogy as Promise**, *Current Perspectives in Social Theory*, 1992, 12, 251-274.

¶ J. L. Austin's notions of performative & constative utterances ("Performative Utterances" in Urmson, J. O., & Warnock, G. J., *Philosophical Papers*, Oxford: Oxford U Press, 1970) are used to critique several of Emile Durkheim's lecture-courses & articles on pedagogy & the sociology of education. It is argued that these writings are performative, political-moral interventions in the field of pedagogy, & contain the most constative & theoretical concerns of Durkheimian sociology. Consideration is given to: Durkheim's arguments about the role of sociology in reconstructing the education system in France (eg, "The Evolution and the Role of Secondary Education in France" in Fox, S. [Tr], *Education and Sociology*, [see SA 6:2/584412 (1911)]), his theoretical explanation of the role of education in maintaining social order, & the educational techniques he advocated. It is shown that Durkheim's theory of education & pedagogy are designed such that they are analogous to the role of the teacher described in Durkheim's pedagogy. 70 References. W. Howard

Köhnke, Klaus Christian, Der junge Georg Simmel zwischen Positivismus und Neukantianismus? Ein Vortag (The Young Georg Simmel between Positivism and Neo-Kantianism? A Contribution), *Simmel Newsletter*, 1991, 1, 2, winter, 123-137. (GER)

¶ An analysis of Georg Simmel's "Eine Neue Popularisirung Kants" ([A New Popularization of Kant] in *Das Magazin für die Literatur des In- und Auslandes*, 1883, 52, 216-217) is presented to help determine his position between positivism & neo-Kantianism during his early career. A biographical sketch reveals that, during his first two years of university study, his focus was on history, while by the winter of 1877/78, he began to develop an interest in philosophy & psychology. In 1880 he received an award for his scholarship on Immanuel Kant. A literature review shows that, in his earlier writings, he displayed a strong positivist influence, while in his more mature period, he could be classified as a neo-Kantian. M. Meeks

93Z4163

Kolenc, Janez, Kommunikacijska teorija Jürgena Habermasa (Jürgen Habermas's Communication Theory), *Anthropos*, 1992, 24, 1-2, 110-129. (SLV)

¶ After a review of Jürgen Habermas's *Theorie des kommunikativen Handelns* ([Theory of the Communicative Act] see IRPS No. 41/88c00922 & 88c00923), attention is focused on speech acts as a medium of rational communication. Language is a way of coordinating social function, which can be analyzed logically or illogically within a social framework. Social communication is the result of individual attempts to develop individuality while simultaneously creating a society. Special attention is given to the category of rationality within the philosophy of language. Also discussed is Habermas's concept of argumentation, both on internal & external levels. 4 Figures, 17 References. Adapted from the source document as translated by M. Meeks.

93Z4164

Kuokkanen, Martti (Dept Philosophy U Helsinki, SF-00170 Finland), **A Generalization of the Role Expectation Conflict Theory with a Methodological Analysis**, *The Journal of Mathematical Sociology*, 1992, 17, 2-3, 217-226.

¶ A role conflict theory with two incompatible role expectations (Gross, N., Mason, W. S., & McEachern, A. W., *Explanations in Role Analysis*, New York: Wiley, 1958) is generalized by increasing the number of incompatible role expectations, demonstrating that the generalized theory is consistent & that its four axioms are independent. In addition, the generalized theory is, in principle, testable from the point of view of three different well-defined testing situations. It is concluded that the original theory is a special case of the generalization. 9 References. Adapted from the source document.

93Z4165

Lee, Raymond L. M. (Dept Anthropology & Sociology U Malaya, 59100 Kuala Lumpur Malaysia), **The Two Faces of Charisma: Structure, System, Praxis in Islam and Hinduism**, *Journal for the Theory of Social Behaviour*, 1992, 22, 1, Mar, 41-62.

¶ The problem of charisma is a problem of agency in history. Great-man theories of history tend to emphasize the power of personal will in the shaping of society. Max Weber had been influenced by this line of thinking when he conceptualized charisma as an individualized force that transcends the impersonal & abstract nature of social structure (reference not specified). In this sense, he had deviated from the original usage of the term by Rudolph Sohm (no reference provided), who saw charisma as embedded in the teachings of the early Christian church. Using Anthony Giddens's structuration concepts of structure & system (eg, see *Social Theory and Modern Sociology* [see IRPS No. 39/87c00857]) an attempt is made to distinguish between these two approaches to charisma & to relate them empirically to developments in Islam & Hinduism. 43 References. Magatti, Mauro (Dipt sociologia U Cattolica Milano, I-20122 Italy), **Forme della comparazione e teoria sociale** (Comparative Analysis and Social Theory), *Studi di Sociologia*, 1991, 29, 2, Apr-June, 143-158. (ITA)

¶ The links between social theory & empirical research become clearer once the strengths & weaknesses of various styles of comparative analysis are recognized. In social action theory, structural-functionalism has lost ground to action-structure theory. Comparative analysis reveals that this more popular theory's use of the "ideal type" concept ties it to the Weberian tradition. The advantages of the comparative analysis approach include deeper understanding of sociological universals through a study of the variety of social theories, & an appreciation for the limited applicability of sociological terms & their empirical equivalents. 2 Figures, 53 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4168

Malkan, Jeffrey, "Against Theory," Pragmatism and Deconstruction, UM *Telos*, 1987, 71, spring, 129-154.

¶ Stanley Fish's rhetorical deconstructive project "Against Theory" (see, eg, *Is There a Text in This Class? The Authority of Interpretive Communities*, Cambridge, 1980), which favors authorial intention & community consensus over textual indeterminacy & critical subjectivism, is exposed as an unfair weapon against would-be adversaries. The politically leftist movement of critical legal studies (CLS), which had originally tried to realign the US legal system's notion of interpretation through deconstruction, ended by disenfranchising traditional liberal ideas. With his academic origins in literary modernism, Fish brought Richard Rorty's pragmatism into the nihilist CLS circle. After review of the against theory argument, Fish's purely rhetorical victories over liberal legal theorists Ronald Dworkin & Owen Fiss are discussed. Finally, a critique of the against theory argument points to essential assumptions of the deconstructionist, Fish's fundamentally ahistorical position, epistemological notions on beliefs as internalized theories, & his inescapable rightist conclusions. Maniscalco, Maria Luisa (57 via Otricoli, I-00181 Rome Italy), **Vilfredo Pareto e le aporie della modernità** (Vilfredo Pareto and the Aporias of Modernity), *Sociologia*, 1992, 26, 1, 169-187. (ITA)

¶ An attempt is made to contextualize Vilfredo Pareto's contributions through a careful reading of his work, emphasizing links with the process of modernization. Using illustrative passages, elements of Pareto's thought are identified that anticipate the successive, more mature criticism of the ideology of modernity. It is argued that Pareto catches in its entirety the contradictions of modernity, which on one side aims at rationalization, secularization, & disenchantment, & on the other, feeds itself on utopia & develops through configurations & polarities transforming its original sense. Pareto's scientific research, as opposed to the equation according to which social is rational, is intended to question the consent surrounding the very idea of reason & to disclose its fideistic valences. Outlined is Pareto's fear that modern Western societies will end up denying any value to that very subjectivity for the safeguard of which they had been constructed. In fact, the excessive rationalization sought by entrusting the state, through an overwhelming bureaucratization with the widespread organization of social life, was considered by Pareto as prejudicial to each individual's freedom & damaging to the collective welfare. Manza, Jeff (Dept Sociology U California, Berkeley 94720), **Classes, Status Groups, and Social Closure: A Critique of Neo-Weberian Social Theory,** *Current Perspectives in Social Theory*, 1992, 12, 275-302.

¶ A general critique of neo-Weberian closure theory focuses on class & stratification in contemporary capitalist societies. It is argued that closure theorists, eg, Randall Collins & Anthony Giddens, have made the most significant contributions to the development of a nonreductive, general theory of social stratification. Closure theory can potentially provide a single language for theorizing & comprehending the multiple forms of inequality in the modern world, as well as facilitate the understanding of how status groups & social classes are formed. The origins of closure theory are traced to Max Weber's *Economy and Society* (Berkeley: U of California Press, 1978 [1922]), & an attempt is made to clarify the significance of the convergence of Weberian & Marxian themes in the neo-Weberian closure model, & to point out limitations to closure theory. 113 References. Müller, Hans-Peter (Instit Soziologie U Heidelberg, D-6900 1 Federal Republic Germany), **Durkheims Vision einer "gerechten" Gesellschaft** (Durkheim's Vision of a "Just" Society), *Zeitschrift für Rechtssoziologie*, 1992, 13, 1, June, 16-43. (GER)

¶ It is paradoxical that classical & contemporary sociology contribute little to the modern debate on justice, although inequities & injustices gave rise to sociology & continue to inspire major areas of research today. Emile Durkheim's *Le Socialisme* ([Socialism] see SA 7:1/5228) & other works are a notable exception to this trend. His approach involves a study of morals to foster a just order. His structural method is superior to normative or institutional attempts at moral philosophy examining socioeconomic development, institutional infrastructure, & social moral consciousness. A just society represents a complex balance between social structure, the institutional system, & collective representations. Durkheim's weaknesses are his inconsistencies & vagueness. It is concluded that in a complex, differentiated society, autonomous spheres of justice with their own rules restrict the convertibility of values & resources. 68 References. Murphy, John W. (U Miami, Coral Gables FL 33124-2080), **Reason, Bounded Rationality, and the *Lebenswelt*: Socially Sensitive Decision Making,** *The American Journal of Economics and Sociology*, 1992, 51, 3, July, 293-304.

¶ Herbert Simon introduced the concept of "bounded rationality" to provide a socially sensitive perspective on decision making. However, since he has not abandoned the assumption of perfect rationality, Simon has simply recognized that persons have limited cognitive abilities, & thus are incapable of acting in a perfectly rational manner. Here, an attempt

is made to illustrate how Simon's position can be deepened, drawing on the work of modern writers. It is suggested that decision making can be made socially sensitive by understanding facts & reason to originate from the *Lebenswelt*. Adapted from the source document.

93Z4176

Myers, Robert J., The Good Society Redux, UM *Society*, 1992, 29, 4(198), May-June, 70-73.

¶ A review essay on a book by Robert N. Bellah et al, *The Good Society* (New York: Alfred A. Knopf, 1991 [see listing in IRPS No. 66]). Some of the main difficulties in this book lie with its proposed bleak dichotomy between the individual's autonomy & the institutions of society. It is claimed that too much individual freedom endangers the common good, & therefore the social collective should take precedence. It is suggested that the arguments are based less on research & more on preference of outcomes. Despite its limitations, the vision of hope presented & contribution to public discourse on bettering life are commended. I. Shagrir

93Z4177

Nowotny, Helga (Instit Theory & Social Studies Science U Vienna, A-1090 Austria (Tel: 43-222-402-7601-14; e-mail: a6111dab@awiunil1.bitnet]), **Time and Social Theory: Towards a Social Theory of Time,** *Time & Society*, 1992, 1, 3, Sept, 421-454.

¶ Fundamental issues raised for social theory by the concept of "social time" are discussed, investigating how the concept is delineated from other discipline-embedded ones. Further, the concept of social time is explored through the work of major social theorists, eg, George Herbert Mead, Norbert Elias, Anthony Giddens, & Niklas Luhmann. The link or lack thereof to human agency is considered crucial. Also examined are the numerous empirical contributions to the study of time that cover a wide variety of subfields of social research. Potential for time studies in the social sciences is also assessed. 118 References. Adapted from the source document.

O'Malley, Michael (Vassar Coll, Poughkeepsie NY 12601), **Standard Time, Narrative Film and American Progressive Politics,** *Time & Society*, 1992, 1, 2, May, 193-206.

¶ Focusing on the "modernist" decades between the US Civil war & WWI, it is shown that such diverse products as the railroads, stopwatches, & narrative films facilitated the imposition of socially sanctioned mechanical standards of time on individual lives, labor practices, & people's private but shareable imagination. The establishment of standard time zones in the US in 1883 furthered the process by which objective time or clock time infiltrated everyday life. It is argued that, because of Woodrow Wilson's progressive politics, the subjective time of ordinary experience rooted in nature was replaced by an objective time based on efficiency & mechanical or clock time. 24 References. Omae, Atsumi, Transliterated title not available ("Counterculture" in Bourdieu's Theory of Practice–Through Comparison with Willis's Study of "Lads"), *Soshioroji*, 1992, 36, 3, Feb, 37-52. (JPN)

¶ Similarities & differences between the research frameworks of Pierre Bourdieu & Paul Willis are discussed, seeking practical applications for Japan. Willis (eg, see *Learning to Labour: How Working Class Kids Get Working Class Jobs*, Saxon House, 1985) promoted a notion of cultural production that stressed the activities of "lads" who exercised "partial penetration." Though he rejected comparisons of his model of determinism with that of Bourdieu, it is argued here that the latter's was far from a deterministic model itself, as it was based on a notion of practice that explained the activities of social agents in temporal as opposed to chronological time. Furthermore, though Bourdieu never discussed praxis, Willis developed an analysis of praxis linked with resistance. His argument is contradictory, however, because he failed to consider the paradox of dominated people; Bourdieu overcame this paradox, creating a counterculture by which to analyze the alternative opposition between resistance & submission. 29 References. Petric, Nedjeljka (Faculty Technology U Split, 58000 Croatia), **Application of the Thermodynamic Theory to Social Events,** UM *International Review of Modern Sociology*, 1991, 21, 1, spring, 121-129.

¶ A demonstration of how the thermodynamics of open systems can be applied to social development & events. Interpreting entropy to mean individual freedom or human potential, a thermodynamics perspective of society suggests that higher energy potential is achieved when individuals have greater freedom; ie, open, less ordered societies have greater entropy & human potential than are found in directed, more ordered societies. Societies naturally seek an entropic equilibrium, a balance of ideas. Equilibrium occurs through idea transfer & is best achieved through conversation & coordination, a reversible process, rather than through strong-arm tactics, an irreversible process. 4 References. Rossi, Pietro & Scamuzzi, Sergio, Simmel Colloquium (Turin, 2-3 October 1991), *Simmel Newsletter*, 1991, 1, 2, winter, 77-79.

¶ A report on an Italian-German conference entitled "Simmel between Philosophy and the Social Sciences," 2-3 Oct 1991, sponsored by the U of Turin & the Goethe Instit. The participants sought to reevaluate Georg Simmel's works by integrating their philosophical & sociological aspects. Topics discussed include: early influences in Simmel's thought, including positivism & Kantianism; his period of maturity; ambiguities in Simmel's relations to the sources of his thought; the notion that ambivalence is the key to Simmel's sociology of the social relationship; & Simmel's way of handling ambiguity, which reflects his general method, in which theory & method are based on analytical concepts, not on naturalistic realism. M. Meeks

93Z4183

Schefold, Bertram (FB Volkswirtschaftslehre Johann Wolfgang Goethe U, D-6000 Frankfurt Federal Republic Germany), **Normative Integration der Einzeldisziplinen in gesellschaftstheoretischer Fragestellung** (The Normative Integration of Individual Disciplines in the Formation of Social Theory Questions), *Protosoziologie*, 1992, 3, July, 90-103. (GER)

¶ Individual social science subdisciplines seem to be divided as though they were concerned with altogether different, unrelated topics, but they in fact share many common questions to which they seek answers. In the late 1800s, proponents of the historical method–eg, G. Schmoller (*Umrisse und Untersuchungen zu Verfassungs-, Verwaltungs- und Wirtschaftsgeschichte besonders des preussischen Staates im 17. und 18. Jh.* [Outlines and Studies for a Governmental, Managerial, and Economic History of the Prussian State in the Seventeenth and Eighteenth Centuries] Leipzig, 1898)–sought to combine various techniques to form an integrated framework. Analysis shows that: individual psychology provides a link between social behavior & economic interests; an intuitive method facilitates analogies among various manifestations of national lifestyle; & coherent ethical norms must exist for individual behavior, social integration, & economic cooperation. Schmoller treated ethics as a unifying principle of social & economic investigation, proceeding from

the unifying power of German culture during the classical period. Implications are noted for modern interdisciplinary studies. Adapted from the source document as translated by M. Meeks.

Shotter, John (Horton Social Science Center U New Hampshire, Durham 03824-3586), **Rhetoric and Social Construction of Cognitivism,** *Theory & Psychology*, 1991, 1, 4, Nov, 495-513.

¶ Employing analytic devices recently introduced into psychology from rhetoric, cognitive psychology is criticized for: (1) reflexively failing to take into account its own rhetorical strategies in its social construction of its research tradition; (2) failing to guard against the textual creation of a set of problems, said to be real & to do with people's mental activities, but which are in fact imaginary; & (3) rendering many other important aspects of people's everyday psychological knowledge rationally-invisible. Central among the invisibilities of cognitivism is people's first-person sense of their own being. A new nontheoretical, descriptive way of talking, which provides us with a way of seeing ourselves 'in' what is said, is called for. 39 References. Adapted from the source document.

Sinclair, M. B. W. (New York Law School, 57 Worth St New York 10013), **Autopoiesis: Who Needs It?,** *Legal Studies Forum*, 1992, 16, 1, 81-102.

¶ A sociological model of law as an internally controlled, self-replicating system has recently been promulgated by Niklas Luhmann. Here, this model–called autopoiesis–is judged at best irrelevant. The logical structure of the model is examined using John von Neumann's analysis of self-replicating systems ("The General and Logical Theory of Automata," *Collected Works*, 1961, 288, 5). It is demonstrated that the model can add nothing to our understanding of statutory or common law. Also examined are Luhmann's claims for the autopoietic model as an explanation of "negentropy" & evolution in legal systems; they are shown to be irrelevant. A brief discussion of theory selection in law is provided. Modified AA

93Z4187

Sloboda, Marcel (Faculty Philosophy Comenius U, CS-81806 Bratislava Czechoslovakia), **Spoločenská skupina ako teoreticko-metodologický problém** (A Society Group as a Problem of Theory and Methodology), *Sociológia*, 1991, 23, 3, 189-199. (SLO)

¶ Definitions are presented for key theoretical & methodological terms in the study of a "society group." The actions of an individual should not be described only in terms of society, culture, & the person, but should take into account other factors, filters, & stimuli affecting the person. Here, social groups are defined in a broader sense than societal groups. A society group cannot act without a certain basis of knowledge mediating the communication process; some groups create their own information system, including specialized institutions or symbol systems. Society groups are argued to be a key component of civil society. 8 References. Adapted from the source document.

Smelser, Neil J. (U California, Berkeley 94720), **The Rational Choice Perspective: A Theoretical Assessment,** *Rationality and Society*, 1992, 4, 4, Oct, 381-410.

Comments, 411-469.

¶ A theoretical assessment of the rational choice (RC) perspective offers: a specification of the historical contexts from which the RC paradigm in economics emerged; an overview of basic theoretical tenets of RC theory; a review of the major theoretical criticisms of the RC perspective; an identification of the major responses by economists to the criticism; & an assessment of several trends in RC theory, which suggests that it, like Marxism & functional analysis, has experienced a kind of theoretical degeneration. In **On the Need to Make a Better Job of Justifying Rational Choice Theory,** Mary K. Farmer (U of Sussex, Falmer Brighton BN1 9RH England) argues that the power of RC theory resides in its ontological realism, rather than in its ability to produce analytically simple theories & models that generate clear empirical predictions. In **We Are Smarter Than We Think,** Gudmund Hernes (Norwegian Royal Ministry of Education, Research, & Ecclestiastical Affairs) draws on Max Weber's analysis of the development of capitalism & Karl Marx's depiction of learning-by-doing to argue that RC theory is not a conceptual system to be verified, but a family of sometimes-true theories that are applicable in certain situations. In **Rationality and Formal Theory,** Thomas J. Fararo (U of Pittsburgh, Pa) examines the function of formal theoretical principles in science & the role of optimization arguments in social theory via an analysis of Smelser's arguments that, in RC theory, maximization & rational calculation should be treated as variables rather than postulates, & that RC theory is degenerating into a nonfalsifiable doctrine. In **Rational Choice and the Limits of Theoretical Generality,** James B. Rule (State U of New York, Stony Brook) argues that no theory based on any single genre of social processes can serve the full range of descriptive or explanatory purposes addressed by sociologists, & that RC theory misleads when its proponents insist on invoking rational calculation to explain outcomes where other social processes are more crucial. 110 References. Stagl, Justin (Instit Kultursoziologie U Salzburg, A-5020 Austria), **Review Essay: Max Weber in Cambridge,** *Soziologische Revue*, 1992, 15, 3, July, 231-235.

¶ A review essay on a book by Jack Goody, *Die Logik der Schrift und die Organisation von Gesellschaft* ([The Logic of Writing and the Organization of Society] Frankfurt am Main: Suhrkamp, 1990 [1980] [see listing in IRPS No. 66]) Goody's purpose is not to provide a new interpretation of Max Weber; rather, he seeks to blend elements of ethnology, sociology, & history to investigate the significance of the development of a writing system. His basic thesis is that writing serves to make explicit what was originally intrinsic. Criticisms that Goody views writing as a culturally invariant technology are incorrect. Goody gives special attention to his express disavowal of deterministic explanations in the preface. Also discussed are conceptual difficulties that German-speaking sociologists might have with the Anglo-Saxon orientation of Goody. M. Meeks

93Z4191

Stauth, Georg & Turner, Bryan S. (National U Singapore, 0511 Singapore), **Ludwig Klages (1872-1956) and the Origins of Critical Theory,** *Theory, Culture & Society*, 1992, 9, 3, Aug, 45-63.

¶ The influence of Ludwig Klages on critical theory, specifically on the works of Theodor Adorno, is examined with the intent to modify conventional wisdom about critical theory, originating purely from rationalist traditions. Klages, who took part in the inner circle around Stefan George in the days of Schwabing, was an influential philosopher, psychologist, & writer in pre-WWII Germany. Basic assumptions of Adorno's philosophy of modern self-identification & knowledge construc-

tion are confronted with Klages's theory of human forms of nature perception. Furthermore, Klages's theme of modern forms of authentication being based on myths of prehistorical times is a recurrent theme in Max Horkheimer's & Adorno's *Dialect of Enlightenment* (London: Verso, 1979). It is concluded that Klages's insights have much to contribute, not only to the understanding of the roots of critical theory, but also to current debates on authentication, self-constitution, human-nature relations, & related ecological issues. 59 References. AA

93Z4192

Šter, Jože, Kaj je najvrednejše (The Most Valuable Thing), *Anthropos*, 1992, 24, 1-2, 52-67. (SLV)

¶ If values are determined by a person's objective needs, then the question of the highest value is that of the most important need. However, no matter which values are selected to be the highest, they eventually become antivalues. No such thing as a single highest value exists; different situations produce different highest values. Any value can be declared an absolute in terms of content, quantity, duration, or intensity. Key absolutes include biologism, psychologism, totalitarianism, individualism, & the mythology of labor. Each absolute is conducive to self-negation, leading to the ruin rather than the construction of human identity. Absolutes may have a sociological, psychological, or theoretical origin. 3 Figures, 5 References. Adapted from the source document as translated by M. Meeks.

93Z4193

Šter, Jože, Kaj je vrednota (What Is of Value), *Anthropos*, 1991, 23, 6, 167-184. (SLV)

¶ A philosophical discussion on the category of value, a special type of relationship between a subject & an object. If this relationship is primarily based on willful emotion, then we succumb to irrational anarchy. Although it seems obvious that pain, misfortune, & damage are not valued, we cannot say on the other hand that all happiness, profit, enjoyment, & pleasure are valuable. If values are purely subjective, this would imply their ultimate abolition; on the other hand, if they are absolute, then we would be deprived of true moral freedom. It is concluded that values are linked to things capable of satisfying our objective needs, but sometimes they are tied to things that are adverse or impossible. 5 Figures. Adapted from the source document.

Strydom, Piet (University Coll, Cork Ireland), **The Ontogenetic Fallacy: The Immanent Critique of Habermas's Developmental Logical Theory of Evolution**, *Theory, Culture & Society*, 1992, 9, 3, Aug, 65-93.

¶ Against the background of the problem of the relation between development & evolution, attention is focused on the developmental model that informs the theory of evolution put forward by the leading critical theorist, Jürgen Habermas. A range of related ideas stemming from recent publications by the younger generation of critical theorists is examined, which are interpreted as together forming a critique of Habermas's basic assumptions. Since the late 1970s, a theoretical development has taken place in the work of such writers as Thomas McCarthy, Johann Arnason, Axel Honneth, Hans Joas, Gunter Frankenberg, Ulrich Rödel & Klaus Eder, involving not merely the progressive identification of the ontogenetic nature of Habermas's developmental model, together with some of its inherent limitations, but actually culminating by the end of the 1980s in the exposure of its deeply problematic character. The ontogenetic fallacy refers to the unacceptable outcome of the attempt to apply a theoretical strategy deriving from genetic psychology within the context of social theory to the phenomenon of society. It not only forecloses the possibility of dealing adequately with cultural & social change through supraindividual learning processes, but also leads to the adoption of a linear, universal historical theory of the evolution of societies that manifests itself in untenable causal assumptions, schematizations, classifications, & ideological implications. In Habermas's subsequent publications, various indications of his willingness to acknowledge the critique & to accommodate its major points are apparent. 50 References. AA

Tschannen, Oliver (Instit Sociologie, Pierre-a-Mazel 7 CH-2000 Neuchatel Switzerland), **La Genèse de l'approche moderne de la sécularisation: une analyse en histoire de la sociologie** (The Genesis of the Modern Approach of Secularization: An Analysis in the History of Sociology), *Social Compass*, 1992, 39, 2, June, 291-308. (FRE)

¶ The historical origins of a variety of secularization theories are discussed, ranging from Auguste Comte's version to those gaining popularity during the 1960s & 1970s. Although these theories underwent a series of complex changes over time, four main trends are noted: (1) the term secularization, originally used descriptively, has been given a more formal definition & inserted into a theoretical framework; (2) secularization theory emphasizes current issues as opposed to historical topics; (3) the strong position statement of secularization has been abandoned in favor of a weaker version that asserts religion's lesser influence in today's society; & (4) the range of formerly one-dimensional, mutually exclusive approaches have been combined into one integrated, multidimensional approach. Religion has become secularized in the sense that it has lost its sacredness, but also in the sense that it has penetrated the world in a secular guise. 83 References. Turner, Jonathan H., Simmel and Weber on Money, Exchange, and Structural Differentiation, *Simmel Newsletter*, 1991, 1, 2, winter,

80-89.

¶ A contrastive analysis is presented of Georg Simmel's *Philosophie des Geldes* ([Philosophy of Money] see SA 8:1/606923) & Max Weber's *Economy and Society* (Totowa, NJ: Bedminister, 1968). While both thinkers proceeded from Kantian positions to very different general directions, similarities did appear in their analyses of money, exchange, & social differentiation. Moreover, *Philosophie des Geldes* was the first work Weber read after his nervous breakdown. Although Weber criticized Simmel's ontology & epistemology, he was undoubtedly affected by Simmel's economic analyses. Simmel was more nearly correct in predicting an increase in personal freedom, the number & length of social ties, the rates of interaction, sources of extrinsic value, & the rates of alienation & anomie. 2 Figures, 17 References. Valsiner, Jaan (Developmental Psychology Program U North Carolina, Chapel Hill 27599), **Construction of the Mental: From the 'Cognitive Revolution' to the Study of Development,** *Theory & Psychology,* 1991, 1, 4, Nov, 477-494.

¶ Cognitivism is shown to have a very limited impact on knowledge of developmental processes by demonstrating that developmental theorizing in psychology is based on axiomatic grounds that are antithetical to those of "the cognitive revolution." Rather, cognitivism has kept investigators' attention away from the process of development, & has fortified the historically strong emphasis on the study of those psychological functions that have already developed. The question of how cognitive processes emerge, develop, & reach their full functional states has been replaced by the question of whether persons (at different age levels) can be shown to possess specific mental functions that are adaptive in specific task settings. 54 References. Van Crombrugge, Hans (Vesaliusstr 2, B-3000 Leuven Belgium), **Uw kinderen zijn uw kinderen wel. Argumenten voor het toewijzen van de pedagogische verantwoordelijkheid aan de biologische ouders** (The Childbearing-Childrearing Connection. Arguments for the Assignment of Pedagogical Responsibility to the Biological Parents), *Comenius,* 1991, 43, fall, 302-316. (DUT)

¶ It seems only natural to those raised in Western societies that the individuals responsible for procreating a child are the ones responsible for its upbringing. A literature review is presented exploring several theories of childbearing/childrearing relationship. Analysis shows that since the Enlightenment, the assumptions justifying this relationship have been questioned. New legitimization strategies are proposed capable of standing up to modern philosophical scrutiny on both the theoretical & empirical levels. Implications for pedagogical & psychoanalytical theory are reviewed. M. Meeks

Wilkes, Kathleen V. (Saint Hilda's Coll, Oxford OX4 1DY England), **The Relationship between Scientific Psychology and Common-Sense Psychology,** *Synthese,* 1991, 89, 1, Oct, 15-34.

¶ An exploration of the relationship between commonsense psychology (CSP) & scientific psychology (SP), first examining the many differences between the aims, interests, explananda, explanantia, methodology, conceptual frameworks, & relationship to the neurosciences that divide CSP & SP. Each is valid within its own territory, & there is no competition between them because CSP has no interest in being a scientific theory. Neither CSP nor SP has the mind-body problem in its familiar form. CSP is not equipped to handle irrational or nonrational behavior, which probably should be the task of SP. It is concluded that the realm of the psychological is so heterogeneous that no single model, for either CSP or SP, is likely to succeed. 1 Figure, 30 References. Adapted from the source document.

93Z4204

Yeatman, Anna (Centre Women's Studies U Waikato, Hamilton New Zealand), **Postmodern Critical Theorising: Introduction,** *Social Analysis,* 1991, 30, Dec, 3-9.

¶ An alternative reading of postmodernism that focuses on its potential for an emancipatory politics while eschewing its nihilistic tendencies is presented. Postmodernism's rejection of reason's transcendent & universal status is discussed, as are modernist rebuttals, including Jürgen Habermas's defense of an intersubjective paradigm of communicative action. Postmodernism is exemplified by: a relinquishing of nostalgia for modernist standards of critique; the ascendancy of simulacra; the 1991 Gulf war & the US's emphasis on high-tech weapons; & the conversion of Middle East conditions into a hyperreal stage for a demonstration of Western technomilitary power. It is argued that there exists a postmodern Western imperialism that espouses Western dominance in the face of protest in the name of democratic values. The relationship between modernity & postmodernity is commented on, & it is concluded that postmodern critical theorizing represents an emancipatory politics. 3 References. W. Howard

93Z4205

Yeatman, Anna (Centre Women's Studies U Waikato, Hamilton New Zealand), **Postmodernity and Revisioning the Political,** *Social Analysis,* 1991, 30, Dec, 116-130.

¶ Applications of Jean-François Lyotard's *The Postmodern Condition* (Manchester U Press, 1984) are explored, & an outline of some of the most significant aspects of a postmodern politics is presented. Several sociopolitical developments point to the coming of a postmodern form of democracy, including: polities' loss of a bounded centricity; the construction of the polity in the form of the welfare state; the destabilization of the paternalism of the state; the rise of political pluralism; & the emergence of a form of the state which, through its culture of performativity, is actually a secretive state that makes discrete deals with corporate players & makes its business public only when interest groups or minority party representatives contest state decisions. It is argued that the performative state has a historical symbiosis with the centricity of both the classical bourgeois liberal-republican state & the welfare state. Reflections are offered on the transition from a modern to a postmodern democratic politics. 19 References. W. Howard

——, **Review Essay Symposium,** *Theory and Society,* 1992, 21, 2, Apr, 183-262.
Reply, 263-283

¶ A review symposium on a book by James S. Coleman, *The Foundations of Social Theory* (Cambridge, Mass: Belknap Press, 1990 [see listings in IRPS No. 66]). In **Simmel Systematized: James S. Coleman and the Social Forms of Purposive Action in his *Foundations of Social Theory*,** Arthur L. Stinchcombe (Northwestern U, Evanston, Ill) draws comparisons between Coleman & Georg Simmel, evaluating the usefulness of the former's model of theorizing & rational action, & criticizing him for failing to acknowledge that a collectivity is more than just an assemblage of individuals. In **Shaky Foundations: The Presuppositions and Internal Contradictions of James Coleman's *Foundations of Social Theory*,** Jeffrey C. Alexander (U of California, Los Angeles) commends Coleman's attempt to reorient "positive" social theory, but criticizes his narrow view of the individual; specific problems with his theoretical logic are addressed. In **Can Rational Choice Be a Foundation for Social Theory?** Anne Warfield Rawls (Wayne State U, Detroit, Mich) accuses Coleman of misreading classical sociological texts on theory, challenges his views on rational choice & methodological individualism as social theory, & elucidates issues surrounding the micro/macro distinction & the problem of meaning in sociology. In **The Social World as a Countinghouse: Coleman's Irrational Worldview,** Alan Sica (Pennsylvania State U, University Park) finds Coleman's project problematic in its misunderstanding of human action, avoidance of classical texts, & misguided attempt to avoid the irrational from the outset. In **The Problematics of Social Theory: Four Reviews of *Foundations of Social Theory*,** Coleman (U of Chicago, Ill) discusses the overall negativity of these reviews in terms of larger problems in the discipline--the "anarchy" plaguing sociology--& responds to each critique in turn. K. Hyatt

——, **Review Symposium,** UM *Contemporary Sociology,* 1992, 21, 4, July, 425-430.

¶ A review symposium on a book by Robert N. Bellah, Richard Madsen, William M. Sullivan, Ann Swidler, & Steven M. Tipton, *The Good Society* (New York: Alfred A. Knopf, 1991 [see listings in IRPS No. 66]). In **The Rhetoric of Thick Consensus,** Steven Lukes reveals that although the authors claim that Lockean concepts of individualism are narrowed & distorted ideology, they generally fail to substantiate the claim, & in a Weberian mold, remains unconvinced of the extent to which consensus is feasible in a democratic society. In **Why Exhortation Is Not a Strategy,** Francis Fox Piven (City U of New York, NY) ascribes to a two-part goal: to describe paradoxical developments within US institutions that proclaim individualist values while undermining them; & to provide readers with an alternative. Although succeeding at the first task, the authors fail to establish the merit & viability of their proposed reforms largely because they fail to take issues of societal power seriously. In **Paradise Lost,** Samuel Preston (U of Pennsylvania, Philadelphia) suggests that the authors' admirable intention to resurrect the philosophical social debate among John Dewey, Walter Lippmann, & Reinhold Neiburh fails because they do not: let their interviewees speak, consider adequately the ends of their proposals, or deal centrally with economics & US economy. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4208

——, **Review Symposium,** UM *Contemporary Sociology,* 1992, 21, 4, July, 430-435.

¶ A review symposium on a book edited by Alan Wolfe, *America at Century's End* (Berkeley: U of California Press, 1991 [see listings in IRPS No. 66]). In **Is the American Dream Over?,** Anthony Giddens (Cambridge U, England), finding that the unusual quality of the overall work resides in its compelling sociological vignettes, picks out a few for special mention while identifying some of the work's general themes, showing, eg, how Judith Stacey & Kathleen Gerson insightfully portray the importance of everyday experiences in all their complexity. Modern society, likewise, must be understood in all its various forms as the book so tellingly reveals. In **You Can't Go Home Again,** James B. Rule (State U of New York, Stony Brook) provides a more structural critique, suggesting that some problematic choices were made in scope & coverage, though he finds that the book bridges the gulf between social science & journalism, providing a "relevant, factual basis for informed public debate." 93Z4209

Cepl, Vojtech, Retribution and Restitution in Czechoslovakia, UM *Archives Européennes de Sociologie,* 1992, 33, 1, 202-214.

¶ Examined are legal strategies for dealing with the current practice of lustration in Czechoslovakia, ie, the examination of secret police records to determine whether officials of the current noncommunist government had been informants for the Communist party. A brief history of lustration is given, & reasons why it is a problematic remedy for dealing with former informants are offered. It is argued that lustration should be suspended until it is systematized & redefined, & that it should include procedures to allow accused informers to explain accusatory information in a hearing. The Federal Assembly's lustration law, passed on 4 Oct 1991, is examined, & its legal framework is reviewed. It is concluded that legislating restitution will not achieve justice retroactively; what is needed is a restitution program that will facilitate the societal changes necessary for Czechoslovakia's further democratic & economic development. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Clarke, Aidan (Trinity Coll, Dublin 2 Republic Ireland), **Alternative Allegiances in Early Modern Ireland,** *Journal of Historical Sociology,* 1992, 5, 3, Sept, 253-266.

¶ It is suggested that allegiance in early modern Ireland was complicated by conquest & religious difference & fragmented by the diversity of a colonial community made up of settlers from different periods & different places, professing different religions, & competing for influence. Notoriously, it was the more recent English Protestant settlers who prevailed. The evolving character of Catholic allegiance was shaped by the growing need to contain English influence through the protection afforded by a common crown whose authority in Ireland was independent of its authority in England. The sense of being joined with England, but separate from its political processes, was transmitted to the Protestant colonists & provided the ingredients of the colonial patriotism of the eighteenth-century ascendancy. Drouvot, Hubert (U Grenoble II, F-38040 Cedex France), **Développement technologique et protectionnisme au Brésil** (Technological Development and Protectionism in Brazil), UM *Sociologie du Travail,* 1992, 34, 2, 153-170. (FRE)

¶ The implementation of trade barriers against foreign-made computer products & other industrial imports has had mixed results in Brazil. On the one hand, protectionist strategies encourage the development of domestic production, especially in growing industries; Brazil has experienced a massive influx of foreign capital resulting in very diversified industries. On the other, the presence of foreign investments in highly dynamic industrial sectors inhibits the development of scientific & technological potential within the country. Brazil cannot compete on the international market unless technologically intensive, cooperative business ventures are arranged to let the country gain parity with other leaders in computer technology. 93Z4212

Hawley, Amos H. (U North Carolina, Chapel Hill 27514), **The Logic of Macrosociology,** UM *Annual Review of Sociology,* 1992, 18, 1-14.

¶ Though it is expedient to give individuals precedence over organizations in explaining social phenomena, individual motives & behaviors, summed together, cannot account for the spectrum of human social relations. On the contrary, all social problems can be traced to organizational malfunction or nonfunction, indicating the primacy of organization over the individual & making implicit the importance & sensibility of the macrolevel perspective. Organizations certainly do not exist without individuals, but more crucial is the interaction of organization, population, & environment. 41 References. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4213

Himmelstein, Jerome L., Decentered America, UM *Qualitative Sociology,* 1992, 15, 1, spring, 105-110.

¶ A review essay on a book edited by Alan Wolfe, *America at Century's End* (Berkeley: U of California Press, 1991 [see listing in IRPS No. 66]). This collection of twenty-one essays by sociologists gaining prominence since the late 1970s shows that old frameworks & verities have broken down & that Americans in many walks of life are actively trying to create new lives beyond the reach of the state & market. It is argued that the US has become decentered, that each of the different spheres of US life is changing in a way quite distinct from the others. Sociologists are urged to examine the institutions of US society individually, from the bottom up. It is suggested that an appreciation for decenteredness is not an alternative to the broad effort to construct systematic theory, but rather, a complement. Ambiguity, complexity, & contradiction cannot be conceptualized without a background of possible clarity & order. Further, the theorizing & moral judgments that might help provide direction for the strivings of citizens to reconstruct their lives cannot be avoided. Above all, decentering is an inadequate notion because it is too broad & vague. S. Millett (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Hyslop, Jonathan (Dept Sociology U Witwatersrand, 2050 Johannesburg South Africa), **A Prussian Path to Apartheid? Germany as Comparative Perspective in Critical Analysis of South African Society,** *South African Sociological Review,* 1990, 3, 1, Oct, 33-55.

¶ Attempts have been made to draw parallels between the historical development of Germany & that of South Africa (SA). It is contended here that comparisons between SA apartheid society & Nazi Germany are not analytically useful, criticizing the view that in both countries a repressive social order arose out of a transformation from above, in which conservative landlords played a central role. Such a comparison arises out of a misconceived account of German history, based on a number of defective logics of explanation. The same inadequate forms of historical explanation are identified as adversely affecting contemporary SA social science & historiography, & the methodological consequences of this are explored. 45 References. Adapted from the source document.

Kalberg, Stephen (Boston U, MA 02215), **The German *Sonderweg* De-Mystified: A Sociological Biography of a Nation,** *Theory, Culture & Society*, 1992, 9, 3, Aug, 111-124.

¶ A review essay on a book by Norbert Elias, *Studien über die Deutschen* ([Studies on the Germans] Frankfurt: Suhrkamp Verlag, 1989 [see listing in IRPS No. 66]). This collection of five essays explores the last 200 years of German history, claiming that nations, like individuals, have biographies. The book offers a brilliant examination of National Socialism's military values & the way that its barbaric beliefs offered subjective meaning to a broad section of Germans. Comparisons with England & France function to isolate the uniqueness of the German state & national identity. Elias's analysis of the assimilation of the bourgeoise into the aristocracy is explored, as is the way that he connects individual conscience with the state. This skillfully rendered portrait of the German civilization pattern demystifies German militarism & lays bare the process by which terrorism undermined the Weimar Republic, which led to a crisis in state power that paved the way for the Third Reich. W. Howard

Kraus, Vered (Dept Sociology & Anthropology U Haifa, Mount Carmel IL-31999 Israel), **Industrial Transformation and Occupational Change in the Israeli Labor Force,** *Israel Social Science Research*, 1992, 7, 1-2, 1-14.

¶ Trends in the distribution of the Israeli labor force over the past three decades & the impact of changes in the industrial structure on the occupational structure are examined through analysis of data from the 1961, 1972, & 1983 Israeli censuses. The industrial structure has seen a decline in employment in the transformative & extractive sectors & a substantial increase in employment in the service sectors. Comparison of Israel's distribution of employees with that of the US, England, & Germany reveals that Israel has the highest ratio of service sectors to transformative sectors. Similar changes can be seen in Israel's occupational structure. These changes are discussed in light of Israel's weak economy & the large number of Soviet immigrants there. 5 Tables, 15 References. Mukonoweshuro, Eliphas G. (Dept Political & Administrative Studies U Zimbabwe, Mount Pleasant Harare), **State "Resilience" and Chronic Political Instability in Madagascar,** *Revue canadienne des études africaines/Canadian Journal of African Studies*, 1990, 24, 3, 376-398.

¶ An examination of the recent history of economic crisis & poltical instability in Madagascar under the presidency (since 1975) of Didier Ratsiraca. The socialist revolutionary nationalization program of business & industry launched by Ratsiraca included an ideological centralization of education, research, & media. The socioeconomic crisis that followed the mismanaged program led to food shortages, endemic unemployment, an active black market, & political dissent. Major incidents of political turmoil in the 1970s & 1980s are reviewed, along with subsequent oppressive government measures. Emphasized is the role of rioting students in enhancing instability, which, combined with the strife of the poverty-stricken urban & rural population, may lead to the ousting of the current regime. Murthy, P. A. Narasimha (School International Studies Jawaharlal Nehru U, New Delhi 110067 India), **From 'Model' to 'Anomaly': Karel Wolferen's *The Enigma of Japanese Power* and Changing Western Views on Japanese Political Economy,** *Indian Journal of Social Science*, 1991, 4, 1, Jan-Mar, 119-144.

¶ In a review article on Karel van Wolferen's *The Enigma of Japanese Power: People and Politics in a Stateless Nation* (New York: Alfred A. Knopf, 1989), fluctuating Western opinions on the political economy of Japan are examined. Writings that project a favorable picture of Japan, which appeared in a certain ideological & political context & were intended to present Japan as a model of evolutionary & industrial success, are considered, along with critical views. In commenting on Wolferen's elaborate critique of Japan, it is noted that: (1) Today's global problems & Japan's own problems are both due to the incompleteness of social & economic reforms tried 1945-1948. (2) There are no absolute standards by which the Japanese bureaucracy, professional politicans, constitution, & the party system can be judged as good or bad. (3) While Western values & norms are popular in most parts of the world, this does not confer on them absoluteness & universality. Therefore, Japanese political life & behavior are proof of diversity & plurality. (4) Japan's position in the global economy is comparable to that of a runner who has won a gold medal but is being told that the victory occurred under the influence of anabolic steroids. 31 References. Peilin, Li (Instit Sociology Chinese Academy Social Sciences, 5 Jianguomennei Da Jie 5 Hao Beijing People's Republic China), **China in a Period of Social Transformation,** UI *International Social Science Journal*, 1992, 44, 3(133), Aug, 433-443.

¶ Several social transformations in the People's Republic of China are examined, including: the transformation from a self-sufficient product economy to a planned commodity economy, from an agricultural society to an industrial one, from a closed to an open society, from a homogeneous society to a heterogeneous one, & from a moral to a legal society. These changes are the results of several developments--the emergence of mass media, the rise of towns, changes in the organization of enterprises, the establishment of a socialist commodity market system, the development of private forms of ownership, & the proliferation of commodity circulation in rural areas. It is concluded that, as modernization proceeds, the transformation from a moral society to a legal one will provide the "software" for organizing & creating a new society in China. 2 Photographs. W. Howard

Prak, Maarten (Instit Geschiedenis Rijks U Utrecht, NL-3508 TC Netherlands), **Het verdeelde Europa. Bourgeoisie, commercieel kapitalisme en staatsvorming in de vroeg-moderne periode** (Fragmented Europe. The Bourgeoisie, Commercial Capitalism and State Formation in the Early Modern Period), *Amsterdams Sociologisch Tijdschrift*, 1992, 19, 1, May, 118-139. (DUT)

¶ Europe's high world position is often seen as the result of the development of the bourgeoisie, whose central role in the establishment of capitalism & the modern state made the ascendant European social structure unique. However, it is argued that capitalism & the modern state did not develop evenly or simultaneously. Early modern Europe contained two separate social systems--the commercial town & the territorial state--each with different structures & operative mechanisms that made them mutually exclusive. The towns were concentrated in a broad belt running from Italy to the North Sea & Baltic coasts, while the territorial

states were located to the west & east of the central zone of urbanization. The two systems implied different forms of political dominance & roles for the bourgeois elites. In the cities, the bourgeoisie's dominance was founded on the political autonomy of the merchant cities; in the national states, it was based on the bureaucracy. Historical empirical evidence drawn from Denmark, France, Germany, & the Netherlands supports this perspective. 69 References. Adapted from the source document.

Adams, Jane (Dept Anthropology Southern Illinois U, Carbondale 62901), **"How Can A Poor Man Live?" Resistance to Capitalist Development in Southern Illinois, 1870-1890**, *Rural History*, 1992, 3, 1, Apr, 87-110.

¶ Historical literature as well as data pertaining to Union County (Ill) from election returns, debates concerning issues published in the county newspaper, & the agricultural census are used to explore resistance to the transition to capitalism. Stimulated by construction of the Ill Central Railroad in the 1850s, capitalist development involved the creation of a class system more complex than that of early nineteenth-century agrarian society. Small- to medium-sized property owners became poor as a new, commercially-oriented elite–made up of larger growers, town-based merchants & landlords, manufacturers, & professionals–formed & sought reforms in property relations & taxation to facilitate commerce & promote commercial agriculture. Biennial votes on fencing livestock, forming townships to improve roads, & taxing dogs reveal the persistent resistance of the majority of county voters to establishing these commercial institutions, & the eventual victory of the new commercial classes. 7 Tables, 1 Figure. Hechter, Michael (U Arizona, Tucson 85721), **Rational Choice Theory and Historical Sociology**, UM *International Social Science Journal*, 1992, 44, 3(133), Aug, 367-373.

¶ Structuralism & rational choice are the two general theories most useful in historical sociology. The relationship between the two is discussed, & it is argued that they are not necessarily competitive. Rather, the path to better research in explanatory historical sociology usually lies in combining insights from each general theory. Since the structuralist concern with accounting for behavior in terms of constraints is often consistent with rational choice explanations, the fundamental difference between these two general theories lies in their units of analysis. Analyzing the individual, rather than the social relation, provides scholars with several advantages, which are shown to good effect in recent rational choice-inspired efforts to explain social change. Given these advantages, it is not surprising that many staunch critics of rational choice unwittingly rely on rational choice mechanisms in their own explanations. Although the two general theories often are complementary, rational choice theory has greater explanatory power than structuralism & thus should be preferred in historical sociology. 2 Illustrations, 22 References. Translated from French.

¶ Reflections are offered on the practice & future of historical sociology, focusing on how the historical approach conflicts with that of the philosophy of morals. Historical sociologists escape their pessimism by forecasting, along with Karl Marx, the end of history & the coming of a new type of society & individual. The philosophy of morals, on the other hand, stresses the natural freedom of the individual & postulates a voluntary contract between the individual & the state. The problem of reconstruct-

ing historical events is addressed, along with Karl Popper's contention (*The Poverty of Historicism*, 1957) that it is impossible to predict the future course of history. It is concluded that the discipline of history should be wary of history being made the new target of sociology, & that sociologists ought to approach history by first jettisoning their repressed historian complex so that the discipline's conceptual creativity can be preserved. 12 References. Kaiser, Daniel H. (Grinnell Coll, IA 50112), **Urban Household Composition in Early Modern Russia,** UM *The Journal of Interdisciplinary History*, 1992, 23, 1, summer, 39-71.

¶ Mean household size (MHS) & household type among 10 central Russian towns in the early eighteenth century are examined, based on data drawn from 12 household inventories, the first such records in Russia to include both males & females. Focus is on whether eighteenth-century Russian urban household populations corresponded to the small, simple households of early modern England, or whether they more closely resembled the perennial multiple-family peasant households of Imperial Russia. Findings reveal a MHS of about 5.7, somewhat larger than that reported for England, but much smaller than the MHS in later Russian serf households, thus undermining the hypothesis of an East European household type. Household size ranged widely, but smaller households prevailed among the tax-exempt & poorer social layers, whereas the well-off generally sustained larger households. About 50% of all households were simple, & about 33% were multiple-family, the distribution varying from city to city. Tax obligations are also compared against household size, suggesting that multiple-family households did not bring significant per capita tax relief. This result indicates that other factors played a greater role in forming households in the cities of early modern Russia. 13 Tables, 5 Figures. Modified AA

Leca, Jean (Instit études politiques, 27 rue Saint-Guillaume F-75341 Paris Cedex 07 France), **Postface: Has Historical Society Gone Back to Its Infancy? Or 'When Sociology Gave Up to History',** UM *International Social Science Journal*, 1992, 44, 3(133), Aug, 403-415.

Translated from French.

¶ Reflections are offered on the development of historical sociology, from the birth of Marxism, to Karl Mannheim's work, to contemporary debates regarding conceptual formation. Special consideration is given to the Michael Hechter-Charles Tilly debate on the utility of rational choice theory for historical sociological analysis. It is maintained that historical sociology, understood in terms of its original aims, remains a valid mode of inquiry because it offers historians the means with which to prevent the "ahistorical fetishism of theory as knowledge." A program for historical sociology is presented, & suggestions are offered for the development of models to explain how individual actions work together to produce macrotransformations. 1 Photograph, 43 References. Lepetit, Bernard (Ecole hautes études sciences sociales, F-75006 Paris France), **Urbanization in Eighteenth-Century France: A Comment,** UM *The Journal of Interdisciplinary History*, 1992, 23, 1, summer, 73-85.

¶ Comments are offered on Philip Benedict's "Was the Eighteenth Century an Era of Urbanization in France?" (see SA 39:2/91X3916), which erroneously claims that the measures of urbanization taken from data from the Instit national d'études démographiques substantially exaggerate the magnitude of urbanization. Here, it is argued that in eighteenth-century France, the level & form of urbanization was partly the outcome of ancient settlement patterns. Benedict is further criticized for restricting his study of urban change to those elements that can be measured quantitatively & in accordance with teleological models of development. W. Howard

McMichael, Philip (Cornell U, Ithaca NY 14853), **Rethinking Comparative Analysis in a Post-Developmentalist Context,** UM *International Social Science Journal*, 1992, 44, 3(133), Aug, 351-365.

¶ The development paradigm, which governs social change theories, has framed central questions in comparative historical sociology in the post-WWII period. Indeed, the enterprise of comparative macrosociology has taken the national society as the essential unit of analysis of social change. While this arose in a context of divergent developmental paths, ensuing comparative anlayses & the development paradigm were mutually reinforcing in legitimating a nation-centered approach. The attempt by world-system theory to transcend this was salutary in opening up new questions about the world-historical character of social change. However, the concept of a world system remains as fixed as that of the nation-state, as source & site of social change. One solution lies in ensuring that the categories of comparison are historical themselves, & that both nation-state & world economy are understood as fluid, historical constructs. Accordingly, the alternative method of "incorporated comparison" seeks to subordinate comparison to historical inquiry itself. It conceptualizes instances as parts of a general process &, through comparison (parts-parts, & parts-whole), constructs a relational setting of part-whole interactions, in which neither is privileged & reified. This avoids experimental procedure, which would reify "cases" as apriori units, substituting historical procedure, which contextualizes parts & whole as ongoing processes. 2 Photographs, 70 References. Nicholas, Stephen J. & Nicholas, Jacqueline M. (U New South Wales, Kensington 2033 Australia), **Male Literacy, "Deskilling," and the Industrial Revolution,** UM *The Journal of Interdisciplinary History*, 1992, 23, 1, summer, 1-18.

¶ The impact of industrialization on illiteracy & deskilling in the first half of the nineteenth century in GB is examined using lists of 7,061 English men transported to the penal colony of New South Wales, Australia, 1827-1840; data on 757 female transportees are presented for comparison purposes. The analysis reveals that: deskilling in nineteenth-century GB occurred on a massive scale; GB's industrialization process was geared toward unskilled-labor-intensive production at an early stage, factories deskilled & proletarianized the work force; & the industrial revolution, once started, did not require high literacy levels. 6 Tables, 1 Figure. Alicke, Mark D. & Doherty, Kevin (Dept Psychology Ohio U, Athens 45701-2979), **Social Disagreement and Conformity,** *Journal of Social Behavior and Personality,* 1992, 7, 1, Jan, 125-137.

¶ The conditions under which people elect to alter responses in order to conform with majority opinions were examined in 2 experimental studies conducted among undergraduate students to test the hypothesis that conformity would be greater when participants were concerned with the possible invalidation of their responses. In the first study, 152 participants watched a video of a woman confronting a moral decision & were asked: what they thought she did, with & without the expectation of feedback (postdictive); what they thought she would do (predictive); or what they thought she should do (proscriptive). Respondents then were told that most of their peers disagreed with them & were asked to repeat their responses. Conformity was greatest among those asked what they thought she did & who also anticipated feedback. In the second study (N = 176 participants) differences were found between postdictive & prescriptive judgment conditions, even when feedback was expected for both types of judgments: postdictive judgments produced greater response alteration than prescriptive judgments. 2 Tables, 17 References. Baker, Paul M. & Eaton, G. Gray (Simon Fraser U, Burnaby British Columbia V5A 1S6), **Seniority versus Age as Causes of Dominance in Social Groups,** *Small Group Research,* 1992, 23, 3, Aug, 322-343.

¶ An analysis of male dominance orders in troops of Japanese & rhesus macaques showed that social seniority was clearly more predictive of dominance than was mere chronological age. Quasiexperimental data from a sample of 40 Japanese students who were asked to play the role of a manager responsible for laying off workers also revealed that seniority was more important than chronological age in determining employee layoff rankings. Thus, seniority systems appear to be fundamental organization mechanisms in most social groups. 5 Tables, 2 Figures, 29 References. Adapted from the source document.

Mullen, Brian, Brown, Rupert & Smith, Colleen (Dept Psychology Syracuse U, NY 13210), **Ingroup Bias as a Function of Salience, Relevance, and Status: An Integration,** UM *European Journal of Social Psychology,* 1992, 22, 2, Mar-Apr, 103-122.

¶ The impact of salience, relevance, & status on ingroup bias is examined through review of the results of 137 tests (with 5,746 Ss) of such bias reported in social-psychology journals spanning 15 years. The ingroup bias effect was found to be highly significant, though of moderate magnitude. It was significantly stronger when the ingroup was more salient. Ingroup bias was decreased by status in real groups & increased by status in artificial groups. Higher-status groups displayed more ingroup bias on more relevant attributes, & lower-status groups more bias on less relevant attributes. 1 Table, 73 References. Adapted from the source document.

Suleiman, Ramzi & Rapoport, Amnon (Coll Business & Public Administration U Arizona, Tucson 85721), **Provision of Step-Level Public Goods with Continuous Contribution,** *Journal of Behavioral Decision Making,* 1992, 5, 2, Apr-June, 133-153.

¶ Modeling social choices with the N-person prisoner's dilemma has been challenged by social scientists, but a comprehensive alternative model is needed. A step in this direction, proposed by A. J. C. van de Kragt, J. M. Orbell, & R. M. Dawes ("The Minimal Contributing Set as a Solution to Public Goods Problems," *American Political Science Review,* 1983, 77, 112-122), which modeled voluntary contributions to the provision of pure goods, is problematic in that each player had to decide between contributing all or none of his/her income. How a step-level public goods model based on partial & continuous contributions fills this void is suggested. The model is mathematically explicated, & hypothetical situations are presented. Results of a test of the model using data obtained in an experiment involving 60 students at the U of Haifa, Israel, indicate that individuals contribute more to the public good as the provision threshold increases (to a maximum efficiency level), although at differing rates. Implications of these findings are discussed. 10 Charts, 30 References. M. Maguire

Verdi, Anthony F. & Wheelan, Susan A. (Dept Physical Medicine & Rehabilitation Mount Sinai Hospital, Philadelphia PA), **Developmental Patterns in Same-Sex and Mixed-Sex Groups,** *Small Group Research,* 1992, 23, 3, Aug, 356-378.

¶ Audiotapes of group sessions at a group relations conference held in 1988 were analyzed to investigate developmental patterns in all-male (M), all-female (F), & mixed-sex groups. Specific focus was on whether there were proportional differences in the types of verbal statements made & whether these proportions changed over time. A repeated-measures analysis of variance revealed no significant differences between the all-M & all-F groups. Developmental patterns were the same in both groups. The verbal behavior of Ms & Fs did not differ in the mixed-sex groups, but did change with the size of the group. The identified patterns of development in the same-sex groups corresponded well to those found in previous research on group developmental patterns, though size of group did alter these patterns to some extent. 4 Tables, 1 Figure, 70 References. Berger, Iris (State U New York, Albany 12222), **Categories and Contexts: Reflections on the Politics of Identity in South Africa,** UM *Feminist Studies,* 1992, 18, 2, summer, 284-294.

¶ An examination of how best to understand & interpret the historical relationships among race, class, & gender. While agreeing with postmodernist critics that such categories are inherently unstable, it is argued that this fluidity does not undermine the personal & political importance of particular identities at given points in time. The potential determinism in implying that ascriptive identities automatically determine people's behavior & attitudes is considered, suggesting instead the relevance of Claude Lévi-Strauss's notion of *bricolage* as a metaphor for how individual identity is constructed. It is observed that the emphasis on relationships among categories may distort the dominance of particular aspects of identity. These issues are illustrated & explored through a case study of the changing conceptualizations of gender among working-class women in South Africa, 1930s-present, arguing that in the 1930s & early 1940s gender was incorporated into the language of class, while in the late 1940s & 1950s, nationalism tended to dominate discussions of gender. Only more recently has gender become an autonomous topic of discussion. Relationships between identity, popular movements, & power are explored. Bishop, Sandra J. & Rothbaum, Fred (c/o Rothbaum–Dept Child Study Tufts U, Medford MA 02155), **Parents' Acceptance of Control Needs and Preschoolers' Social Behaviour: A Longitudinal Study,** UM *Canadian Journal of Behavioural Science/Revue canadienne des sciences du comportement,* 1992, 24, 2, Apr, 171-185.

¶ A longitudinal study found a strong correlation between maternal acceptance of a child's control needs at age 2 & that child's ability to adapt socially at age 5. Videotaped home interactions between parents & 2-year-olds (N = 22) were used to see themselves as: competent, understanding contingencies, having choice, & being worthy of respect. Home visits were conducted to assess the child's social behavior at ages 2 & 5. The results support theories linking maternal acceptance of control needs with the development of children's adaptive social behavior. Consistent with previous parent-child interaction results, the effects are greater longitudinally than concurrently. 1 Table, 59 References. Brown, Susan Love (Dept Anthropology U California San Diego, La Jolla 92093), **Breaking the Habits of the Heart,** *Critical Review,* 1991, 5, 3, summer, 379-397.

¶ In *Habits of the Heart* (New York: Harper & Row, 1986) Robert W Bellah et al assert that American individualism may have grown "cancerous." It is argued here that, because they come to their research with an anti-individualistic bias in place, the authors fail to acknowledge the role of either recent historical events or influences other than individualistic ideas in shaping American culture. An alternative explanation for the emergence of the isolated self & the incoherence of moral discourse in American life is presented that identifies both these phenomena as temporary responses to a shift in American character. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4250

Brückner, Margrit, Besetzte und unbesetzte weibliche Räume (Occupied and Unoccupied Female Spaces), *Journal für Sozialforschung,* 1991, 31, 4, 417-428. (GER)

¶ Women's feelings about acceptable levels of physical intimacy & contact are closely tied to their body image & the social roles they are called to fulfill. In the course of daily life, women let others come into contact with their body in many ways, not always maintaining full control. To examine cases where there is an excessive loss of control, interview data were obtained from 12 physically abused German women. A detailed hermeneutical analysis of their narratives shows that the decision to seek assistance at a women's shelter represents the first step toward gaining a stronger sense of self & ultimately developing more stable, positive relationships. The recovery of a healthy sense of self is closely tied to socially & psychologically established spatial boundaries with home & family. 23 References. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Caccamo, Rita, Il ruolo del ricordo nell'immagine di sé: alcune esperienze di singles (The Role of Memories in the Image of the Self: Some Experiences of Singles), UM *La Critica Sociologica*, 1991, 99, Oct-Dec, 15-29. (ITA)

¶ To investigate how memory permits people to reconstruct a diachronic map of significant personal situations & produce a positive or negative synchronic self-image, interview data were obtained from single Italians (N not provided) ages 30-50 living in large cities. Analysis reveals a change in mentality from the idealistic expectations of the 1960s to the crises of the 1970s & 1980s. The complex interaction between the public & private spheres becomes evident. Men & women have different ways of remembering. Singles see the great amount of time spent alone as an opportunity for meditation. In the process of remembering, people tend to restructure their lives in terms of a drama or novel. Implications for the relationship among subjective truth, narrative fiction, & the representativity of autobiographical testimony are discussed. The intertextual analysis of general narrative categories is needed during the change from oral to written communication. Adapted from the source document.

Chung, Leeva C. (California State U, Fullerton 92634), **Ethnic Identity: A Book Review Essay**, *International Journal of Intercultural Relations*, 1991, 15, 4, 491-500.

¶ A review essay on four books by: Richard D. Alba, *Ethnic Identity: The Transformation of White America* (New Haven, Conn: Yale U Press, 1990); Eugeen E. Roosens, *Creating Ethnicity: The Process of Ethnogenesis* (Newbury Park, Calif: Sage Publications, 1989); Dorita Sewell, *Knowing People: A Mexican-American Community's Conception of a Person* (New York: AMS Press, 1989); & Mary C. Waters, *Ethnic Options: Choosing Identities in America* (Berkeley, Calif: U of California Press, 1990 {see listings in IRPS No. 66}). Alba presents a sociological study of Anglo ethnic identity, based in part on survey data from 524 Anglo-Americans in NY, & examines four factors contributing to the salience of ethnicity: (1) variations in individual conceptions of ethnic identity; (2) variations in individual ethnic experiences; (3) individual family histories; & (4) strength of ethnic social structures. The erosion of the structural basis of ethnicity among Americans with European ancestries is discussed. In the Waters book, data from 50 in-depth interviews with Anglo-Americans living in suburban communities provide the framework for discussion of symbolic ethnicity & voluntary display of ethnicity. It is concluded that individuals make choices about the display of ethnicity based on desires for individuality & conformity to a community. Sewell examines Mexican ethnic identity from a social field perspective, & discusses cultural patterns of obligatory behavior as the basis for ethnic identity. Roosens presents an ethnographic study of various groups of Indians in Canada & South America, exploring ethnic identity as a mechanism that contributes to the content of self-perceptions & helps individuals define who they are. Clayton, Susan D. (Dept Psychology Coll Wooster, OH 44691), **The Experience of Injustice: Some Characteristics and Correlates**, *Social Justice Research*, 1992, 5, 1, Mar, 71-91.

¶ To address the situational factors related to the experience of injustice, G. Mikula's Austrian study ("The Experience of Injustice" in Bierhoff, H. W., Cohen, R. L., & Greenberg, J. (Eds), *Justice in Social Relations*, New York: Plenum Press, 1986, 103-123) was replicated & extended with 21 US undergraduates who described 3 "unfair" situations, categorized by setting, status differentiation, & type of injustice. In a second study, 64 undergraduates completed the Belief in a Just World (BJW) scale & the Internal-External Locus of Control scale, & each responded to 3 types of unjust situations from the first study, varied by 3 different types of motives. Thoughts, attributions, & behaviors were captured in the responses; in 66% of the situations, the most common behavior was to do nothing. Both situational & individual characteristics affected responses to injustice, though not in consistent ways. Situational variables affected thought & attributional responses, but not behavioral responses. Attributions of injustice varied by gender & locus of control score when the motivation was manipulated. Discriminant analyses show that the BJW score & sex were significant predictors of the injustice ratings given to the situations, with women rating the situations higher than men, & high BJW scores associated with lower ratings of injustice. 5 Tables, 24 References. Adapted from the source document.

Côté, James E. & Levine, Charles G. (Dept Sociology U Western Ontario, London N6A 5C2), **The Genesis of the Humanistic Academic: A Second Test of Erikson's Theory of Ego Identity Formation**, UM *Youth and Society*, 1992, 23, 4, June, 387-410.

¶ The neopsychoanalytic perspective of Erik H. Erikson (eg, see *Identity: Youth and Crisis*, New York: Horton, 1968) was used to analyze questionnaire data obtained from 623 university students in an attempt to determine what developmental factors might lead someone to undertake a career in a humanistic academic discipline, as opposed to technological one. Conceptualizing the academic role as the metaphoric equivalent of the clerical role, it was hypothesized that humanistic academics as a group are distinctive in their tendency to have experienced an intensive primary socialization into a religious mode of thought & seriously considered becoming clerics. It was further hypothesized that many then engaged in an intense personal struggle during which they questioned beliefs associated with this primary socialization, replaced them with secular beliefs of equivalent moral "potency," & sought out academia as a forum in which to "preach" about their secular beliefs. Considerable support was found for these hypotheses. 3 Tables, 28 References. Modified AA

Douthitt, Robin A., MacDonald, Maurice & Mullis, Randolph (Dept Consumer Science U Wisconsin, Madison 53706), **The Relationship between Measures of Subjective and Economic Well-Being: A New Look,** *Social Indicators Research,* 1992, 26, 4, June, 407-422.

¶ Data obtained via telephone interviews & expense diaries from 765 US families are used to assess the importance of variable specification in examining the relationship between objective, economic well-being & subjective, psychological well-being. Results indicate that: (1) careful specification of economic variables can increase the explained variance of perceived well-being, (2) specification of dependent variables proves superior to posing open-ended questions; (3) economic variables prove significant in explaining both perceived economic & noneconomic domains of life satisfaction; & (4) increased family size enhances noneconomic life satisfaction, while detracting from economic aspects of life satisfaction. 4 Tables, 1 Appendix, 25 References. Adapted from the source document.

Eisenman, Russell (Dept Psychology McNeese State U, Lake Charles LA 70609-1895), **Creativity, Social and Political Attitudes, and Liking or Disliking David Duke,** *The Bulletin of the Psychonomic Society,* 1992, 30, 1, Jan, 19-22.

¶ Questionnaires including measures of creativity (complexity-simplicity preferences) & of social & political attitudes were completed by 52 La university students about a month before the US Senate election, focusing on their reasons for liking or disliking candidate David Duke, a former leader of the Ku Klux Klan & Nazi sympathizer. The creativity measure was significantly related to liking or disliking Duke: liking Duke was associated with preference for simplicity, which suggests low creativity. Although students showed preferences for some of the social & political variables, these were not related to attitudes toward Duke. The procedures used accurately predicted that Duke would do well in the campaign & receive 50+% of the white vote; this is in stark contrast with the predictions of political pollsters & experts who seriously underestimated his strength. 21 References. Feather, N. T. (School Social Sciences Flinders U South Australia, Adelaide 5001), **Attitudes towards the High Achiever: Effects of Perceiver's Own Level of Competence,** *Australian Journal of Psychology,* 1991, 43, 3, Dec, 121-124.

¶ Attitudes toward peers who are conspicuously successful ("tall poppies"), & reactions when a tall poppy falls, were investigated in a sample of 105 eleventh-grade students in South Australia who answered a questionnaire, a modified version of the Rosenberg self-esteem scale, & questions about their own class standing; teachers' ratings of class achievement were also obtained, & students also provided their reactions to Ben Johnson's loss of the gold medal at the 1988 Seoul, South Korea, Olympics shortly after this event occurred. Results showed that students with low global self-esteem & low perceived self-competence were more likely to favor the fall of tall poppies & less likely to favor rewarding tall poppies compared to their peers with high global self-esteem/perceived self-competence. Students with low global self-esteem, however, were more likely to show sympathy for Ben Johnson (a fallen tall poppy) than were students with high global self-esteem, although Ss in general disapproved of the athlete's transgression. Results are related to theories concerned with similarity/attraction, self-categorization, & social comparison, & offer insight into the emotions of envy & sympathy. 2 Tables, 18 References. Adapted from the source document.

Fling, S., Smith, L., Rodriguez, T., Thornton, D., Atkins, E. & Nixon, K. (Dept Psychology Southwest Texas State U, San Marcos 78666-4616), **Videogames, Aggression, and Self-Esteem: A Survey,** *Social Behavior and Personality,* 1992, 20, 1, 39-45.

¶ Findings of a questionnaire survey of 153 students in grades 6-12 that explored videogame play & measured self-esteem & aggression, supplemented by teachers' ratings of children's self-esteem & aggression, revealed that the amount of videogame play correlated with aggression, but not with self-esteem. About 47% of the students admitted that some videogames might foster anger or aggression. Among other results was evidence that boys play videogames more than girls & are more aggressive than girls. Self-esteem & aggression were positively correlated on teacher ratings, but negatively on self-ratings. 3 Tables, 16 References. Adapted from the source document.

Funder, David C. (Dept Psychology U California, Riverside 92521 (e-mail: funder@ucrvms.bitnet)), **Global Traits: A Neo-Allportian Approach to Personality,** *Psychological Science,* 1991, 2, 1, Jan, 31-39.

¶ A theory of global traits is outlined that is based on the seminal writings of Gordon Allport (eg, see "What Is a Trait of Personality?" *Journal of Abnormal & Social Psychology,* 1931, 25, 368-372) & subsequent empirical research. It is suggested that personality research needs to re-focus on global traits because: such traits are an important part of everyday social discourse; they embody a good deal of folk wisdom & common sense; understanding & evaluating trait judgments can provide an important route toward the improvement of social judgment; & global traits offer legitimate, if necessarily incomplete, explanations of behavior. A substantial body of evidence supporting the existence of global traits includes personality correlates of behavior, interjudge agreement in personality ratings, & the longitudinal stability of personality over time. Future research should clarify the origins of global traits, the dynamic mechanisms through which they influence behavior, & the behavioral cues through which they can most accurately be judged. 51 References. Giannotti, José Arthur (CEBRAP, Rua Morgado de Mateus 615 04015 São Paulo Brazil), **Tráfico de esperanzas** (Traffic in Hopes), *Estudios Sociológicos,* 1991, 9, 25, Jan-Apr, 127-144. (SPA)

Translated from Portuguese by Isabel Vericat & edited by Vania Salles.

¶ The rise of the obscure governor of Alagoas, Fernando Collor de Mello, to the presidency of the Brazilian republic in 1989 is examined in the context of the "game of politics" & the making of politicians. Variations in the Brazilian political game in the decade preceding Collor de Mello, the effect of the new constitution, & the multiparty panorama in which the presence of opposition groups was decisive in awakening interest in recovering the public space are discussed. Collor de Mello's rise to the presidency coincided with a weakening of the structure of the prevalent political structure, & he was able to change the rules. His first advantage

was in the marginality of Alagoas, since he could distance himself from the corruption of the political in-group, who were not popular figures in Brazil. He successfully used metaphorical language to paint his opponent as a political opportunist & a nepotist. Collor de Mello's victory dealt a harsh blow to the fragile Brazilian political game. Independent of his victory, political maturation of the Brazilian system will depend on the new government's capacity to construct alliances with a multiplicity of political forces while still maintaining the apparent distance from those forces that his constituency expects from his campaign. Goldberg, Susan (Psychiatric Research Unit Hospital Sick Children, 555 University Ave Toronto Ontario M5G 1X8), **Recent Developments in Attachment Theory and Research,** IM *Canadian Journal of Psychiatry/Revue Canadienne de Psychiatrie*, 1991, 36, 6, Aug, 393-400.

¶ An overview of the history & development of attachment theory reveals that research has focused on four major patterns of attachment in infancy–one secure & three insecure (avoidant, resistant, & disorganized)–that reflect different histories of parent-child interaction & affect subsequent development up to age eight. More recently, methods have been developed for identifying similar patterns of attachment in preschoolers, children ages 5-7, & adults. Future research is likely to focus on the development of attachment patterns & their transmission from one generation to another. New evidence on the relationship between attachment & behavior problems has generated mutual respect & collaboration between clinicians & researchers. 1 Table, 1 Figure, 52 References. Adapted from the source document.

Gostin, Larry, Life and Death Choices after *Cruzan*, IM *Law, Medicine and Health Care*, 1991, 19, 1-2, spring-summer, 9-12.

¶ A critical overview of the US Supreme Court's *Cruzan* v. *Director, Missouri Department of Health* decision in 1990 is offered. The *Cruzan* decision holds that, in the absence of clear & convincing evidence of a patient's wishes, a family cannot make a decision to withhold life-sustaining treatment from an incompetent patient such as Nancy Cruzan. Though viewed as implicitly affirming a competent patient's right of self-determination, the *Cruzan* decision does not suggest that competent patients have a fundamental right to refuse unwanted treatment, but only a constitutionally protected liberty interest, which may be outweighed by the interests of the state. The *Cruzan* decision effectively abandons constitutional protection of the interests of incompetent patients by suggesting a clear & convincing evidence standard that does not ensure accurate fact finding or prevention of abuse by a surrogate. Policy options to facilitate respect for patient choices are discussed. D. Generoli

Heinberg, Leslie J. & Thompson, J. Kevin (Dept Psychology U South Florida, Tampa 33620-8200), **Social Comparison: Gender, Target Importance Ratings, and Relation to Body Image Disturbance,** *Journal of Social Behavior and Personality*, 1992, 7, 2, 335-344.

¶ A sample of 189 female (F) & 108 male (M) college students rated the importance of 6 groups (eg, family, celebrities, friends, other students) as comparison targets for 7 attributes, & completed 3 subscales of the Eating Disorders Inventory & the Figure Rating Scale. Factor analyses on the averaged target ratings for attributes yielded 2 main factors: an appearance-related dimension (attractiveness, figure/physique) & a nonappearance-related dimension (intelligence & confidence). Gender differences were found on these 2 factors, with M ratings higher than those of Fs. ANOVAs reveal a gender-target interaction, with Ms rating celebrities as a more important comparison group than Fs did. There was a stronger connection between the social comparison group & body image/eating disorders for women, especially for appearance-related ratings. Results are discussed in terms of social comparison processes that differ by gender & promote increased eating disturbances in women. 4 Tables, 15 References. Adapted from the source document.

Ikels, Charlotte, Keith, Jennie, Dickerson-Putman, Jeanette, Draper, Patricia, Fry, Christine, Glascock, Anthony & Harpending, Henry (Dept Anthropology Case Western Reserve U, Cleveland OH 44106), **Perceptions of the Adult Life Course: A Cross-Cultural Analysis,** *Ageing and Society*, 1992, 12, 1, Mar, 49-84.

¶ A cross-cultural investigation of ways that structural & cultural variables shape the strategies people employ to assure themselves a secure old age, focusing on how people perceive old age as an improvement or a decrement compared with other stages of life & the characteristics on which they base their views. Seven sites in Hong Kong, the US, Ireland, & Botswana were selected to ensure broad representation in terms of the key structural variables of scale, complexity, subsistence pattern, residential mobility, & population structure. Interview data (total N = 1,225 respondents) reveal that both across & within sites, people differ in their willingness & ability to discuss the concept of the life course. This variation is attributed to 5 factors: (1) characteristics of the social field, (2) education, (3) cultural salience of age categorization, (4) predictability of life events, & (5) variability in timing of normative social or work roles. 2 Tables, 42 References. Abstracted from the source document.

93Z4272

Kahneman, Daniel (Dept Psychology U California, Berkeley 94720), **Judgment and Decision Making: A Personal View,** *Psychological Science*, 1991, 2, 3, May, 142-145.

¶ The history, accomplishments & limitations, & future of research on judgment & decision making are explored. The field was born in the 1950s, combining concepts from economics, decision theory, & psychology. Since its inception, it has been characterized by: (1) focus on the normative theory of rational belief & choice; (2) emphasis on risky choice & relative neglect of decisional conflict; (3) analysis of cognitive & psychological factors that affect judgment & choice, rather than emotional & social factors; (4) emphasis on cognitive processes described at an intermediate level of generality; & (5) use of between-Ss research methodology & focus on Ss' real life experiences. Criticisms of the field include lack of theory, focus on errors of judgment, lack of incentives for research Ss, & lack of analysis of the role of learning in correcting deficiencies in decision making. Future research should focus on the robustness of previous findings & place less emphasis on the role of rationality & cognitive factors in judgment & choice. 16 References. D. Generoli

Larrue, Janine (U Toulouse II, F-31058 Cedex France), **Au carrefour de la psychologie sociale, des idéologies, et des représentations sociales** (At the Crossroads of Social Psychology, Ideologies and Social Representation), *Archives de sciences sociales des religions*, 1992, 37, 78, Apr-June, 199-210. (FRE)

¶ A review essay on books by: V. Aebisher, J.-P. Deconchy, & M. E. Lipiansky (Eds), *Idéologies et représentations sociales* ([Ideologies and Social Representations] Cousset: Delval, 1991); H. T. Himmelweit & G. Gaskell, *Societal Psychology* (Newbury Park: Sage Publications, 1990); & J.-P. Deconchy, *Psychologie sociale, croyances et idéologies* ([Social Psychology, Beliefs, and Ideologies] Paris: Méridiens Klincksieck, 1989 [see listings in IRPS No. 66]). The collection edited by Aebisher et al is faulted for providing an unsatisfactory synthesis of the large variety of approaches to the subject of ideologies. Some contributors are too narrow-minded; the issues should be analyzed in a (socio-)cognitive perspective. The Himmelweit-Gaskell volume on societal psychology seeks to analyze the process, rather than its role in everyday life. A series of epistemological propositions precedes an in-depth psychological analysis of institutions, social change, & mass media. J.-P. Deconchy's book succeeds better than the others since it spells out a workable epistemology. Deconchy offers an illustration of the transposition & generalization of knowledge, acknowledging however the ideological component in any theory, & the necessary coexistence of many definitions of ideology. J. Sadler

McClearn, Gerald E., Plomin, Robert, Gora-Maslak, Grazyna & Crabbe, John C. (Center Developmental & Health Genetics Pennsylvania State U, University Park 16802 [Tel: 814-865-1717; FAX: 814-863-4768]), **The Gene Chase in Behavioral Science,** *Psychological Science*, 1991, 2, 4, July, 222-229.

¶ Research investigating potential genetic influences on behavior has featured two general approaches: (1) searching for a single gene with influence sufficiently great as to be detectable against almost any genetic or environmental background, & (2) applying the statistical models of quantitative genetics that partition variance of a continuously distributed phenotype into various fractions, attributable to the actions of many genes of individually small effect, & to the influence of environment. Recent developments in molecular genetics have provided tools for exploring a middle ground, ie, genes whose effects are not overwhelming, but that account for appreciable proportions of the variance. These quantitative trait loci offer attractive prospects of bridging the gap between molecular & quantitative genetic perspectives. 3 Figures, 48 References. Adapted from the source document. McCormack, Thelma (Graduate Programme Women's Studies York U, North York Ontario M3J 1P3), **"Politically Correct",** *Society-Société*, 1992, 16, 2, May, 17-20.

¶ A critical examination of the current debate on "political correctness," focusing primarily on the claims by Dinesh D'Souza in *Illiberal Education: The Politics of Race and Sex on Campus* (see IRPS No. 61/92c01514) that academic standards & academic freedom are being endangered by new curricular programs. It is argued that women's studies programs are the test of academic freedom, & failure to recognize & implement them is a denial of such freedom. Women's studies programs are not intended to correct gender injustice nor empower victims, but to develop & transmit through research & teaching a new knowledge base. The use of an autobiography by a Guatemalan Indian peasant women, *I, Rigoberto Menchu* (no publication information provided) is offered as an educational experience for students similar to the use of other cross-cultural materials in the social sciences, intended to sensitize students to their own biases, not to indoctrinate them. Misra, Girishwar (Barkatullah U, Bhopal India), **Socio-Cultural Influences on Moral Behaviour,** UM *The Indian Journal of Social Work*, 1991, 52, 2, Apr, 179-194.

¶ The influence of sociocultural factors on the development of moral behavior in Indian children was examined in 4 studies (total N = 488) via questionnaire & scale data. Results show that while moral realism, retribution, & efficiency of severe punishment increased with age, immanent justice was considerably high in almost all age groups. In an additional experimental study on children drawn from this sample, it was noted that level of moral reasoning did not have a significant effect on generosity. However, experimentally created empathy did, not only on generosity, but also on behavior. It is concluded that the pattern of moral behavior has cultural variations &, in view of global changes in the world order, a constitutive orientation toward the conceptualization of individual & morality is warranted. In this context, the Indian conceptualization of man-society as symbiotically related & the idea of *Dharma* have important implications. 6 Tables, 70 References. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4278

Müller, Peter (Oberassistent Medizinischen Akademie, D-8010 Dresden Federal Republic Germany), **Suizid in Sachsen. Soziologische Annäherung an ein brisantes Thema** (Suicide in Saxony. Sociological Approach to a Controversial Topic), *MMG - Medizin, Mensch, Gesellschaft*, 1991, 16, 2, June, 136-145. (GER)

¶ Germany has always had a fairly high suicide rate. In 1987, among European countries, West Germany ranked ninth for male suicide, eleventh for female suicide, & first for teen suicide, with a daily average of 36 suicides compared to 14 in East Germany. Traditionally, Saxony & other eastern German regions had very high rates, but in the late 1940s, the ratio of suicides between West & East Germany stood at 19:29. However, it is contended that the East German government suppressed information on the actual suicide rate, describing many suicides in terms of traffic fatalities. Suicide is viewed as a social behavior linked to social support, communication, & the individual ability to act socially, & as a factual part of social & cultural systems. Perspectives for future developments are discussed in light of the highly volatile economic & social milieu of eastern Germany since national reunification in 1991. 29 References. Munters, Q. J., Bestaan leefstijlen (nog) wel? Enkele handelingstheoretische overwegingen bij het gebruik van het stijlbegrip (Can One Still Speak of Lifestyles? A Few Considerations of Action Theory on the Concept of Style), *Sociologische Gids*, 1992, 39, 3, May-June, 179-185. (DUT)

¶ The concept of "lifestyle" is appearing ever more frequently in sociological discourse. Other terms, eg, youthstyle, are also being coined. However, this concept is very vague & lacks the necessary precision for exact scientific studies. The relationship between behavioral choices & lifestyle is reviewed. The all-encompassing character of lifestyle is one of its chief drawbacks, suggestive of a totalitarian mentality. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4280

Orbuch, Terri L., Harvey, John H., Russell, Shauna & Sorenson, Kelly (Dept Sociology U Michigan, Ann Arbor 48109), **Person Perception through Accounts: Three Studies,** *Journal of Social Behavior and Personality*, 1992, 7, 1, Jan, 79-94.

¶ Three experimental studies were conducted among students at a large midwestern university to investigate a listener's liking of & behavior toward a female (F) who presents a rich, narrative account of a breakdown of a close relationship. Common independent variables among the studies quantified whether or not the presenter had engaged in an affair during the relationship & whether or not she exhibited personal distress. The first 2 studies (N = 116 & 119, respectively) involved self-report dependent variables; the third study (N = 48) involved behavior dependent variables. Divergent & unexpected patterns of liking of & behavior toward the presenter were found to be a function of the presenter's & perceiver's gender; eg, males were relatively positive & approach-oriented toward a F who indicated that she had engaged in an affair during the relationship. 4 Tables, 13 References. Oskamp, Stuart, Bordin, Jeffrey & Edwards, Todd (Faculty Psychology Claremont Graduate School, CA 91711), **Background Experiences and Attitudes of Peace Activists,** *The Journal of Psychology*, 1992, 126, 1, Jan, 49-61.

¶ In-depth, semistructured interview data obtained in 1986 from 21 Los Angeles, Calif, members of the peace activist organization, Beyond War (BW), are drawn on to investigate their background & motivations. Analysis reveals that most had professional backgrounds, often politically conservative ones. Their average length of involvement in BW was 3+ years, but only 12 had been involved in activist causes before BW. Almost all reported an experience or event that was instrumental in their becoming involved in BW, eg, wartime experiences or particular books, films, or speakers. Almost all saw the peace movement as a moral issue, were optimistic about prospects for achieving peace, were highly motivated for further involvement in BW, & reported strong support from their families. 1 Table, 18 References. Patton, Paul (Dept Philosophy Australian National U, Canberra ACT 2601), **Postmodern Subjectivity: The Problem of the Actor (Zarathustra and the Butler)**, *Social Analysis*, 1991, 30, Dec, 32-41.

¶ Critics of modernity frequently point to the erosion of secure, stable bases for personal identity. The modern (or postmodern) condition is supposed to leave the individual free to adopt any role it chooses, thereby depriving it of any basis on which to choose one role in preference to another. Accordingly, our present moral condition may be experienced either as liberatory or as paralyzing. Friedrich Nietzsche was among the first to identify this dilemma, which he called "the problem of the actor." Here, some of the assumptions of this dilemma are considered, with particular reference to Kazuo Ishiguro's novel *The Remains of the Day* (London: Faber & Faber, 1989). 17 References. AA

Peterson, Christopher, Colvin, Dawn & Lin, Emily H. (Dept Psychology U Michigan, Ann Arbor 48109-1346), **Explanatory Style and Helplessness**, *Social Behavior and Personality*, 1992, 20, 1, 1-13.

¶ To investigate helplessness & its relationship to explanatory style, 2 studies were conducted: (1) Responses to the Academic Attributional Style Questionnaire revealed that 40 U of Michigan students who explained bad events with stable & global causes were less likely than their more optimistic counterparts to take active steps to improve their course performance following a poor grade; in contrast, internality of explanatory style was positively correlated with active coping attempts. (2) Responses of 83 young adults in Ann Arbor, Mich, to an expanded version of the questionnaire & an illness diary showed that those who explained bad events with stable & global causes were less likely to take active steps to feel better when they experienced symptoms of illness; internality of explanatory style was not significantly correlated with attempts to feel better. Pilkington, Constance J., Tesser, Abraham & Stephens, Deborah (Dept Psychology Coll William & Mary, Williamsburg VA 23185), **Complementarity in Romantic Relationships: A Self-Evaluation Maintenance Perspective**, *Journal of Social and Personal Relationships*, 1991, 8, 4, Nov, 481-504.

¶ The Self-Evaluation Maintenance (SEM) model (Tesser, A., "Some Effects of Self-Evaluation Maintenance on Cognition and Action," *The Handbook of Motivation and Cognition: Foundations of Social Behavior*, New York: Guilford Press, 1986), which assumes that people are motivated to maintain positive self-evaluation in relationships, was used to examine interpersonal attraction among dating couples who indicated on questionnaires the importance to themselves & their partners of 68 activities. Responses of participants in 3 studies (total N = 187 male & 301 female undergraduates) confirmed the SEM prediction that romantic partners' performance levels should complement each other in such a way that one person's superior performance serves as the basis for his or her own comparison & his or her partner's reflection benefits. Future research is recommended on how needs & desires are expressed in a relationship. 9 Tables, 3 Figures, 40 References. Adapted from the source document.

Pratt, Daniel D. (Dept Administrative/Adult/Higher Education U British Columbia, Vancouver V6T 1L2), **Conceptions of Self within China and the United States: Contrasting Foundations for Adult Education**, *International Journal of Intercultural Relations*, 1991, 15, 3, 285-310.

¶ A heuristic model is developed to demonstrate how cultural, social, political, & psychological influences result in different conceptions of self within the People's Republic of China & the US. The Chinese construction of self emphasizes continuity of family, societal roles, the supremacy of hierarchical relationships, compliance with authority, & the maintenance of stability. Identity is, largely, externally ascribed, subordinated to the collective, & seeks fulfillment through performance of duty, ordained roles, & patterns of filial loyalty. In the US, the individual is recognized as the starting point for construing the social order, & the self is considered a psychological construct as much as an artifact of cultural, social, & political influences. Implications of these differences for adult education are discussed. 1 Figure, 35 References. Adapted from the source document.

93Z4287

Price, Laurie J. (Dept Anthropology Northern Arizona U, Flagstaff 86011), **Metalogue on Coping with Illness: Cases from Ecuador**, *Qualitative Health Research*, 1992, 2, 2, May, 135-158.

¶ Two case studies of illness in highland Ecuador are presented, focusing on how people use cultural meaning systems to psychologically manage health threats & bereavement, in an attempt to construct a theory of illness coping that incorporates the insights of psychology, anthropology, & health care providers. Two psychological mechanisms, self-esteem & sense of participation in the outcome of the illness situation, are proposed as central in constructive intrapsychic coping aross cultures. It is contended that meaning-based coping constitutes a pivotal factor in adaptation to misfortune for many individuals & families. Cultures vary significantly in what they offer people who are coping with serious health threats & in the degree to which they legitimize constructive psychological management of misfortune. The findings show that, in Ecuador, cultural resources available for intrapsychic management of misfortune include dream interpretation, personal narrative, spiritualist healing, & pilgrimage rituals. Further research that demonstrates more precisely how constructive psychological management of illness differs cross-culturally is recommended. 1 Figure, 51 References. Adapted from the source document.

Rice, John Steadman (Dept Sociology Boston U, MA 02215), **Discursive Formation, Life Stories, and the Emergence of Co-Dependency: "Power/Knowledge" and the Search for Identity**, UM *The Sociological Quarterly*, 1992, 33, 3, fall, 337-364.

¶ Following the thinking of Michel Foucault (reference not specified), it is argued that current research on life stories can be enriched by treating them as "discursive formations"; the emergence of codependency is examined as one such formation. Various codependency theorists illustrate how rules for true statements in codependency discourse contradict those of its psychological & addictive predecessors. These rules produce a unique discursive formation & different life stories. Moreover, Foucault's approach stresses the role of power/knowledge in the construction of the codependency canon, deepening understanding of life stories as forms of both empowerment & subjection to alternative forms of authority. 15 References. Adapted from the source document.

Schiffmann, Rudolf & Wicklund, Robert A. (U Bielefeld, D-4800 Federal Republic Germany), **The Minimal Group Paradigm and Its Minimal Psychology: On Equating Social Identity with Arbitrary Group Membership,** *Theory & Psychology,* 1992, 2, 1, Feb, 29-50.

¶ The H. Tajfel, M. G. Billig, R. P. Bundy, & C. Flament studies presented in "Social Categorization and Intergroup Behavior" (*European Journal of Social Psychology,* 1971, 1, 149-178) on the minimal group paradigm are criticized for not elaborating on the functional relationship between the antecedent psychological state of the individuals entering the group setting & subsequent intergroup differentation, & for setting highly restrictive conditions for group membership in the experiment. In these studies, differentiation between groups was found to be dependent on itself, & thus, arbitrary. A review of other empirical tests of the minimal group paradigm suggests that the similarity-attraction hypothesis cannot be rejected as an alternative explanation for the pattern of discrimination found in these tests. Tajfel's & J. C. Turner's social identity theory ("An Integrative Theory on Intergroup Conflict," in Austin, W. G. & Worchel, S. (Eds), *The Social Psychology of Intergroup Relations,* Monterey, Calif: Brooks/Cole, 1979, 33-47), built on such empirical evidence, is thus only partially supported by these tests. Five major weaknesses of the theory are discussed, revealing that it is a reductionist approach to individual identity or self, & social identity theory is dismissed. Two alternative approaches, self-evaluation maintenance & symbolic self-completion, are described as riper candidates for the generation of hypotheses treating the individual within a group setting. 60 References. Senchak, Marilyn & Leonard, Kenneth E. (Research Instit Alcoholism, 1021 Main St Buffalo NY 14203), **Attachment Styles and Marital Adjustment among Newlywed Couples,** *Journal of Social and Personal Relationships,* 1992, 9, 1, Feb, 51-64.

¶ Interview data are used to investigate attachment styles & marital adjustment among 322 young newlywed couples who were participating in a longitudinal study of alcohol use & marital functioning. The couples were assessed on attachment styles (secure, avoidant, or ambivalent), marital intimacy, marital functioning, & conflict resolution behaviors. Results show that husbands & wives tended to pair on the basis of similar attachment styles, & that when both partners were securely attached, they had better overall marital adjustment. 3 Tables, 34 References. Shamp, Scott A. (Henry W. Grady Coll Journalism & Mass Communication U Georgia, Athens 30602), **Mechanomorphism in Perception of Computer Communication Partners,** *Computers in Human Behavior,* 1991, 7, 3, 147-161.

¶ Since computer bulletin board (CBB) users generally lack personal information about the sender, it is suggested that their perceptions of CBB partners would be similar to their perceptions of the computer itself. This process wherein perceptions of CBB partners become computer-like is termed mechanomorphism. The hypotheses that mechanomorphism would operate to encourage computer-like perceptions under two conditions–when little personal information is exchanged in CBB messages, & when little communication takes place between CBB partners–were tested with data obtained via a computerized questionnaire program from 37 users of 12 CBBs in the Salt Lake City, Utah, area. Results support the first hypothesis but not the second. Implications for implementation of computer communication networks are discussed. 4 Tables, 1 Figure, 44 References. Singh, Ram N. (School Social Work Grand Valley State U, Allendale MI 49401-9403), **Loneliness: Dynamics, Dimensions and Many Faces,** UM *International Review of Modern Sociology,* 1991, 21, 1, spring, 109-120.

¶ In studying loneliness as a devastating disease of modern society–the core of many social problems–it is important to differentiate between loneliness & aloneness. To this end, some myths regarding loneliness are clarified, & the value of aloneness–the moments during which an individual can come to grips with his/her own being–is emphasized. Highlighting previous research measuring loneliness, a three-dimensional approach is presented that leads to a holistic view integrating body, mind, emotions, & social & spiritual aspects of self. 2 Figures, 22 References. Soh, Chung-Hee (Dept Sociology/Anthropology Southwest Texas State U, San Marcos 78666), **Skirts, Trousers, or *Hanbok?* The Politics of Image Making among Korean Women Legislators,** *Women's Studies International Forum,* 1992, 15, 3, May-June, 375-384.

¶ An investigation of the significance of dress styles in creating an acceptable image of a public female (F), drawing on data obtained during 1985/86 field research to analyze the clothing behavior of 29 F Korean legislators. Because there is no Korean role precedent for F politicians, they have had to rely on their own ingenuity & instinct to negotiate their entry into the male bastion of politics. The three variations in the dress styles (Western, Korean, & cross-dressing) represent a mosaic of F strategies to win political positions amidst the dialectic of the systems of dual dress styles & of contradictory gender-role ideologies. Although there is a continuity in each dress style from the pioneer- to the second-generation F legislators, its symbolic & political significance has changed. This is related to the social & political contexts of F participation in Korean national politics & to the complex differences in personal backgrounds & experiences of individual F legislators. 35 References. Spencer, J. William (Purdue U, West Lafayette IN 47907), **Negotiating Role Definitions and the Working Consensus in Self-Work,** UM *Sociological Inquiry,* 1992, 62, 3, summer, 291-307.

¶ Interactionists have traditionally assumed that two kinds of background expectations–definitions of social roles & the maintenance of a working consensus–are unambiguously available to social actors as they negotiate situated meanings of selves & situations. Here, analysis of 58 dyadic role-play conversations produced in an experiment involving undergraduates is drawn on to examine instances where interactants reference these expectations as ambiguous or problematic. Results suggest that the situated meanings of role definitions & the working consensus are continually subject to potential negotiation. Implications of these findings for future research & theory on self-work in social interactions are discussed. 25 References. Adapted from the source document. 93Z4299

Szabó, Ildikó, Tetovált Börtön (Tattooed Prison), *Szociológia,* 1989, 3-4, 311-327. (HUN)

¶ Tattooing is a public, noninstitutionalized form of communication through which individuals seek to tell something about themselves as members of certain groups. A contrastive analysis of tattoos from the last fifty years of the Hungary monarchy with those of recent decades in Hungary & the USSR reveals considerable changes in the content of what is being communicated. Formerly, tattoos indicated social integration, including consolidation into a bourgeois way of life, exotic lifestyles, & expressions of patriotism. In contrast, tattoos of recent years indicate segregation in terms of rejecting official political values, & their use is restricted to marginals, political protesters, & prisoners as a way of proclaiming difference. Thomas, Melvin E. & Holmes, Bernadette J. (Dept Sociology & Anthropology U Bethlehem, PA 18015), **Determinants of Satisfaction for Blacks and Whites,** UM *The Sociological Quarterly,* 1992, 33, 3, fall, 459-472.

¶ Data on determinants of satisfaction for blacks & whites from the Quality of American Life survey conducted in 1971 are compared with those of a 1978 replication (N = 2,103 & 3,526, respectively), using a domain satisfaction scale as the dependent variable & a series of demographic, social relationship, socioeconomic, & religious factors as independent variables. Separate regression analyses by race, & tests for the significance of the interaction of the independent variables with race reveal that: (1) perceived quality of important relationships (ie, friends, neighbors, children, parents, & siblings) more strongly affects levels of satisfaction for both blacks & whites than do demographic variables, socioeconomic status, or religion; (2) black females report significantly lower levels of satisfaction than any other gender/race group; (3) blacks living in the East report lower satisfaction than any other region/race group; (4) feeling close to parents more strongly impacts black than white levels of satisfaction; & (5) religion is more important for whites than blacks in producing satisfaction. Theoretical interpretations are presented. 4 Tables, 41 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Thomson, Irene Taviss (Dept Sociology Fairleigh Dickinson U, Teaneck NJ 07666), **Individualism and Conformity in the 1950s vs. the 1980s,** *Sociological Forum,* 1992, 7, 3, Sept, 497-516.

¶ Portrayals of individualism & conformity in the 1950s vs the 1980s are compared via a content analysis of 16 best-selling self-help books. Several changes are revealed: from maturity as a desirable end to an ever-changing self; from determinism about the self to antideterminism & constructionism; & from institutional constraints & joys to interpersonal ones. These changes reflect the incorporation of ideas from the counterculture of the late 1960s & early 1970s, & may also stem from perceptions of a simultaneous increase in structural determinism & individual empowerment. 2 Tables, 84 References. Trommsdorff, Gisela & John, Helga (Sozialwissenschaftliche Fakultät Fachgruppe Psychologie, Universitätstr 10 D-7750 Konstanz Federal Republic Germany), **Decoding Affective Communication in Intimate Relationships,** UM *European Journal of Social Psychology,* 1992, 22, 1, Jan-Feb, 41-54.

¶ In an examination of accuracy in the decoding of affective messages in intimate relationships, 30 couples who had been living together for at least 12 months discussed an issue that was important to both partners. Then each selected & rated their partner's most "important" statement from their videotaped discussion. Results show the influences of attention-focusing & gender on emphatic accuracy when decoding emotions. It is concluded that conditions that direct the focus of attention toward the partner enable one to make more correct judgments of the partner's intended emotions, which is more true of women than men. 3 Tables, 36 References. Weisberger, Adam (Dept Sociology & Anthropology Colby Coll, Waterville ME 04901), **Marginality and Its Directions,** *Sociological Forum,* 1992, 7, 3, Sept, 425-446.

¶ Robert Park's concept of marginality ("Migration and the Marginal Man," in *On Social Control and Collective Behavior,* Chicago & London: U of Chicago Press, 1967) is reconstructed to yield a more complex general theory of marginality. Park maintained that marginality occurs when individuals in migrant groups are prevented by prejudice from complete acceptance into a dominant culture. It is argued that the marginal person, having inculcated elements of the dominant culture, also is unable to return unchanged to his or her primary group, creating a structure of double ambivalence. The marginal person typically copes with these pressures by either assimilating with the new group, returning to the old one, showing poise in the face of ambivalence, or practicing transcendence through socialist universalism. German Jewry of the Wilhelmine era serves as a test case of the general theory of marginality. 31 References. Adapted from the source document. Wertsch, James V. (Frances L. Hiatt School Psychology Clark U, Worcester MA 01610-1477), **Keys to Cultural Psychology,** *Culture, Medicine and Psychiatry,* 1992, 16, 2, June, 273-280.

¶ A review article on two books by: Jerome S. Bruner, *Acts of Meaning: Four Lectures on Mind and Culture*; & Richard A. Shweder, *Thinking through Cultures: Expeditions in Cultural Psychology* (both Cambridge, Mass: Harvard U Press, 1990 & 1991, respectively [see listings in IRPS No. 66]). Bruner & Shweder are equally dissatisfied with the current state of cultural psychology, which they find overly atomistic, fragmented, & information-based. Bruner offers an overview of the cognitive revolution in psychology, focusing on "meaning-making," especially as it occurs through the use of narrative. Shweder also deals with the construction of meaning, offering a comparative analysis to expose the Western ethnocentrism that dominates contemporary psychology. Both authors also touch on issues at the heart of larger debates concerning the rights & responsibilities of individuals vs society. 14 References. K. Hyatt (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Wildavsky, Aaron (Survey Research Center, 2538 Channing Way Berkeley CA 94720 [Tel: 415-642-6478; FAX: 415-643-8292]), **Can Norms Rescue Self-Interest or Macro Explanation Be Joined to Micro Explanation?,** *Critical Review,* 1991, 5, 3, summer, 301-323.

¶ Examined is Jon Elster's use of methodologically individualistic assumptions to understand social behavior, focusing on his *The Cement of Society & Nuts and Bolts for the Social Sciences* (both, Cambridge: Cambridge U Press, 1989). Elster incorporates nonrational social norms

into his rational choice theory because they provide a unique kind of motivation for action that is irreducible to rationality or any other form of optimizing mechanism. This is challenged here via an analysis of Elster's discussion of "envy" to show that both norms & interests may be placed on the same analytical level, & to demonstrate that it is better to allow for a pluralism of cultural biases than to insert nonrational norms in the rational-choice model on an ad hoc basis. Wilson, Kenneth L., Rest, James R., Boldizar, Janet P. & Deemer, Deborah K. (Dept Sociology U Alabama, Birmingham 35294), **Moral Judgment Development: The Effects of Education and Occupation,** *Social Justice Research,* 1992, 5, 1, Mar, 31-48.

¶ Various conceptualizations of moral judgment development (MJD) were synthesized into a single longitudinal process model using data from a subsample of J. R. Rest's longitudinal study (*Moral Development, Advances in Research and Theory,* New York: Praeger, 1986). The sample of 50 female & 52 male middle-class, midwestern US residents responded to the Defining Issues Test as adolescents in 1972-1974 & again in 1983 at ages 26-27, & were interviewed about major life experiences from high school through young adulthood. As hypothesized, adolescent MJD, educational attainment, & career fulfillment exerted significant direct effects on adult MJD; & occupational attainment exerted effects indirectly through career satisfaction. The hypothesized reciprocal relationship between adult MJD & fulfilling career was disproved–the model was recursive. In tracing MJD in subsamples with 2+ vs less than 2 years of college, work experience (fulfilling career & occupational attainment) proved to be more important for MJD in the lower educational subsample, & educational attainment in the higher one. Work-related variables were equal to or greater than educational attainment in predictive power. 1 Table, 2 Figures, 19 References. Adapted from the source document. Worden, Steven K. & Darden, Donna K. (U Arkansas, Little Rock 72204), **Humor: An Interactionist Approach,** UM *International Review of Modern Sociology,* 1990, 20, 2, autumn, 229-237.

¶ Previous theoretical work on humor as a product in the contemporary economy is expanded to consider the interactionist process of making humor, drawing on data from 300 students who were asked to describe the most recent funny thing that had occurred to them, after which a second group of 24 students rated the humor in these events. As the judges found many of the descriptions not very funny, it is concluded that the sources of humor are the same as the sources of embarrassment & boredom, & that the difference between funny & not funny is in context & presentation. Similarly, the distinction between funny & embarrassing, boring, & deviant is located in an interactionist context in which actors jointly construct meaning for episodes. 1 Table, 15 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Ying, Yu-Wen & Liese, Lawrence H. (School Social Welfare U California, Berkeley 94720), **Emotional Well-Being of Taiwan Students in the U.S.: An Examination of Pre- to Post-Arrival Differential,** *International Journal of Intercultural Relations,* 1991, 15, 3, 345-366.

¶ Scale data are drawn on to explore the pre- to postarrival change in emotional well-being of a group of 171 Taiwan students in the US. Specifically, tested is a multidimensional model that takes into account prearrival well-being, demographics, personality, presence & severity of problems experienced, change of pre- to postarrival level of control, adequacy of prearrival preparation, size of the Chinese community surrounding the student, social support, language competence, & adequacy of financial resources. Results indicate that 50+% of the students experienced declines in emotional well-being, while the remainder reported no change or improved mood level. Using a discriminant function, the model variables correctly classified 76% of the cases. Important determinants of group membership were reported levels of prearrival mood, interpersonal problems, social support far away, predeparture preparation, & academic problems. Predictors of degree of mood change are explored, & implications of the findings discussed. 4 Tables, 56 References. Adapted from the source document. 22 leadership

93Z4310

Bennis, Warren (U Southern California, Los Angeles 90089), **Managing the Dream: Leadership in the 21st Century,** UM *The Antioch Review,* 1991, 49, 1, winter, 22-28.

¶ To maintain US leadership in the twenty-first century despite current changes transforming the world & the role of the US within it, a new generation of leaders is required. Distinguishing leaders from managers, the leader's role is characterized as innovative, creative, people-focused, inspiring trust, inquisitive, & having a long-term perspective. Leaders can manage a vision through communicating, recruiting, rewarding, retraining, & reorganizing. Examples are discussed of leaders who match this model, eg, Jan Carlzon, Chief Executive Officer of Scandinavian Airlines. Leaders of the twenty-first century will also have a global vision, & will be aware of the need for transnational networking & alliances. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Greenstein, Fred I. (Woodrow Wilson School Public & International Affairs Princeton U, NJ 08544), **The President Who Led by Seeming Not To: A Centennial View of Dwight Eisenhower,** UM *The Antioch Review,* 1991, 49, 1, winter, 39-44.

¶ During his period in office, Dwight Eisenhower was viewed by students of the US presidency as a lackluster president, who was ill-informed about the events of the time & who left the detailed tasks of leadership to subordinates. He is not recognized to have been an able, skilled leader. The reasons for his underestimation were implicit in his leadership style, which involved playing up the nonpolitical sides of the presidency & attending to the political sides without publicity. Eisenhower's "hidden-hand leadership" was often effective, but he sometimes failed to publicize his aims & actions on occasions when that would have better advanced his purposes. Smith, David Norman (Dept Sociology U Kansas, Lawrence 66045), **The Beloved Dictator: Adorno, Horkheimer, and the Critique of Domination,** *Current Perspectives in Social Theory,* 1992, 12, 195-230.

¶ The Frankfurt school's social-psychological explanation of the characterological foundations of political obedience is examined to determine why it was developed in the first place, & why it was eventually abandoned by Max Horkheimer & Theodor W. Adorno. It is argued that the Frankfurt school failed to develop a unified theory of authoritarianism because its two leading exponents–Horkheimer & Adorno–gave up sociological explanations of authoritarianism in favor of explanations derived from Freudian mass psychology, which is examined here within the broad context of psychoanalytic theory. It is concluded that Adorno & Horkheimer made a seminal contribution to social science when they demonstrated, using the logic of classical sociology, the role of self-alienating authoritarianism in blunting the masses' will to freedom. 121 References. Heck, William P. (Dept Social Sciences Northeastern State U, Tahlequah OK 74464-2399), **Police Who Snitch: Deviant Actors in a Secret Society,** UM *Deviant Behavior*, 1992, 13, 3, July-Sept, 253-270.

¶ Personal knowledge & observations made during eight years of employment as both a deputy sheriff & a municipal police officer are drawn on to explore, from a subcultural perspective, the phenomenon of police "snitches," who inform superiors of another officer's illegal behavior. Four stressors contribute to an officer's decision to become a snitch: those (1) inherent in police work, (2) stemming from the policies & practices of the police department, (3) deriving from the criminal justice system & society at large, & (4) related to personal factors. Several motivations for snitching are also identified, including an officer's desire for administrative recognition, a need to prove loyalty to the department, & as a strategy for compensating for feelings of inferiority. A typology of police snitches is given, & the effects of snitches on police organization are discussed. 13 References. Adapted from the source document. Stanley, Christopher (U Kent, Canterbury CT2 7NZ England), **Serious Money: Legitimation of Deviancy in the Financial Markets,** *International Journal of the Sociology of Law*, 1992, 20, 1, Mar, 43-60.

¶ A causal relation is hypothesized between the increase in deviant (fraudulent) activity in the London (England) financial markets 1984-1989 & the political imperative of economic liberalism as being pursued by the prevailing conservative administration. The postmodernization of the economic base in contemporary urban culture & the transition in cultural practice toward a differentiated series of norms for action is considered. The deviant activity that resulted from the fracture between city & enterprise culture is analyzed in terms of city & state crime. It is concluded that previously established normative behavior through customary practice had been eroded through state imposition of a competing normative regime, which led to a period of declining confidence in the financial markets & increasing criminal behavior. 39 References. Albrecht, Terrance L. & Halsey, Jane (Dept Communication U South Florida, Tampa 33620), **Mutual Support in Mixed-Status Relationships,** *Journal of Social and Personal Relationships*, 1992, 9, 2, May, 237-252.

¶ An exploration of whether shared perceptions of the role of social support will influence task relationships between mixed-status partners, including relational certainty, trust, talk about new ideas, & performance evaluation. Data obtained via focus group interview & mail questionnaire from 95 nurse manager-staff nurse dyads at 5 northwestern hospitals demonstrate that among the relationships in which managers report giving the most support & staff nurses report receiving the most support were found the highest levels of reciprocity, the best performance ratings, & most frequent discussions on innovation. 3 Tables, 25 References. Crandall, Christian S. & Coleman, Robert (Dept Psychology U Florida, Gainesville 32611), **AIDS-Related Stigmatization and the Disruption of Social Relationships**, *Journal of Social and Personal Relationships*, 1992, 9, 2, May, 163-177.
¶ The importance of stigma to understanding the experience of becoming infected with the human immunodeficiency virus (HIV) is discussed, focusing on social relationships. Anonymous mail questionnaire data from 48 respondents who either have AIDS (acquired immune deficiency syndrome), AIDS-related complex, or are infected but asymptomatic, reveal that many do not feel stigmatized or show its effects. Those who do feel stigmatized also feel anxious, depressed, & alienated from others; these feelings are independent of HIV diagnostic severity, but are associated with disruptions in normal social relationships. 2 Tables, 2 Figures, 29 References. Genosko, Gary (Graduate Programme Social & Political Thought York U, North York Ontario M3J 1P3), **The Struggle for an Affirmative Weakness: de Certeau, Lyotard, and Baudrillard**, *Current Perspectives in Social Theory*, 1992, 12, 179-194.
¶ The concept of "weak thought" is not exclusive to G. Vattimo & P. A. Rovatti (*Il pensiero debole* [Weak Thought], Milan: Feltrinelli, 1983). There is a struggle for an "affirmative weakness" in much of contemporary French poststructuralism, which manifests itself in the proliferation of little textual operators, narratives, & a preference for the part over the whole. Tactical practices (discursive & otherwise) operate critically against strategic, magisterial institutions, discourses, etc. Weak tactics maintain their strength only to the extent that they neither fall into mysticism nor replace the strategic wholes against which they struggle. In spite of the affirmations of weakness, the works of M. de Certeau, Jean-François Lyotard, & Jean Baudrillard reveal evidence of diverse appeals to the strategic strengths of competition & agnostic relations. Weakness is not affirmed in vain, however, even though it defeats itself by courting contradiction. 33 References. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Gold, Gregg J. & Raven, Bertram H. (U California, Los Angeles 90025), **Interpersonal Influence Strategies in the Churchill-Roosevelt Bases-for-Destroyers Exchange**, *Journal of Social Behavior and Personality*, 1992, 7, 2, 245-272.
¶ In 1940, Winston Churchill successfully persuaded Franklin Roosevelt to abandon neutrality & to exchange fifty US destroyers for the use of British bases. Analyzing the extensive documentation on this event via Bertram H. Raven's power/interaction model of interpersonal influence, it can be seen that Churchill combined a number of influence strategies, with the subtle use of referent power being of critical importance. Churchill utilized stage-setting, self-presentation, & other preparatory devices very effectively. In determining his influence strategies, Churchill assessed Roosevelt's motivations & utilized an intermediary, the British ambassador to the US, Lord Lothian. Churchill was especially effective in complex tactics related to informational power: presenting potentially coercive communication as informational with fear appeal & using indirect rather than direct informational power. 1 Figure, 49 References. Halton, Eugene (Dept Sociology U Notre Dame, South Bend IN 46556), **Habermas and Rorty: Between Scylla and Charybdis**, *Symbolic Interaction*, 1992, 15, 3, fall, 333-358.
¶ Jürgen Habermas & Richard Rorty are two widely discussed theorists closely associated with the renewed interest in pragmatism. Habermas has been viewed as a universalist neopragmatist, in contrast to Rorty, who is viewed as a relativist neopragmatist. Although Habermas has sought to come to terms with the body of pragmatism as a whole, it is argued here that his work is fundamentally opposed to the spirit of pragmatism, even if it does incorporate some of its technical concepts. Rorty claims to be a pragmatist influenced by John Dewey, not to mention such seemingly distant sources as Martin Heidegger & Ludwig Wittgenstein. Yet Rorty, for all of his self-description as a pragmatist, also violates the spirit of pragmatism while claiming to appropriate it, but for reasons quite different from those of Habermas. To avoid further confusion of Rorty's & Habermas's positions with that of the spirit of pragmatism, a new term is coined, "fragmatism," to characterize these forms of anti-pragmatism. To the one-sided views of Habermas & Rorty, an alternative is proposed that incorporates an ideal of universal reason & an antifoundationalist fallibilism. 22 References. Hazelrigg, Lawrence (Dept Sociology Florida State U, Tallahassee 32306), **Reading Goffman's Framing as Provocation of a Discipline**, *Human Studies*, 1992, 15, 2-3, July, 239-264.
¶ Erving Goffman's *Frame Analysis* (Cambridge: Harvard U Press, 1974) has commonly been located in the midst of debates between structuralist & interactionist theoretical perspectives. However, such an approach ignores the most productive aspects of Goffman's argument, which, constructed mainly by indirection, features an explicitly yet subtly reflexive, self-referential, self-exemplifying interrogation of the limits of a discipline's core vocabulary of distinctions, including those on which the alternation of structuralist & interactionist perspectives depends. A close reading of this seminal work situates it relative to issues of the foundation of a disciplinary practice & elucidates the modalities, aims, & effects of Goffman's argument. 38 References. Hinkle, Gisela J. (Dept Sociology Ohio State U, Columbus 43210), **Habermas, Mead, and Rationality**, *Symbolic Interaction*, 1992, 15, 3, fall, 315-331.
¶ Symbolic interaction can become more relevant to issues of modernity & postmodernity by surmounting its customary tendency to be apolitical & by overcoming its focus on micro aspects of social relations. An interactionist reading of Jürgen Habermas's *Theory of Communicative Action* (see IRPS No. 41/88c00922 & 88c00923) is offered to show that symbolic interactionism can learn much from Habermas's highly political project, from his linking of micro-oriented interaction studies with the macro world, & from his representation of rationality in communicative terms. George Herbert Mead's behavioristic theory of attitudes is then examined in relation to his logical formulation of rational universals, suggesting that his optimistic vision of society, coupled with his stance on rationality, is no longer appropriate for analyzing social issues in a global society with multiple rationalities. Points of convergence & departure in the theories of Mead & Habermas are discussed. 13 References. Adapted from the source document. Hyatt, Kenton S. (Humboldt State U, Arcata CA 95521), **Creativity through Intrapersonal Communication Dialog**, *The Journal of Creative Behavior*, 1992, 26, 1, 65-71.
¶ Communication & creativity are both suggested to hold several similar defining characteristics. Both are adaptive, dynamic processes providing for synthesis of information, interaction, & understanding. The phenomenological dialogue consisting of the self, the Other, & their relationship forms a model of communication dialogue. That model is adapted to the internal communication process to explain how one communicates intrapersonally, forming relationships with the subject content as well as with the medium employed. This model allows for spontaneity & novelty, characteristics of creativity, & recommends personal responsiveness. Communication, a process familiar to all, allows everyone to engage in creative activities. 18 References. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Joas, Hans (John F. Kennedy Instit Noamerikastudien Freie U Berlin, D-1000 33 Federal Republic Germany), **An Underestimated Alternative: America and the Limits of "Critical Theory"**, *Symbolic Interaction*, 1992, 15, 3, fall, 261-275.
¶ The intellectual & biographical reasons why the theorists of the Frankfurt school did not embrace pragmatism are explored in four areas: (1) the epistemological area of the debate about subjective & objective rea-

son, demonstrating the misleading character of Max Horkheimer's & Herbert Marcuse's writings on pragmatism; (2) the area of political theory, exposing the tension between the US democratic tradition & a quasi-Marxist functionalism; (3) the area of social psychology, revealing the inability of the Frankfurt school to incorporate symbolic interactionism; & (4) the elitist relationship to US mass culture. Also considered are Jürgen Habermas's ambivalent position between pragmatism & his critical theory, & a perspective transcending this ambivalence. Adapted from the source document.

Kuhn, Deanna (Teachers Coll Columbia U, New York NY 10027), **Thinking as Argument,** *Harvard Educational Review*, 1992, 62, 2, summer, 155-178.

¶ It is in argument that the most significant way in which higher order thinking & reasoning figure in the lives of most people is found. Interview data from 160 residents of New York City (adolescence through adults ages 60-70) are used to examine the extent to which a process of reasoned argument underlies the beliefs people hold & the opinions they espouse about important social issues. Results indicate that argumentive reasoning ability does not differ systematically as a function of sex or age, but is strongly related to education level. Social contexts, eg, the classroom, are the most promising arena for practicing & developing argumentative thinking skills. 6 Tables, 36 References. Adapted from the source document.

Monsour, Michael (Dept Communication U Colorado, Denver 80217-3364), **Meanings of Intimacy in Cross- and Same-Sex Friendships,** *Journal of Social and Personal Relationships*, 1992, 9, 2, May, 277-295.

¶ Ways that individuals define & express intimacy within cross- & same-sex friendships are investigated, drawing on self-report questionnaire data from 164 college students in 1989/90. Results reveal substantial similarities in the meaning of intimacy in both types of friendship, as well as some differences by gender. Five of the 7 most frequently mentioned definitions held for both cross- & same-sex relationships: self-disclosure, emotional expressiveness, unconditional support, physical contact, & trust. Of the 2 remaining measures, sexual contact was only mentioned in cross-sex friendships (specified by a higher % of males) while sharing activities was only mentioned by 9% of males in same-sex friendships & 4% of females in cross-sex relationships. 3 Tables, 23 References. Oliver, Mike (Thames Polytechnic, London SE9 2PQ England), **Intellectual Masturbation: A Rejoinder to Söder and Booth,** *European Journal of Special Needs Education*, 1992, 7, 1, Mar, 20-28.

¶ The argument between Mårten Söder (eg, see "Disability as a Social Construct: The Labelling Approach Revisited," *European Journal of Special Needs Education*, 1989, 4, 117-129) & Tony Booth ("Integration, Disability and Commitment: A Response to Mårten Söder," *European Journal of Special Needs Education*, 1991, 6, 1, 1-16) on whether labeling theory tends to deny the reality of disability is locked into old views of integration ascribed to by people with abilities. Booth does provide a critique of Söder's relativism but only replaces it with beliefs about the principles of comprehensive education & equality of value. These are only two competing personal ideologies that fail to take disability as a social creation, &, thus, deny the essential nature of disability. In the proposed new view of integration, it must be taken as a means to an end: beyond school organizational changes, the school ethos must change; teachers must be committed, not just skilled; & the construct of normality must be challenged. 30 References. Prus, Robert & Frisby, Wendy (U Waterloo, Ontario N2L 3G1), **Persuasion as Practical Accomplishment: Tactical Manoeuverings at Home (Party Plan) Shows,** *Current Research on Occupations and Professions*, 1990, 5, 133-162.

¶ The processes of interpersonal influence & persuasion found at home marketing parties (HMPs) were examined via interviews with 14 HMP organizers & 53 of their guests. Findings show that the HMP organizer must assemble three distinct classes of interactants–guests, hostesses, & dealers–&, to be successful, must make tactical maneuvers or establish conditions that will allow others to influence at least some of these individuals to maintain continuing relationships. However, this influence must be carried out without high pressure, leaving plenty of room for marketplace interaction. 47 References. D. Generoli

Raven, Bertram H. (Dept Psychology U California, Los Angeles 90024-1563), **A Power/Interaction Model of Interpersonal Influence: French and Raven Thirty Years Later,** *Journal of Social Behavior and Personality*, 1992, 7, 2, 217-244.

¶ The ways in which the John R. P. French, Jr., & Bertram H. Raven bases-of-power model has evolved are described. Six bases of power were originally proposed: coercion, reward, legitimacy, expert, reference, & informational. Coercive & reward power were further differentiated into personal & impersonal forms; legitimate power now has forms based on position, reciprocity, equity, & responsibility; expert & referent power were found to have negative as well as positive forms; & informational power could be indirect as well as direct. The more comprehensive model of the means that people use to influence one another also examines variables related to: motivations of the influencing agent; subjective assessment of potential power bases; consideration of other strategies, eg, manipulation; utilization of stage-setting devices; assessment of the effectiveness of an influence attempt; & the utilization of various ameliorative devices. Current applications of the overall model are examined: hospital infection control, doctor/patient interaction, East-West cross-cultural comparison, & power confrontations between political figures. 4 Tables, 2 Figures, 86 References. Savard, Christopher J. & Rogers, Ronald W. (Dept Psychology U Alabama, Tuscaloosa 35487-0348), **A Self-Efficacy and Subjective Expected Utility Theory Analysis of the Selection and Use of Influence Strategies,** *Journal of Social Behavior and Personality*, 1992, 7, 2, 273-292.

¶ The effects of dispositional self-efficacy & the organizational status of the target on the selection & use of influence strategies were investigated in 3 studies. The first study with 54 college students generated subjective expected utility (SEU) values for 11 influence strategies. In Study 2, 120 students were given 3 tries to influence an alleged superior, peer, or subordinate. MANOVAs showed that the influence tactics of reason, re-

quest, & making one feel good were more frequently used than: assertion, threat, & chain of command with superiors; lying, threat, & chain of command with peers; & making one feel bad, threat, & lying to subordinates. The correlations between the SEU values of the 11 strategies & their frequency of use were substantial. Tactics with high SEU values were used less frequently on later influence attempts than on earlier ones, as predicted. In Study 3, 42 students completed a self-efficacy scale & were given up to 20 tries to influence a superior, peer, or subordinate. ANOVAs revealed a main effect for self-efficacy: individuals with high self-efficacy made more influence attempts than those with low self-efficacy. 2 Tables, 2 Figures, 27 References. Schmitt, Reinhold (Instit deutsche Sprache, D-6800 Mannheim 1 Federal Republic Germany), **Das Konzept der präsenzfigur. Ein Beitrag zur Integration von Konversationsanalyse und objektiver Hermeneutik** (The Concept of a Figure of Presence. A Contribution to the Integration of Conversational Analysis and Objective Hermeneutics), *Protosoziologie*, 1992, 3, July, 123-143. (GER)

¶ In the concept of a "figure of presence," conversation analysis & objective hermeneutics are integrated to illustrate how linguistic structure & social meaning are related, focusing on the local sensitivity of interactional structures. After a discussion of context-free general structures (eg, turn-taking & conditional relevance), attention shifts to context sensitivity as the result of the selectivity found in the participants' actions on the local level of building social organization. For empirical verification of this theory, a four-step model is proposed, with components to account for maximum & minimum contrast. 30 References. Adapted from the source document.

Shalin, Dmitri N. (Dept Sociology U Nevada, Las Vegas 89154), **Introduction: Habermas, Pragmatism, Interactionism**, *Symbolic Interaction*, 1992, 15, 3, fall, 251-259.

¶ Jürgen Habermas's *Theory of Communicative Action* (see IRPS No. 41/88c00922 & 88c00923) is a serious attempt to break with the long-standing continental tradition that has denigrated pragmatism as an Anglo-Saxon philosophy subservient to the interests of technocratic capitalism. While Habermas deftly uses pragmatist insights into communicative rationality & fully succeeds in reconstructing its radically democratic ethos, little sensitivity is shown to other facets of pragmatism, most notably to its concern for embodied experience & objective uncertainty. Here, it is argued that incorporating the pragmatist perspective on experience & indeterminacy brings an important corrective to the emancipatory agenda championed by critical theorists. The pragmatist alternative to the theory of communicative action is presented, with discussion centering around the following themes: disembodied reason vs embodied reasonableness, determinate being vs indeterminate reality, discursive truth vs pragmatic certainty, rational consensus vs reasonable dissent, transcendental democracy vs democratic transcendence, & rational society vs sane community. 22 References. Shimizu, Manabu, Transliterated title not available (Practical Sociological Reasoning and the Sociological Critique of Everyday Sociological Imagination), *Soshioroji*, 1992, 36, 3, Feb, 3-19. (JPN)

¶ In Harold Garfinkel's ethnomethodological analysis of social life, the concept of "practical sociological reasoning" (PSR) remains inadequately theorized, depriving sociologists of the full strength of his sociological theses. Here, the nature & implications of PSR are examined, paraphrasing the concept as the "ethnohypothesis." This leads to the narrative theory of the social world & to what Norman K. Denzin termed the "everyday sociological imagination," which, with some modification, is equivalent to PSR. The hitherto neglected gulf that separated Garfinkel's theory from the phenomenological school represented by Alfred Schütz is exposed, ie, Garfinkel's sociological critique of everyday narrative. Such a perspective challenges the practical hermeneutical worldview, ie, common sense, to which Schütz conferred a paramount status. Adapted from the source document.

Srubar, Ilja (Sozialwissenschaftliche Fakultät U Konstanz, D-7750 Federal Republic Germany), **Grenzen des "Rational Choice"-Ansatzes** (On the Limits of "Rational Choice"-Reflections), *Zeitschrift für Soziologie*, 1992, 21, 3, June, 157-165. (GER)

¶ Harmut Esser's "Die Rationalität des Alltagshandelns. Eine Rekonstruktion der Handlungstheorie von Alfred Schütz" ([The Rationality of the Everyday Act: A Reconstruction of Action Theory by Alfred Schütz] see SA 40:4/92Y9611) claimed that a close parallel exists between rational choice theory & the interpretive sociology of Alfred Schütz (*Gesammelte Aufsätze* (Collected Works), Vol. 1, The Hague: Nijhoff, 1971). Esser sought to explain everyday behavior by employing a rational choice approach enlarged by using actors' subjective knowledge; the origins of this idea can be seen in Schütz's work. Various limits of the rational choice model are seen in Schütz's discussion of Ludwig von Mises's theory of action in *Grundprobleme der Nationalökonomie* ([Basic Problems of the National Economy] Jena: Fischer, 1933). Although the rational choice approach recognizes that the conditions for action are chosen by the actors' subjective stock of knowledge, it provides no theoretical explanation for the social origins of this knowledge or the selectivity of its everyday structures. 23 References. Adapted from the source document as translated by M. Meeks.

Travers, Andrew (Dept Sociology U Exeter, EX4 4RJ England), **The Conversion of Self in Everyday Life**, *Human Studies*, 1992, 15, 2-3, July, 169-238.

¶ In an extended hermeneutically reflexive meditation on Erving Goffman's style of sociologizing human interaction, it is argued that in real life (ie, sociological analysis), interactants do not "present" their selves but "convert" to selves–ethnoritually–in & as of each particular interaction. The argument itself is presented as a conversion experience for the reader, who is invited either to be converted to the stated conclusions or to suffer intolerable anguish (ie, a sense of having no means of constructing an alternative credible reality). Incidentally, the idea that sociology is a possible methodical discipline is comprehensively ridiculed in sporadic passages of deadpan parody. 90 References. AA

93Z4346

Tseëlon, Efrat (Cultural Studies Faculty Leeds Polytechnic, LS1 3HE England), **Is the Presented Self Sincere? Goffman, Impression Management and the Postmodern Self**, *Theory, Culture & Society*, 1992, 9, 2, May, 115-128.

¶ Constrasted are two approaches to self-presentation that represent two social psychologies: psychological & sociological. Sociological social psychology (SSP) is represented by Erving Goffman's dramaturgy, while psychological social psychology (PSP) is represented by impression management (IM), which, it is argued, is a Cartesian interpretation of Goffman. A postmodern reading of the Goffmanesque self is offered, & it is contended that the question of sincerity reflects a Cartesian, but not a postmodern, vocabulary of selfhood. Some central themes that characterize both Goffman's work & IM are delineated, & the original Goffmanesque self is reinterpreted from an alternative perspective. These arguments illustrate the situated & contested nature of the concepts & practices used in psychology, & their ontological commitments. 45 References. AA

——, **A Response to Farberman's Distinguished Lecture: A Closer Encounter with Postmodernism**, *Symbolic Interaction*, 1992, 15, 3, fall, 359-373.
Reply, 375-379.

¶ In his 1991 lecture to the Society for the Study of Symbolic Interactionism, Harvey A. Farberman argued that conventional symbolic interactionism can rectify its deficiencies by incorporating the thought of critical theorists & Jürgen Habermas into its paradigm, while remaining skeptical of postmodern & poststructuralist theorizing. In **A Response to Farberman's Distinguished Lecture: A Closer Encounter with Postmodernism**, Patricia Ticineto Clough (Fordham U, New York, NY) argues that Farberman's reading of postmodern thought is superficial at best, & that his favoring of Habermas's reading of Sigmund Freud over Jacques Lacan's is politically motivated. A defense of Lacanian psychoanalysis against Farberman's warnings of its nihilism is presented, & reasons why postmodern thought is relevant for symbolic interaction are offered. In **Symbolic Interaction and Postmodern Possibilities: A Comment on Harvey Farberman's Distinguished Lecture**, Dwight Fee (U of California, Santa Barbara) argues against Farberman that postmodernism is of much use to symbolic interactionism, particularly in its approaches to subjectivity, power, & inequality. In **The Grounds of Critique: A Choice among Metaphysics, Power, and Communicative Action: Reply to Fee & Clough**, Farberman (State U of New York, Stony Brook) disagrees with Fee's assertion that the foundation of the Enlightenment has crumbled, challenges the notion that there is no rational basis for scientific authority, & defends his skepticism of postmodernism. 30 References. 93Z4350

Kempeneers, Marianne & Lelièvre, Eva (Dépt Sociologie U Montréal, Quebec H3C 3J7), **Analyse biographique du travail féminin** (Life History Analysis of Women's Work), *European Journal of Population/Revue européenne de démographie*, 1991, 7, 4, 377-400. (FRE)

¶ A critical exploration of the way life event history analysis applied to the relationship between fertility & female (F) economic activity can encourage new analytical perspectives. Using existing Canadian studies, it is suggested that in order to understand the phenomenon of F employment, researchers should avoid the artificial dissociation between the domestic & paid-work realms. Biographical analysis is essential to the integrated perspective on fertility-employment interaction because it accounts better for the notion of time in this complex interaction. The proposed approach entails methodological changes in data collection, eg, collecting complete retrospective biographical data without dichotomizing the domestic & work spheres, & surveying individual perceptions of constraints. 36 References. Wohlrab-Sahr, Monika (Instit Soziologie Erziehung, D-1000 Berlin 33 Federal Republic Germany), **Über den Umgang mit biographischer Unsichergeit–Implikationen der "Modernisierung der Moderne"** (Handling Biographical Insecurity–Implications of the Modernization of Modernity), *Soziale Welt*, 1992, 43, 2, 217-236. (GER)

¶ A literature review is presented showing how insecurity has been viewed as a matter of secondary importance by sociologists. Classical theory also describes insecurity in terms of marginality, anomie, contingency, & loss of guarantees. Current concerns about the modernization of modernity bring insecurity back into the group of primary sociological concerns. Here, objective & subjective insecurities are contrasted. These ideas are confirmed by analysis of interview data from 60 female temporary workers collected 1982-1987 in the German Democratic Republic. The women developed their identities by learning to cope with the uncertainties of their employment situation. Implications for the usefulness of classical sociological ideas in studying reflexive modernity are discussed. 43 References. M. 10 interaction between (large) groups (race relations, ethnicity, & inter-ethnic relations)

93Z4353

Bačová, Viera, Hľadanie rómskej identity (Seeking a Gypsy Identity), *Sociológia*, 1991, 23, 1-2, 139-147. (SLO)

¶ After the communists fell from power in Czechoslovakia in 1989, the gypsies enjoyed new freedom to reconstruct their ethnic identity. Gypsies suffer from a low socioeconomic position, ambiguous sociohistorical status, lack of institutional support for their culture, no language recognition, a high demographic growth rate, & a large social gap between themselves & other ethnic groups in Slovakia. New gypsy cultural & political groups are being established to address these problems. A content analysis is presented of articles on ethnic themes in the first gypsy periodical, *Lacho lav* (Good Word). Various conflicts, discrepancies, biases, & maneuvers are discussed. 2 Tables, 13 References. Adapted from the source document as translated by M. Meeks. Ballard, Roger (U Manchester, M60 1QD England), **New Clothes for the Emperor?: The Conceptual Nakedness of the Race Relations Industry in Britain**, *New Community*, 1992, 18, 3, Apr, 481-492.

¶ The established analytical model of race relations in GB is deprivationistic in character & is founded on the interconnected concepts of racial discrimination & disadvantage & the notion of exclusion. Though exclusionism is a necessary analytic component of the minority experience, it does not provide a sufficient basis for analysis because human behavior is not solely determined by forces that constrain. Humans have the capacity to resist exclusion & oppression & actively pursue alternative moral & spiritual strategies. An analytical model of race relations that cannot accommodate the concept of resistance will leave the student of race relations floundering in attempting to explain the behavior of the new minorities. 3 References. 93Z4355

Bauman, Zygmunt, Exit Visas and Entry Tickets: Paradoxes of Jewish Assimilation, UM *Telos*, 1988, 77, fall, 45-77.

¶ Jewish emancipation has oscillated between the extremes of assimilation & revolution. In Germany & France, Jews gravitated toward professional careers in which they could individually practice assimilation. The Jewish assimilatory zeal paradoxically set them apart from the natives, creating a new form of anti-Semitism that developed even though these individual assimilants adopted the phobias against the Yiddish-speaking orthodox collectives of Eastern Jewry who tended to belong to the poorer classes, & who were the original targets of anti-Semitism. Where assimilation remained elusive after much effort, or where it was expected to fail from the beginning, Jews adopted a revolutionary attitude in which emancipation was not from Jewishness nor an alternative form of assimilation; in revolution, Jewish tradition was liberated from its class enemies. However, wherever the Jewish community disintegrated under bourgeois liberalism, Jewish socialism declined. Thus, in the capitalist West, with Jews almost exclusively belonging to the middle class, hurdles to individual acceptance have disappeared, & with them, assimilation & revolution as expressions of emancipation have lost appeal. 93Z4356

Blauner, Bob (U California, Berkeley 94720), **Talking Past Each Other: Black and White Languages of Race**, *The American Prospect*, 1992, 10, summer, 55-64.

¶ A reflection on the development of personal racial consciousness among students precipitated by the 1992 acquittal of policemen tried for the Rodney King beating in Los Angeles, Calif. It is suggested that black & white differences in language & worldview in the assessment of injustice & racism result in their talking past each other. Blacks (as well as Asians & Latinos) support a broader definition of institutional, power-embedded, impersonal racism, while whites side with earlier, limited notions of racism. Problems inherent in this widening conception of racism are alleviated by allowing both readings of the term, by separating out the factor of ethnicity, & acknowledging the heterogeneity of African & European Americans. 93Z4357

Bohara, Alok K. & Davila, Alberto (c/o Davila–Dept Economics U New Mexico, Albuquerque 87131), **A Reassessment of the Phenotypic Discrimination and Income Differences among Mexican Americans**, UM *Social Science Quarterly*, 1992, 73, 1, Mar, 114-119.
Comment, 120-122.

¶ Edward E. Telles & Edward Marguía (see SA 39:4/91X8897) challenged the conventional wisdom that Mexican Americans are a homogeneous population in the labor market by arguing that dark-skinned Mexican Americans earn less than light Mexicans. Here, this issue is reexamined, using a theoretically based semilogarithmic earnings function approach & an estimation method similar to the ordered probit technique to analyze data from the National Chicano Survey (N not provided). Results fail to substantiate the discrimination reported by Tellers & Murguía. In **The Continuing Significance of Phenotype among Mexican Americans**, Telles (U of California, Los Angeles) & Murguía respond that this evidence does support phenotypic discrimination. They argue that Bohara's & Davila's prescribed level of statistical significance is highly questionable given their small subsample, & that their analysis is incomplete given its sole focus on the earnings model in which phenotype is added as a dummy variable. Furthermore, they should have replicated the decomposition analysis by estimating the semilogarithmic & ordered probit forms for each phenotypic group. 3 Tables, 7 References. S. Millett (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Childs, John Brown (Dept Sociology U California, Santa Cruz 95064), **Constructive Disputing: The Ramifications of African-American Caucus Groups for Today's Organizations**, *Studies in Law, Politics, and Society*, 1992, 12(Part A), 177-197.

¶ African-American caucuses are relatively new, self-initiated advocacy groups formed within predominately white, previously racially exclusionary organizations. Since the late 1960s, several throusand caucuses have been formed in such organizations as the Roman Catholic Church, police & fire departments, elderly & child-care services, & universities. The fact that enough African Americans are now inside these organizational domains to form caucuses is a direct outcome of the successes of the civil rights/black power era & reflect increased, albeit still partial, integration. However, the causes transcend the classic gap in African-American social thought between integrationism vs separatism, representing both. Most caucus groups identify problems of inequality & prejudice within the organizations to which they belong, & propose strategies to resolve them. Dispute is often necessary to make these problems visible, & thus, rather than something to be avoided, is viewed as constructive. Recognition of caucus perspectives & the constructive dimension of disputing are necessary if diversity in organizations is to have significant meaning. 28 References. Cowlishaw, Gillian (Dept Anthropology U Sydney, New South Wales 2006 Australia), **Review Article: The Aboriginal Experience: Problem of Interpretation**, *Ethnic and Racial Studies*, 1992, 15, 2, Apr, 304-311.

¶ A review article on books by: Raymond Evans, Kay Saunders, & Kathryn Cronin, *Race Relations in Colonial Queensland: A History of Exclusion, Exploitation and Experimentation* (St. Lucia: U of Queensland Press, 1988); Henry Reynolds, *With the White People: The Crucial Role of Aborigines in the Exploitation and Development of Australia* (Ringwood: Penguin Books, 1990); & Jeff Collmann, *Fringe-Dwellers*

and Welfare: The Aboriginal Response to Bureaucracy (St. Lucia: U of Queensland Press, 1988 (see listings in IRPS No. 66)). Evans, Saunders, & Cronin describe nineteenth-century Queensland, using verbatim accounts to depict the rampant racist attitudes & policies of the time. Economic reasons for racial discrimination are discounted in favor of racism being an organic part of the colonization of Australia. Reynolds depicts the experiences of aboriginals that lived alongside the whites; they were fringe dwellers who worked as guides, servants, or stockmen. Reynolds argues that the aboriginal response to colonization was not predominantly resistance or assistance; both responses were common. Collmann describes the intertwining of aboriginal & white communities. Special attention is given to the strategies used by the aboriginal communities to satisfy their own needs & also to keep whites from intruding into their lives. D. Generoli

93Z4360

da Costa, Yusuf (Faculty Education U Western Cape, Bellville 7530 South Africa), **The Muslim Community in Greater Cape Town: Contemporary Assimilation Processes**, *Suid-Afrikaanse Tydskrif vir Sosiologie/The South African Journal of Sociology*, 1992, 23, 3, Aug, 73-77.

¶ The impact of assimilatory forces on the Muslim population of Greater Cape Town in the Republic of South Africa is examined, based on an interview survey of 838 residents. The Muslim population came to Greater Cape Town in two waves of migration: (1) involuntary immigrants from different parts of Asia & Africa, classified as coloured by the 1950 Population Registration Act; & (2) Indian immigrants from the Indian subcontinent. The group classified as coloured has a higher degree of general, but a lower degree of specific, psychological assimilation than the Indian group. Despite their common religion, the two groups have not melded to any significant extent into a single community. Indians are more assimilated into the coloured group than vice versa. 18 References. Duijzings, Ger, De Egyptenaren in Kosovo en Macedonië (Egyptians in Kosovo and Macedonia), *Amsterdams Sociologisch Tijdschrift*, 1992, 18, 4, Feb, 24-38. (DUT)

¶ In late 1990, just before the outbreak of the Yugoslav civil war, thousands of people in Kosovo & Macedonia formally sought special recognition as an Egyptian minority. It is most likely that these people are Albanized Gypsies, who no longer wish to be considered either Albanians or Gypsies. Their request was granted by Serbian & Macedonian officials in time for the 1991 census. This development is interpreted in terms of strong ethnic competition between Serbs, Macedonians, & Albanians. The new group emerged due to a drastic shift in the ethnic power balance to the detriment of the Albanians This case shows the fluidity & creative potential of ethnic identities. 21 References. Ellemers, Naomi, Doosje, Bertjan, Van Knippenberg, Ad & Wilke, Henk (Vakgroep Sociale Psychologie Vrije U, NL-1081 HV Amsterdam Netherlands), **Status Protection in High Status Minority Groups**, UM *European Journal of Social Psychology*, 1992, 22, 2, Mar-Apr, 123-140.

¶ The impact of status on group membership preferences was examined for a sample of 129 high school students who were divided into 2 groups, allegedly on the basis of problem-solving style. The relative size (minority/majority) & status position of the group & the permeability of group boundaries were manipulated as independent variables. Membership in a high- vs a low-status group was considered more attractive, especially among minority group members. High-status minority group members displayed relatively strong ingroup identification when group boundaries were permeable, but permeable group boundaries did not result in diminished ingroup identification in low-status minority groups. Resolution of unsatisfactory group membership in a low-status group is discussed. 4 Tables, 33 References. Adapted from the source document.

Falk, William W. & Rankin, Bruce H. (Dept Sociology U Maryland, College Park 20742), **The Cost of Being Black in the Black Belt**, UM *Social Problems*, 1992, 39, 3, Aug, 299-313.

¶ Data from the US Census Bureau's 1980 Public Use Micro Sample are used to investigate the impact of region on black earnings in the South, with a focus on blacks living in the Black Belt, ie, those regions with a strong plantation heritage & large black populations. The use of regression standarization techniques to decompose earnings differences reveals that there are large differences within the South, the largest component of which is related to regional charactertistics & not the quality of the labor force. This finding is analyzed in the context of dependency theory, which posits that peripheral regions (like the Black Belt) are characterized by economic development which lags behind that in other areas. 5 Tables, 2 Maps, 48 References. Feagin, Joe R. (U Florida, Gainesville 32611), **The Continuing Significance of Racism: Discrimination against Black Students in White Colleges**, UM *Journal of Black Studies*, 1992, 22, 4, June, 546-578.

¶ Recent literature continues to emphasize individual & family factors to explain minority student attrition in US colleges & universities. The effects of discrimination are largely ignored or downplayed. Here, it is argued that the experience of continual subtle racism is detrimental to black student achievement & success. Data obtained are used to suggest a typology of the discrimination faced by black students & offer a tentative theory of cumulative discrimination. Racist & discriminatory behavior by white students, administrators & faculty is described that is manifested in racist-jokes & comments, opposition to black culture, & lack of socialization between black & white students on campus. The cumulative impact of aggression, exclusion, typecasting, & dismissal of blacks by whites creates a hostile environment for black students, exacerbates the stresses of college, & encourages black students to leave school. 1 Table, 15 References. Fine, Terri Susan (Dept Political Science U Central Florida, Orlando 32816 (Tel: 407-823-2608)), **The Impact of Issue Framing on Public Opinion: Toward Affirmative Action Programs**, *The Social Science Journal*, 1992, 29, 3, July, 323-334

¶ Gunnar Myrdal's question regarding the systematic subordination of minorities in an egalitarian society (*An American Dilemma: The Negro Problem and Modern Democracy* (New York: Harper & Row, 1944) is considered in a discussion of the methodology used to assess attitudes of whites in regard to equality for blacks. Specifically, questions associated with reactions to equal opportunity programs & the framing of survey questions designed to measure attitudes are addressed. Evidence from questionnaire data (N not provided) drawn from the 1986 American National Election Study supports the contention that public reactions to equal opportunity programs are affected by how these programs are presented to the public. 4 Tables. Frost, Christopher J., Czyzewska, Maria & Kasch, Lisa (Midway Coll, KY 40347-1120), **Reality Construction and Presentational Language: A Social-Cognitive Perspective on Prejudice**, *Humanity and Society*, 1992, 16, 2, May, 197-216.

¶ A social-cognitive perspective that stresses the role of language & the social construction of reality is used to analyze group defamation. The misuse of nonliteral & metaphorical presentational language contributes to prejudice. Susanne K. Langer's philosophy of language (*Philosophy in a New Key* (3rd edition), Cambridge: Harvard U Press, 1970 (1942)) suggests the existence of complex relations between words, concepts, & experience. Cognitive research in psycholinguistics supports Langer's claim concerning the constructiveness of human cognition, & language's role in transforming experience. There is an innate need to dispel the inherent ambiguity of human behavior of an other by simplistic classifications. Metaphorical presentational imagery used in a negative manner about groups of people reinforces prejudice. A possible remedy to prejudice involves the promotion of nondefamatory, positive presentational language. 52 References. J. Sadler

Gallini, Clara (U Rome, I-00185 Italy), **Gefährliche Spiele–Symbolisch praktizierter Rassismus in der Italienischen Popularkultur** (Dangerous Games: Symbolically Practiced Racism in Italian Popular Culture), *Das Argument*, 1992, 34, 1(191), Jan-Feb, 67-78. (GER)

Translated from English by Thomas Laugstien.

¶ Racist depictions of other people can be found in many aspects of Italian popular culture in everything from food advertisements to videogames. Analysis reveals that these separate images combine unsystematically to form a network of meanings that, under specific political & social conditions, can lead to violence & even racially motivated murder. Special attention is given to racial stereotypes, including cannibals & exotic natives in vacation spots. A correlation is seen between the growth of racist messages & the increase in racial violence. Racial discourse is moving from the level of the scenic metaphor to direct symbolic practice. 22 References. Adpated from the source document as translated by M. Meeks.

Gems, Gerald R. (Dept Health & Physical Education North Central Coll, Naperville IL 60566-7063), **Ethnic Education: A Clash of Cultures in Progressive Chicago,** UM *Explorations in Ethnic Studies,* 1991, 14, 2, July, 1-13.

Comment, 13-14.

¶ Drawing on Antonio Gramsci's concept of cultural hegemony, the assimilation of ethnic groups in Chicago, Ill, within the processes of urbanization, industrialization, & education is explored. Before native, middle-class reformers attempted to produce a centralized public school system in the late nineteenth century, schools were local entities in which early German immigrants were particularly active. While the maintenance of cultural traditions motivated the European groups, ethnic educational practices & influences often proved inconsistent with progressive goals for a homogeneous society. Most ethnics, who were predominantly Catholics & Jews, sent their children to church-related schools to avoid the Protestant influences of the public educational system. In the districts where ethnics did not predominate, public school curricula came to be designed to Americanize immigrant children. A broad-based reform movement in the late 1880s reached beyond the schools into the streets & ethnic neighborhoods to study & change the society. Hull House & other settlement houses served as the scene for the assimilation of divergent cultures & liaisons for the labor movement. It is suggested, however, that both the formal & the hidden curricula continue to reinforce the value systems of a white, male, corporate ideology. Competition, time discipline, ethnocentrism, & materialism are reinforced throughout the school day & in extracurricular activities. In **Critique,** Lucia Chiavola Birnbaum (Stanford U, Calif) confirms that ethnic outsiders to white Anglo-Saxon male culture have resisted education for the purposes of cultural hegemony at home & imperialism abroad. Urban youth are trained for minimal economic roles that are inherently unequal, thus fostering a permanent underclass. It is argued that education reform in the US would require comparative analysis with other countries. S. Millett

Glasberg, Davita Silfen (Dept Sociology U Connecticut, Storrs 06269), **Race, Class, and the Differential Application of Bank Bailouts,** *Critical Sociology,* 1991, 18, 2, summer, 51-76.

¶ A comparative case study of state intervention in 2 recent bank crises in Hartford, Conn, & Harlem, NY, suggests that factors other than those that are the focus of existing theories of the state may be important in defining the meaning of "too big to fail." In particular, social characteristics, eg, the race & class of each bank's respective constituents, stand out as differentiating dimensions in the politics of the bailout process. This suggests that attempts to define the meaning of "too big to fail," or to understand the politics of finance more generally, should consider the characteristics of both the banks themselves, & their customers. 58 References. Goldstein, Sidney (Brown U, Providence RI 02912), **Profile of American Jewry: Insights from the 1990 National Jewish Population Survey,** *American Jewish Year Book,* 1992, 92, 77-173.

¶ Based on a national demographic survey of US Jewry commissioned in 1990 by the Council of Jewish Federations ((CJF) N = 5,146 households), examined here are data on numbers, regional distribution, mobility, sociodemographic characteristics, & Jewish practice & attachments of US Jewry. Results are also compared to those of the 1970/71 CJF survey. Findings highlight the diversity of the Jewish population in sociodemographic composition & behavioral indicators. It is observed that born Jews are more traditional & involved in their community; Jews by choice are observant & involved in a level similar to born Jews; & secularists are at the margins of traditional behavior. It is suggested that conversion of the non-Jewish spouse may enhance Jewish identity. No significiant threat is found to the maintenance of Jewish community & of high levels of Jewish identity, despite high intermarriage rates. 24 Tables. I. Shagrir

Greenhouse, Carol J. (Dept Anthropology Indiana U, Bloomington 47405), **Racial and Ethnic Conflict: A Commentary,** *Studies in Law, Politics, and Society,* 1992, 12(Part A), 199-205.

¶ A review of articles by John Stone, Marc Howard Ross, Lawrence Bobo, & John Brown Childs (see abstracts in SA 41:1), based on the assumption that race & ethnicity are both equally cultural, with conventionally assigned meanings that reflect extremely high stakes. It is suggested that envisioning race & ethnicity as cultural leads to two positive vantage points: (1) consideration of multiple points of contact among the topics of racial & ethnic conflict, public bureaucracies, privatization, & the environment; & (2) acknowledgement of the maximum space within which to juxtapose discussions, suggesting that ethnicity & race can be understood only if the contexts & histories of which they are retained as part of the research agenda. A call is made for three specific potential areas of basic research: ethnographies of everyday life & of organizations; & new forms of social participation (& reexamination of traditional forms). 1 Reference. Haslam, S. Alexander, Turner, John C., Oakes, Penelope J., McGarty, Craig & Hayes, Brett K. (Dept Psychology Australian National U, Canberra ACT 2601), **Context-Dependent Variation in Social Stereotyping 1: The Effects of Intergroup Relations as Mediated by Social Change and Frame of Reference,** UM *European Journal of Social Psychology,* 1992, 22, 1, Jan-Feb, 3-20.

¶ A checklist methodology was used to investigate whether the social stereotyping of Americans during the 1990/91 Persian Gulf war varied with social contextual manipulations related to the hostilities. Questionnaire responses of Australian U students (N = 200) at the beginning & end of the conflict showed that their stereotypes of Americans were generally unfavorable. Stereotype content varied across experimental conditions as an interactive function of both large-scale social change & the intergroup relations associated with specific frames of reference. The findings indicate that stereotypes are sensitive to features of social context & are not necessarily fixed, rigid, & resistant to change. 3 Tables, 71 References. Adapted from the source document.

Haug, Wolfgang Fritz (Freie U Berlin, D-1000 33 Federal Republic Germany), **Zur Dialektik des Anti-Rassismus. Erkundungen auf einem Feld voller Fallstricke** (About the Dialectic of Antiracism. Questions about a Field Full of Pitfalls), *Das Argument,* 1992, 34, 1(191), Jan-Feb, 27-52. (GER)

¶ In 1991 more than 300 attacks occurred against foreign refugees & immigrants in Germany. New policies to combat racism are desperately needed. Many contradictions can be seen in the official treatment of aliens. Moralistic antiracism is not enough to solve the problem. Analysis shows how racism functions within the following contexts: the transition

to high-technology capitalism; global expansion of market capitalism; the heat pump structure of the world market; repulsion & attraction of peoples to world markets; & the emergence of a new, precarious, undecided civil society. Also discussed is the connection between racism & sexism. 63 References. Adapted from the source document as translated by M. Meeks.

Hood, David L. & Harlan, Jon R. (Dept Sociology/Political Science/Native American Studies Eastern Montana Coll, Billings 59101), **Ethnic Disparities in Sentencing and the Washington Sentencing Reform Act: The Case of Yakima County**, UM *Explorations in Ethnic Studies*, 1991, 14, 1, Jan, 43-55.

¶ The impact of Wash's Sentencing Reform Act (SRA) on sentencing disparity is examined. The purpose of the statutes was to establish equal punishment for equal crimes to reduce the potential for ethnic/racial bias in the criminal justice system. The SRA's success in achieving this objective in Yakima County is evaluated, comparing sentencing patterns among Hispanics, Native Americans, & whites. From data provided by the Sentencing Guidelines Commission for the period 1986-1989, three independent variables (ethnic group, gender, & age) & two dependent variables (total confinement defined as actual jail/prison time, & partial confinement defined as authorized work release) were chosen. A difference of means test was used in each relevant cell to assess observed deviations in sentencing means. Additionally, mulitiple classification analysis was used to investigate the unique contribution of each independent variable. Results indicate that, while sentencing disparity in Yakima County is not widespread, it does persist. Hispanics are more severely punished–controlling for the seriousness level of crime & defendant criminal history–than are Native Americans or whites. Gender & age factors appear to have minimum impact on the sentence received. 5 Tables, 1 Appendix. AA

93Z4377

Howe, Stephen, The New Xenophobes, *New Statesman & Society*, 1991, 4, 149, 3 May, 12-14.

¶ Though elections have now occurred in all formerly communist East European states, with diverse results, all the new systems have the common pattern of rejecting the political Left. Leftist politics, most often liberalism or social democracy, may still exist in Eastern & East-Central Europe, but such movements avoid labeling themselves as Leftist, are not successful in winning elections, & have powerful enemies, in particular, the increasing trend toward nationalism fueled by aggressive xenophobia. The harsh communist rule of old may be replaced by new dictatorships of the Right. D. Generoli

93Z4378

Huffman, Terry E. (Northern State U, Aberdeen SD 57401), **The Experiences, Perceptions, and Consequences of Campus Racism among Northern Plains Indians**, UM *Journal of American Indian Education*, 1991, 30, 2, Jan, 25-34.

¶ A discussion of the subjective experience & perceptions of Indian students on campus racism based on questionnaires (N = 48) & interviews (N = 22) with American Indian students at a small midwestern university. Findings indicate that Indian students face pervasive verbal racism from non-Indian students, which serves to compound their feelings of isolation & not belonging at college. 1 Table, 27 References. Adapted from the source document.

93Z4379

Hunnisett, Stanley F. & Pennanen, Jukka (U Iowa, Iowa City 52242), **Saami, Gypsies, Indians, and Immigrants: Finns' Attitudes toward Minorities and Others**, *Ethnos*, 1991, 56, 3-4, 210-223.

¶ Examined are case studies of Finnish attitudes & behaviors toward Saami & Canadian Indians, Gypsies, & foreigners, drawing on previously published work & personal experience. Analysis reveals that, while neither official Finnish nor folk attitudes toward the Saami have been particularly prejudiced, competition for resources, coupled with cultural insensitivity, have eroded Saami territory, autonomy, & culture. On both the official & folk levels, Finnish behavior toward the Gypsies has always been unabashedly discriminatory, while Canadian Indians have found generally respectful attitudes in their relations with Finnish immigrants. Finnish society's treatment of immigrants has not been discriminatory on the folk level, though signs of prejudicial attitudes are beginning to appear. 21 References. Adapted from the source document.

93Z4380

Kasinitz, Philip, Facing Up to the Underclass, UM *Telos*, 1988, 76, summer, 170-180.

¶ A review article on a book by William Julius Wilson, *The Truly Disadvantaged: The Inner City, The Underclass and Public Policy* (Chicago: U of Chicago Press, 1987 (see listing in IRPS No. 66)). Wilson defines & explains key issues in the underclass debate: why, having rediscovered the problems of US poverty in the early 1960s, liberals then abandoned this issue by the decade's end & allowed conservatives to win policy debates almost by default; & why black poverty has grown substantially since the late 1960s. In addition, Wilson ties the underclass problem to processes in the larger economy & puts forth his own policy recommendations for solving the problems of social inequity by emphasizing full employment & a tight labor market. Although the book lacks new descriptive material of underclass communities, Wilson is commended for: demonstrating that communities are the appropriate unit of analysis, deftly picking apart the "welfare as the cause of poverty" argument, demonstrating the partiality of the racism argument, & focusing on the problem of the underclass's structural isolation. M. Maguire

93Z4381

Kaufmann, Irene (Gruschaplatz 3/10, A-1140 Vienna Austria), **Albanien–ethnische Homogenität oder ethclass-society?** (Albania–Ethnic Homogeneity or Ethclass-Society?), *Österreichische Zeitschrift für Soziologie*, 1992, 17, 2, 46-61. (GER)

¶ Albanian national identity is currently being reformulated following the downfall of the communist regime, which had repressed information on the status of minority groups. Whereas the 1945 census indicated that 4.2% of the population belonged to minority groups, the 1989 census claimed that only 2% belonged to minorities. Analysis reveals that the upper class is composed of native Albanians & Greeks, while the middle class contains Macedonians, Montenegrans, Serbs, Vlachs, & Albanians from the Kosovo region of Yugoslavia, & the lower class comprises various groups of gypsies. Thus, instead of the ostensibly classless, ethnically homogeneously image of Albania promulgated by the communists, a class structure determined largely by ethnic origin can be identified. Analogies to enforced ethnic segmentation in Nazi Germany can be made. Also discussed is the fate of ethnic Turks, who seem to have disappeared entirely. 2 Tables. Adapted from the source document.

Kellough, J. Edward & Elliott, Euel (Dept Political Science U Georgia, Athens 30602), **Demographic and Organizational Influences on Racial/Ethnic and Gender Integration in Federal Agencies**, UM *Social Science Quarterly*, 1992, 73, 1, Mar, 1-11.

¶ Drawing on previous work concerned with the representativeness of public bureaucracies, several theoretically important demographic & organizational influences on the integration of the federal work force during the Reagan administration are examined. Statistical employment data on women, blacks, & Hispanics in 30 government departments & agencies, 1982-1988, indicate that the geographic location of agency positions is consistently important for blacks & Hispanics. Unionization appears to be a critical influence for all groups, as does bureacratic mission. Agency size is an important predictor of the employment of women, but not statistically significant in the case of Hispanics. Similarly, the rate of new hires has a moderate influence on black & female employment, but no impact on Hispanic employment. Incorporation of these influences explains 54%-70% of the variance in federal workplace diversity. It is suggested that results reveal the kinds of structural constraints even the most assertive affirmative action policies confront; additional re-

search into the nature of agency Equal Employment Opportunity strategies is recommended. 2 Tables, 27 References. Adapted from the source document.

Koven, Ronald, Muslim Immigrants and French Nationalists, UM *Society*, 1992, 29, 4(198), May-June, 25-33.

¶ A review of French attitudes on Maghrebin immigrants. The history of North African immigration to France is outlined, & comments by political leaders on the rate of immigration & ways to control it are cited. A historical overview of French attitudes to various ethic groups is presented, noting integration-enhancing policies. Against this background, attitudes toward North African immigrants appear colored with contempt & bitter colonial memories. The current debate over integration & assimilation policies is examined, with reference to recent racial & anti-Maghrebin incidents. I. Shagrir

Lander, Patricia Slade (Brooklyn Coll, NY 11210), **Finnish Identity in a Changing Europe,** *Ethnos*, 1991, 56, 3-4, 242-255.

¶ Data obtained via informal interviews (N not provided) & observations in 1987 reveal three major shifts in the concept of Finnish identity from an emphasis on: (1) Eastern origins to a reemphasis on common ties with the West, particularly with Nordic states & Sweden; (2) poverty & struggle to prosperity & security; & (3) marginality & isolation to active neutrality. Various components–linguistic, physical, artistic, & political–that shape Finnish identity are discussed, & it is noted that the identity projected by Finnish leaders since independence has paralleled the evolution of racial categories. It is concluded that reinterpretations of history, folklore, & anthropology will continue to shape Finnish identity & help it to meet the demands of a changing Europe. 36 References. Langford, Tom & Ponting, J. Rick (U Calgary, Alberta T2N 1N4), **Canadians' Responses to Aboriginal Issues: The Roles of Prejudice, Perceived Group Conflict and Economic Conservatism,** UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology*, 1992, 29, 2, May, 140-166.

¶ Drawing on relevant research literature, the main features of contemporary public opinion on aboriginal issues in Canada are explored in an effort to contribute to an international debate on the determinant of attitudes toward policy issues surrounding racial groups. The debate concerns the relative explanatory importance of self-interest, perceived group competition, so-called symbolic orientations, eg, prejudice & conservative ideology, & the question of whether the various factors influence policy attitudes in an additive or an interactive fashion. Using interview data from a 1986 national random sample of 1,834 nonaboriginal adults residing in the 10 Canadian provinces, examined are the effects of various factors in shaping Canadians' views on support for self-government, support for special status, & level of priority attached to Native Issues. Findings indicate that: prejudice & perception of group conflict interact strongly in influencing nonaboriginal Canadians' responses to aboriginal issues; economic conservatism is an important determinant of policy responses, not of other factors; & ethnocentrism has a negligble to minor influence in the analyses. A moderate to large proportion of the variation in nonaboriginal responses to aboriginal issues can be explained by group conflict perception, prejudice, & economic conservatism. The analyses additionally demonstrate that perceptions of personal threat have a modest net effect on nonaboriginal Canadians' responses. The relevance of the findings for aboriginal political leaders is discussed. 3 Tables, 2 Appendixes, 45 References. Adapted from the source document.

Lewis, Susan C., Who Are We? Ethnic Stereotypes and "Nordic Individualism" in a Finnish American "Uniontown", *Ethnos*, 1991, 56, 3-4, 224-241.

¶ Archival & fieldwork data are drawn on to document changes in the meaning of individualism in a Finnish-American "uniontown" in the Pacific Northwest. Tensions created by the ongoing conflict coloring Finnish identity in an overarching American society are discussed, demonstrating how ideological & social structural ambiguities involved in the process of change are encapsulated in local stereotypes about Finns. These stereotypes seem to be based on: (1) the cultural imagery of peasant traditionalists promoted by a folk festival; (2) the visibility of Finnish immigrant workers in the fishing industry; & (3) historical political conflict. Analysis of the expressive & instrumental uses of these stereotypes reveals a pattern of conflict & accommodation to an ongoing modernizing process. 36 References. Adapted from the source document.

Martinez, M., Felka, S., Simpson-Housley, P. & De Man, A. (c/o Simpson-Housley–Dept Geography York U, North York Ontario M3J 1P3), **Neighbourliness, Socializing and Residential Satisfaction in Urban Settings: Two Studies of German and Spanish Immigrants,** *International Journal of Comparative Sociology*, 1991, 32, 3-4, Sept-Dec, 310-315.

¶ Two studies of aspects of immigrants' integration in Toronto, Ontario, were performed. In the first, 200 German immigrants completed questionnaires concerning the relationship between neighborliness & selected demographic & personal variables (ie, rural/urban residency prior to immigration, age at arrival, length of residency, knowledge of English at arrival & at present, age, sex, & locus of control). Results of semipartial correlation analyses indicate that women with internal locus of control residing in relatively more rural areas prior to coming to Canada tend to be most neighborly. In the second, 144 Spanish immigrants completed questionnaires assessing variables related to socializing behavior & residential satisfaction (ie, age at arrival, length of residency, rural/urban origin, knowledge of English at arrival & at present, participation in language training programs, years of formal schooling, age, & sex). Results of semipartial correlation analyses indicate that well-educated Spanish immigrants who possess good command of the English language generally socialize with people outside their own ethnic group. Further, residentially satisfied immigrants tend to be long-term residents of Canada who made an effort to learn English through government-sponsored training programs. 10 References. Modified AA

Mason, David (U Leicester, LE1 7RH England), **Categories, Identities and Change: Ethnic Monitoring and the Social Scientist,** *European Journal of Intercultural Studies*, 1992, 2, 3, Mar, 41-52.

¶ The role that a social scientist plays in generating & defining categories used in ethnic monitoring is analyzed, drawing on previous scholarship, including the recent critique of monitoring orthodoxy offered by Philip Nanton ("The New Orthodoxy: Racial Categories and Equal Opportunities Policies," *New Community*, 1989, 15, 4, 549-564). Various theoretical & methodological difficulties encountered in defining appropriate policy categories are elucidated, focusing on how politics fundamentally relates to identification & categorization of "objective" data. By identifying the role of social scientists in the definition of categories for ethnic monitoring, it is argued that researchers must continually & critically reflect on their indirect role within the political process itself–whether or not they claim expertise in political decision making. 19 References. Medding, Peter Y., Tobin, Gary A., Fishman, Sylvia Barack & Rimor, Mordechai (Hebrew U Jerusalem, Mount Scopus IL-91905 Israel), **Jewish Identity in Conversionary and Mixed Marriages,** *American Jewish Year Book*, 1992, 92, 3-76.

¶ File data collected in 8 US Jewish communities 1985-1988 (N = 197, 078 households) are used to examine the characteristics & extent of Jewish behavior & identification, attitudes toward Jewish education, & maintenance of non-Jewish identity within conversionary (one spouse born Jewish & the other converted to Judaism) & mixed (one spouse

born Jewish & the other non-Jewish) marriages. Sociodemographic information on the sample is provided. Typological analysis permits quantification of aspects of Jewish identity on an additive (Likert) scale. Aspects of identity include synagogue membership & attendance, observance of holiday practices, involvement in the Jewish community, & ties to Israel. It is found that conversion often leads to medium & high Jewish identification & establishment of a single-identity household. Mixed marriages often lead to establishment of a dual-identity household, where symbols of Christian identification are present. 35 Tables. I. Shagrir

Min, Pyong Gap (Queens Coll, Flushing NY 11367), **A Comparison of the Korean Minorities in China and Japan**, UM *International Migration Review*, 1992, 26, 1(97), spring, 4-21.

¶ The cultural autonomy & ethnic identity of Korean minorities in the People's Republic of China & Japan are examined. While Koreans in Japan have lost much of their ethnic subculture & suffer from an negative ethnic identity, Koreans in China have maintained ethnic autonomy & identity. Four factors appear responsible for these different levels of ethnicity: (1) China's pluralistic minority policy vs Japan's monolithic assimilationist policy; (2) voluntary migration of Koreans to China vs colonized minority migration to Japan; (3) presence of a Korean territorial base in China vs lack of an ethnic enclave in Japan; & (4) China's geographic & ideological proximity to North Korea vs Japan's isolation. 2 Tables, 1 Figure, 19 References. Morris, Christine (PO Box 74, Coorparoo 4151 Australia), **Oral Traditions under Threat: The Australian Aboriginal Experience**, UM *Explorations in Ethnic Studies*, 1991, 14, 2, July, 33-41. **Comments**, 41-44.

¶ Concern is expressed at the encroachment of the written tradition on the oral tradition of the Australian aborigines. The resurgence in popularity of new anthologies of traditional aboriginal myths & legends is noted. The authors of these books are predominantly nonaboriginal, & compile them under the rationale that they are bringing to the average Australian a knowledge of aboriginal culture. But to take a traditional story from the land from which it was born & on which it is recreated demonstrates an ignorance of exactly what a traditional aboriginal story is, what it is connected to, & what it cannot be disconnected from. In **Critique**, Paivi H. Hoikkala (Arizona State U, Tempe) argues that the oral & the written need not be mutually exclusive, & anthologies can help in establishing a respect for oral traditions. In **Critique**, Alan Spector (Purdue U, West Lafayette, Ind) suggests that Morris's proposals go too far, although any position less extreme would open the door to superficial agreement about the need to preserve traditional cultures. Mullins, David (Centre Urban & Regional Studies U Birmingham, B15 2TT England), **From Local Politics to State Regulation: The Legislation and Policy on Race Equality in Housing**, *New Community*, 1992, 18, 3, Apr, 401-413.

¶ Recent fundamental changes in housing legislation & policy in GB will have significant implications for racial equality in housing. Social housing policy involves: investment shifts from local authorities to housing associations, the introduction of market mechanisms, & the encouragement of tenants & housing providers to "opt out" of the local state. This restructuring has challenged the local political model of race equality. In its place is a regulatory model, policed by the Housing Corp & the Commission for Racial Equality, both of which have attained new powers under this legislation. These important changes are, however, of less significance than the overall decline in social housing investment for black & ethnic minority households in housing need. 35 References. Adapted from the source document.

93Z4394

Mullins, David (Centre Urban & Regional Studies U Birmingham, B15 2TT England), **Housing and Urban Policy**, *New Community*, 1992, 18, 3, Apr, 475-479.

¶ A review of housing implications of recent debate on refugee policies, developments affecting black & minority housing associations, & guides for housing authorities monitoring equal opportunities performance & setting targets. The European Commission's call for tighter immigration controls & restrictions on applications for asylum was met in GB by the 1991 Asylum Bill, which was viewed as racially discriminatory & withdrawn. Housing associations are making an increasing contribution to housing new refugees: eg, black & minority housing associations now manage 7,671 homes. These associations still face difficulties under the new financial regime, their major problem being the small size of their housing stock. Despite the advocacy by housing authorities of systematic ethnic record keeping, monitoring, & target setting, performance has been poor. It is argued that the integration of ethnic monitoring into routine practice will further race equality. 12 References. D. Generoli

Nelson, Gayle L. (Dept Applied Linguistics Georgia State U, Atlanta 30303), **The Relationship between the Use of Personal, Cultural Examples in International Teaching Assistants' Lectures and Uncertainty Reduction, Student Attitude, Student Recall, and Ethnocentrism**, *International Journal of Intercultural Relations*, 1992, 16, 1, winter, 33-52.

¶ Reported are results of an experimental, intercultural study that investigated the relationship between the use of personal cultural examples by an international teaching assistant (ITA) & uncertainty reduction, student attitude, student recall, & ethnocentrism. In one condition, the ITA (a Chinese male) used personal cultural examples to illustrate the major points in the lecture, whereas in the other, hypothetical examples were used. Posttest questionnaires completed by the Ss (N = 160 students at a midwestern university) demonstrated that the use of personal examples by the ITA significantly reduced student uncertainty, improved student attitude toward the ITA, & increased student recall of lecture material. Ethnocentrism did not correlate significantly with attitude or recall. 2 Tables, 1 Appendix, 57 References. Adapted from the source document.

Olivier, Johan L. (Centre Conflict Analysis Human Sciences Research Council, Pretoria 0001 South Africa), **Causes of Ethnic Collective Action in the Pretoria-Witwatersrand Triangle, 1970 to 1984**, *South African Sociological Review*, 1990, 2, 2, Apr, 89-108.

¶ The dynamics of ethnic collective action ((CA) where groups use a set of ethnic markers, eg, skin color & language, as a criterion for membership) in the Pretoria-Witwatersrand-Vaal (South Africa) triangle, 1970-1984, are investigated via newspaper accounts. Support is found for the arguments of the resource mobilization theory & the competition theory. Results also show that labor market dynamics affect rates of protest & conflict events in different ways. Findings reported here question the results of early research suggesting that repression has negative effects on rates of CA: in most cases, repressive measures by the police at events of CA significantly increased subsequent rates of CA. 3 Tables, 1 Figure, 1 Appendix, 77 References. Omi, Michael (Dept Ethnic Studies U California, Berkeley 94720), **Shifting the Blame: Racial Ideology and Politics in the Post-Civil Rights Era**, *Critical Sociology*, 1991, 18, 3, fall, 77-98.

¶ In the post-civil rights era, critics on the Right have argued that liberal social policies have exacerbated the very problems of racism & poverty that they purport to alleviate. In different ways, the far Right & neoconservatives have tried to refashion popular conceptions & scholarly knowledge about racial equality by identifying the liberal state of the 1960s & 1970s as the cause of a new racially unjust social order. It is argued that, despite the ascendancy of various forms of conservatism in the 1980s, the Reagan & Bush administrations did not achieve an improvement in race relations or social policy. The recent rioting in Los Angeles, Calif, & other cities necessitates new dialogue on the issue of race & poverty in the US. 33 References. Adapted from the source document.

Paukovič, Vladimír, Národnostné vzťahy v národnostne zmiešaných oblastiach Slovenska z hľadiska pôsobenia etnicky orientovaných združení (Nationality Relations in Mixed-Nationality Regions of Slovakia from the Point of View of Ethnically Oriented Associations), *Sociológia*, 1991, 23, 1-2, 126-138. (SLO)

¶ To examine ethnic relationships in Slovakia after the overthrow of communism, questionnaire data were obtained in May 1990 in regions with a high proportion of national minorities (N = 1,699 respondents (Rs), including 504 Slovaks & 494 Hungarians in one area & 352 Slovaks & 349 Russians & Ukrainians in another). The relationships between linguistic groups & national minorities are politically sensitive & important. After Nov 1989, the minorities became more vocal, & many ethnically oriented social & political organizations sprang up. In general, Rs interpreted these developments positively. Thus, ethnic self-realization processes do not necessarily disturb social tranquility. However, extreme polarity can lead to negative social influences. 12 Tables, 2 References. Perry, **Pamela** (U California, Berkeley 94720), **The Politics of Identity: Community and Ethnicity in a Pro-Sandinista Enclave on Nicaragua's Atlantic Coast**, *Berkeley Journal of Sociology*, 1991, 36, 115-135.

¶ An explanation is offered for the emergence of the coastal ethnic community of Orinco, Nicaragua, as a zone of support for the Sandinistas in their struggle against the US-backed contras. In contrast to the ethnic identity & activities of the Miskitu (a native Nicaraguan people who were anti-Sandinista) & the Creole (a people of African & British origins who practiced forms of nonviolent resistance against the Sandinistas), Orinocans' self-perception as inhabitants of a locality, rather than as members of an ethnic group, inclined them to support the socioeconomic project of the Sandinistas. The Orinocans' sense of themselves raises questions about the way that ethnic theorists--particularly practitioners of instrumental choice theory--conceive ethnic groups & ethnic mobilization. 20 References. Phillips, Deborah & Karn, Valerie (School Geography U Leeds, LS2 9JT England), **Race and Housing in a Property Owning Democracy**, *New Community*, 1992, 18, 3, Apr, 355-369.

¶ The restructuring of housing tenure & widespread government support of home ownership in GB during the 1980s have had significant implications for ethnic minorities. A complex picture of gains & losses emerges as more ethnic minorities buy into better neighborhoods & young, white households begin to move into established multiracial areas. It appears that some private housing institutions are now providing a wider service to ethnic minorities than in the 1970s, but the structure of opportunities open to black purchasers is still highly differentiated. Little evidence is found of a fundamental change in racial attitudes toward GB's ethnic minorities competing within the private housing market of the 1990s. 22 References. Pohoryles-Drexel, Sabine & Pohoryles, Ronald J. (ICCR, Hamburgerstr 14/20 A-1058 Vienna Austria), **Soviet Jews in Vienna: A Case Study**, *Innovation*, 1991, 4, 3-4, 89-101.

¶ In contemporary Austria, there exists a minority of Soviet Jews, mostly from the Asian parts of the USSR, who are quite often wrongly referred to as "Russian Jews." They went to Vienna as the first station of the emigration from the USSR, sometimes remaining to establish themselves, sometimes coming back from Israel or, quite seldom, from the US. It is estimated that the size of this group is about 6,000 people. Some explorative data from interviews (N not specified) & 40 in-depth biographies of Soviet Jews in Austria are drawn on to distinguish between 2 different groups: Ashkenazim Jews from German origins of the twelfth century, originating from the European parts of the USSR; & Sephardim Jews, whose orgins are more differentiated, some coming from Spain & Portugal in the sixteenth century, some from Turkey to the Asian parts of the USSR, some from the native nation of the Chasars, & others from Iranian origins who immigrated in the seventh century. It is concluded that Soviet Jews in Vienna are a quite heterogeneous population with various needs to overcome their integration problems; however, they also have many common orientations. The integration process, not to be equated with assimilation, creates many problems for both the Soviet Jews & the Austrian authorities. There is a specific responsibility of Austria--as well as of Germany--in the aftermath of the holocaust to promote the newly arising Austrian Jewry. 12 References. Modified AA

Porter, Cornelia P. & Villarruel, Antonia M. (School Nursing U Michigan, Ann Arbor 48109), **Socialization and Caring for Hospitalized African- and Mexican-American Children**, *Issues in Comprehensive Pediatric Nursing*, 1991, 14, 1, Jan-Mar, 1-16.

¶ It is contended that African- & Mexican-American children's responses to health & illness are rooted in their socialization into group perspectives that have been shaped by particular social & economic realities. Nurses are expected to provide care to these children even if they have not been educated to understand the effect of socialized perspectives on their practices. Ways that differences in perspectives & ideologies create misunderstanding are discussed to demonstrate to nurses how their behavior might be interpreted by African- & Mexican-American children. It is stressed that the motivations for these children's behavior may be different from those of their European-American counterparts, even though the observable behaviors may be similar & the children of these two groups may bring additional socialized fears & anxieties to the hospital setting. Examples of actual practice situations are used to illustrate the major points. 53 References. Adapted from the source document.

Pugliese, Enrico, Le interpretazioni del razzismo nel dibattito italiano sulla immigrazione (The Interpretations of Racism in the Italian Debate on Immigration), IN *La Critica Sociologica*, 1991, 99, Oct-Dec, 84-105. (ITA)

¶ To investigate racism in light of the new phenomenon of immigration to Italy, a content analysis is conducted of various articles from popular literature & journalism dealing with racism. Two opposing schools of thought can be distinguished: (1) Italians are basically good people & therefore are not racist; & (2) Italians are intrinsically racist. Although public opinion surveys often tend to point toward racial tolerance, their results cannot always be trusted, since it is difficult to obtain concrete answers. Declarations of antiracism are often accompanied by ethnocentric attitudes. For instance, about 1,000 immigrants are housed at government expense in an old factory, ostensibly pointing toward government largesse; however, the living conditions there are abominable. Debate on racism is minimal in Italy because there are few scholars or journalists who speak out strongly against racism. Adapted from the source document.

Ransford, H. Edward & Palisi, Bartolomeo J. (Dept Sociology U Southern California, Los Angeles 90089-2539), **Has There Been a Resurgence of Racist Attitudes in the General Population?**, *Sociological Spectrum,* 1992, 12, 3, July-Sept, 231-255.

¶ Two images of racism in the US are examined: one view, based on current media reports, claims that acts of racism have increased; the other, based on survey data, notes a steady decline in prejudicial attitudes. Points of convergence & departure in these views are explored, & General Social Survey interview data (1972-1989) are used to examine white attitudes toward blacks. Four measures of prejudice are analyzed: social distance, objections to high proportions of blacks in integrated schools, free-will explanations of black disadvantage, & personal willingness to break down racial barriers. Findings show that: there is a strong pattern of decline in prejudice for 2 of the measures-social distance & willingness to break down barriers; in none of the measures was there an increase in prejudice; & subgroups traditionally high in prejudice have become more tolerant over time than other subgroups. Explanations are offered to reconcile the findings with mass media reports of increased racism. 9 Tables, 19 References. Adapted from the source document. Reynolds, Larry T. (Central Michigan U, Mount Pleasant 48859), **A Retrospective on "Race": The Career of a Concept,** *Sociological Focus,* 1992, 25, 1, Feb, 1-14.

¶ The results of several studies on the origins, development, & use of the concept of "race" in both physical & social science are reported in this 1991 presidential address to the North Carolina Sociological Assoc. A brief history of the concept is given, & uses of the term in physical anthropology, sociology, psychology, & biology are discussed, along with variations in the acceptance of its validity. It is noted that physical anthropologists & physiological psychologists are inclined to accept the concept of race because their disciplines emphasize the biological nature of humans. It is suggested that all disciplines would be better served by the rigorous application of a feminist sociology of knowledge perspective on the issue of race, which emphasizes that race is not a scientific idea, but an ideology serving vested political & cultural interests. 5 Tables, 55 References. Rivett, Kenneth (School Economics U New South Wales, Kensington 2033 Australia), **From White Australia to the Present,** *Population Review,* 1991, 35, 1-2, Jan-Dec, 57-74.

¶ The white Australia policy of 1901 had its origins in racial prejudice, fears of low paid labor, & the supposed inability of Asians to share democratic citizenship. Gradual change culminated in 1973 in the adoption of a nondiscriminatory immigration policy that has allowed Australia to receive more Indo-Chinese refugees per head of population than any other country. Immigration has greatly improved Australia's reputation abroad. Whether it is as economically helpful to people already in Australia as it is to the immigrants is more doubtful: economies of scale, quicker technological innovation, & reduction in per capita cost of conservationist measures may be offset by lower capital stock per head & greater congestion. Admission of business & professional migrants is economically useful & seems justified when all aspects of " the brain drain" are considered. Family reunion & entry of refugees & others admitted on humanitarian grounds require a different justification. 1 Table. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Rosenberg, M. Michael & Jedwab, Jack (c/o Jedwab–McGill U, Montreal Quebec H3A 2T5), **Institutional Completeness, Ethnic Organizational Style and the Role of the State: The Jewish, Italian and Greek Communities of Montreal,** *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology,* 1992, 29, 3, Aug, 266-287.

¶ The notion of ethnic institutional completeness, which refers to parallel institutions that either inhibit or serve as alternatives to participation in the broader society, is extended by examining the organizational styles of Jewish, Italian, & Greek ethnic groups in Montreal, Quebec, in relation to the policies of the Quebec state. In the Quebec educational system, the role of the state has been uneven across ethnic groups. Since neither the British nor the French were willing to allow post-WWII immigrants into their institutions, immigrants were forced to turn to ethnic day schools. In the mid-1960s, when Quebec adopted education as the primary instrument to transform society, the status of institutional completeness among the ethnic groups became transparent. Among the Greeks & Jews, institutional completeness was high; the Italian status was fragmented. Currently, Quebec has instituted a new social contract between these three communities & the state, wherein the state supports the maintenance of ethnic diversity in exchange for compliance with state policy, particularly in the franciziation of community institutions & practices. 37 References. Russell, Margaret M. (School Law Santa Clara U, CA 95053), **Race and the Dominant Gaze: Narratives of Law and Inequality in Popular Film,** *Legal Studies Forum,* 1991, 15, 3, 243-254.

¶ The impact of the "dominant gaze"–the tendency of mainstream culture to replicate, through narrative & imagery, societal racial inequalities & biases–on cinematic narrative is examined. The dominant gaze works to continue subordination of blacks in mainstream Hollywood films in three distinct ways: (1) proliferation of degrading & dehumanizing stereotypes; (2) marginalization or absence of indigenous perspectives on blacks' history & experiences; & (3) cooptation of ostensibly racial themes to capitalize on the perceived trendiness or fashionableness of such perspectives. Examples of the cinematic impact of the dominant gaze in several films are discussed. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

(Faculdade Educaçao U Estadual Campinas, 13081 São Paulo Brazil), **Los mecanismos de discriminación racial en el mercado de trabajo: el caso del Brasil urbano** (Mechanisms of Racial Discrimination in the Labor Market: The Case of Urban Brazil), *Estudios Sociológicos,* 1991, 9, 25, Jan-Apr, 35-60. (SPA)

¶ Race is examined as a determining factor in income levels & employment in Brazil. Life histories obtained from 81 black workers in metropolitan São Paulo show that institutional racism begins in the schools; white teachers point black youth toward manual or service occupations,

& direct white youth toward higher-status occupations. The black drop-out & failure rates are high. Racial discrimination continues in the workplace: black office workers are placed out of the sight of white clients; white women are preferred to black for domestic service; in retail establishments, black clerks are sent to departments in which they encounter customers with lower incomes; & blacks are the first to be fired or laid off. Conditions for blacks are no better in the professional or academic sectors, where they are often overqualified. Even though the new Constitution defines racism as a crime, there seems to be little motivation to confront it on the part of white unions, political parties, business groups, & state bureaucracies. One challenge of the black movement in Brazil is to find support among whites for controlling racism. 7 Tables. Adapted from the source document as translated by M. Pflum. Saunders, Christopher (U Cape Town, Rosebank 7700 South Africa), **The Early Eastern Cape,** *Social Dynamics,* 1992, 18, 1, June, 66-71.

¶ A review essay on a book by Clifton Crais, *White Supremacy and Black Resistance in Pre-Industrial South Africa* (Cambridge: Cambridge U Press, 1991 [see listing in IRPS No. 66]). Crais updates earlier historical accounts of South Africa's Eastern Cape frontier, summarizing the latest scholarship on political, economic, & social relations among whites (settlers, colonial officials, missionaries, & traders), Xhosa speakers (chiefs & commoners), & Khoikhoi (slaves & ex-slaves). Unpublished theses & original archival research are also incorporated in the analysis. The book, however, is found to be obscure, patchy, jargon-ridden, & underdeveloped in places. Specialists would do well to consider Crais's challenges in their future research, while novices should start with another text. 27 References. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4416

Scheff, Thomas J. (U California, Santa Barbara 93106), **Discovering Sociology,** *Teaching Sociology,* 1992, 20, 3, July, 248-253.

¶ A method for teaching sociology that promotes student initiation & discovery is outlined that uses discussion, original source readings, & essay exams instead of lecture, textbooks, & multiple-choice examinations. The discovery approach uses the techniques of role-playing, dialogues, student exchange, & movement from the concrete to the abstract, & classes are run as meetings. 1 Table, 12 References. M. Pflum (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Schierup, Carl-Ulrik (Dept Sociology Umeå U, S-90187 Sweden), **What 'Agency' Should We Be Multi About? The Multicultural Agenda Reviewed,** *European Journal of Intercultural Studies,* 1992, 2, 3, Mar, 5-23.

¶ Theoretical & practical shortcomings of the contemporary multicultural agenda are revealed. The Swedish approach to prescribed multiculturalism has given rise to a dual policy of standardization/assimilation & ethnicization that has resulted in an increasingly fragmented political scene based on the problematic balance between radical ethnic claims & the leftist corporate state's cultural monitoring of social conflicts. Various alternatives to a multicultural agenda are considered, ranging from a traditional Marxist critique to a discussion of the complex interrelations among societal chance, cultural production, & the forms of transethnic agency in contemporary Europe represented in discourses on contemporary social movements. 60 References. Shavit, Yossi (Dept Sociology & Anthropology U Haifa, Mount Carmel IL-31999 Israel), **Arabs in the Israeli Economy: A Study of the Enclave Hypothesis,** *Israel Social Science Research,* 1992, 7, 1-2, 45-66.

¶ In a test of the enclave hypothesis developed by K. L. Wilson & A. Portes (see SA 29:4/81L6751)–which asserts that an enclave economy encourages the socioeconomic success of ethnic minorities–the role of the Arab enclave economy in occupational attainment, employment, & job satisfaction of Arab men is examined through 1988 interview data from 762 Arab males age 34, stratified for religion & type of locality. The Arab-owned economy in Israel is restrictive, consisting mainly of small businesses in the craft industry. Despite this structural limitation, workers in the Arab economy experience greater occupational returns for their education, are less likely to lose their jobs, & report greater job satisfaction than the general Arab population. 6 Tables, 1 Appendix, 35 References. Smith, David M. & Blanc, Maurice (Middlesex Polytechnic, London N11 2NQ England), **Ethnicity and Citizenship: A Tri-National Comparison,** *European Journal of Intercultural Studies,* 1992, 2, 3, Mar, 25-40.

¶ Ways that ethnic & foreign minorities can secure access to nationality & citizenship in GB, the Federal Republic of Germany, & France are explored. Distribution of privilege based on blood rights & territorial rights is assessed in each country, revealing that blood rights predominate in Germany, territorial rights in GB, & elements of each in France. Analysis of citizenship in each of these countries provides a more complex understanding of the situation that minorities face. Operationally, ethnicity is defined (following Max Weber) in terms of national identity, not race or biology, which raises questions about the real meaning of ethnicity for both the majority & the minority. 1 Table, 43 References. Soares do Bem, Arim (Freie U Berlin, D-1000 33 Federal Republic Germany), **Kreuzberger Jugendliche zwischen Revolte und Autoritarismus** (Between Subordination and Resistance: Youth in the Kreuzberg Section of Berlin), *Das Argument,* 1992, 34, 1(191), Jan-Feb, 79-84. (GER)

¶ To investigate possible racist attitudes among Berlin youth, interviews were conducted in Aug 1990 & June 1991 with two boys born in Germany–one of German & the other of Turkish parents. During this historical period, when the wall was opened & preparations were underway for national reunification, their perceptions of the "enemy" underwent considerable change. Negative racist attitudes once projected onto the Turks as undesirable foreigners were shifted to the East Germans, pejoratively called "Ossis," & viewed as dangerous neo-Nazis. Ironically, these prejudicial ideas against East Germans are similar to those of the Nazi era against Jews. 7 References. Adapted from the source document as translated by M. Meeks. Stanfield, John H., II (Dept Sociology Coll William & Mary, Williamsburg VA 23185), **Racism in America and in Other Race-Centered Nation-States: Synchronic Considerations,** *International Journal of Comparative Sociology,* 1991, 32, 3-4, Sept-Dec,

243-260.

¶ It is argued that racism is a synchronic experience & structured form of inequality. Race-centeredness refers to the central place of routinized correlations between real or imagined phenotypical attributes & intellectual abilities, moral fiber, personality, & other social & cultural attributes. Race is an organizing principle of daily life & of power resource distribution that is the basis for making life decisions in a race-centered nation-state. Several synchronic characteristics of racism are analyzed, discussing how these factors simultaneously shape human development. 52 References. Steeh, Charlotte & Schuman, Howard (Dept Sociology U Michigan, Ann Arbor 48109), **Young White Adults: Did Racial Attitudes Change in the 1980s?,** *American Journal of Sociology*, 1992, 98, 2, Sept, 340-367.

¶ Responses to 12 racial policy questions from General Social Surveys & National Election Studies conducted 1984-1990 are analyzed to evaluate the contention that racism among young white adults ages 18-24 increased during the 1980s. Under the assumption that age effects can be treated as negligible, the importance of period & cohort effects in shaping the racial attitudes of adults who have come of age since 1959 is explored. After outlining two possible patterns of differences among cohorts that could have resulted from the impact of historical circumstances during the formative years of early adulthood, it is concluded that there is no indication of decreasing racial tolerance among these cohorts. Similarly, period effects are seldom significant, showing no consistent decline in racial liberalism. 3 Tables, 1 Appendix, 46 References. Adapted from the source document. Stephan, Cookie White & Stephan, Walter G. (Dept Sociology & Anthropology New Mexico State U, Las Cruces 88003), **Reducing Intercultural Anxiety through Intercultural Contact,** *International Journal of Intercultural Relations*, 1992, 16, 1, winter, 89-106.

¶ A model that relates intergroup anxiety to 4 types of feared negative consequences is tested in a sample of 86 white US college students who participated in a semester abroad program in Morocco. Questionnaire data reveal that students' anxiety about interacting with Moroccans decreased significantly, providing partial support for the model. High ethnocentrism & high attributional complexity were associated with increased anxiety regarding anticipated contact with Moroccans, while actual contact was associated with both decreased & increased anxiety, depending on the type of contact. The differing effects of contact, other variables relevant to the reduction of intercultural anxiety, & the implications of these results for effective intercultural contact programs are discussed. 2 Tables, 1 Appendix, 62 References. Šumi, Irena, Renesansa v ameriški staroselski literaturi. Poskus sociološkega ovrednotenja (Renaissance in Native American Literature. An Attempt of Sociological Evaluation), *Anthropos*, 1991, 23, 6, 279-294. (SLV)

¶ With the publication of N. Scott Momaday's novel *House Made of Dawn* (Evanstown, NY: Harper & Row, 1966), a renaissance began in Native American literary production. A recurring theme has been the plight of people of mixed race caught between Native American & mainstream US cultures. The literary movement coincided with political stirrings & called for an all-Native, pan-Indian social, political, & spiritual awakening. A newly articulated Native traditional ideology emerged in which literature sought to reestablish old values & perspectives. Various cheap imitators of Native cultures also emerged, prompting additional articulation by the authentic Native community. 33 References. Adapted from the source document. Tomlinson, Sally (Dept Education University Coll Swansea, Singleton Park SA2 8PP Wales), **Education and Training,** *New Community*, 1992, 18, 3, Apr, 463-468.

¶ A biannual report documenting current issues that affect the education & training of all students in the context of race relations & multicultural education. Issues discussed are: curriculum content, suspensions & exclusions from school, English education & Muslims, local education authorities & their likely misrepresentation by the media, & higher education. The curriculum section notes that neither history nor geography are now compulsory subjects for all pupils ages 14-16, & the Secretary of State has decided that history curricula will end at 1970, leaving little scope to study the history of black migration to GB. The exclusions section notes that black pupils are four times more likely to be excluded from schools for troublesome behavior than other groups. Current preference for an "English, Christian education" over a multifaith education is discussed & amendments suggested to the 1988 Education Act by the Union of Muslim organizations are noted. The way that the popular press attacks local education authorities for supposedly allowing low standards in their multiracial schools & reports by Her Majesties Inspectors on two initial teacher training courses for ethnic minority students are also discussed. 24 References. Van Amersfoort, Hans (Instit Social Geography U Amsterdam, NL-1012 WX Netherlands), **Ethnic Residential Patterns in a Welfare State: Lessons from Amsterdam, 1970-1990,** *New Community*, 1992, 18, 3, Apr, 439-456.

¶ In theory, ethnic residential differentiation assumes that housing is a dimension of general participation &, therefore, residential segregation should be closely related to labor market & school system participation. While this relationship has held for industrial cities of the past, analysis of housing patterns in Dutch cities, particularly Amsterdam, 1970-1990, reveals that housing of immigrants has improved while labor force participation has declined. In postindustrial societies, the labor market no lon-

ger appears to be the primary field of interaction determining other spheres of societal interaction. Housing, work, & education have become relatively autonomous circuits. Limitations of this theory are discussed. 5 Tables, 3 Figures, 19 References. Adapted from the source document.

——, **Race, Liberalism, and Affirmative Action (I),** *The American Prospect*, 1992, 9, spring, 13, 116-127.

Response, 127-128.

¶ In a discussion of Paul Starr's "Civil Reconstruction: What to Do without Affirmative Action" (see abstract in this section of SA 41:1), the future of & possible alternatives to affirmative action are considered. In **Yes and No**, Randall Kennedy (Harvard U, Cambridge, Mass) suggests that progressives strive to develop new initiatives rather that fight to maintain the advances won in the 1960s & 1970s. In **Equality and Identity**, Cornel West (Princeton U, NJ) argues that affirmative action is necessary to ensure against discriminatory practices, & that policies must be implemented that address the poverty & lack of self-respect in the black community. In **Racial Politics**, Ronald Brownstein points out that, although new avenues toward equal opportunity need to be explored, most liberal politicians are hesitant to suggest change, fearing that civil rights leaders will see this as abandonment. In **The Liberals' Loss of Nerve**, Kenneth S. Tollett (Howard U, Washington, DC) argues that Starr is too quick to assume that the conservative Supreme Court will abandon affirmative action policies, though he lauds Starr's call for the reconstruction of civil society in minority communities. In **Paul Starr Responds**, Starr addresses each contributors' comments while reaffirming his position that the replacement of Thurgood Marshall with Clarence Thomas on the Supreme Court will mean the certain overturning of affirmative action policies in employment & education. R. Logsdon

93Z4435

——, **Race, Liberalism, and Affirmative Action (II),** *The American Prospect*, 1992, 10, summer, 86-97.

¶ In a continuing discussion of Paul Starr's "Civil Reconstruction: What to Do without Affirmative Action" (see abstract in this section of SA 41:1), the future of affirmative action policies is discussed. In **The Choice**, Theda Skocpol (Harvard U, Cambridge, Mass) underscores the counterproductive interaction of legislative forces & the conservative ideology of the US Supreme Court in the progressives' agenda for inclusive social policies & sustained political coalitions. A call is made for expanded socioeconomic opportunities for furthering racial equality. In **Back to Universals**, Jim Sleeper cites reactions of a French audience to a speech he made endorsing Starr's arguments against affirmative action, suggesting that discrimination should be addressed in some other form than the reverse discrimination of affirmative action. In **The Road to Rectification**, Robert S. Browne (Howard U, Washington, DC) argues for bringing blacks fully into US society, rejecting the flawed system of reverse discrimination, & favoring reparation payments as a form of race-neutral improvement program. In **The Moral Dimension**, Jonathan Rieder (Barnard Coll, New York, NY) addresses the moral reconstruction component of liberal programs to help blacks succeed, & points to a racist opportunistic attitude among many liberals. J. Sadler

Aroian, Karen J. (School Nursing Boston Coll, Chestnut Hill MA 02167), **Sources of Social Support and Conflict for Polish Immigrants,** *Qualitative Health Research*, 1992, 2, 2, May, 178-207.

¶ The contingencies & functions of social support among Polish immigrants over the course of their resettlement in the US were examined via participant observation, questionnaire, & interview among 25 recent Polish immigrants who now reside in Wash. The results indicate that social relationships with coethnics were most crucial during early to middle resettlement, when immigrants' requirements for social support were highest & ability to derive support from or access people not of the same ethnic background was limited. However, it cannot be assumed that coethnics will be automatic sources of support. Contingencies for social support include similarities in age, life circumstances, leisure interests, social class, & political ideology, as well as perceptions about cultural similarities. Furthermore, the ethnic community's actual material & informational resources as well as the relevancy of the information were important. Some of these contingencies made it problematic to obtain emotional types of social support from coethnics not from the same wave of migration. It is concluded that assessments of the supportive potential of immigrant communities should determine: perceived & actual similarities within & between different waves of immigrants, whether sources of instrumental & emotional support are segmented, & the particular patterns of support & conflict. Further research to determine the extent to which findings can be generalized to other immigrant groups or other Polish communities is recommended. 4 Tables, 45 References. Adapted from the source document.

Hathaway, James C. (Osgoode Hall Law School York U, North York Ontario M3J 1P3), **The Conundrum of Refugee Protection in Canada: From Control to Compliance to Collective Deterrence,** *Journal of Policy History*, 1992, 4, 1, 71-92.

¶ To assess why the asylum dilemma is becoming especially burdensome, Canada's historical, context-specific response to the problem of refugees is depicted. At first, Canada accepted refugees as regular immigrants. In the mid-1960s, immigration-based refugee policy was shifted to comply with international legal rights granted to refugees, resulting in numerous refugees entering Canada, 50% of whom are not subject to immigration quotas. Canada is currently on the verge of entering a third era, in which it must decide whether to continue to accept the burden of refugees when the nation's European allies have abdicated this responsibility. M. Maguire

Mercer, Alex (Medical Demography Unit London School Hygiene & Tropical Medicine, London WC1 England), **Mortality and Morbidity in Refugee Camps in Eastern Sudan: 1985-90,** *Disasters,* 1992, 16, 1, Mar, 28-42.
¶ Trends in mortality & morbidity in refugee camps in Eastern Sudan are examined for 1986-1990, following the influx of refugees from Ethiopia in 1984/85. Data are drawn from comprehensive monthly reports filed by the health & disease surveillance system, which is operated by the Health Unit of the UN Refugee Settlement Administration. It was found that by the end of 1985, death rates decreased & nutritional statu improved. Improvements in sanitation & crowding conditions resulted i control of epidemics in 1986. Improvements in infant, child, & materna mortality rates persisted over the period studied. The impact of the 199 budget cuts on the program are discussed. Implications for standardiza tion of health care systems for settled refugees are indicated. 2 Table 11 Figures, 9 References. I. Shagrir (Copyright 1993, Sociological Ab stracts, Inc., all rights reserved.)

93Z4443
Rudge, Philip, The Asylum Dilemma–Crisis in the Modern World: / European Perspective, *Journal of Policy History,* 1992, 4, 1 93-110.
¶ The depth of deprivation in the Third World & the concomitant serie of human rights abuses have led to an increasing number of asylum seek ers worldwide, as well as to skyrocketing financial & social costs. A glob al response to the dilemma is crucial because the ability of Europea states to absorb these costs is being severely tested, as is their ability t solve the social crises that prompt these massive waves of migration. I is argued that the right of asylum will prevail if it is based on a multila eral commitment to human rights. On the other hand, it will fail if Euro pean states adopt a policy of deterrence & restriction–in reality, a wa to abdicate responsibility. 3 Tables, 1 Figure. M. Maguire (Copyrigh 1993, Sociological Abstracts, Inc., all rights reserved.)

Samir, Hazboun (Faculty Commerce & Economics Birzeit U, Wes Bank via Israel), **A Socioeconomic Study of the Beit-Jibrin Refuge Camp, Bethlehem,** *Journal of Arab Affairs,* 1992, 11, 1, spring 54-67.
¶ An analysis of the socioeconomic situation of Beit-Jibrin, Bethlehem Israel, a refugee camp established forty years ago with a present popula tion of 952 persons Questionnaire data were collected in 1990 from 14 of the camp households. Educational level among individuals age 6 ranks high & is to be utilized in plans for future economic & social devel opment. Unemployment is high & no compensation is provided, with 1:5 ratio of wage earners to non-wage earners. Statistics show that th economic status of the camp's residents seems below the poverty level Shortages of water & electricity also indicate a very low standard of liv ing. Relief organizations have been aiding the residents of the camp t alleviate the harsh conditions. Findings of this research indicate that th prospects for change or development of the socioeconomic situation ar dim & cannot be accomplished in the foreseeable future without the in tervention of further outside aid. A two-phase plan is proposed to im prove living conditions: (1)develop the camp's infrastructure; (2) develo small businesses & provide for social welfare. 7 Tables. 0500 culture and social structure

08 social organizations

93Z4446

Ahrne, Göran (Dept Sociology Stockholm U, S-10691 Sweden), **Outline of an Organizational Theory of Society,** *Protosoziologie,* 1992, 3, July, 52-60.

¶ Organizations are the mechanisms that transform human activity into social processes. Moreover, they are the source of individuality & the foundation of society. Four features form the basis of organizations: membership criteria, resources, interchangeability of individuals, & accumulative control. Four key types of organizations are: enterprises, voluntary associations, states, & families. Primary social actors are organizational hybrids, partly human & partly organization. Social processes & change can be studied in terms of interaction between organizations & their various configurations. It is emphasized that organizations transcend the limits of systems & societies. Adapted from the source document.

Coenen-Huther, Jacques (Dept sociologie U Genève, CH-1211 4 Switzerland), **Production informelle de normes: les files d'attente en Russie soviétique** (Informal Creation of Norms: Queues in Soviet Russia), *Revue française de Sociologie,* 1992, 33, 2, Apr-June, 213-232. (FRE)

¶ Participant observation in waiting lines in Moscow, USSR, May-June 1991 provided data to explore behavioral norms specific to this autoorganizational structure. Examples of rules, exemptions, & prohibitions are cited, eg: consideration of personal problems may induce those in line to allow someone to go ahead; professional excuses are never considered credible; & people standing together always ask questions. Waiting lines are interpreted as a type of functional organization with specific norms. The validity of the research is discussed, noting the limits of participant observation, & the need to account for the complexity of the phenomenon, eg, its origins & causes, & historical interpretation. 1 Appendix, 29 References. I. Shagrir

13 culture

93Z4448

Ahonen, Pertti (U Tampere, SF-33101 Finland), **The Photographic Image: A Study of Political Culture,** *Semiotica,* 1991, 87, 3-4, 225-238.

¶ An interpretation of the iconicity, narration, & discourse embodied in photographs develops links between political & photographic signifiers. A photograph's meaning is affected by syntactical rules & a preexisting lexicon. A broader concept of iconicity allows an analysis of power in the photograph, focusing on elements of concealment & affirmation. Seven photographs of the late Finnish president, Dr. Urho Kekkonen, are studied in detail to reveal a progression of iconically legitimized power, from youth to strength to disability. 7 Photographs, 6 References. J. Sadler

Amselle, Jean-Loup (Ecole hautes études sciences sociales, F-75006 Paris France), **Tensions within Culture,** *Social Dynamics,* 1992, 18, 1, June, 42-57.

Comments, 57-65.

¶ Contributing to the anthropological debate between universalists & relativists about culture & human rights, it is argued that culture is produced over time, externally & internally. Externally, culture is represented as a single, bounded entity only after it has been abstracted from its social context by travelers, missionaries, soldiers, & social scientists. Internally, culture is produced through debates among social actors in which cultural norms are contested & renegotiated. To freeze these processes unnaturally in time legitimates practices of social exclusion & racism. **Comments** are presented by four South African academics. Patrick Harries (U of Cape Town, Rondebosch, South Africa) responds to the suggestion of this fundamentally French analysis that South African academics need to reassess the tools traditionally used to study culture. Andrew D. Spiegel (U of Cape Town) appreciates the emphasis on the fluidity of cultural processes, but finds several shortcomings, eg, downplaying the importance of emic representations of norms as deriving from an unchanging past, & overemphasizing the historically grounded instrumentality of uses of tradition. R. J. Thornton (U of the Witwatersrand, Johannesburg, South Africa) notes that Amselle's epigram, derived from Arthur Schopenhauer, is more appropriate than the casual reader is likely to understand because it invokes a debate about culture, history, & social change among G. F. Hegel, Immanuel Kant, Karl Marx, Friedrich Nietzsche, & modern scholars. Patricia Davison demonstrates a parallel between anthropological writings & museum representations, providing strength for Amselle's arguments. Adapted from the source document & K. Hyatt.

Arluke, Arnold & Sax, Boria (Dept Sociology & Anthropology Northeastern U, Boston MA 02115), **Understanding Nazi Animal Protection and the Holocaust,** *Anthrozoös,* 1992, 5, 1, 6-31.

¶ Based on published data, the extensive animal protection laws that were enacted in Nazi Germany are described & compared to those regarding the treatment of human beings. Possible reasons for this seeming contradiction are proposed, & it is argued that at the core of the Nazis' treatment of people & animals was a reconstitution of societal boundaries & margins. It is concluded that Nazi German identity relied on the blurring of boundaries between animals & humans & the construction of a unique phylogenetic hierarchy that altered conventional human-animal distinctions & imperatives. 76 References. Adapted from the source document.

Aycock, Alan (Dept Anthropology U Lethbridge, Alberta T1K 3M4), **Three Assumptions in Search of an Author: Some Textual Problems in the Study of Play,** *Play & Culture,* 1992, 5, 3, Aug, 264-279.

¶ Ethnographies of play usually make several simplifying assumptions that have something to say about authorial presence in various forms. Using the printed text of a chess game, an examination is made of how the diverse relationships among play, players, experience, textuality, & play criticism could be reconfigured to reach a different understanding of what is meant by the ludic. Implications for further study of authorial presence in play are presented. 1 Figure, 40 References. Adapted from the source document.

Bottomley, Gillian (Macquarie U, New South Wales 2109 Australia), **Culture, Ethnicity and the Politics/Poetics of Representation,** UI *The Australian and New Zealand Journal of Sociology,* 1992, 28, 2, Aug, 208-223.

¶ Using a framework based on Pierre Bourdieu's constructivist structuralism, the concepts of culture & ethnicity are separated, discussing the politics of identity & relations of power in cultural processes & forms of representation. In light of this discussion, some aspects of music & dance are considered, including the diasporic identification suggested in Paul Gilroy's studies of black music & elements of Greek dance in Greece & Australia (see, eg, "It Ain't Where You're From, It's Where You're At: The Dialectics of Diasporic Identification," *Third Text,* 1990/91, winter, 3-16). Focus is on a logic of practice that can move beyond both essentialisms & celebratory pluralisms. 48 References. Adapted from the source document.

93Z4453

Bourdieu, Pierre, "Proofreading", *Poetics Today*, 1991, 12, 4, winter, 625-669.

Translated by Gisele Sapiro; edited by Brian McHale.

¶ Four previously unpublished lectures by Pierre Bourdieu, all delivered in Oct 1989, on social & symbolic space are offered. An introductory note discusses problems associated with orientalists who constitute foreign societies as radically exotic, & relates why Bourdieu's studies of French society are relevant to Japanese culture. In **First Lecture. Social Space and Symbolic Space: Introduction to a Japanese Reading of** ***Distinction***, a model of social & symbolic space that defines social distances that are predictive of encounters, affinities, & desires is presented, & ways that the model can be applied to Japanese society are discussed. In **Supplement.** ***Distinction*** **Revisited: Introduction to an East German Reading**, the model's application to East Germany is considered. In **Second Lecture. The New Capital: Introduction to a Japanese Reading of** ***State Nobility***, mechanisms through which schools contribute to the distribution of cultural capital & structuring of social space are discussed, & parallels between Japanese & French forms of cultural reproduction are drawn. In **Fourth Lecture. Universal Corporatism: The Role of Intellectuals in the Modern World**, the ends & means of collective action by intellectuals of all countries are defined, the genesis of intellectuals is reviewed, & the current status of intellectuals in relation to modern forms of state is examined. 1 Figure, 1 Reference. W. Howard

93Z4454

Burns, Tom R. & Dietz, Thomas (Dept Sociology Uppsala U, S-75120 Sweden), **Cultural Evolution: Social Rule Systems, Selection and Human Agency,** *International Sociology*, 1992, 7, 3, Sept, 259-283.

¶ A general evolutionary theory is developed to describe & analyze the dynamics of cultures & institutions, defined as systems of social rules, produced & reproduced by human groups. In the context of the recent resurgence of evolutionary thinking in the social sciences, contemporary evolutionary approaches & earlier developmental approaches are distinguished. Evolutionary implies models of the generation of variety, transmission of information, & the operation of selection & other processes (migration, distorted or incorrect knowledge transmission) on the distribution of information within & between populations over time. The theory focuses on the key units of information–social rules–& their production, reproduction, & transformation. In this scheme, macro or population-level phenomena & structures are shaped by microlevel processes, & in turn are the selective environment for such processes. Historical developments are seen as the result of complex contingencies rather than representing a tendency for key variables to move toward a static or dynamic Aristotelean "natural state." In historical developments, human agents play a major role, but often not in the ways they intend or anticipate. 85 References. Adapted from the source document.

93Z4455

Calhoun, Craig (U North Carolina, Chapel Hill 27599), **Beyond the Problem of Meaning: Robert Wuthnow's Historical Sociology of Culture,** *Theory and Society*, 1992, 21, 3, June, 419-460.

¶ A review essay on a book by Robert Wuthnow, *Communities of Discourse* (Cambridge, Mass: Harvard U Press, 1989 [see listing in IRPS No. 66]). A reflection of the growth of the sociology of culture & the revival of historical sociology, Wuthnow's book offers accounts of the Reformation, Enlightenment, & socialism to develop a model of ideological movements. In examining the relationship between cultural & social change in the capitalist era; however, Wuthnow tends to oversimplify each of the three great movements of cultural production he treats. His chapter on socialism neglects the significance of nationalism, & his account of Jean-Jacques Rousseau's ideas regarding individual & society is too simplistic. As a work of theory, Wuthnow's book suffers from an arbitrary & reductive presentation of other work in the field. W. Howard

93Z4456

Classen, Constance (Center Study World Religions Harvard U, Cambridge MA 02138), **The Odor of the Other: Olfactory Symbolism and Cultural Categories,** IM *Ethos*, 1992, 20, 2, June, 133-166.

¶ By exploring the ways in which olfactory symbolism is used to express themes of identity & difference in diverse cultures, including the West, the extent to which olfactory codes pervade classificatory thought is demonstrated. At the same time, the examination of how odors are used to categorize "others" in different societies provides an important insight into the construction of concepts of "oneness" & "otherness" & their basic similarities & differences across cultures. 76 References. Counihan, Carole M. (Millersville U, PA 17551), **Food Rules in the United States: Individualism, Control, and Hierarchy,** *Anthropological Quarterly*, 1992, 65, 2, Apr, 55-66.

¶ Data from food journals kept by approximately 250 college students in NJ & Pa reveal adherence to central cultural values through ideas about food & eating. Concern is expressed with individual free choice in diet & self-control toward food so as to be thin, moral, & admirable. By adhering to an ideology that values thinness & self-control & that permits well-off people to decide what poor people should eat & men to determine what women should eat, students uphold the stratification of US society, which elevates men, whites, & the rich over women, people of color, & the poor. Awareness of cultural values embedded in food rules is an important step toward challenging the unscrutinized value system that supports social hierarchy. 60 References. Dauber, Kenneth (Sociology Dept Northwestern Illinois U, Chicago 60625), **Object, Genre, and Buddhist Sculpture,** *Theory and Society*, 1992, 21, 4, Aug, 561-592.

¶ An examination of eighth-century Japanese Sangatsu-dō sculpture is undertaken to specify how physical artifacts can be integrated into sociological analyses, & to argue that such artifacts can serve as material for a more inclusive sociology of culture. A theory of genres is developed & applied to this group of sculptures, revealing the significance of competing religious claims in shaping the Japanese state's decision to use Buddhism to strengthen its legitimacy among the peasantry. A logic of cultural production is presented to show that differences in the form of cultural objects within a genre are due to differences in the nature of the producers, the audiences, or the goals of production. It is concluded that Sangatsu-dō sculptures differ from other Buddhist-inspired genres because they were created under different social conditions of production. 6 Figures. Modified AA

Dillehay, Tom D. (Dept Anhropology U Illinois, Urbana 61801), **The Great Debate on the First Americans,** *Anthropology Today*, 1991, 7, 4, Aug, 12-13.

¶ In attempting to answer the question of who the first humans to enter the New World were, it becomes clear that the evidence for migration of the Clovis people from Alaska to Tierra del Fuego is not altogether consistent. Most recently, sites of Clovis-like activities have been identified in South America (eg, fossils of big game hunters armed with fluted projective point tools) that date to the same period as sites in Alaska. Discontinuity such as this renders traditional assumptions about north to south migration by the Clovis people unsupportable. Research in historical linguistics, genetics, & anatomy provides new insight in the debate about the timing & sequencing of migration. M. Maguire

93Z4460

Driscoll, Janis Wiley (Dept Psychology U Colorado, Denver 80217-3364), **Attitudes toward Animal Use,** *Anthrozoös*, 1992, 5, 1, 32-39.

¶ Based on questionnaire data collected from 495 adults, attitudes toward specific uses of different species of animals are assessed. Uses described include medical & product-testing research, educational purposes, & luxury garments; species include dogs, cats, monkeys, rats, & mice. Results indicate that uses of dogs, cats, & monkeys were less acceptable than those of rats, mice, or nonmammalian vertebrates or invertebrates, & that luxury garment uses were the least acceptable, & educational & behavioral research uses the most acceptable. Gender, pet ownership, & religious affiliation were significantly related to attitudes, but these variables accounted for less than 5% of the variability. Results also indicate that there is little evidence of strong public opposition to the kinds of uses described in this questionnaire. 2 Tables, 1 Appendix, 16 References. Adapted from the source document.

Dutton, Michael (Dept Political Science U Melbourne, Parkville Victoria 3052 Australia), **Disciplinary Projects and Carceral Spread: Foucauldian Theory and Chinese Practice**, *Economy and Society*, 1992, 21, 3, Aug, 276-294.

¶ In an examination of the disciplinary nature of the Chinese postrevolutionary penal system (reform through labor), Michael Foucault's definition of "disciplinary power" (*Discipline and Punish: The Birth of the Prison*, Middlesex: Peregrine Books, 1977) is utilized. It is suggested that the reform-through-labor system is an extension of certain nineteenth-century Western penal practices designed to reform the criminal mind, & that it is founded on the positivist goal of social transformation. The diffusion of discipline thesis, which suggests a gradual societal spread of carceral technologies, is detailed. 1 Table, 2 Figures, 29 References. Adapted from the source document.

Eckardt, A. Roy (6011 Beverly Hill Rd, Coopersburg PA 18056), **The Heirs of Itzhak**, *Society*, 1992, 29, 4(198), May-June, 34-42.

¶ An exploration of the nature of American Jewish humor, interpreted as a special variation on the question of Jewish singularity. Jewish humor is not correctly apprehended through the concept of marginality. In keeping with the thought & contribution of Mark Shechner (no reference provided), a trialectic is elaborated consisting of a Hebrewist-transcendent-highbrowlich factor, a Yiddishist-immanent-lowbrowlich factor, & the ineluctable sociocultural-political structures of middlebrowlich America. Jewish humor arises out of this overall incongruity, which takes into account Jewish history, tradition, & present life in the US. Modified AA

93Z4463

Eckhardt, William, A Dialectical Evolutionary Theory of Civilizations, Empires, and Wars, *Comparative Civilizations Review*, 1991, 25, fall, 54-78.

¶ A quantitative verification of a dialectical evolutionary theory, based on available global data from the past forty-nine centuries. This theory suggests general correlations among civilizations, empires, & war, & predicts that their interaction is mutually reinforcing. Measurement methods of the three factors are reviewed. Civilization is measured by the number of persons contributing to civilized or cultural activity such as reported in encyclopedias. The measurement of sovereign political entities with nonsovereign elements (ie, empires) is in square megameters based on Rein Taagepera's imperial sizes presented in "Size and Duration of Empires: Systematics of Size" (see SA 28:1/80K4576). Finally, war is gauged by frequency of battles. The correlations among these factors indicate a very close relationship among world nations, both globally & regionally over time, & a significant exponential increase, especially in the past 3,000 years. It is suggested that the inevitability of war is a product of man's pattern of domination & exploitation. 5 Tables, 1 Figure, 22 References. J. Sadler

Edelsward, L. M. (McGill U, Montreal Quebec H3A 2T5), **"We Are More Open When We Are Naked"**, *Ethnos*, 1991, 56, 3-4, 189-199.

¶ It is argued that shyness & a sense of personal independence restrict the ease with which Finnish people are able to meet & cultivate relationships with strangers. In Finnish culture, the person consists of a public & a private persona–the former the mask through which the individual faces the world, the latter the true inner personality that is not accessible to others. Certain cultural institutions conjoin these two personas, one being the sauna, where Finns realize their responsiveness to personal & communal needs. Data obtained via questionnaire from 220+ Finns reveal that, even in the sauna, norms regulate social behavior. The sauna provides an informal setting in which Finns can escape the constraints of their public persona & restore balance to their public/private selves while revitalizing their social relations. 7 References. Adapted from the source document.

93Z4465

Erasov, Boris S. (Krasikov St 11-1, 117292 Moscow Russia), **Russia and the Soviet Union: Civilizational Dimensions**, *Comparative Civilizations Review*, 1991, 25, fall, 102-123.

¶ The conception of Soviet society as a totalitarian state-party formation, which has become prevalent in much of Sovietology, ignores civilizational factors of Russian history, which influenced the gestation of the socialist system. Resting on the works of N. Berdyaev & other Russian thinkers, the idea of deep sociocultural heterogeneity of the Russian empire is elaborated. However, Russian civilization itself was characterized not only by deep gaps between different periods & disruptions of continuity, but also by a polar divergence of basic value orientations & a lack of mediatory principles in integrative structure. These gaps stimulated the scope & radicalness of the revolutionary processes. The state always had to stand for a normative order that proved to be a heavy strain in its potential; but Soviet Russia cannot be reduced to the reconstructed state in its totalitarian form. Socialism meant to maintain a civilizational project aimed at overcoming capitalism & the contradictions tearing apart Russian society. The excessiveness of this project undermined the resources of the society & made the dismantling of the former state-party formation inevitable. These processes lead, however, to the revival of civilizational contradictions as well as national rivalries. AA

93Z4466

Figueira, Dorothy M. (State U New York, Stony Brook 11790), **Aryan Ancestors, Pariahs and the Lunatic Fringe**, *Comparative Civilizations Review*, 1991, 25, fall, 1-27.

¶ An exploration of the causal relationships allegedly linking Indian philosophy, specific Indian icons, early Sanskrit philology, & National Socialist (Nazi) ideology. After sketching contributions to this myth-based connection by Amaury de Riencourt, Raymond Schwab, Léon Poliakov, & Alfred Rosenberg, it is noted that scholarship in the field is growing. The term Aryan originated as a name for a linguistic family invented by German linguists, & was later applied to notions of race. The late nineteenth-century Theosophical Society's esoteric blend of various religious elements also formed part of the Orient-Nazi connection. The Society's founder equated the Jews with the pariahs of ancient India. The Nazis shared the swastika symbol with other fringe occult groups (the Ariosophists, the Thule). Germany's future according to the Nazis was aimed at preserving the Aryan race, which perished in the Indian apocalypse, since conditions did not favor its survival. J. Sadler

93Z4467

Giesen, Bernd (Justus-Liebig-U Giessen, D-6300 Federal Republic Germany), **Code, Process and Situation in Cultural Selection**, *Cultural Dynamics*, 1991, 4, 2, 172-185.

¶ A cultural model of evolutionary selection is presented, based on three concepts: (1) codes, eg, languages; (2) processes of reproduction, eg, the process by which the code of language establishes meaningful communication, & (3) situation, or environment, which determines whether a code-instructed process will endure. It is suggested that evolutionary selection, reproduction, & social change cannot occur when code/process & situation are either highly mutually dependent or independent; rather, a decoupling process of code, process, & situation must take place. This model of decoupling is applied to the evolution of German national identity at the turn of the nineteenth century. 37 References. I. Shagrir

93Z4468

Gould, Mark (Haverford Coll, PA 19041), **Theory and History: Comments on Robert Wuthnow's *Communities of Discourse***, *Theory and Society*, 1992, 21, 3, June, 445-460.

¶ A review essay on a book by Robert Wuthnow, *Communities of Discourse: Ideology and Social Structure in the Reformation, the Enlightenment, and European Socialism* (Cambridge, Mass: Harvard U Press, 1989 [see listing in IRPS No. 66]). Major (though often implicit) theoretical problems are identified in this comparative historical analysis of discursive fields & their institutionalization under the Reformation, Enlightenment, & socialism. Wuthnow's definition of the social environment as a set of functionally defined resources is critiqued, along with his failure to adequately explain the social movements he identifies & their role in the progression of European culture. Larger issues surrounding empirical research & theory development are also addressed. K. Hyatt

93Z4469

Greeley, Andrew (U Chicago, IL 60637), **Habits of the Head,** *Society*, 1992, 29, 4(198), May-June, 74-81.

¶ A review essay on two books by Robert N. Bellah et al: *Habits of the Heart: Individualism and Commitment in American Life* (Berkeley, Calif: U of California Press, 1985); & *The Good Society* (New York: Alfred Knopf, 1991 [see listing in IRPS No. 66]). Both books see most ills of contemporary US as resulting from radical individualism & weak civic commitment. This claim, while appealing to social critics, theologians, & clergy, does not contribute to the understanding of US society. It is observed that the books suffer from verbal ambiguities, eg, the meaning of we, ours, culture of individualism, & civic tradition. The books also lack adequate supporting data, & contrasting analyses can be made. Also censored is the comparative reference to the US past & to other countries. It is argued that individualism & commitment may be compatible, & that the authors' call for repentance does not generate a productive discourse. 4 Figures. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4470

Greeson, Larry E. (Dept Educational Psychology Miami U, Middleton OH 45042), **Bus Stop Graffiti: An Index of Media Based Cultural Intrusion in a Scandinavian City,** *Nordisk Psykologi*, 1990, 42, 5, 358-365.

¶ An analysis of the graffiti content found at 100 bus stops in Bergen, Norway, aimed at uncovering factors motivating graffiti behavior. It is suggested that graffiti express young people's attitudes, values, & discontent, & reflect a media-based cultural intrusion from the US & UK (eg, heavy metal music). In a random sample survey of Norwegians regarding graffiti, 15 made positive comments while 29 made negative comments. 2 Tables, 17 References. Adapted from the source document. 93Z4472

Hord, John K., Civilization: A Definition Part II. The Nature of Formal Knowledge Systems, *Comparative Civilizations Review*, 1992, 26, spring, 111-135.

¶ (See abstract of Part 1 in this section of SA 41:1.) Following a critical analysis of traditional perceptions of civilization, from the ancient Greeks to medieval Ireland, a definition of civilization is developed, based on the concept of "formal knowledge systems," which encompass three types–philosophies, sciences, & religions–each of which has four elements: covenant, law, procedure, & myth. It is hypothesized that civilization is the combination of an autonomous knowledge system & a group of people whose actions are shaped by it & who recognize rules & laws as binding. 24 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4473

Hord, John K., Civilization: A Definition. Part I: Identifying Individual Civilizations, *Comparative Civilizations Review*, 1991, 25, fall, 28-53.

¶ Drawing on four decades of research, a new definition of civilization is offered, proposing that a systematized core set of beliefs found in religion is the basis for civilization. Various examples from the High Middle Ages of the civilizations in Byzantium, China, India, & Europe are used to develop the definition. It is shown how multiple formal knowledge systems may coexist in one civilization, & how many civilizations may share one knowledge system. In addition, the questions of erratic growth of complexity in the civilization/knowledge system relationship & the evolution of formal knowledge systems are discussed. 50 References. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Humphrey, Caroline (Dept Social Anthropology U Cambridge, CB2 1TN England), **'Icebergs', Barter, and the Mafia in Provincial Russia,** *Anthropology Today*, 1991, 7, 2, Apr, 8-13.

¶ A description of the situation of transition in provincial Russia with the demise of the planned economy, based on observations made fall 1990 in the Buryat ASSR & on Soviet materials from Tuva & other parts of Siberia. It is argued that local suzerainties (eg, factories, local soviets, state farms [sometimes metaphorically called "icebergs" by Russians]) have not collapsed but strengthened themselves, notably by control of distribution systems (eg coupons, orders, & other entitlements). These systems are described, & economic & cultural reasons for their support by the population considered. Economic relations are often conducted by barter, which leads to increased fragmentation & restricted networks of trusted exchange partners. This situation strenghtens the power of local patronage systems, where bosses expand their base across several enterprises, & members become increasingly dependent. However, many large social categories are left outside these defensive enclaves, eg, displaced people & the unemployed; also, such economic disenfranchisement may sometimes coincide with ethnic boundaries, which gives rise to bitter fighting & economic sabotage. 4 Photographs. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Joe, Jennie R. & Miller, Dorothy Lonewolf (Native American Research & Training Center U Arizona, Tucson 85721), **The Dilemma of Navajo Industrial Workers: Cultural Values and Social Change–An Empirical Study,** *Nature, Society, and Thought*, 1991, 4, 3, July, 303-330.

¶ The sociocultural adaptation of a group of Navajos to the work ethic of mainstream society is examined via interview data from Navajos employed in industry, construction, or unemployed (total N = 101). Considered is whether traditional Navajos who work in polluting industries face conflict as a result of their feelings about their job vs those about the sacredness of their lands. Data reveal several levels of ambivalence about the job of mining coal from sacred mountains or using up the water from their sparse aquifilters. Traditional Navajos expressed greater knowledge of, & concern for, the land. Though 71% of the workers expressed satisfaction with their present job, this was significantly affected by degree of environmental concern. 10 Tables, 36 References. Kalekin-Fishman, Devorah (School Education U Haifa, Mount Carmel IL-31999 Israel), **Systems, Situations and the Individual: An Integrated View of Alienation as Related to Migrants,** *The International Journal of Sociology and Social Policy*, 1991, 11, 6-8, 75-89.

¶ After reviewing methodological & theoretical problems plaguing alienation research, alienation is redefined as "the obverse of an identity communally validated in institutionalized contexts," rather than as a problem of individual feelings of rejection. A model is developed that shows how the causes, symptoms, & outcomes of alienation originate in the larger social system, & then are transmitted to the group (situation), & finally to the individual. The model is applied to extant research on migration, & implications for social program planning & policy are discussed. 1 Figure, 67 References. K. Hyatt (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Kellerman, Aharon (Dept Geography U Haifa, Mount Carmel IL-31999 Israel), **The Decycling of Time and the Reorganization of Urban Space**, *Cultural Dynamics*, 1991, 4, 1, 38-54.

¶ The roles of time & space (eg, as regulators, resources, dimensions, containers, & cultural attributes) have undergone significant changes with the evolution of modern society & technology. Declines in the significance of three components of the cyclic community (daily, weekly, & seasonal cycles) & their interrelationships with spatial changes within an urban context are explored. Lighting initially changed the daily cycle, permitting working, consuming, & transit at night. The emergence of work-free weekends at the end of the nineteenth century established leisure time units. Air conditioning & heating technology have lessened the impact of seasonal differences. While time cycles have blurred in contemporary urban settings, spatial zoning or specialization in cities has increased. The extensive use of space has been attributed to cultural customs & to capitalist drives. It is suggested that the specialized organization of space facilitates a continuous use of time, & the two processes seem to mutually reinforce each other; ie, continuous time use permits further urban expansion that may permit additional continuous use of time. The increased flexibility in time use in contemporary urban societies implies an increased inflexibility in the use of urban space & in the form of zoning. 1 Table, 2 Figures, 21 References. Kennedy, Rosanne (Australian National U, Canberra ACT 2601), **Spectacular Evidence Discourses of Subjectivity in the Trial of John Hinckley**, *Law and Critique*, 1992, 3, 1, spring, 3-28.

¶ The cultural logic of postmodernism is explored via an analysis of law's self-representation & the trial of John Hinckley, who attempted to assassinate President Ronald Reagan in 1981. The novels of Don Delillo are drawn on to show that a new cultural logic is emerging in Western societies, one that is, through the proliferation of images & signs, transforming the lived experience of subjectivity. Using trial transcripts, it is suggested that Hinckley's assassination attempt is symptomatic of US culture's reluctance to distinguish fiction from reality by showing that Hinckley's actions were a simulation of Travis Bickle's attempted assassination in the movie *Taxi Driver*. The ascendancy of the image in Western cultures has had the effect of fragmenting the personality & exposing as myth the notion of a unified self. Implications for the practice of law are discussed, & it is argued that theories of postmodern subjectivity contradict the traditional legal notion of an autonomous subject who is impervious to electronic technologies & image addiction. W. Howard

Leong, Laurence Wai-Teng (Dept Sociology National U Singapore, 0511 Singapore), **Cultural Resistance: The Cultural Terrorism of British Male Working-Class Youth**, *Current Perspectives in Social Theory*, 1992, 12, 29-58.

¶ An evaluation of the theory of cultural resistance developed by the Centre for Contemporary Cultural Studies (Birmingham, England) with specific reference to British male working-class (Wc) youth. Two themes of resistance are identified: as deviance, in which deviance is equated with defiance; & as appropriation, in which Wc youth use symbols to combat the dominant social order. This latter theme gives the image of youths as cultural terrorists seizing commodities from the cultural industry to engage in "semiotic guerilla warfare." Problems with this theme concern: who the resisters are; what is being subverted; the intention of resisters; the source of resistance; & the political agenda of resisters. While the cultural puppet image in domination perspectives is a fiction, because subjects are not totally passive victims of power, the cultural terrorist image in resistance perspectives is overpoliticized & romanticized. Resistance can be conceptualized as a dialectic between struggle & domination: subjects resist the weight of power over them, but they are also constrained to act in ways not of their own choosing. Theories of cultural resistance must acknowledge the indirect, inchoate, & contextual nature of resistance. 40 References. Modified AA

Litt, Paul, The Massey Commission, Americanization, and Canadian Cultural Nationalism, UM *Queen's Quarterly*, 1991, 98, 2, summer, 375-387.

¶ The impact of perceptions of Americanization on the cultural nationalism of post-WII Canada is examined. In this era, Canada emerged from the shadows of British colonization & was faced with the challenge of developing its own national identity. Many Canadians feared that the influence of the US would retard development of a national identity & subjugate Canadians to the undue influence of a foreign nation & culture. In response, the Massey Commission was established in 1949 to conduct a survey of contemporary attitudes & aspirations of the Canadian cultural community. The survey was dominated by input from the Canadian cultural elite, & national culture became identified with high culture. The government, in turn, began to fund artists & performers artistically compatible with this definition of national culture. 11 References. D. Generoli

MacLeod, Arlene Elowe (Political Science Dept Bates Coll, Lewiston ME 04240), **Hegemonic Relations and Gender Resistance: The New Veiling as Accommodating Protest in Cairo**, UM *Signs*, 1992, 17, 3, spring, 533-557.

¶ An exploration of women's role in power relations, specifically examining the case of lower-middle-class women in Cairo, Egypt. Female clerical workers are involved in a popular & voluntary women's movement–to re-veil. It is argued that this new veiling can best be characterized as a mode of symbolic political struggle. It expresses women's protest against the erosion of status they experience as they leave the household & enter the workplace, an erosion caused by conflict between economic pressures & gender beliefs. However, while veiling recalls the dignity of women's traditional role, it also recalls the constraints that women previously experienced. The veil is an ambiguous symbol, involving both resistance & acquiescence in an attempt to redefine identity & role in a changing society. The idea of "accommodating protest" is explored as a characterization of women's style of political struggle & an explanation for the persistence of women's inequality. AA

Matejko, Alexander J. (School Sociology U Alberta, Edmonton T6G 2E1), **Občianska kultúra vo východnej Európe** (Civil Culture in Eastern Europe), *Sociológia*, 1991, 23, 1-2, 71-86. (SLO)

¶ Defensive attitudes have been strongly established among Eastern Europeans as a result of various unfortunate historical experiences: long foreign domination; tremendous war losses; religious & ethnic persecutions; deep class differences; migration; urban vs rural tensions; intolerance; mass exterminations of certain groups & the communist experiment with elements of pseudoreligion, totalitarianism, unrealistic socioeconomic planning, elitism disguised as egalitarianism, & Soviet imperialism. The biggest problem currently faced is the inexperience in political & business life of the noncommunists who recently came to power. Ultimately the democratization of municipal government may be the pivotal factor guiding the reform movement. This process would depend, of course, on overcoming the passivity of the population, conditioned to rely on the welfare state instead of their own initiative. Münch, Richard (Sozialwissenschaftliches Instit Heinrich-Heine U, D-4000 Dusseldorf 1 Federal Republic Germany), **Autopoiesis per Definitionem** (Autopoiesis by Definition), *Protosoziologie*, 1992, 3, July, 42-51. (GER)

¶ An analysis of Niklas Luhmann's *Die Wirtschaft der Gesellschaft* ([The Economy of Society] Frankfurt: Suhrkamp, 1988) & other works. His widely accepted theory of modern society's differentiation into autopoietically operating subsystems is shown to be based on false grounds. In contrast to what many think, Luhmann's theory does not take social differentiation into autonomous subsystems as its empirical point of departure. Rather, he & his critics blend analytical & empirical differentiation occurring on a plane orthogonal to autopoiesis. Empirical differentiation involves the permanent production of economic, political, legal, or other kinds of action in social struggles relating to culture, law, politics, & economics. The resulting codes & programs are not universal, but rather, historically specific institutions. Many theorists support Luhmann's ideas because they serve to reinforce the concepts that they are trying to demonstrate. Adapted from the source document as translated by M. Oladipo, Olusegun (Dept Philosophy U Ibadan, Nigeria), **Freedom and Culture: The African Experience**, *Praxis International*, 1992, 12, 2, July, 205-214.

¶ It is questioned why three decades of independence in Africa have not brought much-desired cultural rebirth. It is argued that freedom from colonial rule & racism has not guaranteed freedom from external economic domination, freedom from injustice & oppression, & mental freedom. Consequently, the socioeconomic, political, & educational climate have not allowed the achievement of cultural renewal. Such renewal cannot be achieved through a single-minded, nationalistic commitment to African culture or through some kind of unalloyed deference to science & technology & their achievements. Rather, the achievement of cultural renewal in Africa requires that Africans unfetter human relations through a process of social reconstruction designed to achieve freedom. The role of the African scholar is to be in the vanguard of the struggle to promote the kind of self-knowledge Africans need to come to grips with their situation. Piette, Albert (8 rue Nobles, B-5003 Saint-Marc Belgium [Tel: 081-73-22-68]), **Play, Reality, and Fiction: Toward a Theoretical and Methodological Approach to the Festival Framework**, UM *Qualitative Sociology*, 1992, 15, 1, spring, 37-52.

Translated by Mary Delahaye.

¶ An examination of the ethnographic complexity of the festive movement in an attempt to uncover the main constraints governing it. Two extreme types of theoretical temptations derived from Emile Durkheim's works are criticized: the celebration festival & the transgression festival. The notion of "*interstitial frame*" is proposed as the theoretical ground

to an ethnographic description & an analysis of the festive experience. This is situated in the interstices of everyday life, between two classes of behavior (reality & fiction, order & disorder) without being equivalent to either. From the example of Binche carnival in Belgium, & based on Erving Goffman's frame analysis (*Frame Analysis. An Essay on the Organization of Experience*, New York: Harper & Row, 1974), described are the incessant keyings or transformations of the festive frame, creating different layers in the activity: a primary framework is a play between reality & fiction, between times of actions, pause, & breaks, between downkeying & ludic retransformation. Goffmanian analysis is seen as a pertinent instrument to reconstitute the formal grammar of the festive experience & give impetus to an analysis of photographic data concerning similar situations. 12 References. Roth, Michael S. (Scripps Coll, Claremont CA 91711-3948), **The Time of Nostalgia: Medicine, History and Normality in 19th-Century France**, *Time & Society*, 1992, 1, 2, May, 271-286.

¶ In nineteenth-century France, nostalgia was viewed as a grave medical danger that could result in serious organic complications or even death. By the 1830s, it was widely agreed that the major symptom of nostalgia was an excessive attachment to something in the past, & several psychiatric therapies for directing the patient away from the past & toward the possibility of new desires & satisfactions were developed. Medical views of the time are presented to show how physicians perceived nostalgia's temporal & spatial components; the writings of Jules Michelet–which display an intense longing to connect with the past & to stay alive through a connection to it–are examined in relation to the medical understanding of nostalgia. It is concluded that the disease of nostalgia was rendered obsolete by a psychiatric narrative based on progress & by the development of psychoanalysis, which focused on hysteria. 43 References. Segal, Daniel A. (Dept Anthropology Pitzer Coll, Claremont CA 91711-6110), **'The European': Allegories of Racial Purity**, *Anthropology Today*, 1991, 7, 5, Oct, 7-9.

¶ An examination of the social construction of nationality in colonial British North America of the eighteenth century & postcolonial GB of the twentieth century. It is argued that, in both cases, national boundaries were constructed as retellings, or transcriptions, of colonial allegories of "European" racial purity; further, subordinated others were imagined as being outside of, or exterior to, the national & the racial self. Thus, the social construction of race & nationality have been deeply intertwined. It is also suggested that the term "European"–along with other modern categories of identity–was not something born in Europe & exported to the rest of the world, but rather, was constructed in a vast array of globally dispersed crossings of colonizers & colonized. Sypnowich, Christine (Queen's U, Kingston Ontario K7L 3N6), **Fear of Death: Mortality and Modernity in Political Philosophy**, UM *Queen's Quarterly*, 1991, 98, 3, fall, 618-636.

¶ An examination of the role of the fear of death in political philosophy, with particular emphasis on the thought of Thomas Hobbes & Michel Foucault. It is argued that the fear of death enters political debate with Hobbes's quintessentially modern argument for political obligation based on self-interest & the drive for self-preservation. The modern conception of mortality is contrasted with ancient Greek understandings of politics as a source of immortality, a bequest of the dead to future generations, & especially, the medieval resignation to death & the denigration of the worldly sphere of politics. While the modern preoccupation with sustaining life has led to an instrumental conception of politics, the gains of the modern world are not dismissed. Foucault's contention that historical change simply yields alternative ways of controlling docile bodies is critically assessed, & an alternative view of politics as the pursuit of the good life in the knowledge of our finitude is offered. 34 References. Trafzer, Clifford E. (U California, Riverside 92521), **Serra's Legacy: The Desecration of American Indian Burials at Mission San Diego**, *American Indian Culture and Research Journal*, 1992, 16, 2, 57-75.

¶ To build a bingo hall & fellowship center for the parish church at Mission San Diego (Calif), the church chose as its construction site the ruins of the first church & the cemetery that surrounds it with 4,000 Christian Indian burials. The Native American Heritage Commission, local preservationists, politicians, & students joined forces with the Kumeyaay & Luiseño Indians to block the desecration of the burial site. The Kumeyaay formed a Cultural Heritage Committee that successfully blocked the church & forged an agreement with church attorneys in 1989 to rebury approximately 100 skeletons in a native ceremony. AA

93Z4508

Travers, Andrew (U Exeter, EX4 4QJ England), **Moralizing Postmodernity**, *Reviewing Sociology (New Series)*, 1992, 8, 2, 3-18.

¶ A review article on books by: Zygmunt Bauman, *Modernity and Ambivalence* (Polity Press, 1991); Agnes Heller, *Can Modernity Survive?* (Polity Press, 1990); Leszek Kolakowski, *Modernity on Endless Trial* (U of Chicago Press, 1990); & Susan Rubin Suleiman, *Subversive Intent: Gender, Politics, and the Avant-Garde* (Harvard U Press, 1990 [see listings in IRPS No. 66]). It is suggested that the works provide practically no reference to everyday life, face-to-face interaction, or intimate love relationships, despite the fact that these phenomena exist regardless of theories. Bauman gets closest to everyday life with his use of Erving Goffman's work on stigma, where the concept of "normal deviant" anticipates ambivalence. On the other hand, Kolakowski moves within the context of distinguished lectures & conservative pronouncements, Heller is actually a commentary on Immanuel Kant, & Suleiman provides an oblique reflection of Sigmund Freud's patriarchalism. Modernity is collectively invoked in these works, & linked to postmodernity in a number of ways, giving each book the appearance of belonging to the present moment. It is argued that none of the authors has yet arrived at an understanding of everyday life, as perceived by Harold Garfinkel & Goffman. Postmodernity is an intellectual's debate that only Bauman brings to bear on the realities of social life. 5 References. S. Millett

Van der Geest, Sjaak (Anthropological/Sociological Centre U Amsterdam, NL-1012 DK Netherlands), **Is Paying for Health Care Culturally Acceptable in Sub-Sahara Africa? Money and Tradition**, *Social Science and Medicine*, 1992, 34, 6, Mar, 667-673.

¶ UNICEF's 1987 Bamako Initiative sought to improve the sustainability of primary health care in sub-Saharan Africa by making people pay for it. It has been questioned whether paying for health care is culturally acceptable in African communities. Here, it is argued that money is not a new phenomenon in Africa & that paying for goods & services does not need to conflict with existing traditions of reciprocity in health care. Money is an artifact that is culturally incorporated to satisfy specific needs. Cultural objections to paying for health care, therefore, are unlikely, but how payment should be realized in an effective & just way is another question. 30 References. Van Maanen, John (European Instit Business Administration, F-77305 Fontainebleau Cedex France), **Displacing Disney: Some Notes on the Flow of Culture**, UM *Qualitative Sociology*, 1992, 15, 1, spring, 5-35.

¶ A comparison of the theme parks Disneyland, DisneyWorld, Tokyo Disneyland, & EuroDisney is employed to explore how an explicitly US product flows across cultural boundaries. The park itself is treated as a source of cultural experience. However, the meaning of this cultural experience depends on the social context in which it occurs; despite corporate claims to the contrary, this meaning is not universal. 59 References. Yoshida, Takeya, Transliterated title not available (The Potentialities and Limitations of Geertz's "Cultural System" Theory), *Soshioroji*, 1992, 36, 3, Feb, 21-36. (JPN)

¶ Though Clifford Geertz's intepretive anthropology has contributed much to poststructural anthropology, there are several logical flaws in his work, which are exposed here via analysis of his studies on cultural systems. Describing religion, ideology, art, & common sense as unique cultural systems, Geertz failed to specify how they constituted a larger system. In the 1970s, he began to understand cultural systems within the context of particular societies, but never developed the logical implications of this. A case study approach is advocated to understand different cultural subsystems within individual societies, focusing on their complexity & mutability. 35 References. Zaret, David (Dept Sociology Indiana U, Bloomington 47405), **Critical Theory and the Sociology of Culture**, *Current Perspectives in Social Theory*, 1992, 12, 1-28.

¶ At the core of critical theory is a model of cultural change in modernization. This model has not varied appreciably, despite other developments, over three generations of critical theorists. During the last decade,

0038-0202/93 $1.50

however, sociological interest in the cultural has developed rapidly, leading to improvements in understanding of cultural dynamics. Implications of recent work in the sociology of culture are developed for the model of cultural change in critical theory, especially as it applies to its account of the rise of the public sphere. These implications militate strongly against the pessimistic account of the public sphere in critical theory, as well as in certain variants of postmodernist social theory. 103 References. AA

Zey, Mary & McIntosh, William Alex (Dept Sociology Texas A&M U, College Station 77843), **Predicting Intent to Consume Beef: Normative versus Attitudinal Influences,** UM *Rural Sociology,* 1992, 57, 2, summer, 250-265.

¶ The Ajzen-Fishbein model (Ajzen, Isaac, & Fishbein, Martin, *Understanding Attitudes and Predicting Social Behavior,* Englewood Cliffs, NJ: Prentice Hall, 1980), which predicts intent to perform behavior, is applied to 1985 interview data from a stratified random sample of 400 Tex women to assess the intent to consume beef. Analysis indicates that attitudes toward consuming beef do not predict directly intent to consume beef, but the subjective norm does. The role of the respondents' husband & friends more strongly affected intentions to consume less beef. Thus, knowing the subjective norm permits prediction of intentions. An intensification of research efforts on social influences (eg, referent others) on food consumption is called for. 2 Figures, 39 References. Adapted from the source document.

----, **A Forum on Postmodernism,** *Theory and Society,* 1992, 21, 4, Aug, 467-560.

Introduction, 463-465.

¶ In **Doing Postmodernism: A Forum,** editor Sharon Zukin (City U of New York, NY) discusses postmodernism's status as a radically modern social science & its relationship to culture. In **Liberty and Discipline: Making Sense of Postmodernity, or, Once Again, Toward a Sociohistorical Understanding of Modernity,** Peter Wagner (Wissenschaftzentrum Berlin für Sozialforschung, Federal Republic of Germany) speculates on what a sociology of postmodernity might include, agrees with the view that Western culture is experiencing a deep-seated crisis of representation, & argues for a renewed focus on historical agency in social theory & research. In **Postmodernism, Urban Ethnography, and the New Social Space of Ethnic Identity,** Michael Peter Smith (U of California, Davis) develops an anti-essentialist approach to urban ethnography & the social construction of personal & ethnic identity, offers brief critiques of liberalism & Marxism, & argues that studies of cities must take into account globalization as well as local issues. In **Comments on Smith and Wagner,** Paul Breines (Boston Coll, Mass) approves of the anti-authoritarian/anti-centralist position of Smith's critique of Marxism, but is critical of his use of modernist rhetoric. Several essentialist tropes in Smith's anti-essentialist essay are identified, & he is criticized for placing too many constraints on postmodern theorizing. In **Poststructuralism and Postmodernism: The Desire for Criticism** Patricia T. Clough (Fordham U, Bronx, NY) argues that Smith's gloss of the radical implcations of poststructural & deconstructive criticism for social science is due to his couching of postmodernism & deconstruction in terms of debates within post-Althusserian Marxism. In **The Real City, the Discursive City, the Disappearing City: Postmodernism and Urban Sociology,** Janet Wolff (U of Rochester, NY) identifies ten arguments in Smith's article & argues that they are separate issues & often unclearly defined. It is agreed with Smith, however, that sociology needs to incorporate new developments in critical theory, poststructuralism, & postmodernism. W. Howard

----, **Retrospective on Clifford Geertz's "Deep Play: Notes on the Balinese Cockfight",** *Play & Culture,* 1992, 5, 3, Aug, 221-263.

¶ In **Introduction,** Margaret Carlisle Duncan (U of Wisconsin, Milwaukee) argues that Clifford Geertz's seminal article "Deep Play: Notes on the Balinese Cockfight" (in Harris, J. C., & Park, R. J. [Eds], *Play, Games and Sports in Cultural Contexts,* Champaign, Ill: Human Kinetics, 1983 [1972], 39-77) has influenced how we: think about play, sport, & culture; persuade others of the validity of our ideas; & regard the role that interpretation plays in our research. In **Notes on Deep Play,** Synthia S. Slowikowski (U of Illinois, Urbana) reviews Geertz's literary style, notes the general ways it is used in play & culture studies, & offers criticisms of other scholars. In **Going Out on a Limn: Geertz's "Deep Play: Notes on the Balinese Cockfight" and the Anthropological Study of Play,** Garry Chick (U of Illinois, Urbana) & Jon Donlon claim that Geertz's article has had no substantial impact on anthropological research & that, when it is cited in play research, it is as an exemplar of Geertz's interpretive enterprise, not as an informative study of play. Although he does not consider the article as the last word on the subject of deviant play, Gary Alan Fine (U of Georgia, Athens), in **The Depths of Deep Play: The Rhetoric and Resources of Morally Controversial Leisure,** reviews the status of cockfighting as deviant & illegal & examines means by which resources are provided for its performance. In **On Depth in Play, Culture, and Ethnographic Description,** Phillips Stevens, Jr. (State U of New York, Buffalo) says that Geertz's article is significant in anthropology not so much for its explanation of the complexities of meaning as for its treatment of the concept of culture & its mode of ethnographic description. In **Notes on Notes: Geertz's Cockfight and the Academic Legitimacy of Sport,** Kendall Blanchard (Lamar U, Beaumont, Tex) concludes that Geertz effectively illustrates how sport can be a metaphor for the society in which it occurs, & for that reason, his article has helped legitimate the anthropological study of sport. 1 Reference. Conquergood, Dwight (Center Urban Affairs & Policy Research Northwestern U, Evanston IL 60208), **Rethinking Ethnography: Towards a Critical Cultural Politics,** UM *Communication Monographs,* 1991, 58, 2, June, 179-194.

¶ A critical theoretical reassessment of ethnography, touching on the political foundations for cultural practices. There are several issues central to ethnography that aid the emergence of a critical cultural politics, including the unique ethnographic methodology of participant observation, which favors the body as a site of knowing. Ethnography becomes an embodied practice favoring speaking & listening over observing. Ethnography's discourse of displacement testifies to its preoccupation with border situations & boundaries, to nondiscrete categories, & the processual performance of identity. The notion of the world as performance or as text is crucial to understanding links among ethnography & cultural process, hermeneutics, scholarly representation, & politics. It is noted that ethnography's rhetorical dimension contributes to its reimpowerment. 31 References. J. Sadler

De Munck, Victor C. (Dept Anthropology U California, Riverside 92521), **The Fallacy of the Misplaced Self: Gender Relations and the Construction of Multiple Selves among Sri Lankan Muslims,** UM *Ethos,* 1992, 20, 2, June, 167-190.

¶ An exploration of the relation between culture & the self, arguing that

the notion of an integrated, overarching self is an example of Alfred North Whitehead's "fallacy of misplaced concreteness" (see *Science and the Modern World*, Cambridge: Cambridge U Press, 1927), since it assigns agency to a class label. Instead there is a "self symbol" that gives the illusion of a coherent self. Metaphorically, self refers to a landscape of consciousness composed of large to small behavioral, cognitive, & affective complexes termed "subselves," which acquire a sense of reflexive history over time & across contexts & may have semiautonomous & contradictory goals & interests. The shift from one subself to another is accomplished through extensional associative or connotative attributes that link subselves. The theory of subselves is tested with narrative & case study data of gender relations in a Sri Lankan Muslim village. A variant of Benjamin N. Colby's eidochronic analysis (eg, see "A Partial Grammar of Eskimo Folktales," *American Anthropologist*, 1973, 75, 645-662) is used to elicit cultural representations or codes pertaining to male (M) & female (F) personae as depicted in village folk narratives. These codes are then used to interpret individual M & F personality configurations from a series of case studies. In support of the theory, individuals exhibited different combinations of codes at different times or across contexts. The concept of a fragmented self composed of a cluster of subselves, each to some degree autonomous, helps explain individuals who can act morally, nobly, & rationally, on the one hand, & immorally, ignobly, & irrationally, on the other, & combinations thereof. 48 References. Facchi, Alessandra (Facoltà scienze politiche U Milano, I-20122 Italy), **L'escissione: un caso giudiziario** (Excision: A Case for the Judiciary), *Sociologia del Diritto*, 1992, 19, 1, 111-119. (ITA)

¶ An exploration of the problems of normative legal pluralism concerning female circumcision or excision, based on a 1989 case heard by the French Court of Appeals imposing a three-year prion sentence on a Mali women. The criminalization of excision in the French social consciousness ignores the presence of the integrated value system of African immigrants into the country. Excision ranges from the extreme form, infibulation, to a more moderate form similar to male circumcision. It is a traditional African practice common to many religions & groups, & performed on the newly born. In some European countries, it has been outlawed as an act of mutiliation. Western jurisprudence considers it a violation of an individual's physical integrity, & seeks to provide the child basic protection & the woman the right to choose. 8 References. Ferrié, Jean-Noël (Instit recherches & études sur le monde arabe & musulman, Aix-en-Provence France), **Vers une anthropologie déconstructiviste des sociétés musulmanes du Maghreb** (Toward a Deconstructionist Anthropology of North African Moslem Societies), *Peuples Méditerranéens/Mediterranean Peoples*, 1991, 54-55, Jan-June, 229-246. (FRE)

¶ A critique of the Western sociological & anthropological approach to the Maghreb, which perceives North African societies as the different "other," & uses religion to explicate this difference. The erroneous perception is traced in the anthropological literature, & uses suggested to be related to Emile Durkheim's differentiation between rites relevant to the sacred & other realms. As an example, it is demonstrated how social mechanisms, not religion, are decisive forces in determining matrimonial behaviors. It is contended that the mystifying perception of the Maghrebian religious culture should be abandoned in favor of an individualistic, social-dynamics approach. 58 References. 93Z4523

Friedman, Jonathan, Beyond Otherness or: The Spectacularization of Anthropology, UI *Telos*, 1987, 71, spring, 161-170.

¶ A critical evaluation of recent trends in anthropology. The intrigue of the relativistic "other" is symptomatic of a decline in Western self-identity. Modernism has been retired from its cultural task to define social movements. A move toward culturalism after modernism's demise has been followed by postmodernism, & its inevitable result, fragmentation. The postmodern relativist contends that theoretical & cultural discourse are indistinguishable epistemologically. Anthropology must advance positively from a global, historical position, & be concerned with the construction of the anthropological object, dependent on larger interglobal structures. Postmodernist otherness assumes the possibility of conscious self-reflection in capitalist civilization, & a socially determined intellectual discourse. Since these processes have become fragmented in modern existence, & empirical science discredited, any attempt at postmodernist otherness itself becomes a product of the fragmented world. A call is made for self-reflexive, nonradical objectivity, a stop to the endless succession of anthropological genres, & a rejection of the narcissistic, commodified posing in anthropology. J. Sadler

Gailey, Christine Ward (Northeastern U, Boston MA 02115), **A Good Man Is Hard to Find: Overseas Migration and the Decentered Family in the Tongan Islands**, *Critique of Anthropology*, 1992, 12, 1, Mar, 47-74.

¶ Over the past fifteen years, an international labor market has developed in Tonga, resulting from an increased need for cash & a limited & patronage-ridden domestic labor market. Data from interviews (N not specified) with kin of all overseas migrants & all returned migrants in two urban neighborhoods, regarding their cash & other remittance receipts & disbursements, are used to argue that overseas migration has created "decentered families" in the sector of the working population engaged primarily in subsistence & cash cropping. Temporary &, in an increasing degree, permanent overseas migration has had a differential effect on women & men in home communities. Women in particular have become linchpins in keeping the far-flung kin networks viable as a source of cash remittances, & maintaining the range of labor, material, & caregiving responsibilities among kin remaining in the islands. All members of the family have changed their expected gendered roles. Thus, family forms are changing with patterns of international labor migration, producing conflicting pressures for nuclear vs broader kin claims, & for the primacy of sibling-centered vs conjugally centered kin ties. 56 References. Modified AA

Harpending, Henry & Pennington, Renee (Dept Anthropology Pennsylvania State U, University Park 16802), **Herero Households**, *Human Ecology*, 1990, 18, 4, Dec, 417-439.

¶ Examined are local residential & economic units among the Herero ranchers of northwestern Botswana. The meanings of the terms "household" & "homestead" among the Herero are discussed, & it is shown that there is not any durable group of associated individuals among the Herero that could be usefully characterized as a household; rather, there is a dual system of local social units. From the male perspective, a household is a hamlet with the associated herd & huts or hut clusters within it. From the female perspective, a household is a hut or hut cluster with dependent children. A brief history of the Herero–beginning with the impact of the 1904 Herero-German war, through their development as one of the wealthiest groups in the region–is presented, & it is noted that the Herero suffered from infertility before antibiotics became available around 1960. The effects of these changes on local organization is discussed. 4 Tables, 1 Figure, 35 References. Adapted from the source document.

Johnson, Patricia Lyons (Dept Anthropology Pennsylvania State U, University Park 16802), **Changing Household Composition, Labor Patterns, and Fertility in a Highland New Guinea Population,** *Human Ecology*, 1990, 18, 4, Dec, 403-416.

¶ Fieldwork data acquired over 13 years spent researching the Gainj of Papua New Guinea, a natural fertility population with low reproductive output, are used to show that the effects of development on fertility change are much more complex than a simple demographic transition model would suggest. It is argued that: (1) fertility change associated with development involves the complex interaction of a number of variables, most importantly, late age at first birth for women & long interbirth intervals; (2) the effects of those variables may be contradictory; (3) the effect of any variable may change as the society changes; & (4) household composition & the allocation of household labor may exert an important mediating influence on the relationship between development & fertility. 1 Table, 2 Figures, 2 Appendixes, 24 References. 93Z4528

Klor de Alva, J. Jorge (Dept Anthropology Princeton U, NJ 08544), **Nahua Colonial Discourse and the Appropriation of the (European) Other,** *Archives de sciences sociales des religions*, 1992, 37, 77, Jan-Mar, 15-35.

¶ "Colonial discourse" has overwhelmingly focused on Europeans' use of language & other symbolic systems to further their domination of nonwhites, neglecting the role of colonial discourse as a weapon to resist that domination or as a tool by which the victims of colonization could adapt themselves, through their own conceptualizations, to the shifting social, cultural, & political conditions. These latter roles are explored by focusing on the appropriation by the Nahuas (the Aztecs & their linguistic & cultural neighbors) of the European other (in the course of "first" encounter narratives) & of the other's voice (through the adaptation of alphabetic literacy to Nahuatl), as tactics useful in their efforts to accommodate themselves to the initiatives of the Spaniards, & as vehicles for affirming their vision of truth & sociopolitical reality. 60 References. Lattas, Andrew (Dept Anthropology U Sydney, New South Wales 2006 Australia), **Primitivism in Deleuze and Guattari's *A Thousand Plateaus*,** *Social Analysis*, 1991, 30, Dec, 98-115.

¶ A reading of Gilles Deleuze's & Félix Guattari's *A Thousand Plateaus* (Minneapolis: U of Minnesota Press, 1987) focuses on its celebration of "nomad thought"-radical thinking that explores phenomena through their exteriority rather than through some interior essence or universal subject. For Deleuze & Guattari, liberation from conventional philosophical epistemes comes from escaping the interiority of one's body & by recognizing "becoming" as the primary weapon against power & knowledge. Becoming requires the willingness to commit subversive acts that allow one to move between identities & categories, between majority & minority forms of existence. Deleuze's & Guattari's thoughts on historical explanations of the state, universal history, the "war machine," & evolutionism are also discussed. It is concluded that their philosophy of marginality & difference represents the logic of exchange value displaced into philosophy. 24 References. W. Howard

Leavitt, John (Dept Anthropology U Montreal, Quebec H3T 1J4), **Cultural Holism in the Anthropology of South Asia: The Challenge of Regional Traditions,** *Contributions to Indian Sociology, New Series*, 1992, 26, 1, Jan-June, 3-49.

¶ The "cultural holism" premise shared by both structuralists (Dumontian) & ethnosociologists (Chicago school) on the anthropology of South Asia is that analytical categories should be derived from South Asian culture itself. It is argued that this premise underestimates the nature & importance of regional & historical specificity in South Asia. Cultural holism privileges widespread phenomena over local ones, classical over vernacular & nonclassical, & tends to replace specific analysis with exemplification in a preordained scheme. The implications of these tendencies in a specific ethnographic domain were rendered through field research on oral literature & its use in rituals in the Kumaon region in northern India, which found patterns that were not those of holistic models. More diverse models are explored, mainly those based on the development of the discipline of European folklore, which allow for more historical direction, provide a broader context for specific research, & are less programmatic than holistic models. 1 Figure, 129 References. M. Pflum

Mehta, Deepak (School Economics U Delhi, Haryana India), **The Semiotics of Weaving: A Case Study,** *Contributions to Indian Sociology, New Series*, 1992, 26, 1, Jan-June, 77-113.

¶ Forces & conventions that inform the production of woven cloth are explained by a case study of a community of weavers in Barabanki, India. Everyday weaving activity comprises four parts (sizing, reeling, warping, & wefting), with a category of worker & a segment of the ritual calendar associated with each part. Spatially, this divides the household into male & female zones, & temporally, it divides the day into four units, the week into seven, & the year into twelve. Sequencing of the stages of weaving, scheduling of each stage, assignment of tasks, & location & spatialization of the body of the weaver in relation to the instruments & apparati of work encode time & space. Weaving techniques-the work styles, spaces & objects of work-fabricate social relationships. On the extraordinary occasion of weaving a death shroud, the worker categories & temporal segments are formalized: the organization of four categories of workers, representing the combination of the four elements (fire, earth, air, water), infuse the dead body with carnality & spirituality. Determinate connections exist between the everyday & the extraordinary activity of weaving. 3 Tables, 7 References. M. Pflum

93Z4533

Mitterauer, Michael (Instit Economic & Social History U Vienna, A-1010 Austria), **Peasant and Non-Peasant Family Forms in Relation to the Physical Environment and the Local Economy,** UM *Journal of Family History*, 1992, 17, 2, spring, 139-159.

¶ The theoretical concept of ecotypes, as developed by Scandinavian cultural anthropologists, is used to explore the relationship between rural family forms & labor organization in agricultural society. It is contended that protoindustrialization theory must be modified, differentiated, & expanded. Integration of the ecotype concept into the history of rural family forms provides a more dynamic view of the peasant economy. Drawing on secondary quantitative & qualitative data from the eastern Alpine region of Austria, the variety of family forms of peasants & smallholders, as shaped by the organization of labor, is contrasted to the simplified model of a peasant & protoindustrial family economy. It is concluded that the different ways in which family forms depend on ecotypes must be considered within the framework of structural conditions leading to a wide range of adaptations to economic needs. Limits to the interpretive value of the ecotype approach are discussed. 1 Table, 3 Figures, 47 References. Adapted from the source document.

Testart, Alain (Laboratoire ethnologie sociologie comparative, 200 ave Republique F-92001 Nanterre France), **La Question de l'évolutionnisme dans l'anthropologie sociale** (The Role of Evolutionism in Social Anthropology), *Revue française de Sociologie*, 1992, 33, 2, Apr-June, 155-187. (FRE)

¶ Evolutionism is considered as an original sin of the founding fathers of social anthropology. Antievolutionism arguments put forth by the second generation of anthropologists are examined, eg, those of Clause Lévi-Strauss. Inconsistencies in the arguments are highlighted, & it is contended that the antievolutionists never proved the illegitimacy of evolutionism. Arguments are advanced in favor of evolutionism here, viewing it as a progressive scientific concept, capable of combatting ethnocentrism. Following a critical analysis of evolutionism in the nineteenth century, based on a literature review, important tasks of evolutionism in current social anthropology are outlined, eg, elaborating a typology of social forms, & relating findings of prehistoric archaeology. 16 References. Thomas, Nicholas (Dept Anthropology Australian National U, Canberra ACT 2601), **The Curiosity of the Gaze: Imperial and Anthropological Postmodernism,** *Social Analysis*, 1991, 30, Dec, 20-31.

¶ Doubts are raised about the utility of postmodernism for anthropology & about its status as a general cultural condition. It is argued that postmodernism's emphasis on the constructedness of all ethnographic accounts not only is of little practical value, but also is a regurgitation of debates that took place in the 1960s & early 1970s. A new kind of critical anthropological analysis that uses insights from postmodernism is described & applied to travel writing & issues relevant to contemporary anthropology. An attempt is made to understand how anthropologists distinguish themselves from travelers, & how the discourse of colonialism is bound up with that of anthropology. It is argued that travel has always been the site for a series of struggles over what constitutes correct traveling, which involves notions of self-improvement, pilgrimage, scientific inquiry, & superficial tourism. It is concluded that anthropology's current emphasis on the postmodern notion of reflexivity needs to be balanced by a concern for history & genealogy. 27 References. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Van der Grijp, Paul (Vakgroep Culturele Anthropologie Rijks U Utrecht, NL-3508 TC Netherlands), **Ideologie en sociale ongelijkheid bij rituele verminkingen van geslachtskenmerken** (Ideology and Social Inequality in Ritual Mutilations of Sexual Features), *Tijdschrift voor Sociale Wetenschappen*, 1992, 37, 3, July-Sept, 266-282. (DUT)

¶ Functionalist sociologists view circumcision & clitorectomy as part of the ritual initiation framework, while structuralists see them as signs grouping people in terms of sex & social background. Psychoanalysts & feminists focus on castration-based fears. Analysis reveals that both operations imply violence against the human body. The search for hidden motives leads to the perception of the genitals as a focus of phantasms on which unconscious human desires & fears are projected. Also, the mutilation of sex organs can be seen as a transition from the natural animal environment to a civilized cultural environment. The operations imply a basic inequality in terms of their physical & symbolic ramifications. Although many critics view clitorectomy as inhuman, many women undergoing the procedure expect that it will enhance their humanity. 39 References. Adapted from the source document as translated by M. Van Ginkel, Rob (U Amsterdam, NL-1012 WX Netherlands), **'Groen-zwart, Texels in het hart.' Over de articulatie van identiteit op een Nederlands Waddeneiland** (*Groen-zwart, Texels in het hart.* The Construction of Local Identity on the Isle of Texel), *Amsterdams Sociologisch Tijdschrift*, 1992, 18, 4, Feb, 76-99. (DUT)

¶ Some anthropologists see an increasing nationalization or globalization

of cultures & identities, while others emphasize that in many places, villagers assert their right to a local identity. Analyzed here is the case of the Dutch island of Texel, where the 6,000 inhabitants renegotiated & articulated their identity in the processes of Dutch nation building & state formation. It is shown that national & local identity do not necessarily have to be conflictual; rather, cultural homogeneity can be conducive to local consciousness & the expression of local identity. 36 References. ¶ The current status of Iraqi Kurdistan is examined. The Kurds have been persecuted by Saddam Hussein's Baathist regime for the past twenty years, but the most recent campaign, named (from the *Koran*) *al-Anfal,* or bounty from raids agaist infidels, began in the late 1980s. The Kurds, however, are not infidels, but Sunni Muslims, who have committed the more secular sin of rebelling against Baghdad's totalitarian control & attempting to maintain a separate Kurdish identity. The campaign has produced a variety of atrocities, including deportation, destruction of villages, & massacre & mass burial of inhabitants. The body count may number as high as 182,000 people along with 400,000 refugees & 60,000 orphans. Only the intervention of the outside world saved the Kurds from further destruction. Their future now lies in the upcoming elections, which the Kurds view as a symbol of reconstruction & national unity, & which they hope will give legitimacy to their leaders in their negotiations with the outside world. ——, **Discussion,** *Contributions to Indian Sociology, New Series,* 1992, 26, 1, Jan-June, 133-157.

¶ In **"Constructing an Indian Ethnosociology" by McKim Marriott: Some General Comments** (for abstract of referenced article, see SA 38:1/90V1527), Arvind Sharma (McGill U, Montreal, Quebec H3A 2T5) contends that social sciences developed from within a culture may be more effective for that culture than those developed from outside sources, but adds that applying social categories of one culture to another may also be useful; eg, the Hindu concepts of *varna* & *aśrama* may illuminate Western cultural realities. In **Steps Away from an Indian Ethnosociology: A Reply to Marriott,** Rajendra Singh (U of Montreal, Quebec H3C 3J7) questions the need for Indian ethnosociology at this time, & raises questions about Marriott's concept of "discovery procedures" & his claims to objectivity. In **Interpreting Social Action as Text: A Hindu Perspective,** Shrinivas Tilak (McGill U, Montreal, Quebec H3A 2T5) uses Marriott's constituent cube metaphor in developing Hindu hermeneutical perspectives on text interpretation that are applicable to the social sciences. The constituent cube (six perspectives on ultimate reality), composed of six orthodox darsanas in three pairs that contribute to making collective life coherent in India, are described & contrasted. 18 References. Social Choice and Welfare publishes original research, survey papers and book reviews on the ethical and positive aspects of welfare economics and collective choice theory. The appropriate topics comprise social choice and voting theory (normative, positive and strategic sides) as well as all aspects of welfare theory (Pareto optimality; welfare criteria; fairness, justice, and equity; externalities; public goods; optimal taxation; incentives in public decision making; cost-benefit analysis; etc.) Articles on choice and order theory may also be published if their results can be applied to these topics. Papers both verbal and formal in style are being solicited.

Membership to the **Society for Social Choice and Welfare** includes subscription to **Social Choice and Welfare.** Please contact M. Salles, Society for Social Choice and Welfare, CREMERC, Université de Caen, 14032 Caen cédex, France

Abramo, Laís W., Nuevas tecnologías y movimiento sindical en Brasil: desafíos en los años 90 (New Technologies and the Union Movement in Brazil: Challenges in the 1990s), UM *Revista Paraguaya de Sociología*, 1991, 28, 82, Sept-Dec, 139-152. (SPA)

¶ The theme of modernization through new technology in Brazil has double significance for the union movement. On the positive side, it could mean the objective strengthening of the Brazilian working class; but it also could have an exclusionary side-social inequality could increase, while real incomes & working/living conditions could decline. Because of this exclusionary potential, the unions have not unconditionally supported all modernization. Interviews (N not given) with union workers, business owners, & technicians in 6 businesses in the state of São Paulo revealed that the unions recognize the necessity of their presence, along with that of the state, to ensure positive consequences of modernization for the quality of life & work; also, conditions for the introduction of new technologies need to be negotiated at the business & sector levels. Union demands relative to participation in modernization include: receiving information on business plans to modernize, discussing the plans, & establishing a parity commission to accompany the introduction of new technologies. Agreements obtained so far in Brazil on these demands are reviewed. In the face of the general economic crisis & the complexity of the reactions of different bases (sectors, businesses, & work areas) to the introductory processes for new technologies, the unions need to elaborate a strategy that integrates these different bases. 10 References. Translated from Portuguese by Graciela Salazar J.

¶ Brazil has had to confront the international transformation of industry's technological base from material to informational, & the concurrent transformation of industrial social relations, under conditions of an increase in its external debt & a decrease in buying power for its exports. Due to this financial crisis, the Brazilian state has been characterized as passive in the process of converting its industries, but the disarticulation between the state, private initiative, & the scientific-technological community has also played a part. To exit from the economic crisis, industry must change not only on the technological plane, but also in the social relations of labor. An analysis of the institutional & political picture of industrialized relations in Brazil shows an enormous mobilization of workers in large, modern industries, but rigid state control over the union movement, & a narrow-mindedness on the part of the state to extend social compromises beyond particular industrial conflicts. It is necessary to create beneficial political & ideological conditions so that the union movement can legitimize its ideal of democratization within a more extensive social program. This will help to achieve real technological modernization & make the process of Brazil's integration into the international economic sector less traumatic. 44 References. Azam, Farooq-i (Welfare & Services Division Overseas Pakistanis Foundation, Islamabad 44000 Pakistan), **Labour Migration from Pakistan: Trends, Impacts, and Implications**, *Regional Development Dialogue*, 1991, 12, 3, autumn, 53-71.

Comment, 72-73.

¶ The recent movement of manpower from Pakistan to Asian & Middle Eastern countries involves a systematic analysis of out- & return migration, occupational, & other features of migrant workers. Pakistan experienced an economic boom 1977-1983 as a result of migrant workers' remittances. Declining outmigration after 1983 strained the home labor market, economically unprepared to reintegrate migrants into their original rural areas. Employed principally in Saudi Arabia & the United Arab Emirates, most migrants are unskilled laborers. Figures from two studies of annual immigration outflow are used to compare migrant worker earnings, consumption & expenses, remittances, savings, & investments. Pakistan benefits from labor migration as workers return skills. Governmental intervention aimed at training returned unskilled laborers should include self-employment & entrepreneur development programs. In **Comment**, Rashid Amjad (Employment Planning & Population Branch ILO, CH-1211 Geneva 22, Switzerland) highlights the socioeconomic impact of migration. Specifically, migration has favored reductions in the country's poverty level. But, government complacency given the economic success of labor migration has resulted in few efforts to control population growth or strengthen the employment structure. 3 Tables, 2 References. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Bagguley, Paul (Dept Social Policy & Sociology U Leeds, LS2 9JT England), **Protest, Acquiescence and the Unemployed: A Comparative Analysis of the 1930s and 1980s**, UM *The British Journal of Sociology*, 1992, 43, 3, Sept, 443-461.

¶ Though much social commentary has been offered on the political quiescence of the unemployed, historical evidence reveals that quiescence is not necessarily the only response to unemployment. Empirical data are presented to describe the widespread protests organized by the National Unemployed Workers' Movement (NUWM) in GB during the interwar period. A comparison of the Trade Union Congress Centres for the Unemployed of the 1980s with the NUWM reveals that changes in the forms of unemployment relief, & in the organizational & cultural resources of the unemployed, account for their differences. The acquiescence & political fatalism of the unemployed during the 1980s derived from the state being impervious to their political protest, & from the unemployed's lack of organizational & cultural resources for mobilization. 1 Table. Baron, Mira G. (Faculty Industrial Engineering & Management Technion Israel Instit Technology, Haifa IL-32000), **Labor Force Participation in Non-Metropolitan Disadvantaged Towns**, *Israel Social Science Research*, 1992, 7, 1-2, 28-44.

¶ The impact of individual characteristics & local job opportunities on labor force participation (LFP) is examined through analysis of questionnaire data obtained from a 20% sample of Israeli households extracted from the 1983 population & housing census. Education level was the most important individual factor affecting LFP. Increases in education were associated with increased LFP regardless of gender or age. Lack of local job opportunities was negatively associated with LFP in females, but no relationship between the two variables was found for males. Regardless of gender, availability of a car increased LFP by 30%-50%. Nonsalaried income was negatively associated with LFP. 7 Tables, 2 Appendixes, 10 References. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Baxter, Janeen (Dept Anthropology & Sociology U Queensland, 4072 Australia), **Domestic Labour and Income Inequality,** *Work, Employment and Society,* 1992, 6, 2, June, 229-249.
¶ Using 1986 survey data collected from 831 employed people from throughout Australia, the relationship between domestic labor & gender inequalities in income is considered, highlighting the impact on earnings of both responsibility for & time spent on domestic labor. Also explored is whether the relationship between housework & paid labor is qualitatively & quantitatively different for men & women. Using regression analysis, empirical evidence about these relations is presented, arguing that gender inequalities in wages are based, at least in part, on the structure of the household system. Policies aimed at reducing the wage gap will need to take account of this. 4 Tables, 44 References. Adapted from the source document. Besser, Terry L. (U Kentucky, Lexington 40506), **A Critical Approach to the Study of Japanese Management,** *Humanity and Society,* 1992, 16, 2, May, 176-195.
¶ Two philosophical perspectives in organizational studies–functionalist & critical–are contrasted, showing that the critical perspective generates provocative questions & provides insight not available through use of the functionalist perspective alone. Mats Alvesson's critical organizational theory (*Organization Theory and Technocratic Consciousness,* New York: Walter de Gruyter, 1987) to rework Robert E. Cole's comparative study of Japanese & US workers & organizations (*Work, Mobility and Participation: A Comparative Study of American and Japanese Industry,* Los Angeles, Calif: U of California Press, 1979). Cole, along with other scholars, identifies a unique management style present in large Japanese organizations. Applying Alvesson's perspective to this topic forces us to consider issues not covered by Cole & most other scholars of Japanese management, especially questions regarding how Japanese management affects worker alienation. Critical theory suggests that the standard measures of alienation used for Western organizations may not be appropriate in Japanese organizations. Also, Alvesson's approach encourages the placement of Japanese management within its historical & societal context Thus, costs paid by other groups & the social system as a whole to allow the elite organizations to practice Japanese management can be considered. Thus, a critical analysis is a useful tool in understanding the implications of Japanese management. 19 References. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Blaschke, Jochen (Berlin Instit Comparative Research, D-1000 30 Federal Republic Germany), **Foreign Workers in Germany: Demographic Patterns, Trends, and Consequences,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 127-142.
Comment, 143-144.
¶ A socioeconomic analysis of Germany's foreign workers explains that demographic trends in immigration for the last thirty years have been influenced by both the sending & receiving countries' economic climates. The oil crisis of the early 1970s prompted policy shifts, while recent political changes in Eastern Europe indicate further regulatory adjustments. Immigration policy was built on recruitment agreements with various countries for contract work, including Italy, Greece, Spain, & Turkey, continuing until 1973. Prior to the 1983 policy phase-out, relatives were permitted to immigrate to live as a family with contract workers. Since 1983, illegal migrants & refugees comprise the largest increase in Germany's foreign population. Although the stigmatized foreigner is associated with low social status & physically hard noncareer jobs, self-employment among foreigners is growing. Most current refugees come from the Middle East, but before the 1980s, they were almost exclusively Eastern European. The labor situation after reunification has been complicated by the addition of immigrants & refugees admitted into the former East Germany. Restructuring of the Soviet Army, ecological disasters (eg, Chernobyl), *perestroika,* & rival ethnic-nationalist conflicts have increased the migratory influx from the former USSR. In **Comment,** Rusen Keles (U of Ankara, Cebeci 06590, Turkey) calls for greater analysis of the sociocultural & sociopolitical issues to contextualize the demographic information. 1 Table. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Bogun, Roland, Osterland, Martin & Warsewa, Günter (Sonderforschungsbereich 186 U Bremen, D-2800 33 Federal Republic Germany), **Arbeit und Umwelt im Risikobewusstsein von Industriearbeitern** (Labor and Ecology in Industrial Workers' Risk Consciousness), *Soziale Welt,* 1992, 43, 2, 237-245. (GER)
¶ To determine how workers view the trade-off between job security & environmental protection, questionnaire data were obtained from 100 workers in the lower Elbe region of the former West Germany, where, in the 1970s, the local government of Lower Saxony encouraged the development of large chemical factories, aluminum mills, & nuclear power facilities to stimulate economic growth. Analysis reveals 4 types of risk consciousness: (1) the dominance of economic considerations; (2) ecological problems as the other side of the coin; (3) industrialization experience as a learning process; & (4) ecological sensibility. Different biographical & professional experiences are reflected in contradictory attitudes. Respondents view themselves as both victims & beneficiaries of technological & economic advances. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4555
Boulin, Jean-Yves, Esclave du dimanche (Sunday's Slave), *Futuribles,* 1992, 164, Apr, 54-62. (FRE)
¶ The debate in France over opening businesses on Sundays is examined from the perspectives of society's time management, the modalities of regulating a collective action, & the interaction of social times. It is observed that the harmonious synchronized work time, especially in urban areas, is determined by the economic order. Yet, working on Sundays involves also social, cultural, & historical dimensions; not working on Sundays may therefore respond to society's need for minimal synchronization combined with free-time autonomy. Elements contributing to desynchronization are discussed, eg, women entering the work force. The opening of businesses on Sundays should be conceptualized as a reorganization not only of work time but of social free time as well. 2 Tables. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Čambáliková, Monika (Sociologický ústav Slovak Academy Sciences, Obrancov Mieru 49 CS-814138 Bratislava Czechoslovakia), **Nové skutočnosti a subjekty vo sfére práce na Slovensku** (New Facts and Subjects in the Sphere of Work in Slovakia), *Sociológia,* 1991, 23, 1-2, 111-117. (SLO)
¶ Current economic changes in Slovakia center on the transformation from a centralized command system with a bureaucratic power monopoly to a market economy in a context of democratic pluralism. The means of production must pass from state to private ownership, which will lead to social stratification based on an increasing diversity of economic levels. The needs of different social groups must be looked after by achieving compromise through consensus. In contrast to the bureaucratic-socialist state, a democracy seeks to deal with conflicts of interest rather than exclude them. The universal subjectivity of the state needs to give way to the subjectivity of civil society in the area of work. Labor, the employer, & the state must be revitalized. The role of unions under the new system is investigated. Adapted from the source document as translated by M. Meeks. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Carton de Grammont, Hubert (Instit Investigaciones Sociales U Nacional Autónoma México, 04510 Mexico DF), **El futuro del campo mexicano frente al Tratado de Libre Comercio** (The Future of the

Mexican Countryside in the Face of the Free Trade Agreement), UM *Revista Mexicana de Sociología*, 1991, 53, 3, July-Sept, 125-141. (SPA)

¶ An examination of the possible effects on Mexican agriculture of the proposed Mexico-US Free Trade Agreement (FTA), with focus on land, labor, & the organization of the growers. It is argued that the previous policy of import promotion on the part of the Mexican government has resulted in the bankruptcy of many farmers. The structure of land tenancy & its impact on grower organization & labor utilization are described, & the potential impact of the FTA is considered. It is concluded that the FTA will drive many small growers out of business & create unemployment among field workers. However, the possibility of strengthening the *ejido* (government land grants) program under the FTA is considered. Adapted from the source document.

93Z4559

Cockburn, Alexander, Speaking Out, *New Statesman & Society*, 1991, 4, 149, 3 May, 20-21.

¶ The future of the US labor movement is examined. Though hailed as a great victory for the labor movement, the passage of the 1970 Occupational Safety & Health Act ironically marked the end of federal regulation of the safety & health standards of the workplace & the beginning of the corporate counterattack that ravaged the labor movement in the 1970s & 1980s. Since that time 200,000 workers have died on the job, 2 million have died from work-related diseases, & 1.4 million have become permanently disabled. Legislation to increase the safety of the workplace has been defeated, employers have gutted wages & medical benefits, & labor is now confronted with the debilitating effects of the new free trade zone. All this has occurred in a national environment for organizing workers that has become increasingly hostile. The hope of the labor movement lies in dislodging entrenched, unimaginative, & often corrupt union leaders. D. Generoli

Colclough, Glenna (U Alabama, Huntsville 35899), **Industrialization, Labor Markets and Income Inequality among Georgia Counties: 1970-1980,** *Research in Rural Sociology and Development*, 1989, 4, 207-222.

¶ The linkage between structural factors–including industrialization patterns & labor market characteristics–& family income inequality among 158 counties in Ga 1970-1980 is examined, using data from the Census of Population & County Business Patterns to identify patterns of growth & decline in manufacturing establishments, as well as types of dominant industries. While family income inequality generally decreased over the decade, this was not true of all counties; in fact, counties showing the most favorable conditions for economic growth also displayed the highest levels of inequality. Inequality due to uneven development was greatest among counties with more diversified industrial structures. Income inequalities along racial lines were greatest in these diversified counties, as well. Since uneven development is clearly associated with economic inequalities among subgroups of the population & locales, development policies aimed at comprehensive planning, instead of those encouraging interarea competition, are needed to distribute the benefits of industrial development more widely. 4 Tables, 2 Maps, 1 Appendix, 20 References. Cunnison, Sheila (Humberside Polytechnic, Hull HU6 7TR England), **Equal Value Legislation and the Unions: A Case Study from the UK,** *Journal of Gender Studies*, 1991, 1, 1, May, 12-28.

¶ The UK Equal Pay Act (1970) operating in conjunction with the Sex Discrimination Act (1975) made it possible for individual women to claim equal pay with men. However, in practice, the Act could only be applied to women & men doing almost the same work; because the UK labor market is largely sex-segregated the Act was almost unworkable. The 1983 Equal Value Amendment Act made it possible for women to claim equal pay with a man doing any job & employed by the same organization. Bringing an action, however, was time-consuming, emotionally draining for the claimant, & costly. While women received significant support from the limited budget of the UK Equal Opportunities Commission, unions, in the years immediately following 1983, were slow to support women, saying that the process was too costly & too time-consuming. Here, these claims are questioned by the evidence derived from eight actions supported between 1983 & 1985 by one local officer of the Transport & General Workers' Union. Findings show that, given union support, women can win significant pay increases under this legislation. In the actions examined, the role of the union officer was crucial in alerting the women to the possibility of claiming equal pay, in researching the financial state of employers, & in the ability to achieve a negotiated settlement. The evidence suggests unions should put more resources into claiming equal pay through the tribunal system, both directly through supporting & financing claims & indirectly through encouraging & educating paid officers in industrial tribunal law & practice. 9 References. duRivage, Virginia L. (519 Philadelphia Ave, Tacoma Park MD 20912), **Flexibility Trap: The Proliferation of Marginal Jobs,** *The American Prospect*, 1992, 9, spring, 84-93.

¶ The expansion of contingent employment–ie, part-time, temporary, & subcontracted–is evidence of a fundamental transformation of work in the US, which has been catalyzed by business's need for flexibility in a changing economy. US employment policies detrimental to contingent workers (CWs) are based on three outmoded assumptions, ie, that: public & private employment policies presume full-time workers with one life-long employer; CWs, many of whom are women & minorities, are marginal or peripheral to the primary labor force; & essential social welfare needs should be tied to the employer-employee relationship rather than citizenship. CWs' effect on health care costs are discussed, & suggestions for future policy directions offered. It is concluded that unions offer the best private solution for bringing equity to CWs. W. Howard

93Z4565

Ellem, Bradon (School Industrial Relations & Organisational Behaviour U New South Wales, Kensington 2033 Australia), **The Australian Workplace Industrial Relations Survey and Trade Unionism,** *The Journal of Industrial Relations*, 1991, 33, 4, Dec, 532-546.

¶ Findings relating to trade union membership of the 1990 Australian Workplace Industrial Relations Survey are examined. Australian union membership is concentrated among large employers: 96% of companies with 500+ workers employ union members; in contrast, 70% of mid-size employers, those having 5-19 employees, employ no union members, & 57% of all workplaces have no union members. Nonetheless, union membership does appear to produce benefits: workplaces with the most active unions were characterized by low labor turnover & dismissal rates, higher earnings, & greater likelihood of having facilities for union delgates, grievance procedures, & written occupational health & safety pol-

icies. Unions do not, however, appear to have much of a role in proposing & implementing change in the workplace. 34 References. D. Generoli

93Z4566

England, George W. (Center Economic & Management Research U Oklahoma, Norman 73019), **The Meaning of Working in the USA: Recent Changes,** *The European Work and Organizational Psychologist,* 1991, 1, 2-3, 111-124.

¶ To assess whether the meaning of work changed during the 1980s, a 1982 telephone interview study that posed questions outlined by the Meaning of Work International Research Team to 1,002 employed US laborers, was replicated in 1989, using identical sampling & data collection techniques. Statistically significant results in 4 areas–work centrality, societal norms, work goals, & work definition–indicate that the meaning of work changed during this 7-year period. Because statistical significance does not necessarily reveal substantive significance, a more general evaluation is offered as well which suggests that work centrality & work definition are the more important transformations. 5 Tables, 1 Figure, 10 References. Fong, Pang Eng (Dept Business Policy National U Singapore, 0511 Singapore), **Labour Migration Workers in Singapore: Policies, Trends, and Implications,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 22-34.

Comment, 35-36.

¶ Singapore has achieved changing social & economic goals through highly selective labor immigration policies. A practical balance between use of unskilled labor during shortages & avoidance of an overdependence on such short-term solutions is achieved. The evolving policy for immigrant labor favors the talented & highly qualified, & limits the unskilled by imposing levies & requiring legal documentation. Singapore benefits from importing labor through the skilled worker's transfer of knowledge, technology, & capital, & through the unskilled worker's catalyst effect on competition & reduced costs. Immigrants also offset the declining birthrate. The labor-sending country of Malaysia, the traditional source for Singapore's unskilled labor, benefits from remittances & skills from returning workers, but must occasionally absorb large numbers of expatriated laborers on expiration of guest-worker contracts. In **Comment,** S. Gunasekaran (Instit of Southeast Asian Studies, Singapore 0511) asks for a clarification between traditional & nontraditional sources. 2 Tables. J. Sadler

Gamberale, Francesco (National Instit Occupational Health, S-17184 Solna Sweden), **Monitoring for Health in the Work Environment: Beyond Pathology and Occupational Diseases,** *Applied Psychology: An International Review/Psychologie Appliquee: Revue Internationale,* 1992, 41, 3, July, 207-218.

¶ It is argued that health-related activities in the workplace based on traditional concepts of occupational medicine are inadequate. A new approach is needed that focuses more on the elimination of the adverse effects of exposure to unfavorable working conditions & less on the prevention of recognized occupational diseases & pathology. Preliminary steps are outlined here for the development & establishment of an alternative policy of health promotion based on the assessment & evaluation of the behavioral & psychological early indices of potential hazards in the work environment. 2 Figures, 19 References. Adapted from the source document.

Golden, Miriam (U California, Los Angeles 90024), **The Politics of Job Loss,** UM *American Journal of Political Science,* 1992, 36, 2, May, 408-430.

¶ A rational choice perspective ground this analysis of why trade unions, confronted with firms equally intransigent in their commitments to work-force reductions, sometimes actively resist job loss & at other times passively acquiesce. Case studies of British Leyland & Fiat automobile plants reveal that unions at the former acquiesced, whereas those at the latter resisted mass work-force reductions in 1980. As the literatures on corporatism & on contemporary industrial relations both describe Italian & British labor relations as antagonistic, they fail to anticipate the different outcomes for these two cases. It is argued here that the outcomes may be understood as products of the rational calculations that union leaders make within the constraints of labor market institutions. Specifically, union responses to the threat of large-scale work-force reductions vary with the presence or absence of seniority-based mechanisms for allocating job loss. 1 Figure, 68 References. Green, Francis & Ashton, David (Dept Economics U Leicester, LE1 7LA England), **Skill Shortage and Skill Deficiency: A Critique,** *Work, Employment and Society,* 1992, 6, 2, June, 287-301.

¶ In an examination of labor market problems in the UK, it is contended that skill shortages should not be taken as a valid measure of skill deficiencies. Empirical data are presented & reasons are given why skill shortages do not relate to skill problems. It is recommended that training of workers, especially school drop-outs & female reentrants, focus on raising the level & broadening the range of skills. A call is made for the development of policies aimed at enhancing continuing education & helping meet individual needs for personal development. 3 Figures, 31 References. L. Dorn

Hegedus, Lajos, Egyetemi hallgatók részvétele a második gazdaságban (University Students' Participation in the Second Economy), *Szociológia,* 1990, 1-2, 63-88. (HUN)

¶ To investigate the extent of Hungarian students' participation in the informal economy, questionnaire data were obtained during the 1982/83 school year from 323 fourth-year students at Karl Marx U (Leipzig, Federal Republic of Germany). Analysis shows that the great bulk of income from informal sources was from work of some type rather than from black marketeering. Throughout the 1980s, administrative sanctions against informal employment were lessened, & student participation accordingly increased. Most students received the greater portion of their income from their parents, & some received scholarship stipends; only 25% of student income came from part-time jobs, yet this share has been steadily climbing. Students are employed in industry, the services, administration, & complex intellectual work. The demand side is affected by seasonal work & economic instability as well as by the distribution of work through informal channels. The internal labor market has a monopolistic character. 7 Tables, 1 Appendix. Adapted from the source document.

Heller, Frank (Tavistock Instit Human Relations, 120 Belsize Ln London NW3 5BA England), **Reassessing the Work Ethic: A New Look at Work and Other Activities,** *The European Work and Organizational Psychologist,* 1991, 1, 2-3, 147-160.

¶ It is contended that psychological research on the work ethic, or work centrality, uses too narrow a focus for understanding shifts in behavior & attitudes over time. The appropriate unit of analysis is activity, & working is a subcategory of this larger unit. Six areas of activity are distinguished: education & training in early life, paid tasks or work, updating education throughout life, unpaid tasks or voluntary activity, educa-

tion of the third age, & active or passive leisure. Historical, sociological, & anthropological evidence is reviewed & related to the psychological analysis of the meaning of working. The answer to whether paid work is a necessary or a desirable means of obtaining a standard of living depends on whether paid work is seen in isolation or as a subsystem of a wider range of activities that together result in a fulfilling life. 1 Figure, 37 References. Hensche, Martin (Fehmarner Str 13, D-1000 Berlin 65 Federal Republic Germany), **Keine Krise des Normalarbeitsverhältnisses in den 80er Jahren?–Bemerkungen zu W. Rosenbaum (ZfRSoz Heft 1/1991)** (No Crisis of the Normal Work Relationship in the 1980s?–Remarks on W. Rosenbaum (ZfRSoz, 1991, 1)), *Zeitschrift für Rechtssoziologie*, 1992, 13, 1, June, 150-153. (GER)

¶ A critical analysis is presented of Wolf Rosenbaum's "Krise des Normalarbeitsverhaltnisses? Trends und Perspektiven normaler und unnormaler Arbeitsverhältnisse" ([Crisis in Normal Employment Positions? Trends and Perspectives on Normal and Abnormal Work Relations] see SA 39:5/91Y0726) Rosenbaum argues against the thesis of the erosion of normal work relationships in Germany, instead discussing several categories of part-time work, self-employment, & government-sponsored make-work programs, & describing their impact on the overall structure of the labor market. A chief weakness in this approach is the failure to provide historical watersheds in the economic transition from the earlier economy, based on full-time employment, to the modern economy, with a wider variety of work schedules. Additional problems with Rosenbaum's arguments include a failure to account for part-time & seasonal work during the early twentieth century & for overtime, night shifts, swing shifts, & other nonstandard workweek arrangements. M. Meeks

Hirschl, Thomas A., Summers, Gene F. & Bloomquist, Leonard E. (Cornell U, Ithaca NY 14853), **Right-to-Work Legislation and Local Labor Market Growth,** *Research in Rural Sociology and Development*, 1989, 4, 223-240.

¶ A report on research on the regional employment effects of the Right-to-Work (RTW) or open-shop provision of the 1947 Taft-Hartley Labor Relations Act. Under RTW, US states may elect to outlaw the closed union shop. Applying sociological theories of the capitalist state, it is argued that RTW should have a weak but measurable effect on firm location decisions, owing to the state's structural position vis-à-vis capital. Empirical support for the theories is provided by analysis of published data for a national probability sample of local labor markets in 275 counties 1950-1980. Multivariate analyses indicate that RTW influences firm location decisions. The results are discussed in terms of implications for increased class, spatial, & sectoral inequality in the US. 3 Tables, 49 References. AA

Hodson, Randy, Hooks, Gregory & Rieble, Sabine (Indiana U, Bloomington 47405), **Customized Training in the Workplace,** UM *Work and Occupations*, 1992, 19, 3, Aug, 272-292.

¶ After reviewing why traditional postsecondary school vocational training is inadequate to meet the challenges of rapid changes in manufacturing technology & procedures, customized labor training (CLT), typically implemented at the workplace, is suggested as a possible alternative. Such training programs are frequently oriented toward specific organizational needs rather than general skill development. In-depth interviews with personnel directors, trainers, & worker-students in 20 organizations using CLT programs specified 3 different settings that entail different background conditions & outcomes for CLT: large, unionized monopoly sector firms that have developed intensive training programs; smaller, periphery sector firms that use state support for training largely as a subsidy to underwrite initial orientation costs for workers; & new starts, many of them Japanese owned, that substitute training in communication skills & group processes for training in specific job skills. Implications of these different settings for the future of CLT are discussed. 1 Table, 56 References. Adapted from the source document.

Isaksen, Scott G. & Kaufmann, Geir (Center Studies Creativity State U New York Coll, Buffalo 14222), **Adaptors and Innovators: Different Perceptions of the Psychological Climate for Creativity,** *Studia Psychologica*, 1990, 32, 3, 129-141.

¶ An examination of the relationship between assessment of creative style, & of creative climate. The Kirton Adaptation Innovation Inventory & the Creative Climate Questionnaire were administered to members of 8 public & private organizations in the northeastern & central US, distinguishing those who had a strong innovator orientation (N = 203) vs a strong adaptor orientation (N = 195). Findings reveal a correlation between heuristic competence & figurative originality. It logically follows that heuristic competence correlates negatively with emotive tension & with tendencies toward resignation & regression that represent a tendency to avoid & escape problem situations. The perception of ecosocial problems is associated with figurative fluency, originality, & nonverbal intelligence. It is suggested that the generation of problems is equally conditioned by intellectual & creative abilities. 3 Tables, 35 References. S. Millett

Jackson, Michael P. (U Stirling, FK9 4LA Scotland), **Recent Trends in Trade Union Membership in Canada,** *The International Journal of Sociology and Social Policy*, 1992, 12, 1-2, 51-76.

¶ Trade union membership in Canada has risen steadily in recent years, in contrast to many other Western nations, particularly the US. Possible explanations include: (1) the supportive public policy environment, particularly the legislation on union recognition; (2) the attitude of employers, which has been less hostile to trade unions than experienced in the US; & (3) the Canadianization of the union movement. It is argued that such factors are important but not a sufficient explanation for the relative success of Canadian unions. The policies adopted & the strategy of the unions themselves have also been important. While the supportive public policy environment should be seen as important, it needs to be kept in mind that unions themselves have helped to create that environment, & that a supportive environment is only a starting point, with much depending on the way that unions try to exploit it. 3 Tables. AA

Kitay, Jim (Dept Industrial Relations U Sydney, New South Wales 2006 Australia), **Analyzing Workplace Industrial Relations: The Australian Workplace Industrial Relations Survey Typology,** *The Journal of Industrial Relations,* 1991, 33, 4, Dec, 547-563.

¶ A brief overview of workplace industrial relations typologies, including a detailed critique of the typology developed by R. Callus et al in *Industrial Relations at Work* (Canberra: AGPS, 1991), which reports on the findings of the Australian Workplace Industrial Relations Survey conducted 1989/90. It is argued that while the typology constitutes an analytical advance over the main reports of comparable British workplace surveys, a number of weaknesses can be identified. Methodologically, the development of one of the three dimensions underlying the typology is flawed. Theoretically, the typology is based on a bargaining model of industrial relations, a perspective that overemphasizes the significance of management-union relations at the expense of more individual modes of workplace activity & the role of the state. 1 Table, 42 References. AA

93Z4586

Kono, Shigemi (Instit Population Problems Ministry Health & Welfare, Kasumigaseki 1-2-2 Chiyoda-ku Tokyo 100 Japan), **International Migration in Japan: A Demographic Sketch,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 37-48.

Comments, 49-52.

¶ In a survey of the flow of foreign workers into Japan, historical trends in international migration to & from Japan are reviewed, & various reasons, including the substantial strengthening of the economy, for a sudden increase in international migration are cited. Although the stronger economy has resulted in a shortage of labor for construction & manufacturing jobs, the country's immigration policy limits inflow of unskilled labor to fill these needs. Workers from the People's Republic of China & the Philippines have recently entered the country, many illegally, as unskilled laborers. In **Comment,** Shigemochi Hirashima (Meiji Gakuin U, Yokohama 244, Japan) focuses on the potentially unfavorable attitudes toward incoming undocumented alien laborers, concluding that Japan would eventually profit from a more liberal policy. In **Comment,** the same problem concerns Young-bum Park (Korea Labor Instit, Seoul 150-010, Korea), who reasons that the government's solutions requiring greater internal efficiency in the labor market, & the alternative proposed by the 1990 revision of immigration laws (to include expansion of a foreign trainee system & use of Japanese origin foreigners), are insufficient to meet the demand by business for more imported unskilled labor. 2 Tables, 1 Figure. J. Sadler

Konrad, Alison M., Winter, Susan & Gutek, Barbara A. (School Business & Management Temple U, Philadelphia PA 19122), **Diversity in Work Group Sex Composition: Implications for Majority and Minority Members,** *Research in the Sociology of Organizations,* 1992, 10, 115-140.

¶ Four theories of the dynamics of group demographic composition are reviewed, & used to develop competing hypotheses about the experiences of males (Ms) & females (Fs) in work groups. Generic theories by Rosabeth M. Kanter (*Women and Men of the Corporation,* New York: Basic Books, 1977) & Peter M. Blau (*Inequality and Heterogeneity,* New York: Free Press, 1977) suggest that being in the minority will result in similar experiences for Ms & Fs. Institutional theories by Barbara A. Gutek (*Sex and the Workplace,* San Francisco: Jossey-Bass, 1985) & Hubert M. Blalock (see SA 5:4/573671 & SA 7:1/595317) suggest that Fs & Ms will have different experiences when in the minority. The Gutek & Blalock theories also conflict in that Gutek suggests that Fs in the minority will have more undesirable social experiences while Blalock suggests that this will be true for Fs in the majority. Hypotheses are tested using questionnare data from 623 members of 89 work groups varying in sex composition from 0%-100% F. Results indicate support for Gutek's institutional theory in that Fs holding superior positions in predominantly M work groups experience the most undesirable social outcomes of any group. 6 Tables, 53 References. Adapted from the source document.

Laurell, Asa Cristina, Noriega, Mariano, Martínez, Susana & Villegas, Jorge (Apartado postal 70-212, 04510 Mexico DF), **Participatory Research on Workers' Health,** *Social Science and Medicine,* 1992, 34, 6, Mar, 603-613.

¶ An action-oriented participatory research methodology is offered for use in investigating Latin American workers' health. The approach is based on a collective questionnaire that permits the recollection of data on characteristics of the labor process, risks, & health damage. A comparison between information obtained via this methodology & via an individual questionnaire applied at the same steel factory in Mexico 1985-1988 shows very similar results. It is concluded that the participatory methodology has some important advantages over traditional methodologies: it provides qualitative information on the labor process, a precise picture of the main risks & how they are produced, & semiquantitative data on health damage, & at the same time, generates a process of consciousness & organization among workers that enables them to promote health-oriented action. 7 Tables, 11 References. Adapted from the source document.

Marginson, Paul (Industrial Relations Research Unit U Warwick, Coventry CV4 7AL England), **Beyond Size and Sector: A View from Overseas,** *The Journal of Industrial Relations,* 1991, 33, 4, Dec, 586-600.

¶ The impact of Australia's conciliation & arbitration system on industrial relations is examined through review of the findings of the Australian Workplace Industrial Relations Survey presented by R. Callus et al, in *Industrial Relations at Work* (Canberra: AGPS, 1991). The survey consisted of interviews with 20+ employees at 2,353 workplaces. The Australian conciliation & arbitration system has been incorrectly viewed as imposing uniformity on industrial relations arrangements, resulting in comparatively underdeveloped industrial relations structures & processes. The survey reveals that complex & diverse relationships exist between management organization & practice, union organization & membership, management-employee relations, & external forces impacting the workplace. Contrary to common belief, the conciliation & arbitration system does not appear to be an obstacle to change & economic performance. 23 References. D. Generoli

Martin, Philip L. (Dept Agricultural Economics U California, Davis 95616), **Foreign-Born Workers in the USA: Past, Present, and Future,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 162-176.

Comment, 177-179.

¶ A review of foreign workers' contributions to growth in the US labor force (LF). Major historic immigration waves began in the eighteenth century (English, Spanish, African slaves), followed by the 1830s (Irish & German), the 1880s (Europeans, Chinese, Japanese), & the 1980s (Mexicans, Latin Americans, Asians). Immigration policy shifts from permissive to restrictive to current selective status aim for balance between goals of population growth & good quality, desirable immigrants. Quality norms are influenced by powerful interest groups including labor unions, agribusiness, religious leaders, & other ethnic minorities. Nearly 10% of the US LF is composed of foreign workers. An extended discussion of the disadvantaged illegal immigrant centers on the conflicts between Nativists calling for a moratorium on immigration & agroemployers supporting their presence in the LF. In **Comment**, Lawrence Lam (York U, Ontario M3J 1P3) summarizes major themes & makes suggestions for future research. 1 Table, 1 Figure. J. Sadler

93Z4591

Marx, Jonathan (Winthrop U, Rock Hill SC 29733), **Affirmative Action and Impact Theory**, *Sociological Focus*, 1992, 25, 1, Feb, 15-26.

¶ Questionnaire data from 573 personnel workers in a large multistate banking institution are drawn on to evaluate the utilization, effectiveness, & efficiency of their employee search activities. Results support aspects of Stephen L. Wasby's social impact theory (*The Impact of the United States Supreme Court*, Chicago, Ill: Dorsey Press, 1970) & Michael Lipsky's contentions on "street-level bureaucracies" (Street-Level Bureaucracy, New York: Russell Sage, 1980). Personnel employees act at substantial variance with legal prescriptions as a means of coping with limited resources, job demands, & social pressures. They voice a clear preference for time- & cost-effective informal recruitment strategies, though the magnitude of informal recruitment is obscured from public scrutiny since personnel workers have the discretion to record refferal hires as walk-ins. The findings suggest that lower-level participants continue to engage in practices, often neutral in terms of intent, that operate to "freeze" existing inequalities. 3 Tables, 23 References. Adapted from the source document.

Misumi, Jyuji & Yamori, Katsuya (Faculty Social Research Nara U, Japan), **Values and Beyond: Training for a Higher Work Centrality in Japan**, *The European Work and Organizational Psychologist*, 1991, 1, 2-3, 135-145.

¶ It is hypothesized that the Japanese "work centrality score" (WCS) is the result of not only the positive work ethic characterizing Japanese society, but also of the intensive training that newly recruited young employees undergo in attempt to strengthen the traditional work ethic in organizations. Data were obtained from 221 newly recruited employees in an electric company who completed a questionnaire before & after training, comparing their WCS in terms of the degree of importance attached to working in comparison to other life areas, ie, family, religion, community, & leisure. Results demonstrate that trainees' WCS drastically increased in a very short period of time (6 months), which is attributed to the effect of the social structure or group norms that pertain to Japanese work organizations. Specific sociocultural effects on employees work centrality are also discussed. 4 Tables, 5 Figures, 5 References. Modified AA

Nanda, Bikram Narayan (Jamia Millia Islamia, Jamia Nagar New Delhi 110025 India), **Vernacular Work, Wage Labour and Tribal Development: A Case Study of Highland Orissa**, *Contributions to Indian Sociology, New Series*, 1992, 26, 1, Jan-June, 115-132.

¶ Data from fieldwork conducted in the Bonda highlands of Koraput in southern Orissa, India, 1979-1988, show that the customary organization of work based on cooperation, termed *odja*, has declined as wage labor has emerged. In *odja*, households voluntarily help each other with harvests & other work done under time pressure, & the labor assembly often has a festive atmosphere. *Odja* labor assistance is based on mutual obligation, but is not always symmetrical, & repayment may not occur for some time. In *buti*, or contractual wage labor, work is paid for promptly in cash. Wage labor is more controlled & time-oriented than the task-oriented *odja*. Destruction of the forest ecology of the highlands & the subsequent decline in productivity of shifting agriculture have promoted wage labor, but not through any simplistic, linear process. Both *odja* & *buti* are related to the process of tribal development & maintain an uneasy coexistence. 15 References. M. Pflum

Neale, Alan (U East London, Essex RM8 2AS England), **Are British Workers Pricing Themselves Out of Jobs? Unit Labour Costs and Competitiveness**, *Work, Employment and Society*, 1992, 6, 2, June, 271-285.

¶ The hypothesis that British manufacturing decline is caused by excessive wage claims is explored. Unit labor cost statistics in the major industrial economies are examined, analyzing their behavior over the 1979-1989 economic cycle. Manufacturing success in Japan & Germany is shown to have been achieved despite rising relative unit labor costs, while in GB & the US, periods of falling relative unit labor costs have not resulted in manufacturing success. In GB's case, data suggest that the problems of the manufacturing sector stem not from deficiencies of labor but from poor management practices in relation to marketing & production. Pay restraint is shown to be of only limited relevance in solving the problems of poor trade performance & related unemployment. 9 Tables, 24 References. AA

Petersen, Trond (Walter A. Haas School Business U California, Berkeley 94720), **Individual, Collective, and Systems Rationality in Work Groups: Dilemmas and Nonmarket Solutions,** *Rationality and Society,* 1992, 4, 3, July, 332-355.
¶ A problem is created in the construction of reward schemes for members of work teams by the existence of either of two situations: (1) one can observe only the output of the work group, not the contributions of each member; & (2) the output of each member depends not only on his/her own effort, but on the efforts of other workers. Group piece-rate schemes are often suggested as a solution, but these are susceptible to free rider problems. One classic & non-market-based solution relies on a supervisor who keeps free riders in line. Another solution retains the market-type character of the piece rate scheme but makes the relationship between output & reward highly nonlinear. Three alternative & non-market-based solutions to the free rider problem are outlined: social rewards, altruistic preferences, & moral commitments. 3 Tables, 1 Appendix, 63 References. Adapted from the source document.

Richmond, Anthony H. (Faculty Arts York U, North York Ontario M3J 1P3), **Foreign-Born Labour in Canada: Past Patterns, Emerging Trends, and Implications,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 145-161
¶ Segmented structural change resulting in stratified labor markets characterize Canada's absorption of immigrants. Canada's labor market comprises nearly 20% foreign workers. Admission into the country is based on a points system, weighted for language knowledge, specialized training, education, experience, & regional demands for work. The structural change model of immigrant absorption describes a link between changes in the industrial distribution of the labor force & immigrant source in the industrial distribution of the labor force & immigrant source countries. Immigrants from traditional source regions (UK, US, Europe) have higher income levels than those from Third World countries. Among the features of Canada's immigrant law are temporary employment authorizations (not like Germany's guest-worker program), promotion of business immigration, & humanitarian admission of refugees (plagued by a backlog of applications). Guided by general public support of multiculturalism, immigration policy effects are unevenly distributed by region, gender, ethnicity, & immigration period. 2 Tables, 2 Figures. J. Sadler

Ruiz Quintanilla, S. Antonio & Wilpert, Bernhard (New York School Industrial & Labour Relations Cornell U, Ithaca 14853-3901), **Are Work Meanings Changing?,** *The European Work and Organizational Psychologist,* 1991, 1, 2-3, 91-109.
¶ In a review of the literature, prominent assumptions about changes in work-related attitudes & values over time are discussed in terms of degree, mode, & method change. Hypotheses are derived & tested empirically using data obtained during interviews with 2 representative German labor force samples drawn in 1982 & 1989 (N = 1,200+ respondents each). Results are used to document demographic changes & stabilities (age, education, employment status, occupational group, weekly working hours, income, family status, & religious education) of the German work force & make longitudinal comparisons of work centrality, societal norms, & work goal importance indices. It is concluded that more than one dimension needs to be monitored to assess & interpret value systems & their changes over time. 7 Tables, 1 Figure, 29 References. Modified AA

Rule, James & Brantley, Peter (Dept Sociology State U New York, Stony Brook 11794-4356), **Computerized Surveillance in the Workplace: Forms and Distributions,** *Sociological Forum,* 1992, 7, 3, Sept, 405-423.
¶ On-site interview data from a representative sample of 186 greater NY firms reveal that the use of computers for monitoring job performance is both widespread & applied to a wide variety of jobs. Contrary to some suggestions, it does not occur exclusively in large firms with particularly high-tech computing applications. Instead, it appears in all kinds of firms, as an outgrowth of management efforts to control & rationalize work. Most cases of computerized job surveillance are part of one of three basic organizational processes: sales analysis, job tracking, or inventory control. 4 Tables, 12 References. Adapted from the source document.

Séguin, Nicole & Roskies, Ethel (Dept Psychologie U Montréal, Quebec H3C 3J7), **Un suivi des conséquences psychologiques de l'insécurité de l'emploi** (A Follow-Up Study of the Psychological Consequences of Job Insecurity), *Canadian Psychology/Psychologie Canadienne,* 1991, 32, 2, Apr, 99-110. (FRE)
¶ To examine the effects of working in an atmosphere of job insecurity, questionnaire & interview data were obtained from 17 employees of 2 Montreal, Quebec, firms. At one company, which had previously been stable, 44% of the employees had been laid off, leaving the remaining workers concerned about their job security; at the other, a confident business atmosphere prevailed. As expected, workers at the unstable company felt more insecure about their jobs, experienced more stress, & rated their own work effort as lower than did the employees at the stable concern. A follow-up study 6 months later revealed that 5 employees who had left the unstable firm & found new jobs elsewhere had the highest level of physical & psychological welfare. 7 Tables, 29 References. Seidman, Gay W. (Dept Sociology U Wisconsin, Madison 53705), **The Emergence of Political Unionism in Brazil and South Africa,** *South African Sociological Review,* 1990, 3, 1, Oct, 3-18.
¶ It is argued that the similarities in the emergence of militant, politicized labor movements in Brazil & South Africa since 1965–close links between the workplace & community groups, opposition to state control over the working class (Wc), & labor support for economic redistribution & political inclusion–arose because of similar patterns of industrialization in the two countries. In the 1960s, industrialization patterns changed labor processes & the shape of the Wc, & altered the relationship between the state & the dominant classes so that workers & unions could challenge state & employed control. These similar patterns, documented more by Brazilian cases than by South African ones, occurred in spite of dissimilar social contexts. Thus, since the context in which labor movements now emerge differs from conditions in early twentieth-century Europe & North America, the Brazilian & South African-type movements may extend to other countries. 68 References. Semyonov, Moshe & Lewin-Epstein, Noah (Dept Sociology & Anthropology Tel-Aviv U, Ramat-Aviv IL-69978 Israel), **Community of Residence, Community of Employment, and Income Returns,** *Israel Social Science Research,* 1992, 7, 1-2, 15-27.

¶ The impact of the community of residence (CR) & community of employment (CE) on income level is examined through analysis of data obtained from the 1983 census on 231,482 individuals ages 25-64 residing & working in 103 Israeli communities. Ethnic composition of the community was the most significant factor associated with individual incomes, with lower income associated with a high proportion of Arab residents. The presence of capital-intensive industries was associated with individual incomes, though this relationship was stronger in the CE than in the CR. The presence of businesses & finance services similarly enhanced individual income, but this relationship was stronger in the CR. There was a positive relationship between professional & managerial jobs & individual incomes in the CR, but a negative relationship in the CE. Individual income was positively associated with size of community & negatively associated with distance from major urban centers. 2 Tables, 29 References. D. Generoli

Tingsabadh, Charit (Social Research Instit Chulalongkorn U, Bangkok 10330 Thailand), **Thailand as a Labour-Sending Country: Population, Labour Force, and Recent Economic Trends,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 74-88.
Comment, 89-90.

¶ The current labor outmigration from Thailand is a product of recent economic trends. Thailand's economy, fueled by rapid increases in investments & exports & an inelastic agricultural sector, strengthened considerably in the latter 1980s. After noting the high level of remittance revenue from migrants, labor migrants' use of institutionalized Thai export agencies is profiled. Government oversight of this process discourages job agencies' exploitation of workers. The social & economic impact of labor migration at the local & regional levels is discussed. It is suggested that an increase of the Thai wage level may result from a trend toward domestic employment. In **Comment,** Azizah Kassim (U of Malaya, 59100 Kuala Lumpur, Malaysia) urges more attention to explanations for the preference of one country over another as a migration target. 5 Tables, 2 References. J. Sadler

Turnbull, Peter & Sapsford, David (Business School U Wales, CF1 3EU Cardiff), **A Sea of Discontent: The Tides of Organised and 'Unorganised' Conflict on the Docks,** *Sociology,* 1992, 26, 2, May, 291-309.

¶ Many forms of worker hostility toward employers reflect the dissatisfactions & deprivations created by capitalist work & employment relations. Absenteeism & turnover are examples of "unorganized" conflict, where the worker responds to an oppressive situation as an individual. Here, unorganized conflict & its relation to organized conflict are investigated in the case of registered dockers in GB, who have challenged the process of industrial rationalization throughout the postwar period by persistently organizing unofficial strikes & absenting themselves from the workplace. Secondary labor statistics demonstrate how culture of the docks was significantly impacted by the nature of the employment relationship under casual & permanent work regimes, as well as technological change in the late 1960s & 1970s. 3 Tables, 1 Figure, 40 References. Adapted from the source document.

Večerník, Jiří (Sociologický ústav ČSAV, Jilská 1 CS-11000 Prague 1 Czechoslovakia (Tel: 02-235-87-777; e-mail: vecernik@cspgas11.bitnet)), **Trh práce: problémy a perspektivy** (The Labor Market in Czechoslovakia: Problems and Perspectives), *Sociologický Časopis,* 1992, 28, 3, 319-336. (CZE)

¶ Changes in the Czechoslavak labor market are analyzed using data from five recent public opinion surveys, focusing on: human capital, work incentives, private ownership & job allocation, & outlook for employment. The transition period from communism to capitalism will no doubt be very confusing, & various sectors of the labor market will drop unevenly. The transition is occurring at a time of decreasing state regulation in the West, with resultant job insecurity. Czechoslovakia does not need uniform regulation, but rather, the flexibility to treat each economic sector separately. However, the populace is largely unaware of these facts, which is good for maintaining social harmony in the short run but bad for trying to achieve profound economic restructuring. 7 Tables, 1 Figure, 16 References. Adapted from the source document as translated by M. Meeks.

Venturini, Alessandra (Facolta scienze politiche U Delgi Studi Firenze, I-50121 Italy), **Italy in the Context of European Migration,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 93-112.
Comment, 113-114.

¶ An analysis of migratory flows into & out of southern Europe, with a focus on Italian patterns. Italy & other southern European countries (Portugal, Spain, Greece) shifted from predominantly outmigration to inmigration during the mid-1970s. Attracted by higher wage levels, immigrants have flowed from the non-European Economic Community (EEC) developing countries in North Africa & Asia. However, because of slower economic development, higher unemployment, & increased migratory influx from former colonies, Portugal's job market is less favorable to non-EEC immigrant workers. Despite inadequacies in sources for foreign population statistics for Italy, available figures suggest that there is a diversification in this population. The underground labor economy, defined as noncriminal employment in violation of tax codes & labor legislation, is experiencing a supply-side growth. Unskilled workers benefiting from unsuccessful immigration regularization reforms connect with employers looking for greater employment flexibility & for workers willing to be exploited. In **Comment,** Roberto Magni (Confederazione Italiana Sindicati Lavorati, I-00198 Rome, Italy) notes the Italian government's lack of plans & inaction in dealing with the Albanian migratory wave in early 1991. 8 Tables, 2 Figures. J. Sadler

Winefield, Anthony H., Tiggemann, Marika & Winefield, Helen R. (Dept Psychology U Adelaide, South Australia 5001), **Attrition Bias and Internal Validity in a Longitudinal Study of Youth Unemployment,** *Australian Journal of Psychology,* 1991, 43, 2, Aug, 69-73.

¶ The psychological impact of unemployment & unsatisfactory employment on a sample of 3,130 Adelaide, Australia, school leavers is investigated longitudinally via questionnaires administered 1980-1988. An attempt is also made to discern whether the attrition rate varies with employment status, & whether pretest scores for dropouts are related to employment status. It is concluded that the internal validity of longitudinal studies investigating the psychological impact of unemployment or unsatisfactory employment in young people is partially comprised by selective attrition in that the most disaffected (the unemployed & the dissatisfied employed) are the most likely to drop out. On the other hand, these status-related differences in attrition do not appear to be related either to demographic characteristics or to pretest scores on the dependent variables. 3 Tables, 22 References. Adapted from the source document.

Bordua, David J., The Intelligence Function and Democratic Polity: A Review of Three Books on Intelligence, UM *Journal of Political and Military Sociology,* 1991, 19, 2, winter, 306-313.

¶ A review essay on books by: Charles D. Ameringer, *U.S. Foreign Intelligence: The Secret Side of American History* (Lexington, Mass: Lexington Books, 1990); Anthony Cave Brown, *Bodyguard of Lies* (New York: William Morrow, 1975); & John Winton, *Ultra at Sea* (New York: William Morrow, 1989 [see listings in IRPS No. 66]). The books focus on different aspects of the intelligence function. Ameringer provides a compact history of the intelligence function as carried out in the US, highlighting the post-WWII period, the problems of organizing the intelligence function, & the difficulty of controlling secret activities in a democracy. It is suggested that this work is most useful for the general reader, providing a basic source in a course of US foreign intelligence. Brown details the deception strategy employed against the Germans in WWII, mostly by GB but also by the US & USSR. The enemy is clear, the cause is just, & the legitimacy of massive deception is unquestioned. The history & fate of the German General Staff conspiracy against Hitler & the value of Ultra (British efforts to read German radio communications) are also discussed. Winton presents a briefer & less informative analysis of the use of British signals intelligence in naval operations during WWII. The work is highly specialized, has no citations or other means for the scholarly reader to assess validity, & appear to be written for the intelligence buff & someone familiar with European naval geography. S. Millett

Cock, Jacklyn (Dept Sociology U Witwatersrand, 2050 Johannesburg South Africa), **Conscription in South Africa: A Study in the Politics of Coercion,** *South African Sociological Review,* 1989, 2, 1, Oct, 1-22.

¶ The South African Defense Force protects white minority rule, & thus, its conscription system is race-specific. Compulsive military service is extremely long, & carries harsh penalties for noncompliance. Interviews with 13 young white South African men revealed that legal, ideological, & social coercive methods are used to conscript, & that there are three types of responses–compliance, retreat, & challenge. All informants describe South Africa as a society at war, & challenge conscription based on religious & moral prohibitions against war. The personal costs of challenging this system–imprisonment & social ostracism–are very high. 23 References. Adapted from the source document.

Dedrick, Dennis K. & Yinger, Richard E. (Georgetown Coll, KY 40324), **The Strategic Defense Initiative: Where Will It Take Us?,** *Humanity and Society,* 1992, 16, 2, May, 236-252.

¶ An argument against US deployment of the Strategic Defense Initiative (SDI). Current military strategy has established the deterrent power of offensive weapons in mutually assured destruction policy. The risk of nuclear destruction can be reversed by either diplomacy & verifiable treaties, or by building technically sophisticated weapons that would neutralize any attack. Rather than an ultimate step in national defense, SDI will adversely affect our relations with NATO (North Atlantic Treaty Organization) allies, favor propaganda claims against the US, thwart arms reduction negotiations, encourage another costly arms race, misallocate scientific talent, & neglect less sophisticated terrorist weaponry. The diplomacy option is preferred for lower costs, political stabilizing effect, security enhancement, & channeling funding to more needed humanitarian areas. The political instability of the former USSR, & the diminished threat it poses are also key issues in deciding the future of SDI. 19 References. J. Sadler

93Z4623

Downie, Richard D. (School International Relations U Southern California, Los Angeles 90007), **Low-Intensity Conflict Doctrine and Policy: Old Wine in a New Bottle?,** *Studies in Conflict and Terrorism,* 1992, 15, 1, Jan-Mar, 53-67.

0038-0202/93 $1.50

¶ Contemporary low-intensity conflict (LIC) policy & doctrine have been criticized for promoting the same concepts & assumptions that served as the foundation for the failed Vietnam-war-era US counterinsurgency policy. Here, the literature on LIC is reviewed & conceptually organized across four dimensions to determine if current LIC policy & doctrine have been revised to remedy the factors responsible for the failure of earlier counterinsurgency doctrine. The analysis reveals that, although some positive doctrinal progress has occurred, there are dimensions of LIC doctrine & policy that have not yet been sufficiently addressed or resolved. 93Z4625

Ertel, Danny, How to Design a Conflict Management Procedure That Fits Your Dispute, UM *Sloan Management Review,* 1991, 32, 4, summer, 29-42.

¶ In utilizing options for dispute resolution in a business organization-eg, litigation, arbitration, mediation, or minitrial-a match between the conflict & the means of resolution means is needed. If a single dispute process does not fit, a consistent analytical framework for resolving the conflict, not for choosing the dispute resolution method, should be used. Such a framework is proposed, involving: clarification of interests, fostering a good working relationship, generating likely options, legitimizing the process, attending to parties' procedural alternatives, & improving communication. In designing their own resolution process, managers should thoroughly understand the nature of the conflict, diagnose causes, prescribe alternative approaches, & then take action leading to a cooperative solution. 2 Figures. 93Z4627

Hooks, Gregory & McLauchlan, Gregory (Dept Sociology Washington State U, Pullman 99164), **Reevaluating Theories of U.S. War Making: Technology and Bureaucracy in Three Eras of Strategic Planning, 1939-1989,** UM *Social Science Quarterly,* 1992, 73, 2, June, 437-456.

¶ The relationship between war making & state building, & the connections between failure in war & the undoing of states, are explored. An institutional theory of war making is developed & employed to analyze the changing dimensions of US strategic planning during 3 periods, 1939-1989-mass industrial warfare, piloted nuclear bombing, & the nuclear missile era. The trend in strategic planning has been toward a science-intensive military program, declining relative levels of military spending, & increasing insularity of command & decision-making structures. It is suggested that the value of the theory derives from the contention that the social implications of war making are shaped by the technological foundations of warfare, & that the military is a set of bureaucracies in a larger state. 1 Table, 1 Figure, 71 References. Joas, Hans (Freie U Berlin, W-1000 33 Federal Republic Germany), **Lehrmeister Krieg?** (War as Teacher?), *Kölner Zeitschrift für Soziologie und Sozialpsychologie,* 1992, 44, 3, Sept, 538-548. (GER)

¶ A review essay on a book by Karl Otto Hondrich, *Lehrmeister Krieg* ([War as Teacher] Reinbek near Hamburg: Rowohlt, 1992 [see listing in IRPS No. 67]). Hondrich seeks to interpret war in general, & the Gulf war of 1991 in particular, within the context of the sociological theory of learning, asserting that war is a learning experience. War is considered an instructor because it breaks through the emotional anchors of standard collective images that may block learning; also, self-centered values become subordinate to the general welfare. Hondrich is criticized for assuming normative concepts without clarifying these norms, as well as for a lack of knowledge of peace research. In **Krieg-und Unser Progressive Theorie-Alltag** (War-And Our Progressive Everyday Theory), Hondrich (Johann-Wolfgang Goethe U, D-6000 Frankfurt a.M., Federal Republic Germany) replies that his book does not deal with peace, but rather sees war as a learning process based on the suffering it produces. His theory was inspired by Karl Popper & views learning as a conflictual process of searching, failing, correcting of course, & renewed failure. His book draws on Emile Durkheim's juxtaposition of collective & individual perceptions. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4629

Knouse, Stephen B. (Dept Management U Southwestern Louisiana, Lafayette 70504-3570), **Introduction to Racial, Ethnic, and Gender Issues in the Military: The Decade of the 1990s and Beyond,** *International Journal of Intercultural Relations,* 1991, 15, 4, 385-388.

¶ An introduction to a special journal issue on racial, ethnic, & gender issues in the US military (see related abstracts this section of SA 41:1), examining the impact of changes in the armed forces due to societal transformation. The decreased threat of nuclear war & increased technological complexity will result in a downsized & streamlined military, involving various scenarios for equal opportunity: (1) creation of higher technical job requirements & diminished recruiting of educationally disadvantaged individuals; (2) greater emphasis on noncombat & support military roles, with increased opportunities for minorities & women; & (3) creation of highly cohesive permanently based combat units, requiring individuals of widely differing backgrounds to work closely together. 6 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Krymkowski, Daniel H. & Krauze, Tadeusz K. (Dept Sociology U Vermont, Burlington 05405 (e-mail: dkrymkowski@vmvax.bitnet)), **Occupational Mobility in the Year 2000: Projections for American Men and Women,** UM *Social Forces,* 1992, 71, 1, Sept, 145-157.
¶ Standard demographic concepts are employed to develop intergenerational occupational mobility tables for US men & women ages 25-64 in the year 2000. The procedure for creating such tables involves three steps: (1) deriving origin distributions in the absence of actual survey data on occupational background; (2) constructing destination distributions using occupational forecasts prepared by the Bureau of Labor Statistics; & (3) calculating cell counts by adjusting the most recent mobility tables available to the derived origin & destinational distributions. The empirical accuracy of some aspects of this projection method is assessed, several descriptive statistics are calculated on the basis of the predicted mobility matrix, & mobility trends are examined by comparing these statistics to those based on tables from earlier periods. Results indicate an increasing tendency toward immobility & downward mobility, especially for men. 2 Tables, 1 Figure, 25 References. Adapted from the source document.

Lamb, Theodore A. & Chin, Keric B. O. (Armstrong Laboratory, AL/HRTE Brooks AFB TX 78235), **The Analytic Onion: Examining Air Force Training Issues from Different Levels of Analysis,** *Sociological Practice Review,* 1992, 3, 3, July, 119-125.
¶ The onion is proposed as a metaphor for multiple levels of analysis of training problems & solutions, illustrated by a hypothetical example using Intelligent Tutoring Systems (ITSs) in US Air Force aircraft maintenance training. The core of the analytic onion is the biological level, surrounded by the individual, group, organizational, community, societal, world-system, & space-system levels of analysis. Each level is discussed with the example of ITSs in mind, drawing on perspectives from biology, psychology, social psychology, political science, & sociology to suggest alternative solutions to training problems. 1 Figure, 27 References. Lammers, Cornelis J. (Sozialwissenschaftlichen Fakultät Rijks U Leiden, NL-2300 RA Netherlands), **Macht und Autorität des Deutschen Besetzers in den Niederlanden während des Zweiten Weltkrieges. Ansätze zu einer Soziologie der Besatzung** (Power and Authority of the German Occupation Force in the Netherlands during World War II. Approaches to a Sociology of Occupation), *Journal für Sozialforschung,* 1991, 31, 4, 401-415. (GER)
¶ The idea that all occupations are alike because they are always based on coercive power is refuted. In the case of the German occupation of the Netherlands, quite remarkable shifts occurred 1940-1945 in the variety of means of control at the disposal of the occupant & in the significance of negative sanctions. Initially, the German conqueror could rely not only on the use of negative sanctions (fiscal & economic), but also on various sorts of authority & positive sanctions. The Dutch government "delegated" its rational-legal authority to the German rulers, so that most of the top civil servants & leaders of the business community felt legitimated, if not obliged, to stay on for the sake of protecting the interests of the Dutch people. This official authorization to collaborate with the occupant also implied a certain legitimation for autochthonous elites to be susceptible to positive sanctions, eg, increases in power, status, & income. Finally, in as far as they ordered or allowed policies to the liking of the Dutch elite, German rulers could gain a measure of functional authority as well. However, when the tide of the war turned, the occupant's chances to reward the "top collaborators" & to maintain functional authority in their eyes, waned rapidly. Due to the exigencies of the German war economy, the occupation regime became more & more exploitative & punitive, which eroded whatever rational-legal authority is still had. In the end, therefore, the German's dominance could be maintained only through violence. 1 Figure, 22 References. AA

Mederer, Helen J. & Weinstein, Laurie (U Rhode Island, Kingston 02881), **Choices and Constraints in a Two-Person Career: Ideology, Division of Labor, and Well-Being among Submarine Officers' Wives,** *Journal of Family Issues,* 1992, 13, 3, Sept, 334-350.
¶ Investigated is the structure of the Naval submarine officer career, with heavy demands placed on the wife, focusing on the extent to which wives' attitudes & behavior conform, & how satisfied they are with their role. Using Janet Saltzman Chafetz's model of gender stratification (see SA 36:4/88T7382), it was hypothesized that wives with traditional gender attitudes would be more involved & exhibit higher personal well-being, satisfaction with the Navy, & life satisfaction. Questionnaire data from 81 officers' wives on a large Atlantic coast Navy base supported the hypothesis, especially with regard to satisfaction with Navy life; less-traditional wives evaluated their involvement less positively, as involvement was not associated with well-being outcomes. It is suggested that for satisfied, involved, & less-traditional wives, the structure of the submariner career might allow women more control over resources in exchange for gendered division of labor, which may be a motivation to perform the labor. In general, results support Chafetz's attention to micro- & macroprocesses in the maintenance of gender stratification. 3 Tables, 35 References. Adapted from the source document.

Niebuhr, Robert E. & Boyles, Wiley R. (Dept Management Auburn U, AL 36849-5241), **Sexual Harassment of Military Personnel: An Examination of Power Differentials,** *International Journal of Intercultural Relations,* 1991, 15, 4, 445-457.
¶ In an examination of the influence of power differentials in the US military with regard to sexual harassment victims, data from the 1988 Dept of Defense survey (N = 1,944 military personnel) were analyzed to see if patterns of sexual harassment differed among racial or ethnic groups. Four independent variables (victim's officer or enlisted classification, gender pioneer status, martial status, & harasser's race) were investigated. Although some interactions of these variables were significant, the main effect of race or ethnic group on sexual harassment events was not supported. The results are discussed relative to a power or status model of individual attitudes & behaviors. 4 Tables, 20 References. Adapted from the source document.

Oakes, Guy & Grossman, Andrew (Monmouth Coll, West Long Branch NJ 07764), **Managing Nuclear Terror: The Genesis of American Civil Defense Strategy,** *International Journal of Politics, Culture and Society,* 1992, 5, 3, spring, 361-403.
¶ An examination of the first attempts to articulate & control the US public's response to the atomic bomb in the early years of the Cold war. Between the Hiroshima bombing of Aug 1945 & the official admission of the dangers of nuclear fallout in Apr 1954, US civil defense strategists developed a program designed to bring the public's response into conformity with national security policy for containing Soviet power. The domestic component of the strategy required the public to exhibit credible expressions of determination to fight a nuclear war as part of an effort to deter the USSR from expanding its influence by means that would precipitate just such an event; however, the civil defense community read the initial public response to the bomb as an expression of panic or terror. Acting on their reading, civil defense specialists developed a plan that included the design of a system of emotion management that would suppress an uncontrollable & dangerous terror of atomic weapons & foster instead a more benign & pliable nuclear fear. Civil defense organizations would then be in a position to make use of nuclear fear in their programs of human resource management. Nuclear fear, properly channeled, would motivate the public to deliver the support that was regarded as essential to the strategy of containment. Modified AA

Secrest, Donald, Brunk, Gregory G. & Tamashiro, Howard (U Oklahoma, Norman 73019), **American Elite Views on the Conduct of War,** UM *Journal of Political and Military Sociology*, 1991, 19, 2, winter, 195-215.

¶ Attitudes regarding issues of war conduct are examined via questionnaire data gathered 1986-1988 among US diplomats, journalists, Catholic clergy members, retired military officers, & retired members of Congress (total N = 1,968). The modal positions of diplomats, journalists, & congresspersons stand apart from those of the clergy & military; the latter two diverge on many issues. While few norms of proper decision making are discovered, there is a consensus among US leaders against moral crusading, & the principles of the "just war" tradition have substantial support. Nevertheless, differences over basic decision-making values seem to be likely sources of future disputes over the use of military force; eg, leaders differ over their willingness to withdraw the principle of noncombatant immunity from enemy civilians. 2 Tables, 37 References. Adapted from the source document.

Segal, Mady Wechsler & Hansen, Amanda Faith (Dept Sociology U Maryland, College Park 20742-1315), **Value Rationales in Policy Debates on Women in the Military: A Content Analysis of Congressional Testimony, 1941-1985,** UM *Social Science Quarterly*, 1992, 73, 2, June, 296-309.

¶ All documentation of congressional testimony, 1941-1985, concerning US military women was coded to explore speakers' value rationales. Most people who testified were men; however, women's representation in the policy process was greatest when debate was most active & conscription of women was an issue. There has been increasing recognition that both military effectiveness & gender equality are values affected by military roles. These value rationales also appear in other forms of public discourse on the roles of women & other previously excluded groups in the military & other social institutions. 2 Tables, 15 References. Abstracted from the source document.

Smither, Robert D. & Houston, Mary Ruth (Dept Psychology Rollins Coll, Winter Park FL 32789), **Racial Discrimination and Forms of Redress in the Military,** *International Journal of Intercultural Relations*, 1991, 15, 4, 459-468.

¶ Although Title VII of the Civil Rights Act of 1964 required employers to eliminate race as a criterion for job decisions, a series of legal rulings have exempted the US military from complying with this requirement. The reason for this exemption has been the prevailing belief that the ability to address grievances to civilian courts would undermine military discipline, although such an assumption is unsupported by empirical evidence. Uniformed military personnel who feel they are victims of racial discrimination must use the military justice system, which provides less protection. Based on a review of several court cases, it is argued that allowing military personnel access to civlian courts for redress of Title VII grievances may improve military morale & efficiency. 28 References. Umberson, Debra & Henderson, Kristin (Population Research Center U Texas, Austin 78712), **The Social Construction of Death in the Gulf War,** *Omega*, 1992, 25, 1, 1-15.

¶ Military & media reports indicated that the 1991 Gulf war was characterized by a striking absence of death. Here, a social construction of reality paradigm is applied to explain why & how media reports facilitated denial of death in the war, & a psychological mechanism is proposed to explain why this construction may have been particularly effective. A content analysis was conducted of war-related stories in the *New York Times* for the duration of the war, 17 Jan-1 Mar 1991, focusing on direct & indirect references to death & killing. Four major themes are revealed: (1) rhetorical devices that distance the reader from death & encourage denial of death in the war; (2) official denial of responsibility for war-related deaths & reassurance to the public that death would be minimal; (3) rhetoric that prepared the public for death in war & to view the deaths to come as just; & (4) ambiguity & uncertainty about the actual death toll from the war. 19 References. Adapted from the source document.

Wilcox, Clyde (Dept Government Georgetown U, Washington DC 20057), **Race, Gender, and Support for Women in the Military,** UM *Social Science Quarterly*, 1992, 73, 2, June, 310-323.

¶ Data from the 1982 General Social Survey for 2,104 white & black males (Ms) & females (Fs) are used to explore public support for women in combat. Findings indicate strong societal consensus that Fs should be allowed to participate in traditionally F military roles, although only a minority favor allowing them into ground combat. There are significant racial & gender differences in support for nontraditional & combat roles for Fs: blacks are less supportive than whites, & Fs are more supportive than Ms. Age is a predictor of attitudes only for Fs, & attitudes toward defense spending are significant predictors only of M attitudes, although the nature of the relationship is different for blacks & whites. White Ms who have seen combat are significantly less likely than others to favor Fs in combat roles, as are those who believe that war is likely. Despite these differences, the basic patterns of predictors of the attitudes of black & white Fs & Ms are essentially similar. 3 Tables, 27 References. Adapted from the source document.

Baum, Joel A. C. & Oliver, Christine (Stern School Business New York U, NY 10012-1126), **Institutional Embeddedness and the Dynamics of Organizational Populations,** UM *American Sociological Review*, 1992, 57, 4, Aug, 540-559.

¶ Investigated is the influence of population density–the number of organizations of a particular type–& relational density–the number of ties between organization & their institutional environment–on founding & failure rates in a population of day care centers. Statistical data on all licensed day care centers (N = 682) in Toronto, Ontario, Jan 1971-Dec 1989, are analyzed. Findings suggest that embeddedness in the institutional environment underlies the legitimating effects of initial population growth & the improved survival capabilities of a population of organizations in the long run. 2 Tables, 5 Figures, 50 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4649

Bélley, László, A szocialista bürokráciáról (On Socialist Bureaucracy), *Szociológia*, 1989, 3-4, 221-235. (HUN)

¶ The organizational & management conditions of the communist countries justified Max Weber's forecast of intensifying bureaucracy, simultaneously refuting the fundamental hypotheses of Marxist ideology. Yet the bureaucracy encountered in Eastern Europe differs substantially from the Western type of bureaucracy described by Weber. Communist bureaucracy was distinguished by its ideological dominance & monopoly of power held by the Communist party. Additional features included centralization of authority, the doubling of management & control in the party hierarchy, the politicization of bureaucracy, the restriction of skills by political limitations, & the consequent dilution of inter- & intraorganizational authority relations. In Hungary it will be much easier to freely elect a new parliament than to develop a professional, functional, & efficient bureaucracy. Adapted from the source document. Bernoux, Philippe (14 av Berthelot, F-69363 Lyon Cedex 07 France), **Can a Law Change Firms?,** *The Polish Sociological Bulletin*, 1990, 2(90), 37-49.

¶ (A working paper excerpted from "The Law as a Force for Change" in Széll, György, Blyton, Paul, & Cornforth, Chris [Eds], *The State, Trade Unions and Self-Management*, Berlin/New York: Walter de Gruyter). The impact of a 1982 law on the organization of firms, both formal & informal, is examined in the case of France, where the system of professional relations is highly centralized in the sense that the state takes much of the initiative, based on qualitative & quantitive observations of 6 firms of the Rhône-Alpes region. The law stipulated that workers in firms with a staff of 200+ should "enjoy a right of direct & collective expression with regard to the content & organization of their work." While the law gave a platform to the "voiceless" of the industrial world, they have not rushed to take advantage of it, due in general to the perception among workers that they could express themselves, but not negotiate. After the material problem of working conditions had been raised, it was necessary to advance onto a terrain of higher involvement & risk, ie, the organization of work, a domain most often reserved for the hierachy & policymakers. The more dynamic expression groups have produced organizational change; thus, expression groups constitute a change, albeit a modest one, since it remains limited to the organization of work. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4656

Dunkerley, David, Organizational Analysis, *Reviewing Sociology (New Series),* 1992, 8, 2, 19-25.

¶ A review article on books by: Goran Ahrne, *Agency and Organization* (Sage, 1990); Stewart Clegg (Ed), *Organization Theory and Class Analysis: New Approaches and New Issues* (de Gruyter, 1989); Brian R. Fry, *Mastering Public Administration–From Max Weber to Dwight Waldo* (Chatham House, 1989); & Arthur L. Stinchcombe, *Information and Organizations* (U of California Press, 1990 (see listings in IRPS No. 66]). These books on organization studies cover a wide spectrum in terms of their respective intellectual levels, their eclecticism, & their mix of theoretical & empirical content. Clegg has tried to integrate a wide range of contributions, but the unevenness of the volume is one of heterogeneity of topic as well as of intellectual levels of the contributions. Stinchcombe presents a model of how difficult & abstract theoretical ideas can be presented by the use of anecdotal & case material, & how such material can bring the otherwise dry to life. The work is essentially about information, though the notion of uncertainty is reflected throughout. In the same way that Stinchcombe moves from the micro to the macro, Ahrne strives for what he calls an organizational theory of society, attempting successfully to overcome the traditional problem of social theory & organization theory never quite becoming integrated. Fry's work is aimed at the undergraduate studying public administration, summarizing the contribution to the field of a selection of key writers from Max Weber to Waldo. While the text could have been more critical in its approach, students will find it valuable for a course in public administration or organization theory. 2 References. S. Kasvio, Antti (U Tampere, SF-33101 Finland), **Industrial Restructuring in the 1980s and the Theoretical Reconstruction of Industrial Sociology,** *The Polish Sociological Bulletin,* 1990, 2(90), 17-25.

¶ The theoretical & methodological development of industrial sociology is discussed. It is argued that contemporary Western Europe is experiencing a shift away from traditional paradigms of production at both the level of work organization & within industrial sociology theory. Paradigms shift when they can no longer account for the data they are supposed to explain; this seems the case in industrial sociology as assumptions about capitalist industrialization, the division of labor, workplace efficiency, & societal modernization are increasingly challenged by "global factories" & the proliferation of low-paying service sector jobs. The utility & limitations associated with defining a new industrial sociological paradigm premised on industrial reorganization are assessed. 38 References. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Mittman, Brian S. (Center Aging Studies RAND Corp, 1700 Main St Santa Monica CA 90406-2138), **Theoretical and Methodological Issues in the Study of Organizational Demography and Demographic Change,** *Research in the Sociology of Organizations,* 1992, 10, 3-53.

¶ A review of recent research in organizational demography (OD) reveals that is has focused on the consequences of OD to a much greater extent than on its origins & determinants. Studies examining the impacts of demographic composition on such outcome variables as communication, perceived & actual performance, & turnover are typical. It is argued that the dynamics of demographic composition itself are also of considerable research interest, & deserve greater attention. A framework for studying the origins & determinants of OD is proposed that addresses both conceptual & methodological issues, & lays a foundation for subsequent theoretical & empirical research on the origins & dynamics of demographic patterns in organizations. 1 Figure, 202 References. Penn, Roger (Cartmel Coll U Lancaster, LA1 4YL England), **Contemporary Relationships between Firms in a Classical Industrial Locality: Evidence from the Social Change and Economic Life Initiative,** *Work, Employment and Society,* 1992, 6, 2, June, 209-227.

¶ Based on recent international research, an examination of the relationships between firms across a wide spectrum of sectors in the industrial district of Rochdale (Lancashire, England) in the 1980s is used to evaluate the extent of cooperation between small & medium-sized industrial firms. Four possible relationships are outlined: satellite, active engagement, subordinate cooperation, & independent cooperation. The historical development of Rochdale as an industrial locality is also delineated. It is revealed that subcontracting did not increase & was, in fact, used as a strategy of last resort. Relations between firms were characterized by external market relations (the classic satellite type), which suggests a pattern for the 1990s. 3 Tables, 28 References. Adapted from the source document.

Perrow, Charles (Instit Social & Policy Studies Yale U, New Haven CT 06520-7382), **Organisational Theorists in a Society of Organisations,** *International Sociology,* 1992, 7, 3, Sept, 371-380.

¶ In a 1991 invited address at the annual meeting of American Sociological Assoc, it is argued that sociologists are captive to the organizations they study when they unwittingly adopt unproductive assumptions. Four of these are critically examined: (1) assuming an industrial society is naturally a society of employees presupposes social inequality; (2) assuming efficiency is naturally measured in economic terms dismisses competing motives; (3) assuming capital naturally hires labor takes little account of the emergent era of global competition; & (4) assuming bigger organizations are more complex & better adapted presumes that smaller organizations are not, despite evidence to the contrary. It is suggested that organizational sociologists should draw from their rich social critiques & pay their "social dues" by fighting, eg, to restore power to the powerless they study. M. Maguire

93Z4666

Richet, Xavier (U Rennes II, F-35043 Cedex France), **Restructurations industrielles et coopération entre firmes en Europe de l'Est (Industrial Reorganization and Cooperation between East European Firms),** UM *Sociologie du Travail,* 1992, 34, 2, 263-274. (FRE)

¶ The growing spirit of cooperation among East European firms regarding transfer of technology is explored. Joint ventures, acquisition of local business through merger & capitalization, & the creation of "green fields" (direct investments) in industry are approaches used for reorganization. Examples of Western firms' direct control in East European industry demonstrate the problematic nature of privatization for formerly state-owned businesses. It is suggested that Western technology transfer has failed primarily because the target firms & industries have not been able to adapt the innovations to their needs. Despite the generally beneficial Western business presence, the restructuring of East European countries will be slow & incur enormous social & economic costs. 2 Tables. Simpson, Sally S. & Koper, Christopher S. (Dept Criminal Justice & Criminology U Maryland, College Park 20742), **Deterring Corporate Crime,** *Criminology,* 1992, 30, 3, Aug, 347-375.

¶ The impact of sanctions on the likelihood of a firm commiting another offense is examined through event-history analysis of 38 corporations charged with one or more serious antitrust violations 1928-1981. Though not robust, there is some evidence that past guilty verdicts & changes in penalties for lawbreaking from misdemeanors to felonies inhibit recidivism. It is noted, however, that industry characteristics are stronger by far in their effects on future illegality than formal sanction risk or consequence. Implications of these findings for organizational deterrence & corporate crime control are discussed. 4 Tables, 3 Appendixes, 53 References. Adapted from the source document.

93Z4669

Theobald, Robin, On the Survival of Patronage in Developed Societies, UM *Archives Européennes de Sociologie,* 1992, 33, 1, 183-191.

¶ A response to Michael A. Korovkin's "Exploitations, Cooperation, Collusion: An Enquiry into Patronage" (see SA 37:1/89U2040), criticizing Robin Theobald's "The Decline of Patron-Client Relations in Developed Societies" (see SA 31:4/83N2914), in which it is argued that affluence, full employment, & mass education combine to produce widespread civic competence, which obviates the need for patronage in developed societies. Korovkin criticized Theobald for assuming the inevitability of the decline & eventual disappearance of patron-client relations in developed societies without providing sufficient evidence. The assumption is defended, & the issue of personalism in modern organizations is discussed. It is further asserted that the scope for patronage-type behavior is likely to increase due to the rapid pace at which the public domain is shrinking, & because the state, too, is receding from the purview of civil society. W. Howard

Wysong, Earl (Indiana U, Kokomo 46902), **Professional Societies, Interorganizational Linkages and Occupational Health Policy Reform,** *Social Problems,* 1992, 39, 3, Aug, 201-218.

An investigation of interorganizational linkages on the policy decisions of professional societies concerning proposed federal occupational health legislation, focusing on the policies of 7 associations of health & safety professionals regarding the proposed "High Risk Act" of 1985-1988. In contrast to new class theories viewing professionals as generally supportive of reform policies, data from interviews with 20 senior staff members & archival sources reveal that professional societies' positions reflect the influence of structural linkages tying their members, leaders, & organizations to either the public or corporate sectors. Multiple linkages between associations & the public sector were typically associated with policies of strong support for the High Risk legislation, while multiple linkages to the corporate sector produced opposite outcomes. Additionally, contextual events & circumstances intersect with structural linkages to both reinforce & modify predicted association policy positions. 3 Tables, 88 References. Adapted from the source document.

Bryman, Alan, Gillingwater, David & McGuinness, Iain (Dept Social Sciences Loughborough U Technology, Leicester LE11 3TU England), **Decision-Making Processes in Community Transport Organisations: A Comparative Case Study of Service Providers,** *Voluntas,* 1992, 3, 1, May, 71-87.

¶ An attempt is made to remedy the paucity of information on how decisions relating to service provision are made by voluntary organizations that provide transportation for the disabled & others in need–often called "community transport" (CT) operators. A comparative case study of three organizations in GB reveals that the leadership approach of their key staff is of particular significance. Each organization is moving in the direction of greater professionalism & away from its community roots. This cultural change can be attributed to responses to external forces, expecially those affecting resources. Evidence suggests they are being forced toward adopting practices of the private sector, but that this need not be the case. CT provision is in a period of transition, the outcome of which may radically alter both its structure & its survival capacities. 4 Figures, 28 References. Adapted from the source document.

Research Project on Hungarian Nonprofit Organizations, Comment on Stephen M. Wunker, 'The Promise of Non-Profits in Poland and Hungary: An Analysis of Third Sector Renaissance', *Voluntas*, 1992, 3, 1, May, 89-98.

¶ Comments are offered on Stephen Wunker's view of the Hungarian nonprofit sector (see abstract in this section of SA 41:1). Though a weak service provider, the pre-WWII Hungarian voluntary sector played a major social & political roles & was an important vehicle of the self-organization of the society. These roles served as the basis for state government's nationalized system of social services & protected citizens' autonomy, solidarity, & private initiatives. The newly emerging nonprofit sector is a blend of traditional government/nonprofit partnership & voluntary organizations. Large government-funded nonprofit organizations may play an important role in the denationalization process & may play a role in assuring that grant-making procedures remain free of politicalization. 3 Tables, 14 References. Adapted from the source document.

Sheth, D. L. & Sethi, Harsh (Center Study Developing Societies, Delhi India), **The NGO Sector in India: Historical Context and Current Discourse,** *Voluntas*, 1991, 2, 2, Nov, 49-68.

¶ With the mushrooming of nongovernmental organizations (NGOs) in India over the last two decades, voluntarism has been converted into primarily a favored instrumentality for developmental intervention. This conversion has changed what was once an organic part of civil society into merely a sector–an appendage of the developmental apparatus of the state; further, this process of instrumental appropriation has resulted in these agencies of self-activity losing both their autonomy & political-transformative edge. It is suggested that voluntarism needs to be reoriented from a framework of subserving the needs of delivery to one promoting self-governance in the widest sense. 32 References. Adapted from the source document.

93Z4687

Six, Perri (National Council Voluntary Organisations, London England), **Review Article,** *Voluntas*, 1992, 3, 1, May, 104-114.

¶ A review article on a book edited by Robert Wuthnow, *Between States and Markets: The Voluntary Sector in Comparative Perspective* (Princeton U Press, 1991 (see listing in IRPS No. 66)). This book explores useful connections between voluntary organizations & the state, public sector, & religion through the contributions of sociologists & political scientists from eight Organization for Economic Cooperation & Development member countries. The concept "public sphere" is amorphous & appeals to the sense of a mythical arena in which citizens voluntarily act without self-interest toward the common good, but it is not helpful for research, or particularly useful in understanding voluntary organizations. Religion plays a crucial role in the development of voluntary organizations, providing historical, motivational, conceptual, economic, & political bases, but lack of definitional consensus diminishes its utility in formulating a cross-cultural perspective of the connection between religion & voluntary organizations. State laws & regulatory agencies may impact the organization, funding, political activities, & operation of voluntary organization, but finer distinctions between types of state regulation are needed for conceptual utility. 17 References. D. Generoli

93Z4688

Smith, David Horton, National Nonprofit, Voluntary Associations: Some Parameters, *Nonprofit and Voluntary Sector Quarterly*, 1992, 21, 1, spring, 81-94.

¶ An exploratory examination of published directory data for a random sample of 200 national nonprofit organizations found that these organizations: have recently grown at 3.6% per year; are mainly work or leisure oriented; have a mean age of 18 years; have mainly individual (rather than organizational) memberships, a median size of 445 (much higher for individuals than organizations), & small staffs; & show declining concentration in the Washington, DC, New York City, & Chicago, Ill, metropolitan areas. 3 Tables, 36 References. Adapted from the source document.

Starr, Jerold M. & Curry, G. David (West Virginia U, Morgantown 26505), **National Voluntary Service: A Humanist Alternative,** *Humanity and Society*, 1992, 16, 3, Aug, 369-389.

¶ In 1990, Congress authorized $287 million for the National & Community Service Act. The history of national service programs in the US is briefly reviewed, documenting the needs of contemporary youth & of communities where they might serve, surveying service initiatives across the country, & explaining how the 1990 Act is structured. Six questions central to the contemporary debate over national service are examined: (1) Who would be eligible? (2) Would such service be voluntary or man-

datory? (3) What would participants be qualified &/or trained to do? (4) Which community needs would be served? (5) How would participants be rewarded? & (6) How would the program be financed? Also considered is how humanist sociologists can contribute to the success of service programs. 44 References. AA

Whiting, Susan H. (Dept Political Science U Michigan, Ann Arbor 48109), **The Politics of NGO Development in China,** *Voluntas,* 1991, 2, 2, Nov, 16-48.

¶ Drawing on a review of competing theories regarding the political impact of nongovernmental organizations (NGOs), supplemented by case study data, the development of the nongovernmental sector in the People's Republic of China, which has burgeoned since the beginning of reform in the late 1970s, is explored. It is argued that the NGO phenomenon in China reflects an attempt on the part of the government to divest itself of some of the burdens of socioeconomic development without sacrificing significant political control; ie, NGOs in China are best characterized as state-sponsored engagement in the political sphere & limited disengagement in the socioeconomic sphere. China's contemporary experience with NGOs is compared with associational life in traditional China, in developing countries in general, & in communist countries in particular. 47 References. Adapted from the source document.

Young, Dennis R. (Mandel Centre Nonprofit Organizations Case Western Reserve U, Cleveland OH 44106), **Organising Principles for International Advocacy Associations,** *Voluntas,* 1992, 3, 1, May, 1-28.

¶ Structural parameters that allow successful operation of international voluntary associations devoted to advocacy on global issues are examined through case studies of three associations, characterized by: (1) a federal structure accommodating both overall coherence & unity & local diversity & autonomy; (2) highly charismatic leadership in early development & visionary local leaders in later stages; (3) growing membership but substantial free-riding among members; (4) dependence on solidary & purposive incentives & much less emphasis on the economic benefits of association; & (5) priviledged members on whom the organizations depend for extraordinary support. The organizations demonstrated some tendency toward decentralization, which will help overcome free-ridership. 29 References. Adapted from the source document.

86 modes of production, employment patterns, social division of labor

93Z4694

Agassi, Judith Buber (York U, North York Ontario M3J 1P3), **The Feminist Challenge to the Sociology of Work,** *The Polish Sociological Bulletin,* 1990, 2(90), 51-61.

¶ The challenge that feminist critique has offered within the field of industrial sociology is underscored. Manifestations of the dominant paradigm that have been challenged by feminists include: (1) functionalist claims that an instrumental role for men & an expressive one for women is useful; (2) Marxist localizing of the sexual division of labor (DofL) within the needs of industrial capitalism; (3) social stereotypes suggesting that the needs & work attitudes of men & women are inherently different; & (4) theories of ascribed status relegating each worker a dominant role & thereby relegating women the role of nurturer. Feminist critics make explicit how scholars have mistaken the traditional, gender-based DofL as natural. M. Maguire

93Z4695

Alwin, Duane F., Braun, Michael & Scott, Jacqueline (Instit Social Research U Michigan, Ann Arbor 48103-1248), **The Separation of Work and the Family: Attitudes towards Women's Labour-Force Participation in Germany, Great Britain, and the United States,** *European Sociological Review,* 1992, 8, 1, May, 13-37.

¶ In a comparative review of the literature on changing gender-role attitudes, public opinion regarding female labor force participation in (former) West Germany, GB, & the US is examined. The analysis focuses specifically on the conditions under which men & women approve of women working, & factors associated with that approval, using data from the 1988 International Social Survey Program module on the family. The findings demonstrate that the attitudes of both men & women reflect substantial preference for a primary familial role for women, particularly when young children are present. In almost all family situations, men are less profeminist in their attitudes than are women. Men & women in all countries overwhelmingly approve of women working where there are not children in a marriage. West Germans are the most traditional in their attitudes toward women's work roles. In addition to gender, important factors accounting for intracountry attitude variation include labor force experience, education, & birth cohort. It is suggested that intercountry differences are due to normative & institutional differences that exist in the labor force activities of women in the three countries, especially those associated with the care & nurture of children. 12 Tables, 1 Appendix, 42 References. Adapted from the source document.

Berger, Peter A. & Sopp, Peter (Instit Soziologie Ludwig-Maximilians-U, D-8000 22 Federal Republic Germany), **Bewegtere Zeiten? Zur Differenzierung von Erwerbsverlaufsmustern in Westdeutschland** (Changing Times? On the Differentiation of Work Life Courses in West Germany), *Zeitschrift für Soziologie,* 1992, 21, 3, June, 166-185. (GER)
¶ To investigate the contemporary destandardization & individualization of life courses, questionnaire data obtained in 1984 from 8,983 West Germans ages 15-65 are analyzed, focusing on changes for men & women in terms of career paths. Analysis reveals that the 1950s-1960s were a period of very high stability & low heterogeneity in the labor force. However, due to educational expansion & to labor market deregulation & crises, instability has increased & the normal career trajectory for men has lost its dominance, especially for the young. For women, the housewife model remains strong, but a growing number are following life courses similar to those of men. As such, a polarization is occurring between family-oriented & career-oriented life paths. 2 Figures, 1 Appendix, 90 References. Adapted from the source document as translated by M. Meeks.

Bielby, William T. & Bielby, Denise D. (Dept Sociology U California, Santa Barbara 93106), **Cumulative versus Continuous Disadvantage in an Unstructured Labor Market: Gender Differences in the Careers of Television Writers,** UM *Work and Occupations,* 1992, 19, 4, Nov, 366-386.
¶ Mechanisms that produce a gender gap in earnings among writers in the US TV industry (N = 6,935) are investigated, using longitudinal career history data, 1982-1990. Two models of labor market dynamics are compared: (1) a model of cumulative disadvantage whereby differential access to opportunity is increasingly consequential over the course of writers' careers, & (2) a model of continuous disadvantage whereby the contributions of women writers are uniformly devalued across career stages. Results strongly support the model of continuous disadvantage & show that a narrowing of the wage gap is limited to very recent cohorts of writers. Ways that unstructured labor market arrangements in the entertainment industry sustain the process of continuous disadvantage are discussed & implications for more general labor market issues are assessed. 5 Tables, 1 Figure, 25 References. Adapted from the source document.

Brüderl, Josef (Instit Sociology Konradstr 6, D-8000 Munich 10 Federal Republic Germany), **Dynamic Career Models and Inequality Research: A Reexamination of the Sørensen Model,** UM *Sociological Methods and Research,* 1992, 21, 1, Aug, 3-24.
¶ Aage B. Sørensen's model of the impact of social structure on career (see SA 28:3/80K6989) is examined through its application to the personnel data of 3,362 blue-collar workers at a large West German mechanical engineering company 1976-1984. Sørensen's model provides 2 methods to infer the structural parameter underlying a work system. However, implementation of these methods yields contradictory conclusions as a result of faulty assumptions, eg, the independence of wage & promotion rates, from which the model is derived. More realistic assumptions produce reasonable results without disturbing the main conclusions of the Sørensen model. 3 Tables, 1 Figure, 32 References. Adapted from the source document.

Carrillo, V. Jorge (Coll Frontera Norte, Mexico), **Relaciones laborales en la industria maquiladora ante el Tratado de Libre Comercio** (Labor Relations in the *Maquiladora* Industry before the Free Trade Agreement), UM *Revista Mexicana de Sociología,* 1991, 53, 3, July-Sept, 235-257. (SPA)
¶ Based on government survey data collected in 1991 from 176 *maquiladora* plants in Tijuana & 146 in Ciudad Juarez (Mexico), current working conditions in the plants are described & the potential effects of the Mexico-US Free Trade Agreement (FTA) considered. Results indicate that the larger the plant, the better the working conditions & the higher the wages. Differences between the two cities are described, & possible changes due to the FTA presented. It is concluded that the FTA will probably encourage growth in the *maquiladora* industry, but the ability of the infrastructure of border cities to support such growth is questionable. 8 Tables, 4 References. Adapted from the source document.

Caruso, Grace-Ann L. (Center Child Welfare Studies Saint Joseph Coll, West Hartford CT 06117), **Pattens of Maternal Employment and Child Care for a Sample of Two-Year-Olds,** *Journal of Family Issues,* 1992, 13, 3, Sept, 297-311.
¶ Telephone interviews conducted with a random sample of 476 parents of two-year-olds in 4 Conn communities are drawn on to describe their attitudes toward maternal employment & child care. Of mothers, 60% were employed & 40% of toddlers received nonparental care. About 20% of couples worked alternate shifts to share parenting. Maternal employment & child care were typically part-time. Results indicate that: (1) many children of employed mothers are cared for exclusively by family members, & (2) the more hours mothers are employed, the more likely children are to receive nonfamilial care. 1 Table, 2 Figures, 16 References. Adapted from the source document.

Chang, Kyung-Sup (Dept Sociology Brown U, Providence RI 02912), **Intra- and Intersectoral Growth of Industrial Wage in the World Economic Context,** *International Journal of Comparative Sociology,* 1991, 32, 3-4, Sept-Dec, 333-340.

¶ The role of intra- & intersectoral wage growth (WG) in industrial wage change is examined through analysis of wage data from 47 countries for 1971-1981. Intrasectoral WG was more substantial than intersectoral WG, & no significant correlation between them was found. Advanced capitalist countries experienced the highest levels of intra- & intersectoral WG, & less developed countries experienced the least. Socialist countries experienced intersectoral WG similar to that of most developed countries, but their intersector WG was the lowest. Intersectoral WG was associated with increases in exports & decreases in labor force growth, while intersectoral WG was associated with increases in gross domestic investment. The determinants of intra- & intersectoral WG were different in advanced & less developed countries. 2 Tables, 33 References. D. Charles, Maria (Dept Sociology Swiss Federal Instit Technology, CH-8092 Zurich), **Cross-National Variation in Occupational Sex Segregation,** UM *American Sociological Review,* 1992, 57, 4, Aug, 483-502.

¶ The relationships between the occupational distribution of men & women in 25 industrial countries, as well as selected social, economic, & cultural factors, are examined through analysis of 1985 statistical data from the International Labor Office. Primary structural characteristics of modern economies, defined by the presence of a relatively large service sector & a large employee class, are associated with greater concentration of female employees in the clerical, sales, & service occupations. Low rates of fertility & more favorable ideological environments partially offset these effects. The penetration of egalitarian principles into the labor market appears to be mediated by the structure of interest articulation, with corporate systems showing greater propensity toward segregation. 5 Tables, 1 Appendix, 108 References. Congi, Gaetano (U Calabria, I-87036 Rende Italy), **Il mercato del lavoro degli ingegneri della provincia di Cosenza** (The Labor Market for Engineers in the Region of Cosenza), *Sociologia e Ricerca Sociale,* 1992, 13, 37, May, 135-150. (ITA)

¶ It is maintained that the job market has changed swiftly & radically as a result of the 1971 institution of the U of Calabria at Cosenza, Italy, based on data obtained 1990/91 via questionnaires completed by 314 engineers, supplemented by interviews with 40 area residents. Analysis shows than in less than 15 years the number of engineers has tripled at Cosenza, a midsized town in Italy's most backward region, Calabria. These engineers differ with respect to "old-style" engineers, who read for their degrees in northern Italian university cities & were recruited from the upper middle-class income bracket. Specifically, these "new" engineers are recruited from a more differentiated & complex social structure, are all Calabrians, mostly from the Cosenza province, & are more oriented toward a specialized, technological culture. However, because of the lack of regional development, the engineering job market still predominantly depends on the public works sector, which privileges the "old-style" engineers. The result is a dichotomy in the job market articulated in terms of an oligarchical structure & a highly competitive sector where new professionals, generally better prepared at the technical level, are engaged in in-fighting to obtain projects & job lots. In both sectors a favors network, not the job market, is the key to professional success. These factors, together with a tightening up of the public budget in recent years, & an output of about 100 engineers per year from the university, creates professional conflict. Thus, the university may serve as a boomerang, ie, a sort of factory producing the unemployed, who in the short term will have to emigrate to central/northern Italy or northern Europe. 5 Tables, 1 Figure, 24 References. Dahme, Harry F. (Dept Sociology New School Social Research, New York NY 10003), **Die gesellschaftliche Rationalisierung der Ökonomie: Vom garantierten Mindesteinkommen als konstitutionellem Anrecht** (The Social Rationalization of the Economy: The Guaranteed Minimum Income as a Constitutional Entitlement), *Soziale Welt,* 1992, 43, 2, 141-167. (GER)

¶ The idea of a guaranteed minimum income spans a social theoretical tradition dating back to G. W. F. Hegel's *Grundlinien der Philosophie des Rechts* ([Basic Sketch of a Philosophy of Rights] Frankfurt, 1970). A guaranteed income is the foundation of an expansive theory of social policy cognizant of long-term socioeconomic changes, ie, the social rationalization of the economy. E. Heimann's *Soziale Theorie des Kapitalismus* ([Social Theory of Capitalism] Frankfurt, 1980 [1929]), although not specifically addressing guaranteed income, provided a conceptual basis for a modern social policy theory advancing such an idea. A literature review shows how the minimum income concept is being introduced into the area of constitutional entitlements of Germany. 83 References. M. Drenovsky, Cynthia K. (Dept Sociology Shippensburg U, PA 17257-2210), **Children's Labor Force Participation in the World System,** UM *Journal of Comparative Family Studies,* 1992, 23, 2, summer, 183-195.

¶ The economic role of children in developing & developed countries is investigated by reviewing mid-1970s children's labor force participation data from the International Labor Office for 70 developed & underdeveloped countries. Under the framework of dependency theory, commodity concentration in exports in 1970 & multinational corporation penetration in 1973 were taken to represent dependency, & urban population growth & women's labor participation were also used as independent variables. The two measures of economic dependency were not significantly related to the proportion of children in the labor force, but there was a positive relation between urban growth & child labor, & female labor & child labor. Per these results, the application of world system variables as direct influences on children's labor roles should be reconsidered, but dependency can still have an indirect effect on child labor through urban growth & women's labor. 2 Tables, 1 Appendix, 31 References. Geary, John Francis (Industrial Relations Research Unit U Warwick, Coventry CV4 7AL England), **Employment Flexibility and Human Resource Management: The Case of Three American Electronics Plants,** *Work, Employment and Society*, 1992, 6, 2, June, 251-270.

¶ Observational & interview data (N not provided) collected over 6 months from management, supervisors, & employees at 3 US electronics firms operating in Ireland are used to examine management's recruitment of temporary labor. Challenged is the assumption that the recruitment of a secondary labor force is a strategic & advantageous practice. It was found that management's reliance on temporary employees caused contradictions & tensions, & in the end was considered to be disadvantageous. A criticism is offered of the flexibility literature's neglect of employees' response to these initiatives. The counterposing of flexibility & rigidity as opposites is also criticized. 1 Table, 38 References. Adapted from the source document.

93Z4716

Geiger, Theodor, Über Arbeitsgesinnung (Spirit of Work), *Österreichische Zeitschrift für Soziologie*, 1992, 17, 2, 3-8. (GER) **Comment**, 9-16.

¶ A previously unpublished lecture prepared in 1930 is presented, discussing the conditions & features of the spirit of work under capitalism. It is concluded that workers have no spirit or real enthusiasm because the dominant classes control the production of capital goods. Workers keep on working only because they need to feed, clothe, & house themselves, not because they are interested in their work. A true spirit of work can be attained only under socialism, which will require working-class solidarity. Only then can a positive professional ethos be realized. In **Zur Soziologie des Betriebs als Lebensraum und Werkmilieu des arbeitenden Menschen-einige Nachbemerkungen zu Theodor Geigers Vortrag 'Über Arbeitsgesinnung'** (The Sociology of the Establishment as a Space and Milieu of the Worker-Some Comments on Theodor Geiger's Lecture "Uber Arbeitsgesinnung"), Klaus Rodax (Am Laibach 4, D-4802 Halle, Federal Republic Germany) explains that Geiger's accomplishments in the social sciences were heavily influenced by his ideological views. Two sets of motives are important for comprehending Geiger: (1) his critical sociological position on the focus of study; & (2) his highly emotional appeal for support for the working class. It is important to view Geiger's Marxist views within the historical framework of the waning years of the Weimar Republic. Adapted from the source document.

Ghidina, Marcia J. (Dept Sociology U New Hampshire, Durham 03824), **Social Relations and the Definition of Work: Identity Management in a Low-Status Occupation,** UM *Qualitative Sociology*, 1992, 15, 1, spring, 73-85.

¶ The process by which low-status workers actively manage the relationship between work & identity was investigated via interviews with 27 custodians. Findings show that workers invent strategies to guard their self-concepts from external inconsistencies arising from discrepancies between the identity of the workers & the image projected by the work. It is suggested that, even if low-status workers are able to redefine work so that it is not threatening to their self-definition, they must also renegotiate its status in the eyes of coworkers. Findings reveal that custodians define & embrace social relations as a self-enhancing aspect of their work. Along with autonomy, responsibility, ownership, & seeing the results of their labor, social relations with others provide custodians with a source of satisfaction & fulfillment with which to define their identities. Unlike professional workers who need not individually manage the aspects of their work in order to create & maintain a positive definition of work & self, it is a continuous process for lower-status workers who lack collectively organized ideologies & the public acceptance of such ideologies. 17 References. Adapted from the source document.

Glass, Jennifer & Camarigg, Valerie (Dept Sociology U Notre Dame, IN 46556), **Gender, Parenthood, and Job-Family Compatibility,** UM *American Journal of Sociology*, 1992, 98, 1, July, 131-151.

¶ Data from the 1977 Quality of Employment Survey (N = 537 female (F) & 944 male full-time workers) are drawn on to test the hypothesis that the concentration of Fs in certain jobs that accommodate parenting can help explain both occupational gender segregation & the lower wages received by F workers. Analysis reveals that the combination of both schedule flexibility & ease of job performance most clearly reduces job-family conflict for parents. However, mothers employed 30+ hours per week are not more likely to be in jobs with those characteristics, nor are predominantly F jobs likely to possess that cluster of characteristics shown to reduce job-family conflict. 7 Tables, 1 Appendix, 44 References. Hakim, Catherine (c/o Niamh Hardiman-Dept Politics University Coll Dublin, Belfield 4 Republic Ireland), **Explaining Trends in Occupational Segregation: The Measurement, Causes, and Consequences of the Sexual Division of Labour,** *European Sociological Review*, 1992, 8, 2, Sept, 127-152.

¶ The impact of recession & work-force restructuring in the 1980s is investigated via analysis of Census & Labour Force Survey data collected 1979-1990 in GB for 550 occupational groups. Surprisingly, the 1980s display a larger fall in occupational segregation than do previous decades, which is explained in terms of women's labor-force participation, notably, a rise in work commitment & in full-time employment that occurred for the first time in the 1980s. On this basis, a substantial decline in occupational segregation is predicted for the 1990s, with a consequential impact on the male-female earnings gap. The growth of integrated occupations & the changing pattern of vertical segregation will provide a better basis for monitoring trends in future years than any summary index. 9 Tables, 164 References. Adapted from the source document.

Han, Jianwei & Morishima, Motohiro (c/o Morishima-Keio U, Tokyo 108 Japan), **Labor System Reform in China and Its Unexpected Consequences,** *Economic and Industrial Democracy*, 1992, 13, 2, May, 233-261

¶ Between the mid-1950s & the late 1970s in the People's Republic of China, labor allocation was a highly controlled government function. In the reforms of 1978, state control of the labor market & government regulations was loosened, better matching of jobs & workers was instituted, overstaffing decreased, nepotism slowed, & independent employment agencies developed. Business gained more flexibility in hiring & adopted an internal employment system of labor contracts, while workers gained job mobility. However, as an unexpected result of labor reform, wage & opportunity differentials have widened, conflicts between workers & management & between fixed- & contract-term workers have developed, & the protection of employee benefits has been poor. Corruption & inflation have become widespread, & many workers have been unwilling to tolerate uncertainties & risks while still expecting personal development from their jobs. Based on the experience of the USSR with political reform only, it is argued that economic & political reform should take place simultaneously in China. 29 References. Horan, Patrick M., Hargis, Peggy G. & Killian, Molly Sizer (U Georgia, Athens 30602), **Longitudinal Research on Local Labor Markets: The County Longitudinal Template,** *Research in Rural Sociology and Development*, 1989, 4, 99-121.

¶ Most studies of local labor markets have emphasized cross-sectional approaches. It is contended here that longitudinal data provide a foundation on which to interpret cross-sectional similarities or differences. The major obstacle to use of local longitudinal data is the changing local unit of analysis-the changing geographic boundaries of county units over

time. Extrapolation of earlier geographical data based on changes in acreage & population associated with boundary changes is tedious & has limited applicability. An aggregation strategy grouping counties into larger units on the basis of historical boundary configurations to construct a decade-by-decade county longitudinal template is preferred. This strategy is illustrated with data from a set of counties in Ga. The interface between cross-sectional & longitudinal analyses of local areas is discussed. 3 Tables, 2 Figures, 10 References. D. Jacobs, Jerry A. & Lim, Suet T. (Graduate Program Sociology U Pennsylvania, Philadelphia 19104), **Trends in Occupational and Industrial Sex Segregation in 56 Countries, 1960-1980**, IM *Work and Occupations*, 1992, 19, 4, Nov, 450-486.

¶ Statistical data from the International Labor Organization, 1960-1980, are used to document trends in sex segregation by occupation & industry in 56 developed & developing countries. Analysis indicates that a majority of countries experienced declines in sex segregation during this period, & nearly all experienced declines in a size-standardized measure of segregation. A striking asymmetry in the experience of these changes for males (Ms) & females (Fs) is also revealed: overall, Ms experienced an increased chance of sharing an occupation (& industry) with Fs during this period, whereas Fs often (but not always) experienced a decline in the chances of being in the same occupational (& industrial) group as Ms. The effects on segregation of per capita gross national product, F labor force participation, total fertility rate, F educational levels, & urbanization, are also explored both cross-sectionally & longitudinally, & results are generally inconsistent with the predictions of the modernization perspective. 6 Tables, 1 Appendix, 83 References. Kolehmainen, Sirpa (U Tampere, SF-33101 Finland), **Sukupuolen mukainen segregaatio työelämässä** (Gender Segregation in Working Life), 1992, 29, 1, 11-22. (FIN)

¶ Several theories that attempt to offer explanations for the problem of gender segregation in the labor market are contrasted, & their relevance to the particular circumstances of Finland is considered. It is noted that male & female participation in wage labor & labor markets has developed unevenly. Although their respective situations are similar in quantitative terms, important qualitative discrepancies still exist. It is found that instead of positively affecting the gendered division of labor, the increase in working females has caused an increase in occupational segregation. In an attempt at clarification, the theory of segregation is examined in the context of the sex/gender system. 42 References. Adapted from the source document. Lewin-Epstein, Noah & Semyonov, Moshe (Dept Sociology Tel-Aviv U, Ramat-Aviv IL-69978 Israel), **Modernization and Subordination: Arab Women in the Israeli Labour-Force**, *European Sociological Review*, 1992, 8, 1, May, 39-51.

¶ The employment patterns of Arab women in Israel are examined, particularly the extent to which labor market characteristics associated with development, as well as cultural attributes, affect labor force participation (LFP) & the gender-linked occupational differentiation of Arab women. Findings from a comparative analysis of 1980s census/government statistics for 42 major Israeli communities in which Arabs reside reveal that Arab women's LFP is systematically related to both economic structure & social composition. Women's employment levels tend to be higher in places characterized by agricultural employment, & lower in places where job opportunities per capita are limited & when fertility is higher. LFP is considerably higher in communities inhabited by Christian Arabs than in Muslim communities. Further analysis demonstrates that the occupational distribution of Arab women is distinct from that of Arab men. While few women join the economically active labor force, those who do are overwhelmingly concentrated in professional & semiprofessional occupations. Despite women's occupational advantage relative to men, their increased LFP tends to decrease their overall occupational advantage. 5 Tables, 35 References. Adapted from the source document. Miles, Ian (Programme Policy Research Engineering/Science/Technology U Manchester, M60 1QD England), **Consequences of the Changing Sexual Division of Labor**, UM *The Annals of the American Academy of Political and Social Science*, 1992, 522, July, 92-103.

¶ An examination of the consequences of women's increasing participation in the labor market, focusing on changes in the organization of work, issues of feminine & masculine identity, & likely transformations in domestic work & family life. The consequences of such increased participation include: an increase in available role models for girls; greater access to educational & financial resources for women; continuing efforts by some men to limit women's empowerment; & a continuation of women's struggle to cope with the double burden of housework & formal employment. The conflicts brought on by women's increasing equality with men are likely to intensify the critique of traditional concepts of masculinity & femininity, which will likely give voice to suppressed grievances & insecurities. Women's increasing equality has the potential to increase social justice, particularly in the spheres of family life & formal work, but this outcome should not be taken for granted. Milkman, Ruth (U California, Los Angeles 90024), **The Impact of Foreign Investment on US Industrial Relations: The Case of California's Japanese-Owned Plants**, *Economic and Industrial Democracy*, 1992, 13, 2, May, 151-182.

¶ Data obtained via on-site visits to 20 Japanese-owned factories in southern Calif & interviews with their managers, mail questionnaire data from managers of 60 such factories, & visits/interviews at 5 factories in Japan, are drawn on to explore Japanese direct investment in the US & its impact on US workers & organized labor. Following an overview of the causes & consequences of the recent growth in Japanese direct investment, findings show that outside the automobile industry, such factories do not conform to the Japanese model of lean production with extensive worker participation, Instead, when in the US, these plants hire US-trained managers, use standard US human resource techniques, & follow the lead of US manufacturing & its commitment to union avoidance. As a result, Japanese direct investment has done little to enhance the competitive position of the US or the living standards of its population; on the contrary, it may contribute to the continuing erosion of both. 1 Table, 44 References. Mok, Albert L. & De Decker, Kristine (U Instelling Antwerpen, B-2610 Wilrijk Belgium), **Workers' Reactions to New Technology in Professional Work**, *The Polish Sociological Bulletin*, 1990, 2(90), 27-36.

¶ Conflicting ideas exist about the influence of new technology on professional work. Some believe that professionals are more resistant to the deskilling & routinization of their work than blue-collar & lower white-collar workers (the resistance thesis). Others argue that professional workers are subject to similar erosions in the quality of their jobs as other workers (the proletarianization thesis). To test these assumptions, a pilot research project was conducted in 2 hospital laboratories in the Antwerp region of Belgium. Some evidence of proletarianization was found. Questionnaire data reveal that laboratory workers (N = 16) perceived their work as more boring & routinized than before the introduction of automated equipment. There was, however, no sign of the traditional blue-collar worker reaction, eg, increased union density or collectivization. Laboratory workers remained professional in their attitudes, although proletarianized in their perceptions. 14 References. Modified AA

Mueller, Charles W., Wallace, Jean E. & Price, James L. (U Iowa, Iowa City 52242), **Employee Commitment: Resolving Some Issues**, UM *Work and Occupations*, 1992, 19, 3, Aug, 211-236.

¶ Conceptual & empirical distinctions among various forms of employee commitment were examined through administration of questionnaires to 3 samples in the midwestern US: (1) 470 full-time employees of a Veterans Administration Medical Center, (2) 946 employees of a short-term general hospital, & (3) 123 nonsupervisory registered nurses at a large teaching hospital. Four commitment constructs were studied--loyalty, intent to stay, work commitment, & career commitment. Factor analysis reveals that loyalty & intent to stay are conceptually & empirically distinct from each other & from work/career commitment. Construct validation was obtained by demonstrating that intent to stay & loyalty, but not work or career commitment, are less stable during the initial employment period, but stablize with tenure. Predictive validity for intent to stay was obtained by demonstrating that it predicted quit behavior, or turnover, while loyalty, work commitment, & career commitment did not. 5 Tables, 2 Appendixes, 75 References. Nätti, Jouko (Jyväskylä U, SF-40100 10 Finland), **Ei-tyypillinen tyollisyys Pohjoismaissa: Kohti marginalisoitumista vai normalisoitumista?** (Atypical Employment in the Nordic Countries: Toward Marginalization or Normalization?), *Sosiologia*, 1992, 29, 2, 116-131. (FIN)

¶ Data from a recent report on labor market tendencies in the Nordic countries (*Employment Outlook*, Paris: OECD, 1989-1991) are analyzed, focusing on the growing popularity of so-called atypical employment, eg, forms of employment that deviate from permanent, full-time work. Although an increase in temporary & part-time employment could lead to greater social inequality, it might also have the positive effect of strengthening labor market flexibility & providing alternatives to typical employment patterns. An attempt is made here to determine the level of job security of part-time & temporary employees in Nordic countries (N not specified) & to consider whether atypical employment represents more of a trap or a bridge. Differences between the labor market situation in Finland & the rest of the Nordic countries are highlighted. 2 Tables, 67 References. Adapted from the source document.

Orzack, Louis H. & Lex, Barbara W. (Rutgers U, New Brunswick NJ 08903), **Work Activities and Professional Expectations: Recent Sociological and Anthropological Analytic Frameworks**, *The Polish Sociological Bulletin*, 1990, 2(90), 5-16.

¶ An examination of how sociologists & anthropologists analyze work acts, work roles, & workers, summarizing often overlooked & misunderstood demographic trends, eg, growth in computer use, services, & health sectors, export of labor-intensive manufacturing positions to low wage regions, & migration. Within sociology, early analyses of work histories, work norms, occupational cultures, & divisions of labor have been overtaken or subsumed by studies of dual careers, how professions develop, deviance from work norms & ethics, impacts of tehcnology, entry of minorities, work stress, & health risks. Participant observations dominate anthropological studies, inclusive of bureaucratic systems, production & exchange in both simpler & more complex societies, migration, & shifts from subsistence to industrialized economies. Analyses of occupations deal with specialized use of time, space, techniques, language, beliefs, & value requirements. 63 References. Modified AA

Petersen, Trond (Walter A. Haas School Business U California, Berkeley 94720), **Payment Systems and the Structure of Inequality: Conceptual Issues and an Analysis of Salespersons in Department Stores,** UM *American Journal of Sociology*, 1992, 98, 1, July, 67-104.
¶ Data from a 1981 survey of 264 US retail stores conducted by the Bureau of Labor Statistics are drawn on to explore wage differences among 62,874 salespersons under 3 payment systems: a straight salary, a straight commission, & a salary plus commission. Four interpretations of wage inequalities under the 3 systems are contrasted: risk-sharing, bargaining, sorting, & social status. It is concluded that salespersons working for a direct salary earn less than their counterparts paid according to either of the 2 output-related schemes. Overall, results support the bargaining interpretation of incentive schemes, though within establishments, the risk-sharing interpretation is more significant. 7 Tables, 1 Figure, 84 References. Rantalaiho, Liisa, Office Work as Women's Work, *The Polish Sociological Bulletin*, 1990, 2(90), 63-74.
¶ While it is true that low-paying office work in industrialized countries is more likely, quantitatively, to be performed by women, it is less clear what the qualitative consequences of this division of labor are. It is problematic to conceptualize office work as a series of fragmented routines performed by a cheap female labor force: there is more to the work than just the visible routines. A need is identified for a methodological approach to this field of inquiry that seeks to understand women as gendered subjects actively performing tasks for a wage. 2 Figures, 33 References. Reskin, Barbara F. & Ross, Catherine E. (Ohio State U, Columbus 43210), **Jobs, Authority, and Earnings among Managers: The Continuing Significance of Sex,** UM *Work and Occupations*, 1992, 19, 4, Nov, 342-365.
¶ If females' (Fs') increasing representation in managerial jobs stems from declines in actual or assumed sex-based differences in relevant qualifications, it would follow that management jobs should afford Fs the organizational authority & concomitant rewards traditionally reserved for males (Ms). On the contrary, 1982 telephone survey data from 222 self-described managers in Ill reveal that Fs are concentrated in the lower levels of the chain of command, & predominantly manage other Fs; their participation in decision making is generally restricted to providing input for decisions made by Ms. The desegregation of managerial occupations, thus, does not signal the declining significance of sex in the workplace because, despite increased access to managerial positions, Fs' decision-making authority & rewards continue to be more limited than those of their M counterparts. 4 Tables, 2 Appendixes, 50 References. Rosenfeld, Rachel A. & Spenner, Kenneth I. (Carolina Population Center U North Carolina, Chapel Hill 27599), **Occupational Sex Segregation and Women's Early Career Job Shifts,** UM *Work and Occupations*, 1992, 19, 4, Nov, 424-449.
¶ The frequency & determinants of jobs shifts that take females (Fs) across gender-type boundaries are investigated, drawing on questionnaire data from Wash public high school juniors & seniors (N = 6,728) in 1965/66, & follow-up telephone interviews in 1979 (N = 5,849). Results indicate that many Fs go between sex-typical & sex-atypical occupations with a change of jobs. Higher work commitment tends to slow moves from male (M) to F occupations, & higher job rewards slow moves across occupational gender types; family variables do not constrain either type move. Thus, the results do not always fit with stereotypes about characteristics of predominately M & F jobs. Further research is needed to identify career lines by gender type, rather than relying on the sex composition of a particular occupation or job. 6 Tables, 50 References. Schmid, Ruth (Soziologisches Instit U Zürich, CH-8001 Switzerland), **Determinanten der Kündigungsbereitschaft: Ein Vergleich zweier konflikttheoretischer Paradigmen** (Determinants of Intent to Quit a Job: A Comparison of Two Basic Conflict Theory Paradigms), *Zeitschrift für Soziologie*, 1992, 21, 3, June, 186-199. (GER)
¶ To investigate the reasons why workers quit their jobs, questionnaire data were obtained from 1,152 employees of a large bank & an insurance company in Zurich, Switzerland, shortly after the stock market crash of 19 Oct 1987. Two models are applied to analyze the data: (1) H. Ludke's theory of relative deprivation (in Fuchs, W. [Ed], *Lexikon zur Soziologie* [Lexicon for Sociology], Opladen: Westdeutscher Verlag, 1973), viewing conflict as an expression of deprivation or dissatisfaction; & (2) rational choice theory, interpreting conflict as a rational action. The results show that these different perspectives may be applicable to different segments of the sample, but neither fully accounts for all the data. 4 Tables, 63 References. Sewell, Graham & Wilkinson, Barry (Instit Science & Technology U Manchester, M60 1QD England), **'Someone to Watch over Me': Surveillance, Discipline and the Just-in-Time Labour Process,** *Sociology*, 1992, 26, 2, May, 271-289.
¶ Issues surrounding the role of human surveillance & control in the contemporary industrial labor process are addressed, drawing on research into the human effects of the implementation of management information systems as a superstructure of control to support just-in-time (JIT) manufacturing & total quality control (TQC). Understanding of the JIT/TQC labor process has been greatly influenced by the work of Michel Foucault & his use of surveillance as the connective tissue in the power/knowledge relationship (*Discipline and Punish: The Birth of the Prison*, London: Allen Lane, 1977). Observations from Japanese Electronics, a plant in GB with an advanced JIT/TQC system, are used to develop meaningful parallels between the nature of power, knowledge, & surveillance. It is argued that the JIT/TQC approach is both enabled & enhanced by the operation of two complementary disciplinary forces, ie, that deriving from the scrutiny of one's peers in a manufacturing cell or quality circle (a horizontal process), & the force deriving from the use of increasingly powerful management information systems that provide extensive shop floor surveillance (a vertical process). The analysis shows that the surveillance systems integral to JIT/TQC are deliberately designed to establish discipline in an efficient manner & to exercise minute control with a minimum of supervisors. It is suggested that these two forces can be harnessed effectively by minimizing negative divergences from expected behavior & management-defined norms while identifying positive divergencies & maximizing their creative potential. 38 References. Singer, M. S. (Dept Psychology U Canterbury, Christchurch 1 New Zealand), **Procedural Justice in Managerial Selection: Identification of Fairness Determinants and Associations of Fairness Perceptions,** *Social Justice Research*, 1992, 5, 1, Mar, 49-70.
¶ To determine whether procedural fairness factors in managerial selection are predictive of managerial candidates' later work satisfaction, 228 professional managers in New Zealand rated via mail questionnaire the importance & fairness of 28 selection procedures, their commitment to

their work, satisfaction from work, & perceptions of organizational effectiveness. Factor analyses of the importance ratings identified 5 major determinants of fair selection procedures: 3 process-related (honest communication & open competition, use of interviews, & voice & information soliciting) & 2 decision-related (avoiding biases & the use of job-relevant criteria). Per multivariate analysis, all determinants except avoiding biases correlated significantly with candidates' later organizational commitment, work satisfaction, & perceptions of effectiveness, but only honest communication consistently & significantly predicted all 3 dependent variables. Partial predictions with the other 2 process factors were better than with the 2 decision factors. The theoretical & practical implications of the robustness of the honest communication factor are discussed. 3 Tables, 79 References. Adapted from the source document.

Snipp, C. Matthew & Bloomquist, Leonard E. (U Wisconsin, Madison 53706), **Sociology and Labor Market Structure: A Selective Overview,** *Research in Rural Sociology and Development,* 1989, 4, 1-27.

¶ Three basic themes dominating the study of labor market structure in sociology are examined: (1) divisions among social classes; (2) organizational characteristics of the workplace; & (3) the ecology of labor markets. Studies of the social division of labor (DofL) have focused on cross-sectional analyses of the relatively simple relationship between market structure & class or gender to the neglect of how the dimensions of the DofL interact to affect labor market position. Longitudinal studies of temporal changes in labor markets & the social DofL, & of the impact of market structure on groups other than blacks, have been neglected also, as have the interactions of class, gender, & race with market ecology & organizational characteristics. A single comprehensive model linking the social DofL, market ecology, & organizational characteristics of the workplace is needed. 128 References. D. Generoli

Steiger, Thomas L. & Wardell, Mark (Dept Sociology Indiana State U, Terre Haute 47809), **The Labor Reserve and the Skill Debate,** UM *The Sociological Quarterly,* 1992, 33, 3, fall, 413-433.

¶ Two competing assertions about changes in the skill structure of wage labor are that: workplace changes do not necessarily lead to a general deskilling, but enhance skill levels for certain categories of wage labor; & such changes contribute to a general deskilling of the paid workforce. The debate over their validity remains unresolved. Harry Braverman's discussion of the labor reserve & its pattern of inclusion into the paid workforce (see *Labor and Monopoly Capital,* New York: Monthly Review Press, 1974) promises one possible resolution. Incorporation of a sizable proportion of female workers from the latent labor reserve negated a trend toward an increased proportion of skilled workers in the US paid workforce, 1950-1987. Implications of the particular pattern of inclusion & exclusion of this labor reserve are discussed in terms of the debate surrounding the deskilling & reskilling of wage labor in general. 4 Tables, 2 Appendixes, 36 References. Steinberg, Ronnie J. (Temple U, Philadelphia PA 19122), **Gendered Instructions: Cultural Lag and Gender Bias in the Hay System of Job Evaluation,** UM *Work and Occupations,* 1992, 19, 4, Nov, 387-423.

¶ In an examination of the structure of gender bias in the Hay Guide Chart-Profile Method, the dominant system of job evaluation, it is shown not only how the system perpetuates gender-based occupational assumptions stemming from its origins in the 1940s & 1950s, but also how it conceals these assumptions under a veneer of gender neutrality. Application of the Hay system to data on 1,441 public sector job titles in Minn demonstrates that it consistently values male-dominated management functions over nonmanagement functions, that are more likely to be performed by women. 6 Tables, 48 References. Adapted from the source document.

Stevens, Dennis J. (U South Carolina, Aiken 29801), **Managerial versus Blue Collar Unemployment,** UM *International Review of Modern Sociology,* 1991, 21, 2, autumn, 45-61.

¶ Drawing on interview data collected at a self-help agency in a large midwestern US city from 32 unemployed middle-level managers, the way in which managers see unemployment is analyzed & compared with studies of blue-collar experience to determine any relationship. Results reveal that both managers & blue-collar workers initially experience degrees of denial, resentment, & feelings of individual incompetence that often lead to self-blame. However, career-minded managers subsequently seek upwardly mobile jobs once they blame structural factors & use "managerial talk" to demonstrate that they are different from other workers. On the other hand, blue-collar workers continue to blame themselves & tend to seek survival jobs below their skill & income levels. It is suggested that managerial unemployment is described far differently than blue-collar unemployment, largely as a result of the work managers do. Unemployment is perceived as a necessary event leading to top jobs as it strengthens managers' individual career concepts & encourages their managerial ideals about exploitation. If career orientation influences mobility, more research is needed relative to career orientation & blue-collar jobs to prevent downward mobility during unemployment. 1 Table, 34 References. Tickamyer, Ann R. & Bokemeier, Janet L. (U Kentucky, Lexington 40506), **Individual and Structural Explanations of Nonmetropolitan Women and Men's Labor Force Experiences,** *Research in Rural Sociology and Development,* 1989, 4, 153-170.

¶ Following an examination of differences in nonmetropolitan women's & men's labor market experiences, multilevel models are constructed, based on integrating human capital, segmented economies, & labor market analysis, to explain pervasive gender differences in a variety of work-related measures, including job characteristics, conditions, & rewards. Examined first are models that include both individual & structural variables, but only use measures based on individual attributes. Considered next are models that add the aggregate/labor market structural-level variables of county industrial structure, labor force participation rate, mean education, & % farmers & provide separate data for women & men. Results of a 1980 mail survey of 2,818 nonmetro Ky households show expected individual-level measure differences between women & men on both individual & structural factors, but relatively little impact of aggregate structural variables. Different aspects of labor market experiences require different models, & there are major gender differences within & across each form of work experience. Reasons for these results are discussed, followed by suggestions for future research. 5 Tables, 47 References. Modified AA

Ward, Clare & Dale, Angela (Social Statistics Research Unit City U New York, NY 10021), **The Impact of Early Life-Course Transitions on Equality at Work and Home,** UM *The Sociological Review*, 1992, 40, 3, Aug, 509-532.

¶ Survey data obtained in 1981 from a cohort of British adults born in 1958 are used to examine aspects of the employment relationship between female & male partners. It is argued that to understand women's position in the home & the labor market, it is necessary to consider employment relationships in the context of the household, since power & equality within the home are derived from the relative contribution of partners to the family income. It is shown that marriage & children influence the number of hours a woman works, & thus that women are economically dependent on men in the early stages of their partnership & parenthood. 9 Tables, 2 Appendixes, 28 References. Adapted from the source document.

Zetka, James R., Jr. (State U New York, Albany 12222), **Mass-Production Automation and Work-Group Solidarity in the Post-World War II Automobile Industry,** UM *Work and Occupations*, 1992, 19, 3, Aug, 255-271.

¶ Archival evidence & data obtained during interviews with 10 workers at a stamping plant are drawn on to examine whether mass-production automation triggered a decline in shop-floor militancy in the post-WWII period. Findings suggest that mass-production automation failed to either atomize or deskill these militant occupational groups, ie, those who performed stamping, body-building, & trim operations, in the US automobile industry. An alternative explanation for post-WWII declines in shop-floor militancy is proposed, focusing on the creation of two diverse labor-process trajectories. 2 Tables, 45 References. SOCIAL DEVELOPMENT ISSUES

a journal of
The University of Iowa
and
Southwest Missouri State University

published in cooperation with the
Inter-University Consortium
for
International Social Development
(IUCISD)

Providing a forum for:

- Research on policies, practices, and service delivery systems in economically developing nations
- Analysis of social development, social services, health, poverty, income maintenance, global feminism, human rights, and non-violence
- Achieving linkages among multiple disciplines, nations, and cultures
- Investigating issues that impact on social justice, community, and individual development

Social Development Issues, which is published three times a year, is an international refereed journal that welcomes contributions from scholars and practitioners in all disciplines interested in social development.

Individual subscription rate is US $20.

Albelda, Randy & MacEwan, Arthur (Dept Economics U Massachusetts, Boston 02125), **The State of the States: Fiscal Crisis in the 1990s,** *Critical Sociology,* 1991, 18, 2, summer, 3-30.

¶ Firsthand experience as faculty members at the U of Massachusetts, Boston, is drawn on to describe the development of the fiscal crisis of the US states & to examine why it has taken on a new economic & political importance. It is argued that progressive forces have an opportunity now to affect both immediate responses to the crisis & the longer-run economic role of government. Some particular proposals for a progressive response based on principles of democracy & equality are offered. 2 Tables, 6 Graphs, 29 References. Adapted from the source document.

93Z4761

Bertaux, Daniel (Centre national recherche scientifique, F-75700 Paris France), **Le Controle de la production anthroponomique comme enjeu de la modernité** (The Control of Anthroponomic Production as a Stake of Modernity), *Revue Internationale de Sociologie/International Review of Sociology (nouvelle serie/new series),* 1992, 1, 35-50. (FRE)

¶ A second industrial revolution is now emerging--the production process of human beings. The concept of "anthroponomic production" is introduced: it views humans as products of their cultural environment & their specific work experiences. The concept is rooted in Karl Marx's & Friedrich Engels's materialist vision. The anthroponomic revolution contains its own autonomic dynamics. Its processes & their impact are examined, including: demographic explosion, increase in human life span, public health, education, urbanism, emergence of a service-oriented middle class, & transformations in gender relations. 11 References. Bestuzhev-Lada, Igor V., Preodolenie problemnykh situatsiy v upravlenii sotsial'nymi protsessami (Overcoming Problem Situations in the Management of Social Processes), *Voprosy ekonomiki,* 1992, 1, Jan, 31-40. (RUS)

¶ Most types of philosophy, spanning the range from Hindu to Marxist, admit some type of recurring cyclical processes of historical development. In the USSR, various reform cycles began under Vladimir Lenin during the 1917 revolution & the New Economic Policy (1921-1929), Nikita Khrushchev (1956-1964), Aleksei Kosygin (1966-1971), & Yuri Andropov (1983). The reforms announced in 1979 were never implemented. Each reform cycle leads eventually to some type of normalization period. In time, the equilibrium in force under a normalization period begins to show imbalance, ultimately leading to collapse & the necessity of introducing new reforms. The cycle of norm-problem-crisis-catastrophe-revolution-norm has not only an ontological, but also a gnoseological significance, permitting the analysis, diagnosis, & prognosis of social processes within a goal-oriented preplanning strategy for economic managers. Its meaning for the optimization of social management processes is difficult to overestimate. Implications for the future of the former USSR are discussed. 2 Appendixes. M. Meeks

Britan, Gerald M. (Program & Policy Evaluation Division Agency International Development, 2201 C St NW Washington DC 20523-0001), **The Future of Foreign Assistance,** *Studies in Third World Societies,* 1991, 44, Apr, 1-12.

¶ The role of the US Agency for International Development (AID) in the future of US foreign assistance is assessed in the context of worldwide political & economic transformations of the late 1980s & early 1990s. Changes in foreign assistance strategies since the 1950s are reviewed, as are the failings of current foreign assistance programs. An analysis of recent trends, however, suggests the beginnings of a major transformation in AID to a more strategic focus on development results, involving a shift from implementing a broad array of projects to alleviate the most significant host country development constraints, whatever they may be, to a more focused program aimed at achieving more significant results in more limited areas that reflect AID's comparative advantage, US national interests, & host country needs. Finally, the implications of this shift for AID's management & for the employment of social scientists are examined. 8 References. AA

Brym, Robert J. (Centre Russian & East European Studies U Toronto, Ontario M5S 1A1), ***Perestroika,* Public Opinion and *Pamyat,*** *Innovation,* 1991, 4, 3-4, 51-61.

¶ A substantial & increasing overlap among pro-*Pamyat* (a chauvinistic, pro-Stalin, anti-Semitic association) & anti-*perestroika* attitudes in the USSR has been reported by the press, but its significance remains unexplicated. A Dec 1988 telephone poll of 1,006 Muscovites & 1,000 New Yorkers revealed the threat that such attitudes pose to Mikhail Gorbachev & the Soviet Jews. Asked whether Jews in their country are targeted by discrimination, fewer Russians than Americans admitted discrimination, even controlling for Jewish respondents. Because Muscovites who acknowledge the presence of anti-Semitism are generally younger & more educated, it is hypothesized that the older Muscovites are downplaying the existence of anti-Semitism either to voice the party line or to cover their own anti-Semitic feelings. Secondary data from 1983-1989 telephone opinion polls verify these conclusions. 6 Tables. M. Maguire

Clark, Mari H. (Office Women's Development US Agency International Development, 2201 C St NW Washington DC 20523-0001), **Humanizing the Development Paradigm,** *Studies in Third World Societies,* 1991, 44, Apr, 13-25.

¶ The focus of foreign economic assistance over the past few decades has been on things, rather than on the people, needed to achieve economic growth, thus causing the failure of many development projects. Some recent development projects show greater concern for the human element & participatory development; these concerns should humanize the development paradigm. To focus on the human factor, linkages between macrolevel economic & legal systems & microlevels in individual & small group economic decision making should be analyzed through the union of economics & anthropology. However, anthropologists need to promote their skills to economists & identify the areas where the development process could be redirected toward integrating people. 39 References. M. Pflum

Cortés, Fernando & Benites, Marcela (Colegio México, 10740 Mexico DF), **Crisis y comercio domicilliario en México** (Crisis and Home-Based Enterprise in Mexico), *Estudios Sociológicos,* 1991, 9, 25, Jan-Apr, 165-187. (SPA)

¶ Statistics on small business openings (SBOs) by family units in Toluca, Mexico, 1971-1988 were examined to explore the relationship between macroeconomic conditions & microeconomic conditions. In general, SBOs were significantly greater during periods of economic crisis than during economic stability. Two types of interactions of macro- & microconditions were found: SBOs when the household head was employed, & presumably wished to improve the family's economic position, were more frequent during economic crises, but SBOs to provide resources to satisfy basic necessities were independent of macroeconomic conditions. SBOs as an economic strategy were a function of the social necessities of household members, their resources & sociodemographic characteristics, & the options offered them at the macrostructural level. 6 Tables, 1 Appendix. Elguea, Javier A. (Colegio México, 10740 Mexico DF), **El sangriento camino hacia la utopía: las guerras de desarrollo en América Latina 1945-1989** (The Bloody Road to Utopia: The Wars of Development in Latin America 1945-1989), *Estudios Sociológicos,* 1991, 9, 25, Jan-Apr, 145-164. (SPA)

Translated from English by Mario A. Zamudio Vega.

¶ Latin America has followed the more developed countries in espousing progress & development. However, Latin American theories about development–Marxist, the theology of liberation, & others--have all provided justification for war & violence as a means to progress. The rationalization that violence & armed force are necessary tools for the betterment of society has served to promote wars, guerilla warfare, terrorism, the exportation of revolution, & repression. Between 1945 & 1989, about 300 armed conflicts were recorded in Latin America. The results of these conflicts have not validated beliefs about the connection between war & progress: prolonged conflict in many areas has not led to greater freedom or improved welfare, & underdevelopment has been maintained or even increased. Economic growth in areas that have not been plagued with war is, in fact, similar to areas involved in armed conflicts. Even after the end of the Cold war, Latin America violence has not ceased. Territorial disputes & internal rivalries between economic & political sectors persist, many factions are still armed, & hunger, poverty, & the reclamation of land & jobs still constitute the daily scene. Violence must be repudiated as a means to development. 2 Tables. Adapted from the source document as translated by M. Pflum. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Engelmann, Hugo O. (Northern Illinois U, DeKalb 60115-2854), **A Sociohistorical Perspective for East European Developments,** UM *Journal of Political and Military Sociology,* 1991, 19, 2, winter, 217-231.

¶ Contrary to both socialist & capitalist economic thought, it is contended that capitalist economic organization is unrelated to ownership, or even to entrepreneurship. Central to capitalism is the separation between control & operation of the means of production. Since capitalist systems remain such even when ownership of the means of production becomes public, the USSR & its East European satellites were always state-capitalist countries. However, democracy does not automatically accompany a transition to private market capitalism. Democracy is a political means for restraining capitalism while it is also a type of authoritarianism. Economic, political, & other powers are disjoined & countervailing in democratic systems, & they are therefore exercised less over powerless individuals who have greater freedom. It is suggested that East European dissidents were concerned more with controlling capitalism politically than with changing its type. Frustration with these democratic aspirations might facilitate the replacement of authoritarianism by totalitarianism, probably facist. 36 References. Adapted from the source document. Fest, Joachim, Interview mit Joachim Fest. Europa im Umbruch (Interview with Joachim Fest. Changes in Europe), *Protosoziologie,* 1992, 3, July, 174-180. (GER)

¶ Recent political transformations in Europe are discussed in light of their impact on general sociological theories. Key topics include: "the end of history," in the sense of the realization of democratic principles; German reunification; the democratization of Eastern Europe; Europe's future as united or divided; comparisons with the historical situation in 1914; parliamentary vs authoritarian rule in Eastern Europe; the emergence of a new national German identity; the treatment of reunification by German intellectuals; the future of the North Atlantic Treaty Organization; German participation in international military conflicts; & migration between Eastern & Western Europe. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4771

Foran, John (U California, Berkeley 94720), **A Historical-Sociological Framework for the Study of Long-Term Transformations in the Third World,** *Humanity and Society,* 1992, 16, 3, Aug, 330-349.

¶ It is argued that three theories of underdevelopment–modes of production, dependency, & world-system analysis–are mutually compatible, & taken together, can explain long-term processes of social transformation in Third World countries. The synthesis of these theories is facilitated by inclusion of two further lines of inquiry: Theda Skocpol's attention to the autonomy of the state in her model of social revolution (*States and Social Revolutions. A Comparative Analysis of France, Russia, & China,* Cambridge, England: Cambridge U Press, 1979); & A. Sivanandan's notion of disorganic development, ("Imperialism in the Silicon Age," *Monthly Review,* 1979, 32, 3, 24-42), which hypothesizes the emergence of native forms of cultural & political opposition to dependent capitalist development. It is concluded that long-term studies of social change in the Third World should balance their consideration of structure with acknowledgement of the significance of actors in shaping & constituting the world. 2 Diagrams, 41 References. Freund, Bill (U Natal, Durban 4001 South Africa), **A New Industrial Revolution? Technological Change and the Implications for South African Labour,** *Social Dynamics,* 1992, 18, 1, June, 1-19.

¶ To assess the claim in contemporary international development research that the world is on the verge of a renewed industrial revolution, the current literature is reviewed & its applicability to the South African context evaluated, focusing on technological aspects, labor-related changes, & international shifts in production & innovation. South Africa is in a position to capitalize on these changing dynamics, although several caveats are mentioned: the pressing need for a social compact; the need to solve skills & training limitations & block-ups; & the difficulties involved in evolving an effective state-led industrial policy. The persisting possibility that only a minority will benefit from successful adaptation is considered, because the sociopolitical context will undoubtedly have a determining influence on economic development. 36 References. Gereffi, Gary & Fonda, Stephanie (Dept Sociology Duke U, Durham NC 27706), **Regional Paths of Development,** UM *Annual Review of Sociology,* 1992, 18, 419-448.

¶ Five major theoretical perspectives on regional paths of development in the Third World are discussed: (1) neoclassical economics; (2) world systems/dependency theories; (3) the developmental state; (4) institutional analysis; & (5) Marxism. Marked affinities between individual theories & the experiences of particular regions of the Third World are evident. Statistical comparisons reveal that East Asia ranks highest on almost all indicators of economic & social development, followed by Latin America, South Asia, &, at a considerable distance, Africa. Agriculture is associated with poor economic & social well-being, although industrialization does not guarantee a higher living standard. Investment in health, education, & training are necessary to improve social welfare. 2 Tables, 122 References. Adapted from the source document. Gordon, Liz (U Canterbury, Christchurch 1 New Zealand), **Youth, State Policy and the Labour Market: The Construction of a New Hegemony,** *New Zealand Journal of Educational Studies,* 1991, 26, 2, Nov, 165-182.

¶ Recent policies relating to young people in New Zealand, in the areas

of education, vocational training, & social security, are considered within the context of the new hegemonic project of the state, which reifies supply-side solutions to social & economic problems. The role of capital (diversified as it is) is examined in terms of the relationship of its accumulation strategies to the state's policy directions. It is demonstrated that state policies for youth are based largely on a particular analysis of the labor market, relating to the need for skilled workers & strategies to meet the new technological era. However, evidence from the 1981 & 1986 census show that this interpretation of labor market change is not necessarily correct. It is concluded that there is little evidence that new policies for youth are working to aid either young people or the economic sector. Rather, they work most effectively to uphold the larger hegemonic project of the state, providing legitimation for its larger program but, at the same time, creating contradictions for young people who must live within & experience the policy framework. 1 Table, 43 References. Adapted from the source document.

Gupta, Arvind (Instit Defence Studies & Analyses, Barakhamba Rd New Delhi 110001 India), **Evolution of the Conceptual Basis of *Perestroika*,** *Indian Journal of Social Science,* 1991, 4, 1, Jan-Mar, 59-75.

¶ The early *perestroika* ideology was clearly influenced by V. I. Lenin's New Economic Policy program, Nikita Khrushchev's destabilization program, & Yuri Andropov's 1983 drive toward perfecting socialism. Serious thinking had been going on among an influential but limited number of Soviet academic, political, & military personnel on ways to deal with the ripening crisis in Soviet society even during the last years of the Brezhnev government. Four stages of *perestroika* are identified: (1) in Apr 1985-Feb 1986, *perestroika* began with expressions of close adherence to socialism; (2) between Feb 1986 & June 1988, *glasnost* gathered momentum, which brought pressure on the party & made *perestroika* popular among the people; (3) in June 1988-June 1989, a blueprint of political reforms was presented; (4) during June 1989-Mar 1990, distinct signs of *perestroika* stepping outside the bonds of traditional Marxism-Leninism began to appear. This tendency intensified after the Twenty-Eighth Party Congress at which the concept of humane, democratic socialism was put forward, modifying the older concept of socialism. 48 References. Henry, Stuart (Dept Sociology Eastern Michigan U, Ypsilanti 48197), **Guerrilla Economics and the Wild Economy,** UM *Crime, Law and Social Change,* 1991, 15, 1, Jan, 1-18.

¶ A review essay on books by: Philip Harding & Richard Jenkins, *The Myth of the Hidden Economy: Toward a New Understanding of Informal Economic Activity* (Milton Keynes: Open U Press, 1989); & Alejandro Portes, Manuel Castells, & Lauren A. Benton (Eds), *The Informal Economy: Studies in Advanced and Less Developed Countries* (Baltimore: Johns Hopkins U Press, 1989 (see listings in IRPS No. 66)). Harding & Jenkins examine the informal economy in advanced capitalistic countries, particularly the US & GB. They argue that the informal economy concept impedes theoretical development, & that the distinction between informal & formal economies is artificial; rather, they represent different ends on an analytical continuum & all social interaction contains elements of both. Portes, Castells, & Benton consider the economies of both advanced & less-developed capitalist countries, analyzing the theoretical & practical implications of in-depth observational studies in different settings. They suggest that the informal economy is universal, growing, & ever changing in form. D. Generoli

Janáček, Kamil (Ekonomický ústav ČSAV, Politických vezňů 7 CS-11173 Prague 1 Czechoslovakia (Tel: 02-26-87-19)), **K vybraným sociálním efektům transformace československé ekonomiky** (Some Social Effects of Economic Transformation in Czechoslovakia), *Sociologický Časopis,* 1992, 28, 3, 386-393. (CZE)

¶ The social effects of the economic transformation in Czechoslovakia from communism to capitalism are analyzed on the basis of national statistics. On the level of individual households, there is considerable rational adaptation, eg, a renewed propensity to save. The inequality of earnings among various sectors of the economy is intensifying, differentiating levels of household income. Unemployment is still low, & is mainly concentrated among certain geographic regions & age groups. About 13% of the households were at the poverty level in 1991, with another 17% close to that level. There is a great need for studying ways to redistribute income. 2 Tables, 5 References. Adapted from the source document as translated by M. Meeks.

Kobe, Miloš, Tehnološko znanje-kapital postindustrijski družbe (Technological Knowledge-The Capital of Postindustrial Society), *Anthropos,* 1992, 24, 1-2, 151-161. (SLV)

¶ During the industrial era, technological expertise became a dominant production factor; its influence on production can be presented graphically. Aside from its own special characteristics, knowledge shares along with other economic factors its market value, reflected by its price, enabling the entrepreneur to make a profit. In nonmarket forms of socialism, the goal is to socialize knowledge, & make it more accessible. Now, under the restoration of capitalism in Slovenia, the value of individually owned knowledge is being restored. After the anticipated shift to a postindustrial economy, knowledge will be the prerequisite not only for the individual's economic existence, but also for that of the society as a whole. 6 Figures, 7 References. Lubeck, Paul M. (Merrill Coll U California, Santa Cruz 95064), **The Crisis of African Development: Conflicting Interpretations and Resolutions,** UM *Annual Review of Sociology,* 1992, 18, 519-540.

¶ Explanations for the multiple crises of sub-Saharan African development focus on debates regarding the necessity of following market-oriented economic policies, the capacity of African states to manage either development or reform, & the way in which African institutions reproduce societies that are resistant either to state-centered development or to market forces. Here, after allowing for events beyond the control of policy, perspectives of three schools–neoliberal, structural-nationalist, & institutional–are used to evaluate the literature on peasant agriculture, industry, & state policy. The experience of Nigeria indicates that: commercial agriculture is increasing, structural reforms can have some positive benefits, & its hydrocarbon sector can form a basis for regional industrialization. The rise of popular democratic movements suggests how the crisis has unleashed elements of a formerly passive civil society that promise to reform authoritarianism & discipline rentier states. 122 References. Adapted from the source document.

93Z4781

Magatti, Mauro (Dept Sociology U Cattolica Sacro Cuore, I-20123 Milan Italy), **The Social Shaping of the Economy: An Inquiry,** *Innovation,* 1992, 5, 1, 45-59.

¶ The notion of the "social shaping of the economy" (ie, a recognition of the social relations in which markets operate) has received growing attention in recent sociological literature, highlighting the foundations of this concept & identifying viable developments of the debate. A discussion of the regulative properties of the market calls attention to four arguments in support of the social regulation of the economy. Recent contributions are reviewed in an attempt to enhance conceptual & terminological clarity. 112 References. Adapted from the source document.

Marion, Marie-Odile (Instit Nacional Antropología & Historia, Cordoba 45 Mexico 7 DF), **El "Desarrollo Económico" y su impacto en las estructuras sociales e ideológicas de la comunidad lacandona** ("Economic Development" and Its Impact on the Social and Ideological Structures of the Lacandona Community), *Sociológica*, 1990, 5, 13, May-Aug, 207-223. (SPA)

¶ An exploration of the strategies used by the Lacandona people of Lancanja Chansayab, Mexico, in adapting to socioeconomic change in the 1970s & 1980s, including exposure to evangelical Christianity, development of the nearby jungle, & tourism. While elements of their traditions have been lost, notably rituals & myths, elements of Lacandona tradition have been incorporated into the evangelical discourse. Economic growth during the 1970s & 1980s was moderate, & the removal of a nearby project that employed residents does not seem to have thrown the community into a recession; they merely returned to their previous subsistence lifestyle with little apparent hardship. The most lasting change seems to have been that women in the community are now more involved in public life & decision making than is traditional in Lacandona culture. Adapted from the source document as translated by J. Taylor.

93Z4784

Miková, Zuzana (*Sociologický ústav ČSAV, Jilská 1 CS-11000* Prague 1 Czechoslovakia (Tel: 02-235-89-68-71; e-mail: soc@cspgas11.bitnet)), **Lidský kapitál a strategie chování ve sféře práce** (Human Capital and Household Work Strategies), *Sociologický Časopis*, 1992, 28, 3, 337-350. (CZE)

¶ The change from a planned economy to a free market in Czechoslovakia involves changes in work strategies on the level of individual households. Analysis of public opinion survey data from many sources shows four models of typical household response to the new economic realities. For most households, the traditional orientation of the formal sphere of work is still important. The most common adaptation mechanism is to supplement regular wages with informal income & production of goods & services at home. The level of human capital. Despite the persistence of a defensive orientation, some movement toward a strategy based on performance & achievement is noted. The first suggestions of market household substitution & rational behavior are occurring in the area of higher investment in human capital. Such strategies in formal employment, typical for highly educated workers, reduce the importance of activities in the informal & household spheres. 4 Tables, 1 Graph, 7 References. Spilling, Olav R., Kulturstrategier i lokal utvikling (Cultural Strategies in Local Development), *Tidsskrift for samfunnsforskning*, 1991, 32, 6, 467-500. (NOR)

¶ The relationship between culture & local development is considered, with focus on the concept of entrepreneurship, drawing on empirical data from the cities of Risor & Notodden, Norway. How cultural aspects may influence local development is discussed, & a framework for analyzing cultural strategies is proposed. It is argued that culture may be considered an economic sector with growth potential, but the potentials may be rather marginal, & the effects of culture & entrepreneurship are in many ways unpredictable. Further research-based knowledge is needed. 6 Tables, 64 References. Adapted from the source document.

93Z4790

Stena, Ján (Sociologický ústav Slovak Academy Sciences, Obrancov Mieru 49 CS-814138 Bratislava Czechoslovakia), **Utváranie občianskej spoločnosti ako rozvojový problém súčasného Slovenska** (The Creation of Civil Society as a Developmental Problem in Contemporary Slovakia), *Sociológia*, 1991, 23, 1-2, 7-22. (SLO)

¶ Current changes in Slovakia are leading to the reorganization of society in accordance with new principles. Specifically, a new civil society is emerging, not as an ideal philosophical abstraction, but in an objective. concrete way contributing to the advance of civilization. The new civil society is based on the individualization of social life, in which each person is free to realize his own interests, in contrast to the previous socialist system in which everything revolved around the interests of the state. A historical sketch compares the absence of the civil society in Czechoslovakia over this century with the situation in Western Europe. Special attention is given to the sociological analysis of the currently developing civil society. 21 References. Adapted from the source document as translated by M. Meeks.

Tarozzi, Alberto (Facoltá Scienze Politiche U Bologna, I-40125 Italy), **L'interpretazione dello sviluppo. Un orizzonte per la sociologia** (Interpreting Development. A New Frontier for Sociological Analysis), *Studi di Sociologia*, 1991, 29, 2, Apr-June, 209-228. (ITA)

¶ The traditional paradigm of modernization through dependency used in the sociological interpretation of economic development has been questioned in recent years. The 1990 UN Development Program's Human Development Report argues against a reductionist definition of human development at the international level on exclusively economic & quantitative criteria. Only when social phenomena are analytically interpreted can unintended, random links & retroactive elements characterizing the development process be understood. While the existence of mutually dependent economic regions in the global system may point to the qualitative importance of a reciprocity principle based in socioanthropology, & a relativist perspective, efforts to safeguard reciprocity may prevent the emergence of hybridized social systems. A reflexively based sociological interpretation focusing on the interdependent links between North & South, individual & system, & man & nature is proposed. 2 Figures, 100 References. Williams, Karel, Haslam, Colin, Williams, John, Cutler, Tony, Adcroft, Andy & Johal, Sukhdev (Dept History University Coll Wales, Aberystwyth SY23 3DY), **Against Lean Production**, *Economy and Society*, 1992, 21, 3, Aug, 321-354.

¶ Lean production ((LP) Womack, J., Jones, D., & Roos, D. *The Machine that Changed the World*, New York: Rawson Associates, 1990), was used to describe the new Japanese techniques of production, & was presented as standing in simple opposition to Western mass-production techniques. Using company reports & accounts, & national & international official statistics, the concept of LP is evaluated as a basis for understanding competition in the world car business. Four propositions that undermine the claims made by Womack et al for LP are explored: (1) the claimed difference between distinctive LP & mass production techniques is not empirically sustainable; (2) the central claim that LP involves half the human effort is a substantial exaggeration of real difference in productive efficiency; (3) failure to identify the causes of the performance gap between Japan & other countries; & (4) the expectation that competition between companies will produce balanced trade lacks firm foundation. Findings are used to articulate a revisionist empirical analysis that points toward a public policy, in the European Community & the US, of regulating the Japanese car companies by placing limits on Japanese parts imports. 19 Tables, 40 References. 93Z4795

Zaslavsky, Victor, Three Years of *Perestroika*, UM *Telos*, 1987-1988, 74, winter, 31-41.
Translated from Russian by Alexander Zaslavsky.

¶ (Originally published in *Mondoperaio*, 1987, Dec.) Reflections are offered on the state of Soviet society after three years of *perestroika*. Mikhail S. Gorbachev launched *perestroika* by stressing scientific & technological progress, a strategy that quickly proved fruitless. He then shifted to economic reforms that emphasized self-financing & autonomy for industrial enterprises. Reasons why Gorbachev's economic reforms have not succeeded are offered, & the Soviet government's failed attempt to eradicate unearned income (ie, excessive wealth) is discussed. The government's attack on unearned income resulted in a popular backlash that damaged Gorbachev's reform efforts. It is concluded that the first three years of Gorbachev's rule produced no concrete restructuring & little improvement in the quality of life of the average Soviet citizen. W. Howard

Baxter, Vern & Mann, Susan (Dept Sociology U New Orleans, LA 70148), **The Survival and Revival of Non-Wage Labour in a Global Economy**, *Sociologia Ruralis*, 1992, 32, 2-3, 231-247.

¶ An examination of the survival & revival of nonwage forms of production in contemporary agriculture, drawing parallels to industry. Research that tends to erase differences between capitalist production & petty commodity production is criticized. The case of contract farming is used to develop an alternative argument that only by recognizing the different economic logics & political implications of wage- & nonwage labor can natural & social barriers to capitalist development, & the survival & revival of nonwage forms of production, be explained. 63 References. Adapted from the source document.

Berberoglu, Berch (Dept Sociology U Nevada, Reno 89557), **The Internationalization of Capital and Its Impact on Labor on a World Scale**, UM *International Review of Modern Sociology*, 1990, 20, 2, autumn, 179-192.

¶ Statistical data from several sources are drawn on to describe the internationalization of capital since WWII & to analyze the impact of this process on labor & the labor movement in the Third World. It is suggested that the new international division of labor ushered in by the transnational monopolies on a world scale accelerated the expansion of manufacturing production in less-developed countries, & led to the growth of an industrial workforce that is exploited by international capital at an extraordinarily high level through below-subsistence wages. This situation has, in turn, led to the politization of the labor force & brought the labor movement to the forefront of the struggle against imperialism. 6 Tables, 2 Figures. Connolly, Priscilla (Dept Sociologia U Autónoma Metropolitana, Azcapotzalco 02000 Mexico DF), **Dos décadas de "sector informal"** (Two Decades of the "Informal Sector"), *Sociológica*, 1990, 5, 12, Jan-Apr, 75-94. (SPA)

¶ A critical analysis of the notion that the current economic restructuring is resulting in an expanded informal sector in many urban areas. The concept of informal sector is reviewed, & its applications are considered in: the national industrial economies of the 1970s; Latin America in the 1970s; & the present crisis in Latin America. It is argued that the ambiguous definition of the term "informality" nullifies its use as a category. It is concluded that in the present Latin American context, the vague discourse surrounding the informal sector is useful to right-wing political interests in that it supports neoliberal policies. 38 References. Ibbetson, David (Magdalen Coll, Oxford OX1 4AU England), **From Property to Contract: The Transformation of Sale in the Middle Ages,** *Journal of Legal History,* 1992, 13, 1, Apr, 1-22.
¶ The transition to capitalism in the late eleventh & twelfth centuries incorporated an undeniable legal dimension, especially Germanic legal codes & renewed emphasis on Roman law. Nonetheless, it is argued that the real impetus for marketplace change came from merchants, not lawyers, & that these transformations depended on emergent, culturally based social practices, not on intellectual analyses of legal categories. While legal mechanisms to enforce a transformed notion of "sale" (a cash contract rather than a mode of conveyance) were crucial to early capitalist practices, it is suggested that more significant were the material tokens of future conduct between seller & buyer, including handshakes, pledge tokens, wine, & "God's pennies." Lie, John (Dept Sociology U Illinois, Urbana 61801), **The Concept of Mode of Exchange,** UM *American Sociological Review,* 1992, 57, 4, Aug, 508-523.
¶ Arguing that the neoclassical economic concept of the market ignores social relations & structures, a sociological concept of mode of exchange is presented as an alternative, distinguishing four modes of exchange based on whether trade is open to popular participation & whether it is primarily within or across regions. The social-structural conditions that underlie each mode of exchange include the level of stratification & political centralization. The power struggle among groups for control over trade, rather than individual utility maximization, is a critical factor in commercial development. This framework is applied to commercial development of England & Japan. 2 Figures, 111 References. Adapted from the source document. Papson, Stephen D. (Saint Lawrence U, Canton NY 13617), **Green Marketing and the Commodity Self,** *Humanity and Society,* 1992, 16, 3, Aug, 390-413.
¶ The development of "green" or environmental marketing is examined to show that, like nature advertising prominent during the 1920s, it serves to legitimate consumption by protecting corporate environmental practices from criticism & by reducing guilt associated with overconsumption. The emergence of unnecessarily high levels of commodity consumption is discussed, & referent systems used by advertisers to signify environmental concern are examined. It is maintained that the production of representations by advertisers is driven by the logic of capital &, as a result, functions to legitimate corporate goals. Green commodity marketing sanctions consumption by disingenously divorcing the act of consumption from its impact on the environment. 71 References. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Taylor, Ian (Dept Sociology U Salford, M5 4WT Lancashire England), **The International Drug Trade and Money-Laundering: Border Controls and Other Issues,** *European Sociological Review,* 1992, 8, 2, Sept, 181-193.
¶ The escalating international trade in drugs & the associated international problem of money-laundering are examined from the production side, as an effect of the demise of mass production in Western countries & the intensification of competition for capital, & on the demand side, in terms of the cultural conditions contributing to the consumption of hard drugs, especially in North American metropolitan areas. An attempt is made to provide an alternative, sociological account, grounded in political economy & cultural theory, to the more familiar demonological accounts of Western political leaders & journalists, which tend to focus too simplistically on the activities of Third World drug barons. 23 References. Amin, Samir (Bureau Africain Third World Forum, BP 3501 Dakar Senegal), **Transnationalisation,** *Indian Journal of Social Science,* 1991, 4, 1, Jan-Mar, 25-44.
¶ The conflict between transnationalization & national autonomy is examined. Since the 1970s & 1980s, transnationalization, primarily within the European community & between the three poles of the capitalist world–the US, Japan, & the European community–has expanded at a rate higher than growth & has been accompanied by regional crystallization. Transnationalization contradicts national autonomy & in developing countries often leads to the detrimental effect of poverty for the majority. Accepted models of transnationalization suggest that the process is inevitable & that acceptance & adjustment are the only two viable responses to it. Progress in the Third World may, however, rely on resisting accumulation, & thus, dependence. The process of transnationalization & the response to it of various countries in the Third World, Eastern Europe, & Asia are discussed. 4 Tables, 6 References. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Anderson, Kevin (Northern Illinois U, DeKalb 60115-2854), **The East European Upheavals, German Unification and the Future of Marxism: The Continuing Relevance of the Concepts of State Capitalism and Marxist Humanism,** *Humanity and Society,* 1992, 16, 2, May, 138-158.
¶ Marxist humanism & state capitalism continue to be relevant leftist movements despite political shifts in central & Eastern Europe. Popular disillusionment with democratic reforms & an implied movement away from capitalism are exemplified in the formerly communist countries of Czechoslovakia, Romania, Poland, Russia, & the former East Germany. A critical assessment of statist communism reveals structural contradictions in its agenda to break with Stalinist & social democratic orthodoxy, which are both rooted in human emancipation through modernization & objective changes in the productive forces. A truly liberated society is the objective of a radically emancipatory strand of Marxist state capitalist theory & Marxist humanist philosophy, focusing on subjectivity in historical development, Hegelian dialects, & Marxist praxis. Such a theory draws from the writings of Raya Dunayevskaya, Frederick Pollock, Tony Cliff, Erich Fromm, & Karel Kosík. 76 References. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Chase-Dunn, Christopher & Hall, Thomas D. (Dept Sociology Johns Hopkins U, Baltimore MD 21218), **World-Systems and Modes of Production: Toward the Comparative Study of Transformations,** *Humboldt Journal of Social Relations,* 1992, 18, 1, 81-117.

¶ It has been argued by some scholars that fundamental changes have occurred in the logics of intersocietal systems in the past, & might occur again in the future; others claim that systemic logic merely oscillates between state-based & market forms. A stand is taken on the continuity/transformation issue that posits a typology of qualitative transformations over the last 17,000 years, as very small stateless, classless world systems became transformed & incorporated into the single global political economy of the present. 1 Figure, 81 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Chishti, Sumitra (School International Studies Jawaharlal Nehru U, New Delhi 110067 India), **Systemic Changes in the World-Hegemony and World Economic Order in the Nineties,** *Indian Journal of Social Science,* 1991, 4, 1, Jan-Mar, 45-57.

¶ An examination of the hypothesis that the hegemonic power of the US has declined. Various theories of hegemony & the need for hegemonic power in the present world development are analyzed in the context of the collapse of the communist system & the strengthening of global capitalism. Claims made for the status of emerging hegemonic position by Germany & Japan are assessed; these two countries are economically strong, but are not in a position to take the mantle from the US. The US, with its resources, military power, & experience of exercising hegemony, is the only eligible candidate. After achieving the defeat of communism, the US has the primary objective of making the global economy safe for the growth of capitalism. 27 References. Coufoudakis, Van, Post-1974 Greek Domestic Politics: The Panhellenic Socialist Movement-Promise and Performance, IM *Journal of Political and Military Sociology,* 1991, 19, 2, winter, 293-306.

¶ A review essay on books by: Richard Clogg, *Parties and Elections in Greece-The Search for Legitimacy* (Durham: Duke U Press, 1987); Michalis Spourdalakis, *The Rise of the Greek Socialist Party* (London & New York: Routledge, 1988); Nikolaos A. Stavrou (Ed), *Greece under Socialism-A NATO Ally Adrift* (New York: Caratzas Publishers, 1989); & Zafiris Tzannatos, *Socialism in Greece-The First Four Years* (Brookfield, Vt: Gower Publishing Co, 1986 (see listings in IRPS No. 66)). The 1974 restoration of democracy in Greece brought about a liberalization of Greek politics, legalized the participation of the communists, & gave rise to the Panhellenic Socialist Movement (PASOK). PASOK's ideological distinctiveness & its performance in office became the object of much political controversy. Clogg suggests that between 1974 & 1981 PASOK, created by Andreas Papandreou, became the most effective, widespread, & democratic grass-roots political organization in Greek politics. Tzannatos's volume consists of selected papers presented at a 1983 conference, most of which focused on the transformation of Greek public life under PASOK. The essays address the past & present of socialism, the political economy, the state & civil society, & social services, health, & education in Greece. Spourdalakis addresses PASOK's failure to reach its radical potential, partly due to its dual political discourse portraying the movement both as moderate, pragmatic, & realistic & as radical. Stavrou provides a conservative critique of PASOK, distinguishing it from other Eurosocialist parties. It is concluded that none of the volumes, because of ideological leanings to the Right or Left, provides a comprehensive or objective evaluation of PASOK. S. Millett (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Cutler, Tony (Business School Middlesex Polytechnic, London NW4 4BT England), **Vocational Training and British Economic Performance: A Further Instalment of the 'British Labour Problem'?,** *Work, Employment and Society,* 1992, 6, 2, June, 161-183.

¶ In an attempt to locate the reasons for postwar British economic failure, two possible explanations are explored: the British labor problem, which blames workers & unions, & the British training program, which blames the poor quality of vocational training. It is contended that preoccupation with training in the 1990s is analogous to the labor problem as the cause of GB's economic problems in the 1980s. The research of the National Instit for Economic & Social Research is critically examined, & the reason why an increase in vocational training has become such a popular policy in the 1990s is discussed. 27 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Delcourt, Jacques (U Catholique Louvain, B-1348 Louvain-La-Neuve Belgium), **Globalisation de l'économie et progrès social. L'Etat social à l'heure de la mondialisation** (Globalization of Economy and Social Progress. The Welfare State at a Time of Internationalization), *Futuribles,* 1992, 164, Apr, 3-34. (FRE)

¶ The dysfunctional effects of the welfare state are analyzed, including high administration costs, quality of services, & counterproductivity. Among the more recent arguments against it are the negative effects of interest-group interaction, & the internationalization of economy, with its implied international interdependence & competition. Positive aspects of the welfare state are also examined, emphasizing the functions of social control, correction of social inequalities, & mobilization of human resources in service of development. It is concluded that future globalization & development cannot be achieved if the welfare state concept is completely abandoned. 4 Tables, 3 Figures, 23 References. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Denemark, Robert A. (Dept Political Science U Delaware, Newark 19716), **Core-Periphery Trade: The Debate with Brenner over the Nature of the Link and Its Lessons,** *Humboldt Journal of Social Relations,* 1992, 18, 1, 119-145.

¶ As part of the debate on the relative role of exchange & production in shaping social, political, & economic reality, the three main arguments raised by R. Brenner ("The Agrarian Roots of European Capitalism" in Aston, T., & Philpin, C. (Eds), *The Brenner Debate,* Cambridge: 1985, 213-329) on the world-system approach represented by A. G. Frank & B. Gills ("5000 Years of World System History: The Cumulation of Accumulation" in Chase-Dunn, C., & Hall, T. (Eds), *Core/Periphery Relations in Precapitalist Worlds,* Boulder: Westview Press, 1991, 67-112) are critiqued. According to Brenner: (1) capitalist logics cannot be applied to precapitalist periods; (2) class analysis is the most pertinent to the study of social change; & (3) capitalism is a national, self-generated process. The discussion focuses on the case study of Poland in the fifteenth century. After reviewing the history of the debate, the main world-system arguments, & Brenner's criticism, it is concluded the Brenner's critique is unconvincing. However, several methodological lessons may be learned from it relating to periodization & case choice. 29 References. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Frank, Andre Gunder & Gills, Barry K. (U Amsterdam, NL-1011 NH Netherlands), **The Five Thousand Year World System: An Interdisciplinary Introduction,** *Humboldt Journal of Social Relations,* 1992, 18, 1, 1-79.

¶ This non-Eurocentric theoretical analysis perceives the contemporary

world system (WS) as having a history of at least 5,000 years, with most characteristics commonly ascribed to the modern world (since 1942) seen as having a much longer history. It is argued that European hegemony is a recent & perhaps passing phenomenon. The analysis emphasizes the centrality of the economic law of value in the process of capital accumulation in the WS history since the ancient Mesopotamian cultures. It is observed that center-periphery structure characterized the WS long before the discovery of the Americas. Also emphasized is the long history of alternations between hegemonic leadership & rivalry for hegemony. Long & short economic cycles of ascending & descending phases are also central to the WS history. The thoughts of scholars from diverse disciplines on the subject are discussed, eg, Samir Amin (*Eurocentrism*, London: Zed, 1989) & Immanuel Wallerstein (*The Modern World System*, Vols I, II, & III, New York: Academic, 1974, 1980, & 1988, respectively). 170 References. Galanguest, Kathryn P. (U Maine, Orono 04469), **Transitions from Centralization to Democratization in Central-Eastern Europe,** *Humanity and Society*, 1992, 16, 2, May, 117-137.

¶ The new opportunities for democratization emerging from the progressive decentralization of Eastern Europe depend on the creation of structures & relationships for a broad-based empowered citizenry & increased political participation. This critique of current political systems in both the East & West proposes a more humanistic model for democracies, citing transitions from centralization to democratization in Poland, Czechoslovakia, & Hungary. Centralization & associated hierarchy, specialization, & impersonality cause a distancing of political decision making & result in citizens' disengagement from democratic participation. Essential to a true democracy are the reformation of state power to include a three-branch government, & the restructuring of a civil society that assures autonomous, direct participation of a diverse pool of citizens. 1 Figure, 51 References. J. Sadler

93Z4817

Goldstein, Leonard, The Unification of Germany: Causes and Prospects, *Nature, Society, and Thought*, 1991, 4, 3, July, 355-368.

¶ A discussion of the future of the former East Germany in the aftermath of German reunification. After reviewing conditions for the formation of the German Democratic Republic (GDR), it is observed that the Soviet economy, which established socialism in a backward Russian capitalism, imperialistically subordinated the East German economy. Socialism in the GDR became more difficult to build & maintain. Its economic problems resulted from an overreliance on centralized investment in heavy industry. Although there were gains in social welfare, travel restrictions, an obstinate leadership, & a steadily worsening economy led to popular dissatisfaction. Unification was made contingent on a monetary union & the privatization of state-owned industry. Unification is seen as an annexation or colonialization. 2 References. J. Sadler

Grillitsch, Volker (English/American Studies Dept Humboldt U, D-1086 Berlin Federal Republic Germany), **The Destruction of the German Democratic Republic,** *Nature, Society, and Thought*, 1991, 4, 3, July, 369-376.

¶ The collapse of the German Democratic Republic (GDR) & its socialist system was caused by a number of external & internal factors. Most important were the inefficiency of the economy & the failure of the Council for Mutual Economic Assistance. Other international factors (human rights campaigns, detenté, Mikhail Gorbachev's new thinking) had a substantial impact on internal development, already characterized by increasing conflicts. The Socialist Unity Party of Germany, with its claim to the leading force in society, was unable to adapt its policy to new national & international situations after 1975 & particularly after 1986. It failed to meet its own claim–ie, to solve the internal social conflicts–&, therefore, is to be held responsible for the destruction of the GDR. AA

Kukreja, Sunil (U Puget Sound, Tacoma WA 98416), **The Relationship between Transnational Penetration, Militarization, Debt Dependence, and Political Exclusion,** UM *International Review of Modern Sociology*, 1991, 21, 1, spring, 131-162.

¶ The correlation between three mechanisms of dependency relations–transnational penetration, debt dependence, & military dependence–& political exclusion was examined through path analysis of secondary data from 97 nations. Transnational penetration was weakly associated with political exclusion, but stronger relationships existed between world system position, debt dependence, & political exclusion. Military expenditures & arms imports were positively related to political exclusion, & militarization was also positively related to debt dependence. The relationship between transnational penetration & military dependence was negative, though debt dependence appeared to have an intervening effect on the relationship. 2 Tables, 3 Figures, 1 Appendix, 48 References. Adapted from the source document.

93Z4820

Laibman, David (Brooklyn Coll, NY 11210), **Market and Plan: The Evolution of Socialist Social Structures in History and Theory,** UM *Science and Society*, 1992, 56, 1, spring, 60-91.

¶ Despite the recent collapse of many socialist regimes, the experience of twentieth-century socialist construction contains the core of a viable model of socialism–grounded both in history & in the theory of social development culminating in capitalist society–that is neither an arbitrary utopian projection, nor a mechanical rationalization for the preexisting Eastern-bloc reality. The model's core is comprehensive planning: an articulated combination of central & decentral planning that provides for the necessary sophistication of success indicators & elaboration of widespread participation & dialogue required if new qualities of principled behavior & consensualization are to evolve. Stages in the development of comprehensive planning are outlined, & a role for a subsidiary spontaneous-market sector is sketched. The changing social contents behind apparent market relations are examined, & a set of criteria is developed to weigh the strengths & weaknesses of plan & market forms of organization. While the outlines of a mature & viable socialist society appear in the twentieth-century postcapitalist regimes, authoritarianism has prevented the socialist potential from being realized. Socialism, however, remains the key to further major advances in democracy, productivity, & well-being. 1 Table, 53 References. AA

Lele, Jayant (Queen's U, Kingston Ontario K7L 3N6), **Seeking Inspiration from Maldevelopment,** *Humboldt Journal of Social Relations*, 1992, 18, 1, 225-239.

¶ A review essay on books by: Samir Amin, *Maldevelopment: Anatomy of a Global Failure* (London: Zed Books Ltd, 1990) & Samir Amin, Giovanni Arrighi, Andre Gunder Frank, & Immanuel Wallerstein, *Transforming the Revolution: Social Movements and the World-System* (New York: Monthly Review Press, 1990 [see listings in IRPS No. 66]). Today's pattern of global economy, it is suggested, is reminiscent of the pre-1930s era of colonialism & Western economic hegemony, despite Third World endeavors to achieve economic, cultural, & social liberation. Both books–*Maldevelopment* with its focus on problems of ethnicity & nationhood in Africa, & *Transforming the Revolution*, examining the dynamics of popular response to oppression–offer profound analyses of today's malaise. Here, the concept of development is explored from the world-systems perspective, & its constraints are noted. The critique by Amin et al of the notion of democracy as found in Third World liberation is praised; their exciting debate on the prospects of capitalism, socialism, & "classical economic liberalism" is also lauded. 9 References. I. Shagrir

93Z4822

Manza, Jeff (Dept Sociology U California, Berkeley 94720), **Postindustrial Economics,** UM *Socialist Review*, 1992, 22, 1, Jan-Mar, 107-112.

¶ A review essay on a book by Fred Block, *Postindustrial Possibilities: A Critique of Economic Discourse* (Berkeley & Los Angeles: U of California Press, 1990 [see listing in IRPS No. 66]). A useful contribution to leftist debates on contemporary social change, Block's book outlines a model of qualitative economic growth that aims to use the best aspects of the emerging postindustrial economy to attain greater equality & democracy. Block identifies the kinds of economic projects that are possible within postindustrial society. He offers a general critique of neoclassical economics & Marxism, demonstrating that postindustrial developments have made the categories of traditional economic discourse irrelevant, &

0038-0202/93 $1.50

argues that postindustrialism increases the significance of the social relations of production. Block's model of a desirable postindustrial economy stresses: reorganization of workplaces, & of labor markets, & the expansion of educational institutions. However, the book is criticized for ignoring the politics of economic reform. W. Howard

93Z4823

Martinelli, Alberto (Dept Sociology U Milan, I-20122 Italy), **The Economy as an Institutional Process,** UM *Telos,* 1987, 73, fall, 131-146.

¶ An explication of Karl Polanyi's critique of economic institutions & capitalist society focuses on his *The Great Transformation* (Boston: Beacon Press, 1967), the central thesis of which is that the self-regulating market is founded on tenuous premises since it destroys humanity & the environment. Polanyi's project is situated within early & mid-twentieth century social & economic thought, & his intellectual indebtedness to the work of Max Weber & Bronislaw Malinowski is discussed. Other themes in Polanyi's book include: the conflict between economic liberalism & social protectionism, the rise & fall of liberal capitalism, & the economy as an institutional process. Polanyi is criticized for his organic & holistic concept of society, the static nature of his typology of forms of integration, & for underestimating the degree of complexity of the societies he studied. W. Howard

93Z4824

Miller, Carol D. (Dept Sociology U Arizona, Tucson 85721), **Trade Dependence and Maternal Mortality,** *Humboldt Journal of Social Relations,* 1992, 18, 1, 147-161.

¶ World-system theory & dependency theory are drawn on to explore the status of women in relation to the global economic system. Focus is on the relationship between various measures of dependent Third World economy & maternal mortality rates. Data on trade commodity concentration, trade partner concentration, & per capita gross national product are drawn from the UN *Yearbook of International Trade Statistics* (1981). Maternal mortality rates are based on World Health Organization data. It is concluded that women in poor dependent nations have a higher chance of maternity-related death than women in core-hegemonic countries. From a world-systems perspective, women in dependent economies are disadvantaged in working & living conditions, & have higher fertility & mortality rates. 1 Table, 1 Figure, 1 Appendix, 22 References. I. Shagrir

93Z4825

Misztal, Barbara A., Must Eastern Europe Follow the Latin American Way?, UM *Archives Européennes de Sociologie,* 1992, 33, 1, 151-179.

¶ The prospects for democratization in Eastern Europe are evaluated from the perspective of Latin American experiences. Research literature that views Latin America's chances for democracy as contingent on certain economic & political variables is reviewed, & studies that examine the historical processes that underlie democratization are discussed. It is shown that, while both Latin American & Eastern European countries face similar restrictions on developmental policy, the role played by the international economic & political environment is more important for postcommunist societies than for Latin American nations. Political impediments to democratic consolidation are explored, & the role of political parties in democratic consolidation is assessed. Based on Latin America's experience, it is concluded that the postcommunist societies' chances of meeting their neoliberal economic goals depend on the politics of the transitions, which can encourage or prevent the development of the state & democratization. 40 References. W. Howard

93Z4826

Müller, Klaus, 'Modernising' Eastern Europe: Theoretical Problems and Political Dilemmas, UM *Archives Européennes de Sociologie,* 1992, 33, 1, 109-150.

¶ Sociology's inability to grasp the dynamics & scope of the upheavals in Eastern Europe is examined. Talcott Parsons's modernization theory is critiqued & related to the central economic & political problems facing Eastern European countries. It is maintained that Soviet-type societies are unlikely to experience a modernization thrust, & that Parsons's theory of modernization contributes little to explaining the dynamics of political conflicts in Eastern Europe. Several suggestions for sociological analyses of the situation in Eastern Europe are offered, including: approaching its transformation from the vantage of its dilemmas rather than projecting an evolutionary logic onto them, & developing a new sense for the political dimensions involved in modernization. 1 Table, 2 Figures, 75 References. W. Howard

Offe, Claus (12 rue l'Ecole médecine, F-75270 Paris Cedex 06 France), **Coming to Terms with Past Injustices,** UM *Archives Européennes de Sociologie,* 1992, 33, 1, 195-201.

¶ Focusing on postcommunist societies, three legal strategies for dealing with political actors of the old regime who committed acts that call for sanctions under the new regime are discussed: applying civil laws (ie, confiscating property, restricting access to public sector jobs), initiating criminal proceedings, & compensating victims. It is concluded that restitution is the best strategy for dealing with unscrupulous actors of the old regime because it is cost-effective. W. Howard

Polychroniou, Constantine G. (U Cincinnati, OH 45221), **Global Capitalism: A Perspective of Convergence,** UM *International Review of Modern Sociology,* 1990, 20, 2, autumn, 239-251.

¶ In a review of the role of government in capitalist systems, the instrumentality of competition in the growth of an economy & its effects on the social system are examined, together with inflation & the industrial countries' high consumption & its social effects. The incidence of unemployment in capitalist vs socialist countries, 1974-1981, is compared using official statistical data, & the interplay of political strife, redistributional policies, & socioeconomic stability is explored. The future globalization of economies & the political growth of capitalism are discussed. 1 Table, 5 References. Adapted from the source document.

Rogovin, Vadim Z. (Instit Sociology Academy Science, 117259 Krzjizjanovcicogo St 24/35 Korpus 5 Moscow Republic Russia), ***Perestroyka* and the Problems of Social-Differentiation,** *Innovation,* 1992, 5, 1, 109-114.

¶ The Communist party in the former USSR came to betray the principle of social justice that was the driving force behind the 1917 October revolution. The erosion of the social policy has created a socially stratified structure that will worsen with the introduction of economic reforms. Unless the process of economic transformation is corrected by a strong social policy, not only is economic reform likely to be impeded, but the political stability of the country is also likely to deteriorate. Saram, P. A. (U Alberta, Edmonton T6G 2E1), **Veblen and Weber, on the Spirit of Capitalism,** *Journal of Historical Sociology,* 1992, 5, 2, June, 234-252.

¶ Max Weber's & Thorstein Veblen's understandings of the spirit of capitalism & its social psychological dimensions are examined. Weber & Veblen provide alternative hypotheses on two decisive variables in the development of the spirit of capitalism, respectively, religion & technology. Here, the development of the spirit of capitalism is described in four sequential phases: early capitalism (capitalism as spirit); early-modern capitalism (capitalism as spirit & economic organization); late-modern capitalism (spiritless capitalism); & postmodernity (society in need of a spirit). It is concluded that, apart from their divergent views on the role of technology & religion in capitalistic development, Weber & Veblen share similar views on socioeconomic trends spanning some 500 years of social change in Western society. 35 References. So, Alvin Y. (Dept Sociology U Hawaii, Honolulu 96822), **The Dilemma of Socialist Development in the People's Republic of China,** *Humboldt Journal of Social Relations,* 1992, 18, 1, 163-194.

¶ Socialist states, usually considered economically autonomous, are seen from the world-systems perspective as situated within the capitalist world

economy; state ownership is considered identical to capitalist ownership. In this light, the socialist development of China since 1949 is examined, focusing on the impact of capitalist world-economy *constraints* on choices of mercantile strategies & revolutionary objectives. It is shown how, in the early 1950s, China borrowed the USSR's mercantilism strategy of postwar economic recovery, then dropped it to enhance revolutionary socialism, but then re-embraced it in the late 1970s with the death of the original socialist leadership & the competition with East Asian capitalist economies. The creation of a hybrid socialist commodity economy in the 1980s is also viewed from a world-system perspective. 32 References. I. Shagrir

Tabb, William K. (Queens Coll, Flushing NY 11367), **Vampire Capitalism,** UM *Socialist Review,* 1992, 22, 1, Jan-Mar, 81-93.

¶ We are currently experiencing a new world order–termed here, "vampire capitalism"–a strategy of growth through redistribution that is based not on the productive capacities of the US, but on its powers of coercion, military force, & political & ideological domination. At a time when economic efficiency & technological innovation are eclipsing military & political domination as forms of control, the US is alone among the developed countries of the world in its emphasis on military intervention, or coerced extraction. One contribution to the development of vampire capitalism is the military-industrial complex's need to justify its existence in the post-cold war world. Vampire capitalism's strategy is to neutralize three forces that oppose US elites: rival capitalist forces, eg, Japan & Germany; the domestic working class; & developing nations dependent on US aid. To counter vampire capitalism, radical reforms must be undertaken, including a reformulation of international codes of corporate conduct, environmental standards, & labor rights. 3 Illustrations, 4 References. Walder, Andrew G. (Dept Sociology Harvard U, Cambridge MA 02138), **Property Rights and Stratification in Socialist Redistributive Economies,** UM *American Sociological Review,* 1992, 57, 4, Aug, 524-539.

¶ An institutional theory of stratification for socialist economies anchored in property rights, defined as the right to derive income from productive assets, is presented & tested through analysis of 1986 survey data on housing & benefits provided by work organizations collected from 1,011 households in Tianjin, People's Republic of China. The theory is based on two aspects of property rights: (1) the dispersion of property rights across a hierarchy of government jurisdictions; & (2) the exercise of these rights by government jurisdictions as they extract revenues, primarily through taxation. Extraction of revenues from a work organization varies with the budgetary resources of a government jurisdiction & the dependence of the jurisdiction on the outputs of the organization. Variation in revenue extraction, in turn, creates inequalities among work organizations in their abilities to provide benefits to workers. Data from Tianjin provide provisional support for the theory. 4 Tables, 66 References. Adapted from the source document.

Wallerstein, Immanuel (State U New York, Binghamton 13901), **Geopolitical Strategies of the U.S. in a Post-American World,** *Humboldt Journal of Social Relations,* 1992, 18, 1, 217-223.

¶ It is argued that the Cold war ensured a relatively stable world order, which the US played a major role in maintaining. In the absence of the threat of Cold war, however, US global power is decreasing, exacerbated by the decline in production & finance. Two areas of continued US strength, military force & research capacity, are noted, along with the impending threats to each. The three major dangers facing the US are outlined: *competition with other Organization for Economic Cooperation* & Development states, military rebellion in the Third World, & acute social conflict within the US. Strategies for confronting these challenges & the plausibility of averting them are briefly considered. Adapted from the source document.

Arditti, Rita (Graduate Program Union Instit, 32 Richdale Ave Cambridge MA 02140), **"Recovering Identity": The Work of the Grandmothers of the Plaza de Mayo,** *Women's Studies International Forum*, 1992, 15, 4, July-Aug, 461-471.

¶ A descriptive report on the Assoc of the Grandmothers of the Plaza de Mayo, formed in 1977 in Argentina to seek the restitution of 400+ children kidnapped or born in captivity during the 1976-1983 dictatorship. The Grandmothers have collaborated with experts to clarify the legal & political contexts in which these children were stolen, assessed the medical & psychological condition of children & their families, & verified genetic filiation. Their work has brought international attention to the plight of these children, as well as legal & scientific expertise to the service of the Grandmothers' efforts. This effect reflects important relations between politics & science, forging new understanding of ethical issues around questions of paternity, maternity, & the right to one's identity. The discussion is situated within an ongoing feminist debate concerning reproductive technologies & parenting in hopes of elucidating some of the difficult questions that confront those working in multicultural, international, & interdisciplinary contexts. 35 References. Chater, Nancy (Women's Studies Programme U Toronto, Ontario M5S 1A1), **Unexamined History Repeats Itself: Race and Class in the Canadian Reproductive Rights Movement,** *Fireweed*, 1991, 33, summer, 44-60.

¶ The Canadian reproductive rights movement is critically examined from the perspective of a white, working-class woman. The movement's limitations are assessed, especially its traditionally white, middle-class orientation, because the time has come for a more broad-based resistance to antiabortion coalitions. A historical self-examination of the movement is offered, although a more informed account of the relation between historic & contemporary classism & racism within the movement is called for. Limitations of the contemporary movement are outlined, including how white women have claimed undue credit for challenges to the movement raised by women of color, the movement's failure to consider race- & class-based dynamics in reproductive choice, & participants' ignorance of & apathy toward the politics of sterilization in Canada. 36 References. Connor, George E. (Dept Political Science Southwest Missouri State U, Springfield 65804-0094 (Tel: 417-836-5630)), **The Politics of Insurrection: A Comparative Analysis of the Shays', Whiskey, and Fries' Rebellions,** *The Social Science Journal*, 1992, 29, 3, July, 259-281.

¶ A comparative examination of the Shay's, Whiskey, & Fries' rebellions reveals their theoretical connections. David O. Sears's & John B. McConahay's model of ghetto violence (*The Politics of Violence: The New Urban Blacks and the Watts Riot*, Boston: Houghton Mifflin Co, 1973) is drawn on to demonstrate that the rebellions can be accounted for by the breakdown of grievance redress mechanisms. This breakdown, in concert with the riot ideology engendered by the early American experience, encouraged the recourse to violence during the founding era. The model includes a component that distinguishes the insurrections from revolutionary political violence, as well as a component that accommodates complementary theories of ideology, rhetoric, & consolidation. Implications of the analysis for the development of both American political institutions & American political thought are discussed. Adapted from the source document.

Der-Karabetian, Aghop (Behavioral Science Dept U La Verne, CA 91750), **World-Mindedness and the Nuclear Threat: A Multinational Study,** *Journal of Social Behavior and Personality*, 1992, 7, 2, 293-308.

¶ Perceptions of nuclear threat & antinuclear activism were assessed 1984-1986 using items adapted from various scales & translated for groups of 109-292 college students in 10 different countries. South African students scored lowest on world-mindedness & those from Sweden scored highest. Taiwanese perceived the threat of nuclear war highest, with Greeks lowest. Low but significant positive correlations were found between the likelihood of nuclear war & world-mindedness in England, Mexico, & the US, & low but significantly negative correlations were found between world-mindedness & the likelihood of personal survival in nuclear war in Australia, UK, India, & Nigeria. Positive correlations between antinuclear activism & world-mindedness were supported in 4 of 6 countries where antinuclear activism is present: Australia, England, Sweden & the US. Results are discussed in terms of M. Sherif's & C. W. Sherif's superordinate goal theory (*Groups in Harmony and Tension*, New York: Harper & Rowe, 1953) & global changes since the data were collected. 3 Tables, 1 Appendix, 44 References. Doctor, Adi H. (Dept Political Science Goa U, 403005 India), **Low Caste Protest Movements in 19th and 20th Century Maharashtra: A Study of Jotirao Phule and B. R. Ambedkar,** *Indian Journal of Social Science*, 1991, 4, 2, Apr-June, 199-222.

¶ A discussion of the low-caste protest movement against the Brahminical order & values in nineteenth- & twentieth-century Maharashtra, India. Focus is on the European (both secular & Christian missionary) impact on the shaping of the movement, which rendered this protest radically different in character from the earlier seventeenth-century protest of *bhakti* saints & poets. Jotirao Phule's strategy to mobilize the downtrodden (*shudras & ati-shudras*) & his attempt to unite all the oppressed non-Brahmin communities into a broader community of "Mara-

thas" is analyzed. After Phule, center stage was occupied by moderate liberal Brahmin reformers mainly concerned with the reform of the Hindu family. At best such reformers sought to reinterpret the Hindu scriptures to suit modern exigencies & reason & made no frontal attack on the ideological basis of Hinduism. B. R. Ambedkar resumed the attack on the ideological basis of Hinduism, in a sense taking over from where Phule left off. Significant change in the nature of the low-caste protest movement occurring over its course is examined. 19 References. AA

Fudge, Judy & Glasbeek, Harry (Osgoode Hall Law School York U, North York Ontario M3J 1P3), **The Politics of Rights: A Politics with Little Class,** *Social & Legal Studies,* 1992, 1, 1, Mar, 45-70.

¶ The theory of the politics of rights (PofR)–associated as it is with an almost exclusive emphasis on new social movements, identity, & culture–is largely rooted in the understandable rejection of older forms of class struggle. The identification of the new social movements as the agents of social transformation, & of civil society as the most important terrain of struggle, however, obscures the extent to which capital & the state have developed strategies & implemented policies that have exacerbated the fragmentation & commodification of civil society. The possibility for solidarity between different emancipatory struggles has been rendered even more likely than before. At the same time, by emphasizing the universal aspects of liberal discourse, the proponents of the PofR have tended to ignore or minimize the extent to which that discourse is associated with the hegemony of the dominant class. Indeed, the allure of the PofR is that the claims it causes to be made are compatible with the dominant hegemony. What tends to be forgotten is that hegemony has evolved to perpetuate fragmentation & inequality. Drawing on the recent experience under the Canadian *Charter of Rights & Freedoms,* an attempt is made to illustrate how elements of the dominant hegemony block the transformative potential of the PofR. 93 References. Lippert, Anne (Dept Foreign Languages Ohio Northern U, Ada 45810), **Sahrawi Women in the Liberation Struggle of the Sahrawi People,** UM *Signs,* 1992, 17, 3, spring, 636-651.

¶ Sahrawi women have substantially increased the traditional participatory functions of women in that society through ever-increasing responsibilities in the liberation struggle of the people of the western Sahara (former Spanish Sahara). The roots of feminine participation lie in nomadic traditions of the several Sahrawi peoples, but the Polisario Front, the political representative of the Sahrawi people, has enunciated & expanded role for women in the society as a major policy direction of the Sahrawi Arab Democratic Republic, the Sahrawi state proclaimed in Feb 1976. Women's experience in the Polisario Front & in the Polisario National Union of Sahrawi Women, educational opportunities provided during the years of the struggle for independence, & practical experience in running the refugee camps, & participation in the institutions of the Sahrawi "state," have combined to make it possible for Sahrawi women to effectively increase their societal participation. Longstaff, S. A. (York U, North York Ontario M3J 1P3), **The Quebec-Canada Crisis,** *New Politics (New Series),* 1992, 4, 1(13), summer, 27-40.

¶ By Oct 1992, voters in Canada's French-speaking province will respond to a referendum on sovereignty, the second such vote in twelve years. Among the developments accounting for this unforeseen revival of nationalism is francophone dissatisfaction with the Charter of Rights & Freedoms in Canada's Constitutional Act of 1982, an innovation that threatens Quebec's ability to protect its linguistic heritage. An even more significant ingredient is the transformation of the Quebec economy under the nationalist *Parti Québécois* government of René Lévesque, which, after losing the referendum of 1980, abandoned its labor orientation to become Canada's most probusiness government in the 1980s. It is because of the success of this transition to market nationalism that Quebec holds such a strong bargaining position in the current round of constitutional negotiations. It also explains the province's enthusiastic backing of the North American Free Trade Agreement recently concluded between the US & Canada, an arrangement that has created much anti-Quebec sentiment elsewhere in Canada, especially on the left. 10 References. Ludes, Peter (Ratzebuschstr 11, D-5910 Kreuztal Federal Republic Germany), **Die Rolle des Fernsehens bei der revolutionären Wende in der DDR** (The Role of Television in the Revolutionary Change of the German Democratic Republic), *Publizistik,* 1991, 36, 2, Apr-June, 201-216. (GER)

¶ To investigate the role of TV in the 1989 overthrow of communism in the former East Germany, interview data were obtained from journalists employed by the major US, West German, & East German networks (to-

tal N = 93). Considerable differences are observed in the responses by East & West Germans. It is concluded that West German TV lent a legitimizing force to the East German political opposition movement, helping to tip the balance in their favor under newly changed conditions of the international power structure. TV did not make the whole revolution, but it did accelerate its onset & bring it to a swifter conclusion. The day-by-day coverage of events played more into the hands of the opposition than of the communist regime. Adapted from the source document.

93Z4852

Luke, Tim, The Dreams of Deep Ecology, UM *Telos,* 1988, 76, summer, 65-92.

¶ Arguing that "deep ecology" is more than a new philosophy of nature, the movement's history, possibilities, & shortcomings are outlined. Deep ecologists have provided the inspiration for numerous bioregional, national, & transnational political action groups since the early 1970s. As well, the movement's other-directed focus has suggested new codes of ethical responsibility. However, deep ecologists' messages are often undercut by their poorly conceived, ineffectively argued, & politically naive positions. Most crucially, deep ecology lacks a theory of transition; ie, although practical arguments & the means for change are integral to success, the focus on "biospherical egalitarianism" of humans & nonhumans highlights a persistent philosophic contradiction that limits the movement's strength. M. Maguire

93Z4853

MacDonald, Michael (Dept Political Science Williams Coll, Williamstown MA 01267), **Blurring the Difference: The Politics of Identity in Northern Ireland,** *South African Sociological Review,* 1990, 3, 1, Oct, 19-32.

¶ The Protestant rejection of the Catholic civil rights movement in Northern Ireland after the mid-1960s reinstituted the persistent conflict between the Protestant majority & the Catholic minority. The dilemma over how to establish political institutions in such a polarized society has not been solved, but scholars have adopted the "dual identity" approach to orient political discussion, viewing Protestants (unionists) as motivated primarily by their attachment to GB & Catholics (nationalists) by their attachment to Ireland. However, it is insufficient just to prescribe constitutions for Northern Ireland that would allow both communities to express their separate identities & traditions, because the communal identities of Protestants & Catholics have been formed through their political & cultural interaction with & opposition to each other over 400 years. If for the Protestants, loyalism presumes disloyalism, than in affirming their traditions, they also accentuate the conflict with Catholics. In this sense, the obstacles to a solution are formidable. 16 References. Adapted from the source document.

Moaddel, Mansoor (Dept Sociology/Anthropology/Criminology Eastern Michigan U, Ypsilanti 48197), **Shi'i Political Discourse and Class Mobilization in the Tobacco Movement of 1890-1892,** *Sociological Forum,* 1992, 7, 3, Sept, 447-468.

¶ Examined is the political role of Shi'i religion in the 1890-1892 tobacco movement against the Qajar state & a British company in Iran. An attempt is made to clarify the relationship between ideology & class action in the movement, & an alternative interpretation of the oppositional role of Shi'ism in the politics of late-nineteenth-century Iran is offered. The analysis demonstrates the utility of conceiving ideology as a discourse that shapes class action. It is argued that, in the tobacco movement, Shi'i Islam represented a language with which to confront the problem of British colonialism, & provided an efficacious tactic for merchants to mobilize support against a British monopoly & challenge British hegemony. 39 References. Piccone, Paul, Reinterpreting 1968: Mythology on the Make, UM *Telos,* 1988, 77, fall, 7-43.

¶ On the twentieth anniversary of 1968, recollections of that year by many chroniclers ("mythologizers") reveal not only the glorification of their youth, but the political agendas of the 1980s. The mythologizers come from three groups: those committed neoconservatives who saw 1968 as a catastrophe & are now holding comfortable moderate liberal positions; born-again liberals who belong to the current intellectual elite; & those who supposedly have remained committed for two decades to their 1968 ideals. Because of their commitment to myth, the mythologizers cannot reconstruct why 1968 happened, nor why it failed. The treatments by the three groups of the myths of the end of US world hegemony, a single world system, the international communist conspiracy, & gender & race, are discussed, & an alternative analysis of 1968 is offered. In the 1960s generalized corruption was blamed on a state defend-

ing corporate capitalist interests against all other groups. This systemic crisis could not be solved by administrative measures, so an alternative grass-roots infrastructure developed; before it could mature, however, the bureaucracy compromised & absorbed the most receptive countercultural elements. M. Pflum

93Z4860

Polasky, Janet L. (U New Hampshire, Durham 03824), **A Revolution for Socialist Reforms: The Belgian General Strike for Universal Suffrage,** *Journal of Contemporary History,* 1992, 27, 3, July, 449-466.

¶ After the Aug 1890 demonstration for universal suffrage & the Belgian Parliament refusal to enact suffrage reform, Belgian socialist leaders voted to strike. This event was noteworthy in that it linked their revolutionary strategy with their political goals: in the aftermath of the strike, the Belgian socialists won places in the government. When universal suffrage continued to be voted down in Parliament, general strikes in 1893, 1902, & 1913 reinforced this linkage, & gained the socialists more parliamentary seats. By the turn of the century, they had adopted their brand of Marxism to the gradually opening political system, citing Friedrich Engels to justify utilizing the mass strike for political reform. Since the Belgian general strikes were terminated because of the threat of violence or the anticipation of a government concession, the Belgian socialists proved to other European members of the Second International Congress that revolution was not a necessary consequence of a strike. Rothgang, Heinz (U Köln, D-5000 41 Federal Republic Germany), **Die Umwelt- und Friedensbewegung in Grossbritannien** (The Environmental and Peace Movements in Great Britain), *Journal für Sozialforschung,* 1991, 31, 2, 163-185. (GER)

¶ New social movements can be described as loose networks of informal & antihierarchical groups that share common values & aims well beyond the particular cause of protest, & employ predominantly unconventional forms of participation. This concept is critiqued in the context of the British peace & environmental movements, based on secondary literature, unpublished primary sources, & interviews with activists. The environmental movement in Britain can be perceived as a lobby of established professional & centrally run environmental groups with passive mass membership. Environmental groups are in regular contact with decisionmakers of all levels. To achieve their goals, environmental groups employ a high-profile insider strategy that combines actions to create public awareness with considerable emphasis on working within the system. In doing so, a division of labor between newer, more radical groups & older, more conservative groups has developed. The peace movement, on the other hand, is dominated by one single group, the Campaign for Nuclear Disarmament (CND). The internal structure of CND is also conventional, though–due to the active mass membership–the group is much more democratic than the oligarchical environmental groups. Nevertheless, CND is far from the model of *Burgerinititativen* hailed as the typical organizational mode for new social movements. CND has no access to decision-making processes; therefore the chosen strategy to further CND's constitutional aim combines protest, education, & lobbying the Labour party. It is concluded that the concept of new social movements should no longer be used as a pardigm for further research. 1 Table, 37 References. Modified AA

Seekings, Jeremy (U Cape Town, Rosebank 7700 South Africa), **From Quiescence to 'People's Power': Township Politics in Kagiso, 1985-1986,** *Social Dynamics,* 1992, 18, 1, June, 20-41.

¶ Two forms of transition to revolt & confrontation among many of South Africa's townships during the mid-1980s, in which different factors shaped the respective processes & outcomes, have been identified. Existing case studies tend to focus on the first form: the initial transition to confrontation in each region, in which local factors were of primary importance. Here, documentary data from a 1986 court case & interviews conducted 1989-1991 with political activists (N not provided) in Kagiso township are drawn on to describe the second form: the "belated" transition, in which mass protest occurred some time after violent conflict had become endemic in the surrounding region. The case study of Kagiso surpalocal factors, particularly regional & national organization, played an important role in these belated transitions. In Kagiso, as in many other townships, consumer boycotts served as the medium for national influence on local politics. But external factors only led to mass mobilization in conjunction with other local factors. 30 References. Adapted from the source document.

Shinn, Larry D. (Bucknell U, Lewisburg PA 17837), **Cult Conversions and the Courts: Some Ethical Issues in Academic Expert Testimony,** UM *Sociological Analysis,* 1992, 53, 3, fall, 273-285.

¶ An exploration of fundamental ethical & professional questions with respect to courtroom testimony in trials related to new religious movements, drawing on eight years of research among the Hare Krishnas, particularly a case study of a young woman's conversion to the cult in MD, & personal expert witness experience. The analysis suggests that it is important who provides the definition of religion or authentic conversion, & that academic experts can contribute to the absolutism of the courtroom in their close adherence to single modes of explanation of religious behavior. Specific recommendations are offered for academic experts who are called on to testify in such trials. 21 References. Adapted from the source document.

Steinberg, Marc W. (Dept Sociology Clark U, Worcester MA 01610-1477), **Recent Social Movement Theory: Moving from the Theoretical Margins to Main Street?,** *Sociological Forum,* 1992, 7, 3, Sept, 551-555.

¶ A review essay on two books by: Ron Eyerman & Andrew Jamison, *Social Movements: A Cognitive Perspective* (Oxford: Polity Press, 1991); & Alan Scott, *Ideology and Social Movements* (London: Unwin Hyman, 1990 [see listings in IRPS No. 66]). Eyerman & Jamison chronicle how social movements open up new public spaces for the articulation of new collective identities & ideas. Largely an elaboration of Jürgen Habermas's work on knowledge interests, but also broadly aligned with other European theorists who see social movements as creators of collective identities, the book argues that the power of social movements dissipates when praxis becomes objectified in permanent organizations & activists are incorporated into the organizational power structure. Scott offers a critique of a broad range of social movement theories, including European new social movement theory & resource mobilization theory. Drawing on the environmental movement, Scott argues that new social movement theory is focused too much on institutional politics & collective identity, & that resource mobilization theory is inadequate due to its instrumentalist emphasis. 17 References. Taras, Raymond (Tulane U, New Orleans LA 70118), **When Fatalists Rebelled: Cultural Theory, Conflicting Ways of Life under Socialism, and Counterrevolution in Eastern Europe,** *Cultural Dynamics,* 1991, 4, 1, 55-89.

¶ The collapse of communist regimes throughout the Soviet bloc has been widely interpreted in terms of economic or historical determinism. Here, it is argued that human agency effected the overthrow of communist regimes in 1989 &, therefore, cultural explanations are extremely important. Literature on revolution, social movements, & collective mentality is reviewed to underscore the importance of an antecedent stage of political value formation–cultural pathways. Hypothesizing that communist rule was predicated on hierarchies encouraging widespread fatalist attitudes among citizens, a reconstruction is offered of how large sections of the population in East European states–prodded by reluctant leaders in the Mosaic tradition–converted out of fatalism & into active ways of life. Regime change in Eastern Europe was the outcome, therefore, of protracted but often indiscernable cultural change. AA

Van Wyk, Albert C. & Steyn, Anna F. (Dept Sosiologie Randse Afrikaanse U, Johannesburg 2000 South Africa), **Die Werksetiek en studentesubkulture** (The Work Ethic and Student Subcultures of Randse Afrikaans University Students), *Suid-Afrikaanse Tydskrif vir Sosiologie/The South African Journal of Sociology*, 1992, 23, 3, Aug, 83-89. (AFR)

¶ The work ethic of undergraduate students attending Randse Afrikaans U in South Africa is examined, based on scale data obtained from 1,000 students. Generally, students were found to have a relatively high Protestant work ethic, but women more so than men, which was negatively associated with number of years spent at the university. Significantly more first-year students belonged to a hardworking subculture than second- & third-year students, who were significantly more likely to belong to a fun subculture. Aspects & activities of first-year university students that negatively impact development of a strong Protestant ethic are discussed. 9 Tables. Adapted from the source document.

¶ In **L'Intifada: crise de la société israélienne et recomposition de la politique dans la société palestinienne** (The *Intifada*: Crisis of Israeli Society's Political Recomposition of Palestinian Society), Ulysses Santamaria introduces this series of essays on the Palestinian *Intifada* & Israeli society, emphasizing the roots of the popular social & political uprising, & noting the longstanding exclusion of Palestinians from democratic standards & economic development. But while the *Intifada* is revealing a restructuration of Palestinian society, it also exposes a fundamental crisis of Israeli society, & Israeli incapacity to form a clear political approach. A major achievement of the *Intifada* is making the Palestinians visible & distinctive from other Arabs. In **Des pierres contre la main de fer: l'alternance des structures de violence dans le conflict israélo-palestinien (1939-1989)** (Stones against the Iron Hand: Alternating Structures of Violence in the Israeli-Palestinian Conflict [1939-1989]), Scott Atran distinguishes between Palestinian & Israeli structures of violence. Also discussed are the sources of militancy of the Israeli Right. In **L'Opinion israélienne face à l'Intifada: réactions et contradictions** (Israeli Opinion regarding the *Intifada*: Reactions and Contradictions), Raya Cohen-Adler presents a study of Israeli reactions to the *Intifada* based on statistical data & opinion polls. Emphasized is the role of the *Intifada* in mobilizing public opinion through the acknowledgement that a peaceful rule over the territories is no longer possible, & that Israel, not Arab countries, should strive for a solution. In **L'Intifada et ses dirigeants** (The *Intifada* and Its Directors), Saleh Abdel Jawad (U of Bir Zeit, Ramallah, Cisjordanie) places the *Intifada* in the historical context of Palestinian social evolutions, starting in 1858. As a social movement, it is concluded, the *Intifada* produces a veritable elite that reflects current political & national orientations. In **L'Intifada comme principe de réalité**,(The *Intifada* as a Principle of Reality), René Gallissot highlights the original traits of the Palestinian struggle for independence, & examines the Israeli model of the communitarian state in the face of the *Intifada*. 2 Appendixes, 105 References. Davis, James A. (Harvard U, Cambridge MA 02138), **Changeable Weather in a Cooling Climate atop the Liberal Plateau: Conversion and Replacement in Forty-Two General Social Survey Items, 1972-1989**, *The Public Opinion Quarterly*, 1992, 56, 3, fall, 261-306. **Comments**, 307-314.

¶ To determine if the liberal shift that began after WWII is declining, the liberal vs conservative attitudes of Americans are tracked using 1972-1987 General Social Survey data on 42 items relating to crime, free speech, politics, race, religion, & gender/sexuality. Four cohorts (N = approximately 500 persons each) are observed for cohort succession (replacement) & intracohort shifts (conversions). It is suggested that general public opinion ([PO] overall climate) still leans toward the liberal, but small topic-specific countertrends within the cohorts (weather) may be explained in terms of a weather vs climate (between cohorts) metaphor. In particular, the late 1970s saw a small shift toward the Right. In **Comment on Davis's "Changeable Weather in a Cooling Climate atop the Liberal Plateau,"** Philip E. Converse applauds Davis's elucidation of the assymetrical effects of cohort replacement, but challenges him on other issues, pointing to the heterogeneity of change patterns item by item in the selection of the 42 items, noting the variability in difficulty for keying some of these items & the vagueness in the ideological descriptors, & contending that the items clustered around conservative issues are outnumbered by those concerning liberal issues two to one. In **Comment on David: Yes, but...Public Opinion is a Top-Down Process**, Cliff Zukin (Eagleton Instit of Politics, Rutgers, U, New Brunswick, NJ) offers observations about the relationship between public policy & PO, rather than commenting directly on Davis. Survey results, notwithstanding, it is remarked that, since there is no one thing called PO, public policy is mainly in the hands of public policymakers. This points to a top-down process in the PO-policy relationship. 18 Tables, 5 Figures, 2 Appendixes, 20 References. J. Sadler

Katz, Cheryl A. & Baldassare, Mark G. (Program Social Ecology U California, Irvine 92717), **Using the 'L-Word' in Public: A Test of the Spiral of Silence in Conservative Orange County, California,** *The Public Opinion Quarterly,* 1992, 56, 2, summer, 232-235.

¶ According to the spiral of silence theory, individuals holding views they perceive as being in the minority or losing ground fear social isolation, & so are less likely to express their views in public. Examined in this light was whether respondents who are liberals, Democrats, or not supporting the leading presidential candidate during the campaign season in a politically conservative region (Orange County, Calif) were less willing than Republicans, conservatives, & those supporting the front-runner to be interviewed & have their names & views published in a prominent local newspaper. Three random-sample telephone surveys (total N = 1,815) were conducted for the *Los Angeles Times* (Orange County Edition) at different times during the 1988 presidential election. Each survey concluded with a question asking respondents whether they would be willing to speak to a reporter & have their names & views appear in a newspaper article on the findings. The findings show that: (1) those holding minority political positions were no less likely than those in the majority to consent to reinterview; & (2) those with minority views did not become increasingly resistant to reinterview over time. Results point out the utility of the newspaper reinterview question in studies on speaking out in public. 1 Table, 7 References. AA

Reuband, Karl-Heinz (Zentralarchiv empirische Sozialforschung, Bachemer Str 40 D-5000 Koln 41 Federal Republic Germany), **Einflüsse kontextueller Hintergrundinformationen auf die Deliktbewertung und das Sanktionsverlangen der Bevölkerung. Ergebnisse eines Frageexperiments** (The Influences of Background Information on Moral Evaluation and Sanctioning Orientation of the Population. The Results of a Survey Experiment), *Zeitschrift für Rechtssoziologie,* 1992, 13, 1, June, 141-149. (GER)

¶ To investigate how changes in the description of a criminal defendant affect the public's moral evaluation of him or her, interview data were obtained from a random sample of 1,993 adults in the former West Germany. Different groups of respondents (Rs) heard 3 various accounts of hashish consumption at a party for young people. Analysis reveals that Rs felt more sympathetic & understanding of the defendant when the party was described more in terms of a young adult affair than a student or late adolescent affair. The harsher the moral judgment of the Rs, the stiffer was the penalty proposed for the infraction. The descriptions of the defender have a big impact in certain population subgroups. 2 Tables, 1 Figure, 14 References. Adapted from the source document.

Akhavan-Majid, Roya & Wolf, Gary (School Journalism Southern Illinois U, Carbondale 62901), **American Mass Media and the Myth of Libertarianism: Toward an "Elite Power Group" Theory,** *Critical Studies in Mass Communication,* 1991, 8, 2, June, 139-151.

¶ It is argued that there has been a basic structural shift in the US mass media system away from libertarianism & toward an "elite power group" model. In sharp contrast to the structural characteristics implied by the libertarian model (eg, diversity & plurality, independence, & functioning as an adversary of the government in the public interest), the media are now characterized by: (1) concentration of ownership, (2) integration with other power elites, & (3) ability to exercise self-serving control on government policy even as it is controlled by it. The elite power group model goes beyond viewing the media as servants of the power elite to suggest that the media constitute a power elite whose power is steadily increasing. 33 References. Beentjes, Johannes (Sectie Kind en Media Rijks U Leiden, NL-2300 RB Netherlands), **Televisieverhalen versus voorgelezen en zelf gelezen verhalen** (Televised Stories versus Audio Stories and Printed Stories), *Comenius,* 1991, 43, fall, 290-301. (DUT)

¶ Research on the effects of different types of input on children's processing of stories is reviewed. Studies comparing televised & audio (read aloud or audiotaped) input media revealed characteristic differences in story retelling: more auditory information retained, more expressive & figurative language use, & greater imaginativeness after audio input, but

better overall reproduction after televised input. Inferences were predominately based on visually presented material after televised input, on verbal or story-extraneous information after audio input. Two experiments, reported elsewhere, have investigated differences between televised input & reading to oneself in information retention & language use. In experiment 1, elementary school children (N = 127, ages 10-12) either read a story or viewed it on videotape; all Ss immediately retold the story in writing. In experiment 2, elementary school children (N = 88) read one story & saw another on videotape; both were retold orally, immediately after presentation & 3 weeks later. Ss were divided into older & younger groups. Results tended to agree with those of TV-audio comparisons: information retention was better & longer lasting after video input, descriptions more specific after text reading. An age effect emerged: in immediate retelling, differences between input types became insignificant among older Ss. The informative power of TV is inferred from all the studies reviewed; limitations of the research & implications for instruction are discussed. 20 References. J. Hitchcock

Ferrarotti, Franco (Corso Vittorio Emanuele 24, I-00186 Rome Italy), **Cesare Zavattini e l'interazione critica dei mass media** (Cesare Zavattini and the Critical Interaction of Mass Media), UM *La Critica Sociologica*, 1991, 99, Oct-Dec, 45-65. (ITA)

¶ Cesare Zavattini's "Alcune idee sul cinema" ([A Few Ideas on Cinema] *La rivista del cinema italiano*, 1959, 1, 2, Dec) & other works investigate the rhythm of everyday life, finding both normality & miracles. He reformulates the meaning of various forms of expression, eg, poetry, prose, drama, & cinema, with respect to their different authors, components, & audiences. Special attention is given to his neorealist cinema criticism & analysis of TV. The rapidity with which a viewer must digest what is presented through these two forms of media new to the twentieth century contrasts with the amount of time that a viewer can spend pondering over still photographs. Adapted from the source document.

93Z4885

Gamson, William A., Croteau, David, Hoynes, William & Sasson, Theodore (Boston Coll, Chestnut Hill MA 02167), **Media Images and the Social Construction of Reality,** UM *Annual Review of Sociology*, 1992, 18, 373-393.

¶ Rather than providing readers with some coherent sense of the broader social forces that affect the conditions of everyday life, media discourse in the US operates in ways that promote apathy, cynicism, & quiescence. Further, media trends point toward more & more messages, fewer & bigger producers, & even less substance. On the positive side, media messages provide a many-voiced, open text that can & often is read oppositionally. TV imagery often forces the powers that be to compete & defend what they would prefer to have taken for granted. The undetermined nature of media discourse allows challenges to the status quo to present competing constructions of reality & to find support for them from readers whose daily lives may lead them to construct meaning in ways that go beyond media imagery. 65 References. Greek, Cecil E. & Thompson, William (Dept Criminology U South Florida, Saint Petersburg 33701), **Antipornography Campaigns: Saving the Family in America and England,** *International Journal of Politics, Culture and Society*, 1992, 5, 4, summer, 601-616.

¶ A comparison of the antipornography campaigns of the 1980s in England & the US. The theological statements of conservative Protestant spokespersons regarding the alleged dangers of pornography are examined. These claims center on possible threats to marriage & children & thus represent a part of the larger conservative agenda of returning to traditional family values. Inherent in the fundamentalist argument is a belief that media images–particularly those that contain sexual content–are quite powerful & can negatively affect both attitudes & behavior. The theoretical perspective developed here represents an elaboration of moral panic theory. However, rather than dismiss the importance of religious beliefs for understanding fundamentalist attitudes about pornography–a problem with the status politics model–such claims are treated seriously. 43 References. 93Z4887

Gunther, Albert C. (U Wisconsin, Madison 53706), **Biased Press or Biased Public? Attitudes toward Media Coverage of Social Groups,** *The Public Opinion Quarterly*, 1992, 56, 2, summer, 147-167.

¶ Mass media credibility has been defined & studied largely as an attribute of message sources. Here, it is argued that trust in media can be better understood as a relational variable–an audience response to media content. In addition, audience assessments of credibility are commonly explained as the result of each individual's skeptical disposition, either toward mass media in particular or as a general trait. From this, it is proposed that distrust is more likely to be a situational response, stemming from involvement with issues & groups. Using interview data from a national probability sample (N = 1,600), the hypothesis was tested by analyzing the effect of numerous independent variables on respondent ratings of newspaper & TV news coverage of social groups. As hypothesized, a respondent's own group identification proved to be the strongest predictor. The evidence was strengthened by replication across social groups, which provided built-in controls & demonstrated that an important part of the variance in trust of mass media news is within persons rather than between persons. 2 Tables, 1 Appendix, 44 References. Haas, Hannes & Wallisch, Gian-Luca (Lustkandlgasse 25, A-1090 Vienna Austria), **Literarischer Journalismus oder journalistische Literatur? Ein Beitrag zu Konzept, Vertretern und Philosophie des "*New Journalism*"** (Literary Journalism or Journalistic Literature? A Contribution to the Concept, the Representatives and the Philosophy of "New Journalism"), *Publizistik*, 1991, 36, 3, July-Sept, 298-314. (GER)

¶ About twenty years ago the "new journalism" movement began in the US. Its hallmark was the blurring of the distinction between literature & journalism & between fiction & nonfiction. Other features included narration in lieu of reporting, intuition instead of analysis, people in place of things, & style rather than statistics. As such the new journalism represents the value changes of the social movements of the 1960s; it has recently made its debut in Germany & other European nations. The new journalism sees objectivity as an authentic, personal, many-faceted experience, while established journalism seeks to realize a detached, representative objectivity. M. Hallin, Daniel C. (Dept Communication U California San Diego, La Jolla 92093), **Sound Bite News: Television Coverage of Elections, 1968-1988**, UM *Journal of Communication*, 1992, 42, 2, spring, 5-24.

¶ Samples of network evening news broadcasts gathered Sept-Oct during each presidential election year 1968-1988 are used to show that the average sound bite has declined from 43 to 9 seconds. This change is interpreted as part of a general shift in the style of TV news toward a more mediated, journalist-centered form of journalism. Three factors help explain this change: (1) the evolution of TV "know-how," (2) the weakening of political consensus & authority during the last twenty years, & (3) changes in the economics of the industry. Implications for journalism in the 1990s are discussed. 5 Tables, 2 Figures, 22 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Henket, Maarten (U Utrecht, Boothstraat 3512 BT Netherlands), **A Case of Non-Communication**, *International Journal for the Semiotics of Law/Revue Internationale de Sémiotique Juridique*, 1991, 4, 11, 137-149.

¶ A personal experience in teaching is described in which the communication of norms proved extremely difficult. The story of the experience is used as a starting point for reflections regarding the theory of narrative coherence as developed in Bernard S. Jackson's "Law, Fact and Narrative Coherence" (Merseyside: Deborah Charles Publications, 1988). Two points are made: (1) if narrative coherence is to be a workable criterion of truth & of law, it must make clear for each legal discourse how narrative coherence is to be established; & (2) the theory does not seem to account for the role of those people that are affected by a set of rules without belonging to the corresponding semiotic group as that concept is defined by Jackson. Illouz, Eva (Tel-Aviv U, Ramat-Aviv IL-69978 Israel), **Reason within Passion: Love in Women's Magazines**, *Critical Studies in Mass Communication*, 1991, 8, 3, Sept, 231-248.

¶ Max Weber's & Jürgen Habermas's theories of rationalization are used to analyze the ways that romantic love has been colonized by the twofold process of practical & cognitive rationalization, embodied respectively in economic & scientific discourses. Content analysis of a sample of 35 articles from popular, middle-class women's magazines published Jan-June 1988 reveals that love is constructed in 2 contradictory ways: as an irrational & uncontrollable emotion, & as a rational transaction evaluated in terms of its costs & benefits. While the first discourse mixes a hedonist terminology with the classical tropes of passion, the second discourse uses the semantics of market transactions. It is argued that far from being "unconscious," this cultural contradiction is interpreted & resolved by the therapeutic discourse. By importing epistemic schemes from the realm of science to the realm of the self, the therapeutic discourse fosters a rationalized management of romantic relationships. Implications of the cognitive & practical rationalization of love in the context of an emancipatory feminist politics are considered. 53 References. Jalbert, Paul L. (Dept Communication Sciences U Connecticut, Stamford 06903), **Charting the Logical Geography of the Concept of "Cease-Fire"**, *Human Studies*, 1992, 15, 2-3, July, 265-290.

¶ The concept of "cease-fire," as used by mainstream media, is examined ethnomethodologically with focus on how it varies across different contexts, based on a case study of network news coverage of the 1982 war in Lebanon. It is argued that the varied uses of "cease-fire" by the mass media entail different meanings, or understandings, potentially available to members of US culture. The notion of "category-excluded activities"–which emerges from a broader concern to develop analytical arguments to understand members' practices in making sense of their categorization practices–is developed as a logico-grammatical property of the concept. It is shown that the concept of "cease-fire": does not possess a reliable sign to represent it in every instance of its use; is not a family-resemblances concept; & is not a category that expresses several other concepts. Further, the possible features of the concept are nonexhaustive. 20 References. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Keller, Kathryn (80 Cain St, Springfield NJ 07081), **Nurture and Work in the Middle Class–Imagery from Women's Magazines**, *International Journal of Politics, Culture and Society*, 1992, 5, 4, summer, 577-600.

¶ Changes in gender-based divisions of labor in the home & the workplace are documented. The mass entrance of mothers into the workforce has created a conflict for the middle-class family. The working mother violates the icon of the middle-class mother, ie, the loving, nurturant woman who does not work outside the home but who exclusively cares for the home & the children while her breadwinning husband is at work. Articles (N = 450) published in 4 women's magazines 1950-1989 are reviewed to trace historically the development of ideologies for the changing middle class. During this time, explanations for mothers working moved from excuses to justifications, but working is still called into question. All justifications are tied to the powerful image of the good mother. On the other hand, the role of housewife has moved from the position where no account was required to one where the role must be justified. Also discussed are the questions of: (1) the ethical & moral responsibilities of those who claim expertise in matters of family life, & (2) the difference in views on the subject between journalism & social science. Krupka, Lawrence R. & Vener, Arthur M. (Michigan State U, East Lansing 48824), **Gender Differences in Drug (Prescription, Non-Prescription, Alcohol and Tobacco) Advertising: Trends and Implications**, *Journal of Drug Issues*, 1992, 22, 2, spring, 339-360.

¶ A review of studies investigating gender targeting in manufacturers' advertising of prescription & over-the-counter (OTC) drugs, tobacco, & alcohol products concentrates on recent trends. Prescription drug advertising is progressively neutral in gender-targeting, reflecting a trend away from sexual stereotyping prevalent in the 1980s. OTC drug adver-

tisements appear in nearly 3 times more women's than men's popular magazines, according to a study of advertisements in 111 gender-specific publications published in 1985 ("Over-the-Counter Drug Advertising in Gender Oriented Popular Magazines" [see SA 35:4/87R7522]). Perhaps because the link between advertising & level of consumption is unclear, little research has been done on gender targeting in alcohol advertisements. On the contrary, although denied by tobacco companies, targeting a market based on gender (& other specific classes, eg, age & race) is widespread. 86 References. Adapted from the source document.

Kuiper, G., Gelukewensen en verwensen in het maatschappelijk verkeer (Blessing and Cursing in Social Interaction), *Tijdschrift voor Sociale Wetenschappen*, 1992, 37, 3, July-Sept, 243-265. (DUT)

¶ As phenomena meant to offend others, swearing, cursing, & insults can be described by many sociological theories, eg: functionalism, human configurations, exchange theory, & symbolic interactionism. Insulting, the opposite of blessing, is a form of communication preceding a possible communication breakdown. In contrast, cursing involves the invocation of evil spirits. Swearing tends to be random, serving as emotional discharge while taking the place of solid logical argumentation. Although it is looked down on, swearing is a part of language & culture. 36 References. Adapted from the source document as translated by M. Meeks.

Liebes, Tamar (Dept Communication Hebrew U Jerusalem, Mount Scopus IL-91905 Israel), **Decoding Television News: The Political Discourse of Israeli Hawks and Doves**, *Theory and Society*, 1992, 21, 3, June, 357-381.

¶ In Israel, a one-issue country, parents who have hard-line uncompromising positions toward the Israeli-Arab conflict have a better chance of socializing their children to their political ideologies than do parents with more compromising dovish views. Here, it is examined whether TV news has a role in this process, noting prior research on the characteristics of TV framing of protest, & on the centrality of the one evening news program in Israel, including the salience of family viewing. Observations of interactions within 55 Jewish families–while viewing the news, & following broadcast–reveal that, in discussing the *Intifada*–the latest violence manifestation of the conflict–the soldiers' violence is perceived as situationally enforced while the Palestinians' is perceived as dispositional. This result may be explained by TV's portrayal of the Palestinians, in which they are depersonalized, demonized, & not given a voice, & is exacerbated by the viewers' experience, in which the soldiers are known in other roles–both on & off the screen–while the protesters are known only in their role in the conflict. Findings are generalized to the portrayal of a state of conflict–eg, strikes, social protest, & violent demonstrations–that constitutes a direct challenge to the established means or ends of a society, & to the portrayal of marginal groups whose every existence is threatening to core values. Thus, TV news reinforces the viewers' tendency for committing the fundamental attribution error. Modified AA

Mazzella, Carmela, Durkin, Kevin, Cerini, Emma & Buralli, Paul (c/o Durkin–Dept Psychology U Western Australia, Nedlands 6009), **Sex Role Stereotyping in Australian Television Advertisements**, *Sex Roles*, 1992, 26, 7-8, Apr, 243-259.

¶ To provide a cross-cultural comparison for previous research conducted in the US & GB on sex-role stereotypes on TV, a sample of 281 Australian TV commercials taped during a week of prime-time broadcasting in 1989 were coded for sex of central figures, age, role, location, & other variables. Of the 433 figures coded, 74% were male (M). Females (Fs) portrayed were more likely to be young, in a dependent role, & at home vs in occupational settings. In general, M characters provided objective & knowledgeable reasons for buying expensive products, while F characters typically emphasized the social rewards of buying inexpensive products. It is concluded that Australian TV commercials depict sex-role stereotypes very similar to those found in the US & GB. 1 Table, 44 References. Adapted from the source document.

McLaughlin, Lisa (U Kentucky, Lexington 40506), **Discourses of Prostitution/Discourses of Sexuality**, *Critical Studies in Mass Communication*, 1991, 8, 3, Sept, 249-272.

¶ The problem of presenting prostitutes as "other" in contemporary, mediated discourses of sexuality is addressed from the perspective that such discourses are based on a dominant notions of sexuality that impede the progress of feminism as a counterideology. The contention that feminism has altered popular images of women (particularly prostitutes), from sensationalized, deviant, or disordered actors to working women is challenged. Critical examination of traditional representations of prostitutes, the contemporary portrayal of prostitution on TV, the inability of feminist voices to challenge the normalizing effects of these popular representations, & identity politics that hinder acceptance of feminist images of women reveal the persistence of dominant ideology in this area. 65 References. Oakes, Guy (Monmouth Coll, West Long Beach NJ 07764), **Image and Reality in *Media Worlds***, *International Journal of Politics, Culture and Society*, 1992, 5, 3, spring, 439-463.

Reply, 465-472.

¶ The concepts of "media logic" & "media culture" are explored as they are used in David L. Altheide's & Robert M. Snow's *Media Worlds in the Postjournalism Era* (New York: Aldine De Gruyter, 1991). Media logic is a form & process of communication that generates a framework of assumptions on which media artifacts & strategies are conceived. Through the vehicle of media logic, all social institutions have been transformed into media institutions or the media culture. The concept of media logic rests on four propositions: (1) modern media are oriented toward rational means-end communications; (2) modern media require rapid dissemination of information at low cost; (3) audience expectations require media information to be accurate, current, & entertaining; & (4) media information must be dependable & relevant. It is argued that all of these claims are mistaken. The media culture thesis rests on spurious, unsupported claims as well, eg, the proposition that the media have caused the death of organized journalism. In **Media Logic and Culture: Reply to Oakes** Altheide (Arizona State U, Tempe) & Snow repeat their premise that electronic communications have changed all aspects of US culture, reiterate the distinction & importance of media logic & media culture, & critique Oakes's suggestion that the infrastructure of politics continues to work as usual. Paret, Peter (School Historical Studies Princeton U, NJ 08544), **God's Hammer**, *Proceedings of the American Philosophical Society*, 1992, 136, 2, June, 226-246.

¶ Based on aesthetic & content analyses of the posters designed by the National Socialist poster artist Hans Schweitzer, & on archival research including the discovery of the record of Schweitzer's de-Nazification trial, Schweitzer's career is interpreted & compared with the rise & decline of National Socialism. Schweitzer was born in 1901 into a naval family that suffered economically & socially form Germany's defeat in WWI. He became a cartoonist for extreme right-wing publications, & worked for Joseph Goebbels as cartoonist & poster designer, & developed into one of the most important propagandists of the movement. The outbreak of war in 1939 presented him with new opportunities to express his psychological & aesthetic violence. Gradually, however, he became disillusioned with the party leadership & possibly even with the German people as a whole, but he survived the war as an unrepentant anti-Semite who

took the "socialist" element in National Socialism seriously. Comparing the history of the movement with the history of this individual enhances understanding of both. The slap on the wrist he received at his de-Nazification trial also makes him characteristic of the thousands of middle-level Nazi functionaries who easily reentered post-WWII German society. 17 Figures. Skarpelos, George M. (Stanford U, CA 94305), **Communication Breakdown: The Chilean State and the Media, 1973-1980,** *Berkeley Journal of Sociology*, 1991, 36, 137-163.

¶ An examination of how the Chilean state envisioned & interacted with the organs of mass communication before the 1980 Constitution was instituted. A model of the conception & implementation of the state's media objectives, & a schematic of the interactional processes between the state & the domestic media, are offered. The essential structure of authoritarian communication systems is described, & literature on the Chilean media is reviewed. Five mechanisms by which the state controlled the flow of information are identified: force, legal, judicial, organizational, & implied (ie, private unofficial governmental measures). The state's joining of policy & media-control mechanisms eventually enabled the Pinochet regime to control–sometimes brutally–the dissemination of information, & to manipulate transmitters of information. 47 References. St. Peters, Michelle, Fitch, Marguerite, Huston, Aletha C., Wright, John C. & Eakins, Darwin J. (c/o Huston–Dept Human Development U Kansas, Lawrence 66045), **Television and Families: What Do Young Children Watch with Their Parents?,** *Child Development*, 1991, 62, 6, Dec, 1409-1423.

¶ In a 2-year longitudinal study of TV viewing patterns, 1-week diaries for all members of 271 families with children ages 3-5 years in Topeka, Kan, were collected at 6-month intervals. The majority of child programs were viewed without parents, while the majority of adult programs viewed by children were watched with parents. Coviewing patterns of adult programs were predicted from parents' individual viewing habits, but not from the child's, & coviewing declined with age. Parental encouragement & regulation of viewing were orthogonal: children whose parents encouraged viewing watched more child informative programming, & children of restrictive parents watched less entertainment programming. Encouraging parents coviewed more than nonencouraging parents. Results support the assertion that parental viewing preferences, habits, & orientations toward TV influence children's viewing, both with & without parents. 4 Tables, 2 Figures, 46 References. Wallger, Gregory T., The Moral Universes of Libertarian Press Theory, *Critical Studies in Mass Communication,* 1991, 8, 2, June, 152-167.

¶ An analysis & ethical assessment of three moral universes embodied in libertarian press theory highlights the fallacy of mixing moral paradigms. The continuing struggle of truth against falsehood in the free marketplace of ideas is the principle that guides the libertarian press. A Kantian analysis of the libertarian self-righting process suggests some alternatives: (1) libertarianism as a definition implies a mechanistic moral universe; (2) libertarianism as an observation by society implies a deterministic moral universe, & by professionals, it suggests a relativistic moral universe guided by the ethics of utilitarianism; & (3) libertarianism as a universal suggests an absolutist pursuit of morally good truth as an end in itself. Ways that competing philosophies in the libertarian newsroom may pose ethical conflicts are delineated. 46 References. J. Sadler

93Z4913

Barnes, Barry (Dept Sociology U Edinburgh, EH8 9JT Scotland), **Status Groups and Collective Action,** *Sociology,* 1992, 26, 2, May, 259-270.

¶ Sociological theory draws heavily on Max Weber's description of how status groups monopolize goods & opportunities to understand the economic & political relationships between groups. It is rarely recongized, however, that a problem of collective action must be solved if a status group is to operate in this way, that it is individually irrational for members of the group to support its monopolistic activities even if they profit from them. Once the collective action problem is recognized, it is immediately apparent that Weber's own account of the definitive features of a status group identifies precisely the means by which the problem is solved. Weber's analyses of the operation of status groups & their nature may then be fused into a single coherent & comprehensive account. 19 References. Adapted from the source document.

Feige, Andreas (Ludwig-Beck-Str 29, D-3300 Braunschweig Federal Repulic Germany), **Gesellschaftliche Reflexivitätsprozesse und Massenkommunikation am Beispiel der DDR. Zur Funktion öffentlicher Kommunikation und besonders der Massenmedien vor und während der Massendemonstrationen im Herbst 1989** (Social Reflexivity Processes and Mass Communication in the Former GDR. On the Function of Public Communication, and Particularly of the Mass Media before and during Mass Demonstrations in Fall 1989), *Publizistik,* 1990, 35, 4, Oct-Dec, 387-397. (GER)

¶ Events taking place during fall 1989 in the former East Germany provide rich opportunities to test theories of the role of the mass media in modern societies. In addition to information from the government-controlled SED TV network, East Germans also had access to information from West German TV. Proceeding from Niklas Luhmann's *Soziologische Aufklärung 2* ([Sociological Enlightenment] Opladen: 1975), attention is focused on three aspects of reflexivity in the framework of mass communication system theory: (1) perception is met by another perception; (2) for every utterance there is another utterance functioning as a meta-utterance; & (3) all communication works backward in time to stabilize itself. Once the reflexive processes of communication were set in motion through protest meetings in the churches & on the streets, momentum continued to build, leading ultimately to the regime's downfall. Dodgen, Lynda & Rapp, Adrian (Dept Sociology North Harris Coll, Houston TX 77073), **An nalysis of Personality Differences between Baseball Card Collectors and Investors Based on the Myers-Briggs Personality Inventory**, *Journal of Social Behavior and Personality*, 1992, 7, 2, 355-361.

¶ The Myers-Briggs Personality Inventory was used to assess personality differences to determine if personality influenced decisions to collect baseball cards as an investment vs as a leisure activity among 36 male & 8 female collectors age 11+ in Houston, Tex. Respondents were classified as investor, hobbyist, or combination hobbyist/investor. Findings show no statistical difference between the 3 groups on the dimensions of introversion/extraversion, sensors/intuitors, & judger/perceiver; however, on the dimension of thinker/feeler, investors appear to be thinkers. 1 Table, 15 References. Adapted from the source document.

Fakeye, Paul C. & Crompton, John L. (c/o Crompton–Dept Recreation/Park/Tourism Sciences Texas A&M U, College Station 77843-2261), **Importance of Socialization to Repeat Visitation**, *Annals of Tourism Research*, 1992, 19, 2, 364-367.

¶ Differences in the motives of repeat, first-time, & nonvisitors to the Lower Rio Grande Valley (Tex) are examined through analysis of mail questionnaire data from 568 respondents. Factor analysis reveals 5 domains: (1) escape from personal, physical, & social problems; (2) social contacts; (3) physical self, intellectual enrichment; (4) family togetherness & curiosity; & (5) temperature, exploration, & security. First-time visitors ranked this last domain as significantly more important than did nonvisitors or repeat visitors. Along with nonvisitors, they also ranked family togetherness as more important than did repeat visitors. Repeat visitors rated social contact significantly more important than did the other groups. 2 Tables, 5 References. Adapted from the source document.

Gu, Zheng & Martin, Thomas L. (Coll Hotel Administration U Nevada, Las Vegas 89154), **Terrorism, Seasonality, and International Air Tourist Arrivals in Central Florida: An Empirical Analysis**, UM *Journal of Travel & Tourism Marketing*, 1992, 1, 1, 3-17.

¶ A multiple regression model is developed to explain the rapid growth in international passenger traffic at central Fla's Orlando International Airport (OIA), focusing on implications for regional tourism. Five variables are identified as significantly related to the passenger arrivals. The positive relationship between the economic performance of other industrialized countries & OIA international arrivals is consistent with the hypothesis that income is a positive determinant in travel decision. The increasing hijacking incidents in Europe & the Middle East has a destination substitution effect: hijacking may have encouraged Canadian & European tourists to switch from European/Middle Eastern destinations to the US in general, & to Orlando in particular. The composite tourism supply variable, represented by the number of Orlando hotel/motel rooms, is positively related to OIA international arrivals. The two dummy variables of seasonality–a pleasant winter & early spring sunshine–contribute significantly to international passenger arrivals. 2 Figures, 1 Appendix, 10 References. Adapted from the source document.

Haltsman, John & Harper, William (Leisure Studies Program Arizona State U West, Phoenix 85069-7100), **Interpreting Leisure as Text: The Part**, *Leisure Studies*, 1992, 11, 2, May, 135-146.

¶ Leisure scholars have recently begun to use qualitative research approaches to study the experience of leisure, including textual interpretation, or hermeneutics. This method is applied to a collection of essays written in 1930 about the Old (US) South, attempting to reinterpret the nature & significance of social classes & their prevailing recreations in the antebellum South. This new interpretation illustrates a way in which hermeneutics can be useful in the leisure sciences. 25 References. Adapted from the source document.

Stebbins, Robert A. (Dept Sociology U Calgary, Alberta T2N 1N4), **Costs and Rewards in Barbershop Singing**, *Leisure Studies*, 1992, 11, 2, May, 123-133.

¶ Barbershop singing is a form of serious leisure that, like other hobbies & amateur pursuits, has its own pattern of costs & rewards. To discern this pattern, observations were made of the principal activities of 4 male & female barbershop chapters in Calgary, Alberta, & interviews conducted with 32 of their members. The primary object was to develop a grounded theory of barbershop singing as serious leisure, using a qualitative exploratory research design, but the focus here is on the rewards & thrills of barbershop in comparison with its costs: the disappointments, dislikes, & tensions. Overall, barbershop singers find that the positives outweigh the negatives. 1 Table, 14 References. Modified AA

van den Berghe, Pierre L. (U Washington, Seattle 98195), **Tourism and the Ethnic Division of Labor**, *Annals of Tourism Research*, 1992, 19, 2, 234-249.

¶ Ethnic tourism (ET) is examined through fieldwork observations & 175 interviews with tourists from 19 different nations conducted in 1990 in San Cristóbal, Mexico. ET involves complex ethnic relations & a division of labor between tourists, tourees (natives who literally make a spectacle of themselves), & middlemen who mediate tourist-touree encounters & provide catering facilities. ET is a product of the capitalist world, stemming from a combination of leisure time, affluence, dissatisfaction, & alienation. ET may provide its own undoing as it invades the unspoiled, primitive parts of the world, thus spoiling the very commodity it seeks to find. 26 References. Adapted from the source document.

Betz, Hans-Georg (Rome Center Liberal Arts Loyola U, Chicago IL 60611), **Postmodernism and the New Middle Class**, *Theory, Culture & Society*, 1992, 9, 2, May, 93-114.

¶ An examination of postmodernism focuses on structural changes in the power balances between various social groups that have traditionally defined what constitutes culture. It is argued that the rise of postmodernism can be explained as a competitive struggle between various substrata within the "new middle class" over the definition of culture. The emergence of consumer society is shown to have contributed to the aestheticization of everyday life via signs & images signifying the pleasures associated with consumption. Through an examination of the political, cultural, & social experiences of the Federal Republic of Germany in the 1980s, it is shown that the rise of postmodernism among the nonestablished young educational class supports Mike Featherstone's interpretation ("Towards a Sociology of Postmodern Culture" in Haferkamp, H. [Ed], *Social Structure and Culture* [see IRPS No.51/90c01223]) of postmodernism as an attack by renegade intellectuals on the prevailing system of classification in order to redefine culture to suit their interests. 86 References. Bonner, Frances & Du Gay, Paul (Dept English U Queensland, 4072 Australia), **Representing the Enterprising Self: *thirtysomething* and Contemporary Consumer Culture**, *Theory, Culture & Society*, 1992, 9, 2, May, 67-92.

¶ An examination of the US TV program *thirtysomething*, concentrating on episodes from the first three series screened in the UK 1989/90. Textual analysis is used to argue that the program encapsulates & promotes a new "regime of the self"-an enterprising or consuming one. The extensive popular familiarity with the program style & ethos & the wide general use of its name indicate the salience of this (self-) representation in articulating the ascent of a particular "service" class fraction, the new petite bourgeoisie. Also explored are questions of gender & its renegotiation both within & outside the program, showing how the values of the petite bourgeoisie are feminized. Represented as such in *thirtysomething*, they have coalesced there with a masculinized form of melodrama. The program problematized the characters' ability to "have it all" as they find themselves subject economically to an interrupted trajectory. Both women & men attempt to overcome this by focusing instead on an investment orientation toward life in which the self becomes the project to be worked on. Within the program, the emotional excess characteristic of melodrama is narrowly focused on the family, rather than on the social, thus reducing the apparent class fractional specificity of the representations offered. The disparity between the representation of the desirable mode of being & that achievable by those outside its class specific-boundaries remains unrecognized, but traces of the need for the existence of a servicing class (denied the choices their labor makes possible for the new petite bourgeoisie) are detected. 44 References. Merquior, J. G., In Quest of Modern Culture: Hysterical or Historical Humanism, *Critical Review*, 1991, 5, 3, summer, 399-420.

¶ Reflections are offered on the historical nature & present predicament of modern culture, & several salient humanistic reactions to modernity

are reviewed. It is maintained that the shift from atheism to hedonism in the modern world was facilitated by an innovation in thought that joined individualism & narcissism with the idea of culture. The roots of individualism in the Renaissance are examined, & the influence of Protestantism on Western culture is discussed. It is argued that in response to modernity, humanism developed three perspectives, of which the most profound is "Marcionism," whose practitioners (eg, Franz Kafka, Lionel Trilling, Theodor W. Adorno) see the reality of the world as something intrinsically bad & in need of radical reform. A modern humanism, which would facilitate both the modernization of culture & the humanization of modern life through culture, is advocated. W. Howard

93Z4939

Palmer, Jerry (City London Polytechnic, EC3A 7BU England), **Women and Soap Opera**, *Theory, Culture & Society*, 1992, 9, 3, Aug, 125-138.

¶ A review essay on books by: Christine Geraghty, *Women and Soap Opera. A Study of Prime-Time Soaps* (Cambridge: Polity Press, 1990) & Helen Taylor, *Scarlett's Women.* **Gone With the Wind** *and its Female Fans* (London: Virago, 1989 [see listings in IRPS No. 66]). Geraghty examines images of women in British & US TV soap operas, claiming that self-parody & the ambiguous relationship between narrative & the extradiegetic reality of the actor & his or her public persona are integral to soap opera aesthetics. She concludes that soap operas are no longer an exclusively female genre. Written for a general audience, Taylor focuses on *Gone With the Wind* & the romance genre in general to explore how subject positions are created through gender thematics in film. Taylor shows that in romance films, women's transgressions may be condemned by female viewers but, nevertheless, are always comprehensible due to a fundamental empathy with the character's motives & desires. 32 References. Reimann, Horst (U Augsburg, D-8900 Federal Republic Germany), **(Massen-)Kommunikationsforschung in der Informationsgesellschaft** ([Mass] Communication Research in the Information Society), *Soziologische Revue*, 1992, 15, 3, July, 245-251. (GER)

¶ A review essay on books by: Thomas Heinze, *Medienanalyse. Ansätze zur Kultur- und Gesellschaftskritik* ([Analysis of Media. Extension of Cultural and Social Criticism] Opladen: Westdeutscher Verlag, 1990); Max Kaase & Winfried Schulz (Eds), *Massenkommunikation. Theorien, Methoden, Befunde* ([Mass Communication. Theories, Methods, Findings (special issue of *Kölner Zeitschrift für Soziologie & Sozialpsychologie*, 1989, 30)] Opladen: Westdeutscher Verlag, 1989); Alexander Rossnagel (Ed), Freiheit im Griff. Informationsgesellschaft und Grundgesetz ([Freedom Seized. Informational Society and the Basic Law] Stuttgart: S. Hirzel, 1989); Alexander Rossnagel, Peter Wedde, Volker Hammer, & Ulrich Pordesch, *Digitalisierung der Grundrechte? Zur Verfassungsverträglichkeit der Informations- und Kommunikationstechnik* ([Digitalization of the Basic Laws? On the Digestibility of the Informational and Communicative Technologies] Opladen: Westdeutscher Verlag, 1990); & Joachim Friedrich Staab, *Nachrichtenwert-Theorie. Formale Struktur und empirischer Gehalt* ([News Value-Theory, Formal Structure and Empirical Content] Freiburg/München: Alber 1990 [see listings in IRPS No. 66]). Heinze offers a synopsis of works by experts on information & media from the early Frankfurt school of critical theory, achieving a reconstruction of different critical theories on the sociopolitical function of mass media; however, in general the book is rather disappointing. Schulz's & Kaase's book expands beyond the scope of its title to include information on new areas of inquiry in the theory of social communication. Rossnagel's work is an anthology of practical studies examining the potential advantages & risks of a data-oriented society, with special emphasis on management & communication systems. The book by Rossnagel et al illustrates the potential for social change in the areas of fundamental social values & constitutional law that may be brought about by the computer revolution. Staab presents a theoretical & empirical contribution to election journalism, based on the possible intentionality of the journalistic act. M. Meeks

93Z4941

Walters, Suzanna Danuta (Dept Sociology Georgetown U, Washington DC 20057), **Material Girls: Feminism and Cultural Studies**, *Current Perspectives in Social Theory*, 1992, 12, 59-96.

¶ Two major approaches to the study of the representation of women in the mass media & popular culture are debated, & an argument is made for a more comprehensive feminist cultural theory. First, examining what has often been called the "images" or "roles" approach, it is concluded that its quantitative methodology & theoretical simplicity mire it in a liberal & ultimately descriptive perspective that fails to address the larger social & cultural structures through which gender has meaning. Recently, theorists deriving their intellectual currency largely from semiotics, psychoanalysis, & poststructuralism, have challenged the basic assumptions of the image analysts. By problematizing the subject & treating "meaning" as the precarious result of a complex interaction between viewer, social relations, & image, they examine the cultural construction of "women" in & through the specific "signifying practice" implied by the particular medium. While an improvement on the images perspective, signification theorists are so wedded to a formalist language that the "social" is often lost or elided in their analyses, & the vital relationship between the image of woman & real, social women is held in abeyance. Thus, while these two positions are widely perceived as contradictory, it is shown that they are quite similar in their shared rejection of a social & contextual understanding of cultural objects, an understanding that we must have if we are to develop a truly feminist cultural practice. 50 References. Wang, Zhixing (Dept Journalism People's U China, Beijing), **The Chinese Mass Media: Environmental Coverage (A Case Study)**, *Interaction*, 1991, 9, 1-2, 94-118.

¶ A content analysis of 21 issues of *People's Daily*, the official newspaper of the Chinese Communist Party, from 1987 examines mass media attitudes toward coverage of environmental news in the People's Republic of China, & how they differ from those of Western news media. Focusing on coverage of a forest fire in Daxingan Ling, it is shown that: positive actions & events relating to environmental disasters were stressed over negative information; more coverage was given to authorities than to ordinary citizens; & local officials served as barriers to coverage by hiding victims of the fire. The difference between Chinese & Western mass media lies in the former's tendency to treat disasters as phenomena from which political & moral lessons can be drawn, while the latter views disasters as an opportunity to provide a valuable service to local victims & as a means for increasing ratings or circulation. New developments in Chinese mass media are discussed. 4 Tables, 21 References. Adapted from the source document.

Boutilier, Mary A. & San Giovanni, Lucinda F. (Dept Political Science Seton Hall U, South Orange NJ 07079), **Individual and Team Sports in the Olympics: A Question of Balance**, *International Review for the Sociology of Sport*, 1992, 27, 2, 177-191.

¶ It is contended that the social organization of an Olympic sport constructed as an individual or a team event has important consequences for the demands it makes on an athlete, both in terms of instrumental (technical) skills & expressive (affective, motivational, & interactional) orientations. Furthermore, with respect to the larger audience of spectators, sports can be understood as symbolic events that affirm the priority of certain worldviews & ideals. The 1988 summer games in Seoul, South Korea, & the 1992 summer games in Barcelona, Spain, are used to examine the relative distribution of these two types of sports over the history of the Olympics. Findings reveal a predominance of individual sports, which is explained by six social forces: history, organization, culture, stratification, modernization, & politics. Dimensions of specialization, interdependence, & face-to-face competition provide the basis for a classification of team sports. An increase in the number of Olympic team sports is proposed to bring a greater balance to the Games & to promote

international understanding. 1 Table, 20 References. Adapted from the source document.

Coakley, Jay (Sociology Dept U Colorado, Colorado Springs 80933-7150), **Burnout among Adolescent Athletes: A Personal Failure or Social Problem?,** *Sociology of Sport Journal,* 1992, 9, 3, Sept, 271-285.

¶ Standard explanations of burnout among young athletes attribute it to chronic, excessive stress & emphasize prevention techniques that help athletes control stress & adjust to the conditions of sport participation. Here, informal interview data from a convenience sample of adolescent athletes experiencing burnout suggest that the roots of burnout are grounded in the social organization of high performance sport, & tied to identity & control issues. A model is developed that conceptualizes burnout as a social problem grounded in forms of social organization that constrain identity development during adolescence & prevent young athletes from having meaningful control over their lives. In light of this alternative perspective, new strategies for preventing burnout are recommended. 1 Figure, 24 References. Adapted from the source document.

Grey, Mark A. (Dept Sociology & Anthropology U Northern Iowa, Cedar Falls 50613), **Sports and Immigrant, Minority and Anglo Relations in Garden City (Kansas) High School,** *Sociology of Sport Journal,* 1992, 9, 3, Sept, 255-270.

¶ Ethnographic research, entailing 700+ hours of observation & 50 formal interviews, was conducted to explore the role of sports in relations among immigrant & established-resident minority & Anglo students in Garden City (Kan) High School. It is demonstrated that sports activities form the most direct link between the school & community, & many Garden City residents consider sport to be one of the school's most important functions & a catalyst for successful academic achievement. Student participation in established sports & other school activities is encouraged under the pretext that it will help them more readily establish an identity with the school. Because most immigrant & many other minority students are not involved in established sports, & do not even attend games, they risk being perceived as unwilling to assimilate on "American" terms, & they are generally given lower status in the school's social hierarchy. 21 References. Hargreaves, John (Goldsmiths' Coll U London, SE14 6NW England), **Olympism and Nationalism: Some Preliminary Considerations,** *International Review for the Sociology of Sport,* 1992, 27, 2, 119-137.

¶ Following a brief review of some inadequacies of Olympism as normative theory & of the critical response that treats it as mere ideology, two possible approaches to the problem of Olympism & nationalism are examined. The idea that sport performs a necessary cathartic function, releasing tension generated in social formations & helping in the management of conflict, is reflected in the notion that the modern pattern of sport is the outcome of a civilizing process. The approach that draws on models of international relations is on much firmer ground in arguing that in a world characterized by international tension between states & peoples, participant units in transnational institutions like the Olympics can be expected to behave as if these are an extension of politics. It is argued that Olympism & nationalism should be regarded as sociopolitical constructions with a specific character & dynamics of their own. The 1992 Barcelona (Spain) Olympics are offered as an example. 32 References. Adapted from the source document.

93Z4951

Kidd, Bruce (School Physical & Health Education U Toronto, Ontario M5S 1A1), **The Culture Wars of the Montreal Olympics,** *International Review for the Sociology of Sport,* 1992, 27, 2, 151-164.

¶ Despite a tradition of Canadian talent for successfully staging international & domestic multisport games, the 1976 Montreal (Quebec) Olympic Games received mixed reviews, with many Canadians remembering them as an embarrassing failure. Subsequent investigations to determine why the Games proved so difficult generally attributed extravagant mismanagement & unfulfilled expectations to Montreal's flamboyant mayor. The event also generated a deep-rooted debate about the purposes of sport. It is argued that the impulse to stage grandiose Games & the failings it led to were magnified by the clash of nationalisms that preoccupied & polarized Canadian society during the period. Although the events themselves were quite successful & the social investment contributed to the long-term development of sports & fitness in many parts of Canada, those accomplishments were clouded by the contending nationalism. It is concluded that, while the Games made a decided impact on cultural barriers in Canada, they did not unblock the country's dominant cultural rigidities. 44 References. 93Z4952

Lämmer, Manfred (Instit Sportgeschichte Deutschen Sporthochschule Köln, Carl-Diem-Weg 6 D-5000 41 Federal Republic Germany), **Myth or Reality: The Classical Olympic Athlete,** *International Review for the Sociology of Sport,* 1992, 27, 2, 107-118.

¶ The most important values, principles, & postulates of the ideal of the classical Olympic athlete are highlighted, drawing on the ideology of the ancient Greeks, which was characterized by three principles: harmonious & balanced development of all physical & intellectual qualities & personal traits; all-round physical training; & a striving for physical health & perfection. It is contended that such a perspective fails to sustain critical analysis on the basis of original sources. Only after a reorientation of sport history along the methods of modern social sciences, & after evaluation of ancient inscriptions & the results of excavation, has it been revealed that the body was not the goal of top athletes' efforts, but rather a means to accomplish the real sense of life, ie, to achieve the honor & recognition that would decide social prestige & status among peers. It is suggested that the myth of the classical Olympic athlete is a product of a nineteenth-century idealization of Greek antiquity. 19 References. Adapted from the source document.

Lee, Judy (Dept Kinesiology U Waterloo, Ontario N2J 3E2), **Media Portrayals of Male and Female Olympic Athletes: Analyses of Newspaper Accounts of the 1984 and the 1988 Summer Games,** *International Review for the Sociology of Sport,* 1992, 27, 3, 197-222.

¶ Media portrayals of male (M) & female (F) athletes in the 1984 & 1988 summer Olympics as reflected in the *Globe and Mail* in Canada & the *New York Times* in the US are subjected to quantitative content analyses, supplemented by some qualitative analyses. Results confirm the hypothesis that Ms receive more attention, & more favorable portrayals, than do Fs in sports news in the mass media. 9 Tables, 24 References. Adapted from the source document.

93Z4954

Pujadas, Xavier & Santacana, Carles (Hospitalet Llobregat, Avinquda Europa 49 1 o 1 a E-08907 Spain), **The Popular Olympic Games, Barcelona 1936: Olympians and Antifascists,** *International Review for the Sociology of Sport,* 1992, 27, 2, 139-150.

¶ An examination of the Popular Olympic Games, organized in Barcelona, Spain, in 1936 as an antifascist protest to the Olympic Games being held in Nazi Germany. Although the event was cancelled due to the Spanish civil war, diverse aspects that ran parallel to the organization of the Olympic Games are explored through media sources, documentation, & oral sources. A preliminary descriptive summary of the Catalan sports movement is provided to highlight some of the interpretive characteristics of the 1936 Olympics. Historical reasons that prevented the Spanish event from being held are discussed, attempting to avoid the narrow view of the Popular Olympic Games as an isolated occurrence–the single & direct consequence of the victory of the Left in the Feb 1936 elections. New elements that link it to other social & sports mechanisms are suggested. 1 Table, 4 References. Adapted from the source document.

93Z4955

Takács, Ferenc (Hungarian U Physical Education, H-1123 Budapest), **Ethos and Olympism: The Ethic Principles of Olympism,** *International Review for the Sociology of Sport,* 1992, 27, 3, 223-234.

¶ The manifestations of ethos in the theory & practice of modern Olympic games are examined. The ethos of ancient Olympic games can be organized around the principle of "kalokagathia"–beauty, goodness, morality–while that of the modern games can be explained on the basis of Coubertin's philosophy & the ethical principle of order. Two basic pillars of Olympism are examined: the well-known slogan of "citius, altius, fortius" containing the twentieth century's performance-oriented human ideal, & the notion that "participation is the main thing," insisting on the expansion & democratization of sport. 6 References. Adapted from the source document.

Trujillo, Nick (Dept Communication Studies California State U, Sacramento 95819), **Hegemonic Masculinity on the Mound: Media Representations of Nolan Ryan and American Sports Culture,** *Critical Studies in Mass Communication,* 1991, 8, 3, Sept, 290-308.

¶ The ways that hegemonic masculinity is reproduced in mediated sport are demonstrated via a content analysis of print & TV representations of US baseball pitcher Nolan Ryan, focusing on how the media have covered & commodified Ryan throughout his career. Five distinguishing features are analyzed: Ryan as the embodiment of male athletic power, as an ideal image of the capitalist worker, as a family patriarch, as a white rural cowboy, & as a phallic symbol. 115 References. Wacquant, Loïc J. D. (Harvard U, Cambridge MA 02138), **The Social Logic of Boxing in Black Chicago: Toward a Sociology of Pugilism,** *Sociology of Sport Journal,* 1992, 9, 3, Sept, 221-254.

¶ Ethnographic & participant observation data obtained over 3 years at a ghetto gym in Chicago, Ill, are used to: (1) de-exoticize the subproletarian bodily craft of boxing by uncovering its embedded social logic & meaning, & (2) contribute to a theory of practice that escapes the false antinomies associated with rational choice & normative models of action. The peculiar relation of symbiotic opposition that ties the boxing gym to its proximate social matrix of the black ghetto & to the masculine street culture from which it draws its sustenance & shelters its members is described Boxing is depicted as a Durkheimian "social art" whose mastery involves an intensive, ascetic, & strictly regulated manipulation of the body designed to inculcate through direct embodiment the set of corporeal, visual, & mental schemata immanent to pugilistic practice. The social production of the pugilistic habitus as embodied practical reason suggests the need to place the socialized lived body at the center of the analysis of social action. 84 References. SOCIAL PROBLEMS AND THE POLICY STUDIES ORGANIZATION

The Policy Studies Organization has published numerous important books that relate to social, economic, planning, technology, and political policy problems. Nearly all of these books are preceded by a journal issue on the topic. Members of PSO receive eight such journals per year by way of the *Policy Studies Journal* and the *Policy Studies Review*. The list below provides a sampling of the PSO concern for social problems in addition to political problems.

I. SOCIAL POLICY

1. Harrell Rodgers, *Public Policy and Social Institutions* (PSO-JAI Press, 1989).
2. Michael Kraft and Mark Schneider, *Population Policy Analysis: Issues in American Politics* (PSO-Lexington Books, 1978).
3. Marian Palley and Michael Preston, *Race, Sex, and Policy Problems* (PSO-Lexington, 1979).

II. ECONOMIC POLICY

1. Warren Samuels, *Fundamentals of the Economic Role of Government* (PSO-Greenwood Press, 1989).
2. James Anderson, *Economic Regulatory Policies* (PSO-Lexington, 1978).
3. Alan Stone and Edward Harpham, *The Political Economy of Public Policy* (PSO-Sage, 1982).

III. URBAN AND REGIONAL PLANNING

1. Dean Mann, *Environmental Policy Implementation: Planning and Management Options and Their Consequences* (PSO-Lexington, 1982).
2. Roger Montgomery and Dale Marshall, *Housing Policy for the 1980s* (PSO-Lexington, 1980).
3. Alan Altshuler, *Current Issues in Transportation Policy* (PSO-Lexington,1979).

IV. SCIENCE AND TECHNOLOGY POLICY

1. Joseph Haberer, *Science and Technology Policy* (PSO-Lexington, 1977).
2. Robert Blank and Miriam Mills, *Biomedical Technology and Public Policy* (PSO-Greenwood, 1989).
3. Susan Welch and Robert Miewald, *Scarce Natural Resources: The Challenge to Public Policymaking* (PSO-Sage, 1983).

Abeyratne, R. I. R. (1000 Sherbrooke St West, Montreal Quebec H3A 2R2), **The United Nations Decade of International Law,** *International Journal of Politics, Culture and Society,* 1992, 5, 3, spring, 511-523.

¶ The UN is examined as an instrument of international law (IL), analyzing its competence to promulgate & sustain principles of IL throughout its member states. Also presented are a critical analysis of past achievements of the UN in relation to the application of principles of IL by states, & an examination of whether the aims of General Assembly Resolution 44/23 (declaring 1990-1999 the UN Decade of International Law) could be successfully attained. It is argued that the ineffectiveness of IL is due to its reactive nature, & that IL should be applied more proactively; eight measures to enhance the effectiveness of IL & make Resolution 44/23 work are suggested. Modified AA

93Z4963

Bandy, John David (U Texas, Austin 78712), **State and Military Force in the World-System: The Political Rhetorics of Disarmament,** * *Dissertation Abstracts International, A: The Humanities and Social Sciences,* 1992, 53, 4, Oct, 1289-A.

Available from UMI, Ann Arbor, MI. Order No. DA9225516.

93Z4964

Berretta, Nora & Paolino, Carlos (Investigadores Centro Investigaciones Economicas, 1428 Buenos Aires Argentina), **Comercio con Argentina y Brasil: uno o dos patrones de inserción comercial?** (Commerce with Argentina and Brazil: One or Two Patterns of Insertion?), UM *Revista Paraguaya de Sociología,* 1991, 28, 81, May-Aug, 151-175. (SPA)

¶ The economic insertion of Uruguay into regional commerce in Latin America is described, focusing on Uruguayan export capacity & regional import needs, based on official statistics for 1983-1988. The global exportation specialization of Uruguay is outlined, & its relationship to Uruguayan participation in regional & global commerce is discussed. Changes in regional commerce are quantified, suggesting that Uruguay's trade relationship with both Brazil & Argentina is increasing. Implications for the future of regional commerce are considered. 8 Tables, 3 Graphs, 1 Appendix, 11 References. J. Taylor

93Z4965

Boisier, Sergio (Instit Latinoamericano & Caribe Planificación Económica & Social, Naciones Unidas Ave Dag Hammarskjöld Santiago Chile), **La gestión de las regiones en el nuevo orden internacional: cuasi-estados y cuasi-empresas** (The Articulation of Regions in the New International Order: Quasi-States and Quasi-Businesses), UM *Revista Paraguaya de Sociología,* 1991, 28, 82, Sept-Dec, 7-37. (SPA)

¶ The international political changes that took place 1989-1991 were precursors for the globalization of the international economy. In planning for regional development in such a global economy, traditional notions of regional development must be discounted. Regions are newly conceptualized as quasi-states & quasi-businesses, & full, active participation by all agents of regional development is required. While governments, unions, & businesses may have their individual strategies for development, construction of a generalized regional strategy requires building a matrix of interaction between these actors &, at the same time, considering the dynamic use & redistribution of social resources. Flow in such a matrix is presented, with the two primary assumptions being that: planning for regional development requires that a region truly consider itself a region; & each region must evaluate its global socioeconomic panorama to establish basic objectives for development. 1 Figure, 29 References. 93Z4966

Calva, José Luis (Facultad Economía U Nacional Autónoma México, 04510 Mexico DF), **Posibles efectos de un Tratado de Libre Comercio México-Estados Unidos sobre el sector agropecuario** (Possible Effects of a Mexico-United States Free Trade Agreement on the Agricultural-Financial Sector), UM *Revista Mexicana de Sociología,* 1991, 53, 3, July-Sept, 111-124. (SPA)

¶ It is argued that the potential effects of the Mexico-US Free Trade Agreement on Mexican agriculture should be analyzed in the context of the current economic crisis in agriculture. The economic adjustment policies of the 1980s have already seriously undermined profitability & investment productivity in agriculture, causing a drop in capital accumulation. Agriculture has also been affected by a decrease in government capital expenditures & credit. It is concluded that free, unrestricted commerce could be catastrophic for Mexico in that many of its most important crops would disappear from the market. 27 References. Adapted from the source document.

Cypher, James M., **La política de México para la promoción de exportaciones: un nuevo patrón de acumulación?** (Mexico's Exportation Promotion Policy: A New Accumulation Model?), UM *Revista Mexicana de Sociología,* 1991, 53, 3, July-Sept, 81-110. (SPA)

Translated by Hortensia Moreno & Salvador Mendiola.

¶ Mexico, one of the first developing nations to use import substitution in order to favor national industrialization, in the 1980s, turned to a laissez-faire doctrine to promote exports. Here, drawing on published statistical data for 1929-1990, the nature & dimensions of this change in development policy are analyzed. Results indicate that boosting imports did not represent a drastic change in development policy, as many politicians have claimed. The effectiveness of boosting exports to increase industrialization has yet to be proven. 5 Tables, 45 References. Adapted from the source document.

Faure, Claude (U Paris VIII, F-93526 Saint Denis Cedex 02 France), **El campesino, el centro y la periferia** (The Peasant, the Center and the Periphery), *Sociológica,* 1990, 5, 13, May-Aug, 231-248. (SPA)

Introduction, 227-229; translated from French by Francis Mestries.

¶ In **Nota introductoria** (Introductory Note), Michelle Chauvet S. (U Autónoma, Azcapotzalco, Mexico) situates the work of Claude Faure within the debate among the social sciences regarding whether or not a peasantry still exists. Faure describes how a modern, global economy presents an obstacle to the continued existence of the Third World peasantry in their own space (the countryside), displacing them to the cities, where they find themselves at the center of the system of domination that excludes them. The classic opposition of country-city occurs within the space of the Third World megalopolis. Simultaneously, agriculture functions via a different social system than capitalism, outside industry & salaried work, falling on the periphery of global capitalism. However, an essential characteristic of capitalism is that labor, material, & money circulate; all production is part of the cycle of capital, with the activities of the market resulting in a homogenization of social relations & activities. This paradox is explored, drawing on Karl Marx's theory of formal subsumption of labor to capital (no reference provided). It is concluded that the need to accumulate capital forces some peasants into the proletariat, but the reproduction of the peasantry is still possible at the margins of capitalist society. J. Taylor

93Z4969

Ferrarotti, Franco (Corso Vittorio Emanuele 24, I-00186 Rome Italy), **Attualità dell'europeismo di Luigi Einaudi** (The Relevance of Luigi Einaudi's Europeism), UM *La Critica Sociologica,* 1991, 99, Oct-Dec, III-VII. (ITA)

¶ Recent political trends across Europe bring to mind the call by Luigi

Einaudi, later president of Italy, for an integrated, federalized system of European states in "La società delle nazioni è un ideale possibile?" ((Is a Society of Nations a Possible Ideal?) *Corriere della Sera*, 5 Jan 1918). The current impending unification of Western Europe under the Maastricht treaty contrasts sharply with the chaotic divisiveness in Eastern Europe. The present violence in Yugoslavia could hardly have been expected a few years ago. On a larger scale, there is potential for increased ethnic tensions among the republics of the former USSR, characterized as a potential "nuclear Yugoslavia." Einaudi's philosophy offers a perspective for lessening nationalist tensions. M. Meeks

Firebaugh, Glenn (Dept Sociology Pennsylvania State U, University Park 16802), **Growth Effects of Foreign and Domestic Investment**, UM *American Journal of Sociology*, 1992, 98, 1, July, 105-130.

¶ Reanalysis of data from previous dependency studies in 76 less-developed countries (Ballmer-Cao, Thanh-Huyen, Scheidegger, Juerg, *Compendium of Data for World-System Analysis: Bulletin of the Sociological Institute of the University of Zurich*, 1979, Mar; & Bornschier, Volker, & Chase-Dunn, Christopher *Transnational Corporations and Underdevelopment*, New York: Praeger, 1983) shows that, contrary to earlier conclusions, foreign investment spurs rather than inhibits economic growth. Previous studies focused on the coefficient for foreign capital stock, controlling for "flow" (new investment), & inferred that a negative coefficient for stock reflects dependency effects that retard economic growth. Because capital stock is the denominator for rate of investment, the greater the stock, the lower the investment rate for a given level of new investment. Thus, it is concluded that the negative coefficient for capital stock indicates a beneficial rather than a harmful investment effect. 4 Tables, 4 Appendixes, 44 References. Adapted from the source document.

Fogarty, Brian E. (Coll Saint Catherine, Saint Paul MN 55105), **Peace and Justice: Toward a Culture-Neutral View**, *Peace & Change*, 1992, 17, 3, July, 267-285.

¶ It is often assumed that peace & justice are closely linked, definitions of these concepts are difficult to agree on & tend to be ethnocentric in nature, rooted in Western Judeo-Christian traditions. Definitions of peace & justice are presented here that are independent of particular moral systems, grounded in principles of interactionist sociology. It is contended that peace & justice are related, but not inevitably so. A just social order, based on genuine consensus on beliefs, values, & norms, is the surest way to maintain peace, but such consensus can be formed around widely varying belief systems, some of which may seem unjust in Western eyes. Adapted from the source document.

93Z4972

Gerth, Hans H. (c/o Nubuko Gerth-Schulstr 19 D-6246 Glashütten/Ts Federal Republic Germany), **Crisis Management of Social Structures: Planning, Propaganda and Societal Morale**, *International Journal of Politics, Culture and Society*, 1992, 5, 3, spring, 337-359.

¶ The administrative leadership of communities confronted by crisis, particularly war & cold war, is examined. Crisis management by representative government requires introduction of remedial change through integration of two levels of power resources: (1) the power invested in large-scale functional organizations designed to meet special needs, eg, military defense of economic production; & (2) the power stemming from cohesive & solidifying forces within the community, eg, professional organizations & churches. This process relies on communication resources, which must convey the nonarbitrariness of policy adjustments & find the optimum balance between official secrecy, propaganda, & openness. The uses of racial & ethnic diversity & economic divisions in managing crises are discussed. D. Generoli

93Z4973

Ghils, Paul (Union International Associations, rue Washington 40 B-1050 Brussels Belgium), **International Civil Society: International Non-Governmental Organizations in the International System**, UM *International Social Science Journal*, 1992, 44, 3(133), Aug, 417-431.

Translated from French.

¶ An analysis of how international nongovernment organizations (INGOs) have come to modify or challenge the international system. The introduction of transnational forces–ie, nonstate entities of a social, political, scientific, religious, environmental, or other nature–into the study of international relations does not merely shift or cut across boundaries, but calls for a new, intrinsicially pluralistic approach. The interplay of factors & actors outside the conventional frame of reference of territorial sovereign states exposes a multipolar world that encompasses a variety of intersecting sociopolitical "forces of attraction" of a predominantly economic, ethnic, or religious character. The transnational approach particularly emphasizes three aspects of nonstate entities: their historical precedence over the state system; INGOs' role as the subjects & makers of international law; & the latter's effective scope of action in the contemporary world, either as shapers of opinion, as autonomous actors, or in competition with states. As central components of a potential international civil society, their transnationalization poses the question of the universal character of the state, & hence of civil society, & the groupings that structure it across national borders. 2 Illustrations, 41 References. AA

93Z4974

González-Aréchiga, Bernardo, Ramírez, José Carlos & Gómez, Fanny Aguas (c/o Ramírez–Coll Frontera Norte, Mexico), **Los servicios en la industria maquiladora y las negociaciones de un Tratado de Libre Comercio con Estados Unidos y Canadá** (Services in the Maquiladora Industry and Negotiations of a Free Trade Agreement with the United States and Canada), UM *Revista Mexicana de Sociología*, 1991, 53, 3, July-Sept, 201-219. (SPA)

¶ It is argued that the Mexico-US-Canada Free Trade Agreement (FTA) does not create an ideal structural framework for the Mexican *maquiladora* (subcontracting) industry, drawing on statistical data for the 1980s. The FTA is the result of a one-sided exchange that distributes opportunities, costs, & benefits unequally. The FTA will adversely affect the global efficiency of the subcontracting industry. A redefinition of the relationship between Mexico & the world is urged. 1 Table, 53 References. Adapted from the source document.

93Z4975

Harris, Sheldon (Dept History California State U, Northridge 91330), **Japanese Biological Warfare Experiments and Other Atrocities in Manchuria, 1932-1945, and the Subsequent United States Cover Up: A Preliminary Assessment**, UM *Crime, Law and Social Change*, 1991, 15, 3, May, 171-199.

¶ As early as the 1930s, Japanese microbiologists & other scientists used humans for test purposes in their quest for a viable offensive biological warfare system. Test Ss were either killed in the experiments or were "sacrificed" when they outlived their usefulness. Data confirm that field tests in China unleashed plagues that killed tens, & possibly hundreds, of thousands. Japan's large biological warfare enterprise in Manchuria & China was discovered by US intelligence in early 1942. By the end of WWII, the US had secured a comprehensive outline of Japanese operations. The efforts of US scientists to obtain research data from Japanese scientists who escaped from Manchuria are described. Specifically, the Americans agreed not to prosecute the scientists as war criminals. Thus, under US jurisdiction, Japanese scientists were able to live normal lives following the war. Adapted from the source document.

93Z4976

Hobsbawm, Eric, Whose Fault-Line Is It Anyway?, *New Statesman & Society*, 1992, 5, 199, 24 Apr, 23-26.

¶ The ideological division of Europe's population into nations & ethnic groups is examined. Explanation of the fracturing of "Soviet" Europe requires understanding of the concepts of nationalism & ethnicity: nationalism is a political concept, with comparatively little historical underpinnings, referring to the right to form territorial states & exert sovereign control within state boundaries; ethnicity is a sociological & historical concept emphasizing homogeneity & group identity. The disintegration of a nation-state severs the bonds of nationalism & also produces social disorientation & loss of material welfare. Under such conditions of turmoil & uncertainty individuals fall back on their historical group identity bonds, manifesting ethnicity & ethnic politics. D. Generoli

93Z4977

Hoole, Francis W. & Huang, Chi (Indiana U, Bloomington 47405), **The Political Economy of Global Conflict**, UM *Journal of Politics*, 1992, 54, 3, Aug, 834-856.

¶ The political economy of global conflict is examined from a historical & dynamic perspective, based on data for the years 1954-1980 compiled by Melvin Small & J. David Singer (*Resort to Arms: International and Civil Wars, 1816-1980*, Beverly Hills, Calif: Sage, 1982). Findings support the view that changes in civil war, international war, size of the global economy, economic interdependence, & economic hegemony are interrelated in a complex behavioral pattern with higher-order lag structures, autoregressive components, & multivariate relationships involving some feedback mechanisms. 2 Tables, 1 Figure, 107 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4978

Kellermann, Paul (Instit Soziologie U Klagenfurt, A-9022 Austria), **Current European Transformations**, *Innovation*, 1992, 5, 1, 5-10.

¶ The process of social, political, economic, & geographical change in Europe is examined. Rather than a political or sharply defined geographical entity, Europe has developed over centuries of diverse history & events, making interpretation of current European transformations difficult. Seven general guidelines for interpretation are offered: (1) no single comprehensive theory exists to explain the current European transformation; (2) revolutionary transformations in Europe are not a completely new phenomenon; (3) transformations may be integrative as well as disintegrative; (4) the integrative processes in Western Europe do not indicate the victory of capitalism & the disintegrative processes in Eastern Europe do not indicate the defeat of socialism; (5) the transformation processes contain unknown, unpredictable, & contradictory latent & manifest effects; (6) the European transformation in the East & the West can both be viewed as imperative steps toward a global society; & (7) identifiable tendencies in the European transformation include ongoing individualization, centralization in decision making, & increasing interdependence. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4979

Kimmerling, Baruch (Dept Sociology & Anthropology Hebrew U Jerusalem, IL-91905 Mount Scopus Israel (e-mail: ksukb@hujivm1.huji.ac.il)), **Sociology, Ideology, and Nation-Building: The Palestinians and Their Meaning in Israeli Sociology**, UM *American Sociological Review*, 1992, 57, 4, Aug, 446-460.

¶ Using the example of the Jewish-Arab conflict in Israel, it is shown that the analytic framework that guides research & analysis is often value-laden & conforms to a hegemonic culture or struggling counterculture. Five kinds of framework decisions are discussed: the sociopolitical boundaries of the collectivity under investigation, the historical periodization of the society, the terminology used to characterize sociological processes & phenomena, the way the research problem is posed, & the subjects deemed appropriate for investigation It is shown how the Palestinian minority & Jewish-Arab conflict were characterized by mainstream Israeli sociologists in accordance with dominant Zionist perspectives, & shaped by cultural commitments, perceived existential needs, & class, ethnic, & national interests. 94 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4980

Kourvetaris, George A. (Northern Illinois U, DeKalb 60115-2854), **Beyond the Arms Race: The Search for a New Paradigm of a Peaceful World**, UM *Journal of Political and Military Sociology*, 1991, 19, 2, winter, 233-252.

¶ Despite the euphoria of the "new world order" & the collapse of state socialism in Eastern Europe & the USSR, military forces are still by far the most expensive institutions in the world. It is argued that world leaders must move beyond notions of national security & the arms race, or the military paradigm, to more sociological & political approaches for a new system of world peace & security. More militarism provides false security & tends to promote the structured inequality & class system. The solution to the present arms race must be international & cannot be sought in the acceleration of nuclear weapons through a process of conversion to civilian industries. It is contended that this process must begin by reconsidering values, restructuring institutions, & reallocating resources. A peaceful paradigm is outlined, which consists of five major interrelated propositions or processes, based on a set of sociopolitical concepts such as inequality, national interests, closed system, dependency, & property rights. 2 Figures, 34 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4981

Kowalewski, David (Social Science Division Alfred U, NY 14802), **Periphery Praetorianism in Cliometric Perspective 1855-1985**, *International Journal of Comparative Sociology*, 1991, 32, 3-4, Sept-Dec, 289-303.

¶ Modernization & world-system theories are used to derive hypotheses about the historical trajectory of military coups in developing nations. Modernization theory suggests the absence of any historical patterning, while world-system theory suggests an increase over time & acceleration during Kondratieff contractions, hegemonic decline, & colonial withdrawal. Time-series data were gathered from the *New York Times* & *London Times* on unsuccessful & successful coups in 34 nations 1821-1985. Independent measures were constructed for time, the Kondratieff cycle, the hegemonic cycle, colonialism, & controls for political turmoil, terror, & revolution. The analysis provides no support for modernization theory but moderate support for world-system theory. Both unsuccessful & successful coups became more frequent over time. Unsuccessful coups were also more prevalent in years of Kondratieff expansion, & successful ones in years of extensive terrorist activities. 3 Tables, 2 Figures, 27 References. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z4982

Lenart, Silvo & Targ, Harry R. (Purdue U, West Lafayette IN 47907), **Framing the Enemy: *New York Times* Coverage of Cuba in the 1980s**, *Peace & Change*, 1992, 17, 3, July, 341-362.

¶ It is argued that US media portrayal of Cuba has shifted to accommodate this post-Cold-war structure of international relations, with greater focus now on Cuban domestic issues. That the *perestroika* period coincides with Cuba's own restructuring, or "rectification" campaign would apparently explain this domestic emphasis. However, a content analysis of *New York Times* coverage (N = 805 stories, 1982-1990) of Cuba shows a distinct lack of coverage of rectification, & a growing frequency of stories dealing with human rights issues. This human rights frame, it is argued, serves to preserve an anti-Cuba consciousness among the US public, even as the past Soviet connection is rendered benign. 5 Tables, 2 Figures, 1 Appendix. León, Samuel (Facultad Ciencias Políticas & Sociales U Autónoma México, 04510 Mexico DF), **Réquiem por el sindicalismo?** (Requiem for Unionism?), UM *Revista Mexicana de Sociología*, 1991, 53, 3, July-Sept, 171-184. (SPA)

¶ An examination of the effects of the privatization of companies & the policy of open markets in Mexico on workers, based on an analysis of 1987-1990 legislation in this area. This set of legislation is referred to as the "Pact," in that its passage constituted an agreement on the part of the traditional agents of the government to institute reforms to make this economic model work. The old union-corporation machinery is part of this pact, making any real attempt at labor reform impossible. 1 Table. Adapted from the source document. Losano, Mario G. (Facoltà scienze politiche U Milano, I-20122 Italy), **I corrispondenti tedeschi di Tobias Barreto** (Tobias Barreto's German Correspondents), *Sociologia del Diritto*, 1992, 19, 1, 5-41. (ITA)

¶ Sketches are presented of the lives of various Germans who personally influenced Brazilian jurist Tobias Barreto (1839-1889), principal backer of Germanism & German concepts in European law in Brazil. Barreto's German journalistic contact Karl von Koseritz was an active politician in southern Brazil, & also played a crucial role in introducing German culture. Barreto's correspondence with geographers Henry Lange & Wilhelm Albert Sellin further developed his Germanist agenda. Sellin's controversial criticisms of Brazil's intellectual climate are discussed. 1 Appendix. Adapted from the source document as translated by J. Sadler. Melissen, Jan (Polemologisch Instit U Groningen, NL-9700 HS Netherlands), **Prelude to Interdependence: The Anglo-American Relationship and the Limits of Great Britain's Nuclear Policy, 1952-1957,** *Arms Control,* 1990, 11, 3, Dec, 205-231.

¶ A survey of the importance of the Anglo-American relationship in British nuclear policy, 1952-1957, the period of conservative rule under Winston Churchill & Anthony Eden that preceded the restoration of the US-UK nuclear relationship, based on archival material & recent literature. Discussed are: (1) consultation on the use of nuclear weapons; (2) bilateral negotiations about the exchange of technical nuclear information; (3) the impact of the thermonuclear weapon on GB's nuclear policy; & (4) British decisions regarding the development & acquisition of adequate delivery vehicles like the medium-range bombers, the Thor, & the Blue Streak missiles. The importance of political factors underlying British strategic policy is emphasized. Modified AA

Molotchkov, Sergei (Instit USA & Canada Soviet Academy Sciences, *Leninsky Prospekt 14 117901 Moscow V-71 Republic* Russia), **Europe: Canada's Last Chance?,** UM *Queen's Quarterly,* 1991, 98, 2, summer, 308-318.

¶ Economic & political relations between Canada & Europe are examined. Until recently, Canadian foreign policy was dominated by relations with the US, & foreign relations with Europe were greatly colored by US influence & interests. Now, with the North American Free Trade Agreement guaranteeing Canadian access to US markets, Canadian foreign policy can refocus its efforts & face the challenge of relations with Europe. Canada's new European foreign policy consists of three elements: (1) establishment of a redirected & politicized North Atlantic Treaty Organization; (2) expansion of the role of the Conference on Security & Cooperation in Europe; & (3) development of a more comprehensive relationship with the European Economic Community. In pursuing these, Canada must adopt its own entirely Canadian viewpoint & help to balance the influence of the US. D. Generoli

93Z4987

Morin, Edgar, L'Etat-Nation (The Nation-State), *Sociologia,* 1992, 26, 1, 135-142. (FRE)

¶ Marxism was flawed by its reduction of the nation-state to an ideological abstraction. It would be more appropriate to speak of the nation-state as both a creator & creation of secularization processes starting in the late Middle Ages. Each nation-state formed under different conditions; eg, England, was formed by its geographic insularity, while France was formed by the partial assimilation of various ethnic groups. Currently, the nation-state persists as the major unit of government despite economic internationalization. The French model of achieving membership in the nation-state, based on the voluntary acceptance of French culture by immigrants, is contrasted with the German model, based on genetic relationship to the German people. M. Meeks

Pacheco, Simón, El espejo empañado: crisis de legitimidad del Estado (The Tarnished Mirror: Crisis of Legitimacy of the State), UM *Revista Paraguaya de Sociología,* 1991, 28, 82, Sept-Dec, 69-81. (SPA)

¶ Any attempt to analyze the crisis of legitimacy of the state cannot avoid studying daily life, where values, myths, & behaviors are constructed. In Ecuador's case, it is contended that profound social fragmentation is actually impeding individuals from recognizing "the other." Other individuals have become strangers or enemies, creating a permanent state of instability & fear, & the imposed order is seen as alien. This alien order, or perceived lack of order, impedes the universalization of social relations & norms that regulate them. The situation of inequitable social relations breeds authoritarianism, & laws are imposed on, not adopted by, the citizenry. Order must be instituted in Ecuador before the society can be collectively constructed. The guarantee for consolidating a legitimate political order in Ecuadorian society is rooted in the existence of democracy in the society, & not the reverse. M. Pflum

Palomares, Laura & Mertens, Leonard (Facultad Ciencias Políticas & Sociales U Nacional Autónoma México, 04510 Mexico DF), **Las bases estructurales del movimiento sindical en transformación a partir de las innovaciones tecnológicas** (The Structural Bases of the Labor Movement Transformation Due to Technological Innovations), UM *Revista Mexicana de Sociología,* 1991, 53, 3, July-Sept, 143-170. (SPA)

¶ The transformation of the labor movement in the face of technological innovations is considered, describing the new post-Fordist model, or techno-economic paradigm, that has emerged from this transformation, drawing on secondary data. Four stages are presented: the fixing of the wage table & consumption, & the material & ecological surroundings according to the limits of the previous paradigm; the new technologies; the structural elements of the labor movement; & the union's view of the new technologies. A union response to technological innovation should include: development of a new worker culture; use of union organizational capacity to address contradictions emerging in the new paradigm; & decentralization of union life & activity. 2 Tables, 3 Graphs. Pedersen, Thomas (Instit Political Science U Aarhus, DK-8000 C Denmark), **Political Change in the European Community. The Single European Act as a Case of System Transformation,** *Cooperation and Conflict,* 1992, 27, 1, Mar, 7-44.

¶ A pluralistic framework for analyzing European Community (EC) integration dynamics draws on Leon Lindberg's & Stuart Scheingold's actor-oriented, neofunctionalist study, *Europe's Would-Be Polity* (Englewood Cliffs, NJ: Prentice-Hall, 1970), which uses sectoral models to focus on discrete regional processes of political change. Here, these models are broadened to include graduated categories of change (marginal, incremental, dynamic) & directed vs undirected change. The system transformation concept, which models political change through geographical enlargement & institutional reform, is better explained on an international level. EC adoption of the Single European Act exemplifies system transformation, considering mobilization of European leaders faced with international economic & political challenges. 2 Tables, 55 References. Pilger, John, Pol Pot's Safe Haven: The West Is Helping Asia's Hitler Back to Power, *New Statesman & Society,* 1991, 4, 148, 26 Apr, 10-11.

¶ World opinion of Cambodia's Khmer Rouge dictator Pol Pot is explored. In sharp contrast to the call for the prosecution of Saddam Hussein for crimes of genocide, the US & the world have taken a much different stance toward Pol Pot, whose crimes have been characterized as the worst the world has seen since Hitler's Germany. Pol Pot has been granted safe haven by the UN, is under protection of a special Thai army unit funded by the US, & is privy to US satellite intelligence information. His chosen man is allowed to occupy Cambodia's seat in the UN General Assembly, his envoys receive all diplomatic privileges, & he has received a pledge that he will not be tried for his crimes against humanity. US policy supports Pol Pot because he is anti-Vietnamese & will continue to pressure the US's old enemy & protect the name of the West in a region where it greatly needs protection. D. Generoli

93Z4992

Pohoryles, Ronald (Interdisciplinary Centre Comparative Research Social Sciences, Hamburgerstr 14/20 A-1050 Vienna Austria), **The East and the West: What Cooperation, What Aid?,** *Innovation,* 1992, 5, 1, 11-23.

¶ The parallel & complex processes of integration & disintegration under way in both Eastern & Western Europe are examined. In the post-WWII years, Eastern Europe was viewed as a monolithic socialist state. Though Western European integration was perceived in finer detail, the emergence of the European Community & other related events created a similar image of a coherent Europe. The dissolution of the USSR & the rise of nationalism has now created the image of disintegration in Eastern Europe, an image in stark contrast to the picture of an increasingly integrated Western Europe. Analysis of the postwar history of Western Europe, however, reveals surprising parallels with the present disintegration of Eastern Europe. Low voter turnout, capitalistic bureaucratization, increasing poverty, & the creation of a polyarchic po-

litical system can all be perceived as symptoms of crisis & should prompt a reevaluation of the role of Western aid to Europe. 23 References. Adapted from the source document.

Polychroniou, Constantine G. (U Cincinnati, OH 45221), **U.S. and E.E.C.: A Sociopolitical Alliance and an Economic Competition,** UM *International Review of Modern Sociology,* 1991, 21, 2, autumn, 123-128.

¶ The European Economic Community's (EEC) objectives to integrate restrictions on capital movement, unify Europe's individual labor markets, & ease discriminatory regulation that could impede full employment of market forces have become particularly salient since the collapse of major sociopolitical barriers to global economic competition. The new environment has the potential of transforming political partners into economic adversaries. It is suggested that the EEC's plans threaten long-standing economic cooperation between the US & EEC members, & that economic competition may generate geopolitical fallout at the expense of US international posturing. The EEC is likely to benefit most from the movement of socialist countries toward a more open economy, given EEC countries' proximity, both geographic & cultural, & apparent readiness to enter those markets. It is contended, however, that US businesses have an unprecedented opportunity to enter those markets jointly with their European counterparts. Adapted from the source document.

Quintana, Enrique (Dept Economía U Autónoma Metropolitana, Azcapotzalco 02000 Mexico DF), **El Tratado de Libre Comercio: alcances e implicaciones** (The Free Trade Agreement: Potential Effects and Implications), UM *Revista Mexicana de Sociología,* 1991, 53, 3, July-Sept, 65-80. (SPA)

¶ An exploration of the possible effects in Mexico of the proposed Free Trade Agreement (FTA) between the US & Mexico, with focus on two issues: indirect effects & implications for the financial industry. Among the indirect effects will be: the difficulty of turning back the clock once the FTA is implemented; a gradual & irreversible change in the production system; growth among larger industries & cities & a reduction in smaller industries; & profound changes in the social structure. For the financial community to facilitate the transition, it must: avoid the formation of oligarchical practices; guarantee the availability of financial services in a prolonged period of transition; modify the concept of regulation; & accept lower levels of liquidity for longer periods of time. Comparisons are made to the Canadian & US financial systems, & the positions of the financial community & the government are considered. Adapted from the source document.

Richardson, R. Jack (McMaster U, Hamilton Ontario L8S 4L8), **Free Trade: Why Did It Happen?,** UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology,* 1992, 29, 3, Aug, 307-328.

¶ In 1983, when Brian Mulroney campaigned for the leadership of the Progressive Conservative Party in Canada, he opposed a free trade agreement between the US & Canada; but in 1985, he began negotiations with the US on this agreement, which was eventually implemented in 1989. The theory of financial capital & the power balance model are used to explain this reversal. Per the theory of financial capital, the dominant financial & nonfinancial corporations control the economy. In the case of the free trade agreement, the concentration of Canadian economic institutions & directorships interlocked with foreign-controlled firms was responsible for pressuring Mulroney into supporting the agreement. These firms needed opportunities to expand to the US market & a free flow of capital, goods, & services. Per the power balance model, these financial & nonfinancial corporations had grown in recent years to wield more power & influence than the labor & agriculture sectors. Thus, the interests of the stronger & more organized dominant class prevailed. 3 Tables, 65 References. Adapted from the source document.

Scott, Peter Dale (English Dept U California, Berkeley 94720), **Cocaine, the Contras, and the United States: How the U.S. Government Has Augmented America's Drug Crisis,** UM *Crime, Law and Social Change,* 1991, 16, 1, July, 97-131.

¶ In an analysis of connections between Washington DC, & Honduran & other contra supporters in the illicit drug trade, it is demonstrated that such gray alliances for covert operations are themselves a major part of the US national drug problem. Though contra supporters have been arrested on drug charges, this has only occurred after the US has ceased to promote the contra faction which those arrested had been supporting. The Bush administration drug strategy is unlikely to affect the window of drug smuggling opportunity opened by Washington's relations with the corrupt Honduran military, & may well open new such windows by gray alliances with the corrupt right-wing forces in Andean countries. Stern, Eric (Dept Political Science Stockholm U, S-10691 Sweden), **Information Management and the Whiskey on the Rocks Crisis,** *Cooperation and Conflict,* 1992, 27, 1, Mar, 45-96.

¶ Theoretical perspectives on the management of information affecting decision making during crisis are developed, building on earlier research (eg, see Snyder, G., & Dieseing, P., *Conflict among Nations,* Princeton NJ: Princeton U Press, 1977). Search, processing, & communication are identified as three main functions of information management. In particular, search centers on the collection of data about the operational environment, while processing involves the logical development of data into politically relevant statements about actors/situations. As part of the communication function, a dyadic interaction of state actors distributes & produces meaning from data. These analytical tools are supported in an empirical examination of decision-making events during Sweden's 1981 "Whiskey on the Rocks" crisis. 1 Table, 1 Appendix, 46 References. Adapted from the source document.

93Z4998

Thompson, Anres, Review, *Voluntas,* 1991, 2, 2, Nov, 114-120.

¶ A review essay on a book by Brian H. Smith, *More than Altruism: The Politics of Private Foreign Aid* (Princeton U Press, 1990 [see listing in IRPS No. 66]). In this work, Smith provides an overview of private international development aid. Despite a political discourse proclaiming its humanitarian purpose, private foreign aid in the US, generally relief assistance, has largely attempted to serve government foreign policy objectives, eg, stopping communism & expanding free enterprise. In contrast, the efforts of nongovernment organizations in Western Europe & Canada have been geared toward empowerment of the people, with emphasis on structural assistance, long-term equity, & world peace. Despite these divergent agendas, a consensus born of overlapping interests can forge a system of development cooperation, through conflicted secondary agendas will likely not be negotiable. 4 References. Tilly, Charles (New School Social Research, New York NY 10003-4520), **Prisoners of the State,** UM *International Social Science Journal,* 1992, 44, 3(133), Aug, 329-342.

¶ A review of approaches & problems in historical-comparative analysis, arguing that comparative-historical sociologists are unwittingly peripheralizing the state while asserting its centrality. This tendency is based on two fallacies: the notion that every state corresponds to a distinct & continuous society whose history has interacted with that of the state; & the assumption that comparative sociology's main concern is to compare the divergent histories of different societies. Several explanations of why comparative-historical sociologists are now challenging the assumptions of "society" & linear modernization are offered: attempts to work out a logic of causal comparison for whole societies & their associated states; renewed attention to problems of structure & agency; the development of world systems theory; & the maturing of "structural sociology." It is concluded that rational choice theory is of limited value for historical analysis, & that structural sociology holds the promise of allaying Bertrand Badie's criticism (see reference in this issue of SA 41:1 to SA 38:6/90S21977/ISA/1990/5659) that historical analysis must abandon causal claims. 200 References. Waever, Ole (Centre Peace & Conflict Research, Copenhagen Denmark), **International Society–Theoretical Promises Unfulfilled?,**

Cooperation and Conflict, 1992, 27, 1, Mar, 97-128.

¶ A review essay on books by: Hedley Bull, Benedict Kingsbury, & Adam Roberts (Eds), *Hugo Grotius and International Relations* (Oxford: Clarendon Press, 1990); James Mayall, *Nationalism and International Society* (Cambridge: Cambridge U Press, 1990); & J. D. B. Miller & R. J. Vincent (Eds), *Order and Violence: Hedley Bull and International Relations* (Oxford: Clarendon Press, 1990 [see listings in IRPS No. 66]). The theoretical contributions of these recent studies to the English school of international relations are assessed. An international society composed of nation-states whose behavior is regulated by jointly developed conventions & institutions is envisioned by the English school. The negative relationship between international & world societies articulated in *Order and Violence* is questioned in a series of criticisms of the school. Insights of semioticians on shared language describing rules, norms, & institutions governing this relationship can benefit the school. Historical perspectives developed by Mayall focus on both steady & changing aspects of the international society interacting with nationalist forces. Contributors to *Hugo Grotius and International Relations* emphasize solidarism in international society & its role in the natural law/positivistic dichotomy. 58 References. J. Sadler

Wilkie, James W. (U California, Los Angeles 90024), **Comercio libre para México: imposición o demanda?** (Free Trade for Mexico: Imposition or Demand?), UM *Revista Mexicana de Sociología*, 1991, 53, 3, July-Sept, 3-14. (SPA)

Translated by Salvador Mendiola.

¶ The idea that the Free Trade Agreement (FTA) between the US & Mexico is being imposed on Mexico by President Salinas de Gotari & his advisors is challenged, drawing on informal interviews (N not provided) conducted in Eastern Europe & Mexico in 1990/91. Respondents (Rs) in Eastern Europe viewed international free trade as a protection against exploitation of workers on a national level. It is argued that opposition to international free trade in Mexico is concentrated among local political elites: working-class Rs appeared to favor free trade because they believed it would open up new markets for the goods they produced. It is concluded that the FTA is seen by many Mexicans as a means of wresting control from local political elites. Adapted from the source document.

Adams, Richard N. (U Texas, Austin 78712), **The Role of Energy in the Surgence of Ethnicity**, *Cultural Dynamics*, 1991, 4, 2, 186-198.

¶ Over the past 10,000 years, civilization & the state emerged; their expansion in extent & capacities has been based primarily on improvements in their control over energy & on increases in per capita energy consumption. In so doing, they have created social structures that demand the construction of identities on increasingly diverse bases, eg, religions, state-nationalism, & occupations. While it can be argued that the state never met its primal obligations (ie, it was created to provide people with greater security), there is no question that today, states of all political persuasions demonstrate that they are inherently unable to provide their basic function. Today the surge toward the recognition or creation of ethnic identities is the socially shared response of individuals to this failure. As such, it represents two important changes: (1) a return to the most basic form of identity–ancestry–as the basis for social organizing; & (2) a shift from solving the problem of security by ever-increasing amounts of energy, to the redefinition of social organization & individuals' relation to it. 7 References. Alozie, Nicholas O. (School Public Affairs Arizona State U, Tempe 85287-0603), **The Election of Asians to City Councils**, UM *Social Science Quarterly*, 1992, 73, 1, Mar, 90-100.
¶ An exploration of factors that condition Asians' ability to gain city council seats, how these factors differ from those that determine black & Hispanic representation, &, if the factors are similar, how their effects differ with respect to Asians. A sample of 66 US cities with populations of 25,000+ in 1984, of which 5%-50% were Asian, was analyzed using data from the 1986 International City Management Assoc's Form of Government Survey. Findings demonstrate that whether Asian council achievement is measured in raw numbers or in relation to all council portfolios, the % of Asian population is a crucial element, & that Asians' chances of gaining a council seat improve, the greater their median family income relative to whites. The size of the city council is useful in predicting whether or not Asians will get a seat on the council, but is not a particularly impressive predictor of variations in their % of representation. Neither electoral structure nor black & Hispanic council seats significantly affect Asian representation. Since the results show that the % of Asian population may not be as important as that of the black population in explaining variations in Asian representation, it is suggested that the % of black population is a more potent political force. 1 Table, 37 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5009
Anderson, Ken, Piccone, Paul, Siegel, Fred & Taves, Michael, **Roundtable on Communitarianism**, UM *Telos*, 1988, 76, summer, 2-32.
¶ A transcription of a roundtable discussion on communitarianism. As a working description, communitarianism refers to political & social sentiments somewhat akin to populism: recapturing political control in local communities, & reconstructing the social basis to better support family structures. The history of the idea-appropriated in different historical moments by both the Left (in the 1930s) & the Right (in the 1980s)-as well as its basis in political theory, are debated. Why communitarianism has resurfaced as an important political issue in the US today & whether it represents a real possibility in the future are two of the key questions discussed. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5013
Azmanova, Albena, Dictatorships of Freedom, *Praxis International*, 1992, 12, 2, July, 145-156.
¶ The social change underway in Eastern Europe derives its legitimacy either from the principle of restoring previously existing democratic states or from the principle of importing a democratic paradigm from Western societies. The institutions of these burgeoning democracies (eg, the USSR, Bulgaria, Romania, & Yugoslavia) have the role of creating a self-regulating civil society. This type of democratization is analogous to the Stalinist tactics of building communism, in that it issues from a similar utopian notion of rationally directed social change, which itself is derived from a hypothetical social model. The transition from communist social formations to liberal-democratic ones, then, does not constitute a change in political logic, because both models presume a centrally directed liberation. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5014
Balke, Friedrich (Friedrich/Literatur/kommunikationswissenschaftliches Graduiertenkoll U-Gesamthochschule Siegen, D-5900 Federal Republic Germany), **Die Figur des Fremden bei Carl Schmitt und Georg Simmel** (The Figure of the Alien in Carl Schmitt and Georg Simmel), *Sociologia Internationalis*, 1992, 30, 1, 35-59. (GER)
¶ Carl Schmitt's *Der Begriff des Politischen* ([The Concept of the Political] Hamburg: Hanseatische Verlagsanstalt, 1933) focuses on the stranger, not the enemy, as the key concept of his political theory. For Schmitt, the homogeneous people, seeking to eliminate or exterminate heterogeneous elements, is the proper subject of politics. By deciding to naturalize the will of the people to assure its ontological dignity, he sought to protect popular will against usurpation by any official political organization. Despite disagreements over some points in Georg Simmel's *Soziologie: Untersuchungen über die Formen der Vergesellschaftung* ([Sociology: Studies on the Forms of Socialization] Berlin: Duncker & Humblot, 1923), there was considerable agreement between the two men regarding the theoretical determination of the stranger. After the Nazi takeover in 1933, Schmitt accussed Simmel of propagating a Jewish spirit; Schmitt's writings from 1926 to 1943 contained a racist discourse in behalf of "national democracy." 34 References. Blommaert, Jan M. E. (State U Ghent, B-9000 Belgium), **Nation-Building, Democracy, and Pragmatic Leadership in Kenya's Nyayo Ideology**, *Communication and Cognition*, 1991, 24, 2, 181-193.
¶ Discerning the patterns of intercultural discursive dominance in North-South dialogue is difficult but imperative if inherent antagonisms are to be identified & worked through. Norm disputes that result from the North's assumed cultural superiority exemplify the disparaging strategies that are fundamental in these communicative conflicts. Because identification is not equivalent to solving injustices, an ethnolinguistic approach to political discourse is advocated. In addition, an ethnolinguistic analysis of some of Kenya's basic political concepts is provided to demonstrate how these processes work in a particular case. Arap Moi appropriated part of Kenya's political lexicon of revolution, redefined it, & thereby provided an ideology of stability. 7 References. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Busch, Ralph E. (Dept Political Science Portland State U, OR 97207-0751), **Political Socialization and Civics Education in Oceania,** *International Journal of Comparative Sociology,* 1991, 32, 3-4, Sept-Dec, 315-321.

¶ Evidenced by UNESCO publications, the former colonial powers & the UN are active in Oceania promoting formal &, particularly, civics education aimed at mobilizing Pacific Islanders & integrating them into the modern world. However, the very term, civics education, is foreign to the cultures of the Islanders; it flows from concepts of the development of nation-states (divine right & social contract theory), & is a product of normative Western political thought. A recent anthropological empirical theory of the origin of states by Robert Carniero (see SA 19:7/71F2414), when applied to Oceania, confirms the absence of social institutions that would make the concept of civics education relevant to the cultures of Oceania. Thus, similar to earlier forms of colonial intrusion, current Western intrusion in creating educational systems in Oceania exhibits an inconsistent message: while articulating normative values of self-determination, it practices the imposition of Western values incongruent with Oceanian cultures. Western policy continues to serve the national interests of powerful states at a cultural cost to Pacific Islanders & the preservation of diversity. 16 References. Capó Giol, Jordi (Dept Derecho Constitucional & Ciencia Politica U Barcelona, E-08007 Spain), **Elecciones municipales, pero no locales** (Municipal Elections Are Not Local), *Revista Española de Investigaciones Sociológicas,* 1991, 56, Oct-Dec, 143-164. (SPA)

¶ It is suggested that the municipal elections held in 8,000+ Spanish towns & villages are not governed in a determinant way by electoral guidelines of local type but rather tend to reproduce, with slight variations, the parameters of general elections. Therefore, it is deduced that local or municipal elections are not merely administrative, but highly political. Quantitative aggregate data are used to examine local & general elections over the historical period of consolidation of the new democratic system, ie, 1979, year of the first local election, until 1991. Focus is on the relation between independent & partly candidacies, the evolution of abstention, & formation of a system of national parties that spreads to the local ambit. Analysis suggests that local elections in Spain appear much more "national" than in neighboring countries. Rather than the progressive nationalization of the vote, ie, a growing similarity between local & general elections, findings reflect the electoral cycle in which mutual interferences are reflected between both electoral arenas. 11 Tables, 1 Figure. Carleer, Bert, De socialistische wijkclubs. Uitbouw en werking (Socialist District Clubs. Organization and Range of Activities), *Tijdschrift voor Sociale Wetenschappen,* 1992, 37, 3, July-Sept, 219-242. (DUT)

¶ A historical analysis is presented of the local district clubs of the Flemish Social Democratic Party in Ghent, Belgium. Most of these clubs were founded in 1886, built on the earlier activities of various cultural associations & cooperative societies. These societies financially & materially supported the socialist district clubs at the expense of radical parties. Over time politics & ideology gave way to cultural activities, celebrations, excursions, etc. Their chief goal shifted to preservation of their social & cultural activities & expanding their membership. At present their political function is almost moribund, due to lack of leadership, political apathy, & low interest levels among youth. 24 References. Céspedes, Roberto Luis (Centro Paraguayo Estudios Sociológicos, Eligio Ayala 973 Casilla 2157 Asunción Paraguay), **El contrato colectivo en el Paraguay de la transición** (The Collective Contract in Transition-Era Paraguay), **UM** *Revista Paraguaya de Sociología,* 1991, 28, 81, May-Aug, 123-149. (SPA)

¶ An examination of collective bargaining in unionized industries in Paraguay during the post-Stroessner era, drawing on documentary, legislative, & statistical data for 1989/90. The Stroessner regime repressed union activity, resulting in weak unions that could not demand collective contracts. Legislative restrictions on collective contracts are described. With the change in regimes, unionism has flourished, & with it, collective bargaining & contracts. It is emphasized that allowing unions political space has had a more positive impact on collective bargaining than economic activity per se. 5 Tables, 25 References. J. Taylor (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Cohn, Jonathan S., A Lost Political Generation?, *The American Prospect,* 1992, 9, spring, 30-38.

¶ It is incorrect & unfair to equate the cynicism of those Americans who came of political age during the 1970s & 1980s with a lack of moral compassion or concern about public issues. Because this generation grew up during a time when government neither undertook bold initiatives nor offered a compelling vision of the country's future, its members see electoral politics as irrelevant to achieving societal progress, & thus tend to engage in politics only at the local level. Reasons for this generation's cynicism are offered, & a comparison is made between the political engagement of the baby-boom generation & the political disaffection of those born afterward. Also discussed is the generation's attraction to Ronald Reagan, which was based largely on Reagan's charisma, rather than his politics. 2 Figures. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Colapietra, Raffaele, Il diario di don Rodolfo Benevento: agli inizi del Partito Popolare nel Molise (The Diary of Rodolfo Benevento: The Beginning of the Popular Party in Molise), *Sociologia,* 1992, 26, 1, 111-134. (ITA)

¶ A review essay is presented on a book by Luigi Picardi, *Il partito popolare italiano nel Molise (1919-1924)* ((The Italian Popular Party in Molise (1919-1924)) Vita e Pensiero, 1990 [see listing in IRPS No. 66]). Special attention is given to the role of Rodolfo Benevento in the confrontation between workers & authorities in Molise (Italy) in 1919. Also discussed are his attempts to reorganize the workers in 1920 & to achieve recognition of his pro-Catholic position within Luigi Sturzo's Popular party platform. In the late 1920s Benevento was active as a local publisher of Catholic literature. By this time fascism was strong enough to influence the character of Italian Catholicism, along with its social & political impact. Excerpts from Benevento's diary, Aug 1919-May 1920, are reprinted here. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5023

Corradi, Juan, A Difficult Transition to Democracy, UM *Telos,* 1988, 75, spring, 141-147.

¶ Examined is Raul Alfonsin's 1983 election to the Argentine presidency in relation to his country's transition to democracy. The triumph of Alfonsin resulted in a change from an authoritarian to a civilian regime, prompting the armed forces to isolate themselves from civil society. To appease the military, Alfonsin offered to allow the armed forces to purge themselves of their most notorious leaders by bringing them to trial before a military court. The armed forces rejected Alfonsin's offer, sparking not only a military crisis, but also economic & political ones. The military crisis & the electoral defeat of Alfonsin in 1987 ended the democratic transition. Currently, two "historic" parties control politics in Argentina, the Union Civica Radical & the Partido Justicialista. The political platforms of each are discussed, & their prospects for carrying on the transition to democracy are examined. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Czyneczyk, Andrzej Artur (U Warsaw, PL-00-325 Poland), **Privatization in Poland: Politics, Society, and the Law**, *UM Law & Policy*, 1991, 13, 2, Apr, 171-183.

¶ The process of privatization in Poland since 1990 is examined, highlighting the political debate on the Privatization Act & corresponding social reaction regarding who, & on what principles, is to take over the hitherto state-owned property. The legal starting point & the first empirical results of the "social contract on privatization" demonstrate that the most visible social effect was the growth in the inequalities between workers & elites; the role of workers in the process of transformation is also described. The role of privatization law is also considered, which on the one hand presents a compromise between the ruling class & the society & on the other has been replaced by current privatization policy. 9 References. De Deken, Johan Jeroen (SPS-Dept European University Instit, I-50016 San Domenico di Fiesole Italy (e-mail: dedeken@iffiiue.fi.cnr.it)), **Sociální politika a politika solidarity. Existují perspektivy pro sociální demokracii ve střední a východní Evropě?** (Social Politics and the Politics of Solidarity. Are There Any Prospects for Social Democracy in East-Central Europe?), *Sociologický Časopis*, 1992, 28, 3, 351-368. (CZE)

Translated by Michal Kudernatsch.

¶ In light of the downfall of communism in Eastern Europe, a contrastive analysis is presented of Eastern & Western European socioeconomic systems. The different social policy regimes institutionalized after WWII were based on three solidarity strategies: (1) the social citizenship strategy, adopted in Scandinavia, using citizenship to include people in the social security system apart from their position or performance in the labor market, creating interclass solidarity; (2) the conservative corporatist strategy in continental Europe, based on the insurance technique, leading to solidarity only within individual classes; & (3) the Leninist strategy, seeking to establish solidarity by creating a single social class, with social benefits contingent on individuals' agreement to be included in this worker's state. The failure of the Leninist model left an organizational legacy favoring the conservative corporatist model. Forty years of Leninism discredited all vocabulary terms relating to socialism, so that chances for conversion to Scandinavian-style social democracy are bleak. The likely scenario is the development of "market Leninism." 43 References. Adapted from the source document as translated by M. Meeks.

De Rosa, Gabriele, Pier Giorgio Frassati (Pier Giorgio Frassati), *Sociologia*, 1992, 26, 1, 7-13. (ITA)

¶ A biographical sketch is presented of Pier Giorgio Frassati (1901-1925), who, although he was from a Piedmontese (Italy) bourgeois background, devoted himself to work among the poor & elderly of Turin. He became very active in the Catholic Action movement in the period between WWI & the rise of fascism. He was a supporter of Luigi Sturzo, a democratic politician, & staunch opponent of Benito Mussolini. Currently he is the subject of a canonization movement in the Catholic church due to the example he set of translating faith into action. He is remembered for his charity, opposition to violence, & ability to make spiritually wise choices within a democratic framework. M. Meeks

93Z5028

Di Tella, Torcuato S. (U Buenos Aires, 1053 Argentina), **Letter from Argentina**, *Government and Opposition*, 1992, 27, 1, winter, 27-32.

¶ During the last fifty years Argentina has experienced a horrendous sequence of civil & civil-military confrontations, often caused by antagonism between economic groups. After the crises associated with the nation's "bureaucratic-authoritarian" experiences 1962-1983, Argentinians are having the rare experience of changing the ruling party by ballot & having cash in their pockets. It is suggested that the present economic recovery is primarily the outcome of the changed political & social climate that followed from President Menem's decision, before assuming office, to make a deal with the economic establishment so as to pacify the country. Further, the Peronista leadership is undergoing a thorough change, although there is a great deal to improve on given entrenched corruption & old habits. The continued prevalence of the rule of law has permitted the free play of public opinion & of the judiciary, so that scandals are exposed & often corrected. It is concluded that if Argentina enters the First World it should develop a political system that more closely resembles that of Western European or North American nations. S. Millett

93Z5030

Domhoff, G. William (Adlai E. Stevenson Coll U California, Santa Cruz 95064), **American State Autonomy via the Military? Another Counterattack on a Theoretical Delusion**, *Critical Sociology*, 1991, 18, 3, fall, 9-56.

Reply, 57-74, **Rejoinder**, 75-76.

¶ A critique is offered of Gregory Hooks's claim (*Forging the Military-Industrial Complex: World War II's Battle of the Potomac*, Urbana: U of Illinois Press, 1991) that the industrial mobilization for WWII led to autonomy for the US military, particularly the Pentagon. Against Hook, it is argued that a coalition of corporate leaders & military officers dominated decision making on mobilization, despite opposition from a New Deal, liberal coalition based in universities, unions, government appointments, & the mass media. Criticism is also leveled at adherents of state autonomy theory for using a style of theorizing that depends exclusively on secondary sources for making controversial claims. In **The Ambiguous Legacy of C. Wright Mills: A Reply to G. William Domhoff**, Hooks (Washington State U, Pullman) argues that Domhoff's approach to explaining the rise of the Pentagon within the state cannot be justified logically or methodologically, & that he is negligent in not adequately acknowledging US militarism. In **Rejoinder to Hooks's Reply**, Domhoff reiterates that he objects to all of Hooks's criticisms & defends his claim that the Committee for Economic Development did not want gradual reconversion. 1 Table, 66 References. Domhoff, G. William (Adlai E. Stevenson Coll U California, Santa Cruz 95064), **Class, Power, and Parties in the New Deal: A Critique of Skocpol's State Autonomy Theory**, *Berkeley Journal of Sociology*, 1991, 36, 1-49.

Comments, 51-91.

¶ It is argued that the class-based theory of power in the US (Domhoff, G. William, *The Power Elite and the State: How Policy Is Made in America* (see IRPS No. 56/91c01363]) is more useful in understanding the origins of New Deal initiatives than is Theda Skocpol's theory of

state autonomy (reference not specified). The two theories are compared via an analysis of four innovations during Franklin Roosevelt's first US presidential term: the Agricultural Adjustment Act (AAA), the National Recovery Administration, the Social Security Act (SSA), & the National Labor Relations Act. Skocpol's analysis of Marxism & small businessmen ("Political Responses to Capitalist Crisis: Neo-Marxist Theories of the State and the Case of the New Deal," *Politics & Society*, 1980, 10, 155-202) is critically assessed, & it is asserted that Skocpol's views of the AAA & the SSA are highly misleading. In **Domhoff and a New Political History**, Richard S. Kirkendall (U of Washington, Seattle) compliments Domhoff's article & suggests that new political history should emphasize the state itself & the impacts of the state & the society on one another. In **A Comment on Domhoff's "Class, Power, and Parties in the New Deal" A Critique of Skocpol's State Autonomy Theory**, Ellis W. Hawley (U of Iowa, Ames) agrees with Domhoff's analysis of the role of the South & the power of organized business in the Second New Deal, but argues that his article does not vitiate Skocpol's argument concerning the importance of political institutions & administrative capacities. In **A "Big Bang"–or a Whimper**, William Graebner (State U of New York Coll, Fredonia) argues that there is little evidence to support Skocpol's claims that old-age insurance was implemented over the oppositon of capitalists & that capitalists did not plan to promote Roosevelt's SSA & the Wagner (southern agricultural) Act. In **Between All and Nothing: A Comment on G. William Domhoff's "Class, Power, and Parties in the New Deal,"** Kenneth Finegold (Rutgers U, New Brunswick, NJ) agrees with much of Domhoff's analysis but criticizes it for overstating the roles of the Farm Bureau & the Rockefeller network, & for understating the significance of the independence of the agricultural economists. In **G. William Domhoff and the Political Sociology of the New Deal**, Jeff Manza (U of California, Berkeley) focuses on Domhoff's model of the origins of the Wagner Act, & argues that certain components of Skocpol's work are able to explain policy-making processes more thoroughly than does Domhoff's corporate liberal approach. 103 References. Eatwell, Roger (School Social Sciences U Bath, BA2 7AY England), **Towards a New Model of Generic Fascism**, *Journal of Theoretical Politics*, 1992, 4, 2, Apr, 161-194.

¶ In the literature on fascism, the conceptual approach tries to unravel fascist ideology, & the theoretical perspective attempts to explain its support. The fact that the latter is more commonly adopted stems from the notions that fascist ideology tends to be incoherent, & that support-based models are more scientific, but the result has been that different forms of movement/regine are often subsumed in one category. A conceptual approach is therefore proposed here, the "spectral-syncretic," which undermines the view that fascism was essentially a feature of interwar Europe, but without allowing the term to degenerate so that it can be applied to significant non-European movements/regimes. Differences of interpretation over the syntheses, especially national contextual factors, make it difficult to place fascism on the Left-Right spectrum. 121 References. Esping-Andersen, Gøsta & Van Kersbergen, Kees (European University Instit, I-50016 San Domenico di Fiesole Florence Italy), **Contemporary Research on Social Democracy**, UM *Annual Review of Sociology*, 1992, 18, 187-208.

¶ A review of the comparative, empirical literature that concerns the impact of social democracy on welfare state development & on economic performance, utilizing the theoretical perspective of reformist social-democratic ideology. Findings provide substantial confirmation of this approach in the sense that the balance of political power influences outcomes. The case against traditional modernization theory & other critiques is found to be strong, especially when the social-democratic effect combines strong Left parties with trade unions. The credibility of the social-democratic model is particularly strong if its consistent validation is examined in cross-sectional as well as time-series analyses. It is doubtful, however, whether the social democratic thesis is applicable outside the framework of the advanced industrial democracies. 141 References. Adapted from the source document.

Feldmesser, Robert A. (74 New Rd, Lambertville NJ 08530), **The Origin of Soviet Political Pathology**, *International Journal of Comparative Sociology*, 1991, 32, 3-4, Sept-Dec, 304-310.

¶ The personal characteristics of Joseph Stalin are not an adequate explanation of the development of totalitarianism in the former USSR. The source lies, rather, in the fundamental premise of Marxism: that history is a function of objective facts & that facts are obvious matters. Facts include not only material objects but also the laws that govern them & the concepts that constitute the laws; but if facts are obvious, there must be some people who know them, & they are the people who should exercise power. Those who see facts otherwise are defined as evil, backward, stupid, or insane. When the party of truth-knowers has assumed power, its opponents become a threat to the reign of truth & must be excluded from power. Even within the party, disagreements cannot be treated as mere differences of opinion, for that would imply that the truth is not easily discernible; thus, opponents within the party must be treated the same way as opponents outside it. In a struggle for power, those who know the truth are bound to be victorious. Ultimately, therefore, repeated disagreements, accompanied by power struggles, lead to a condition in which only one person can be said to know the truth, & this person must exercise all power. In a free society, on the other hand, facts are regarded as elusive, & uncertainty is tolerated. AA

93Z5036

Friedman, Jeffrey, Accounting for Political Preferences: Cultural Theory vs. Cultural History, *Critical Review*, 1991, 5, 3, summer, 325-351.

¶ Aaron Wildavsky's cultural theory (eg, see "Choosing Preferences by Constructing Institutions: A Cultural Theory of Preference Formation," *American Political Science Review*, 1987, 81, 1, Mar, 3-21 [also see abstract of "Can Norms Rescue Self-Interest or Macro Explanation Be Joined to Micro Explanation?" in SA 41:1]), which is designed to overcome shortcomings in rational choice theory & to account for people's political preferences, is critically assessed. It is argued that Wildavsky's cultural theory does not facilitate the criticism of political preferences because its understanding of them is based on the libertarian premises that structure our politics. By restricting the influences on an individual's political preferences, cultural theory parallels the naturalistic tendencies of endogenous determinism by reducing society to the status of a physical object, & reproduces the deracinated & conservative view of economistic & libertarian theory. It is concluded that cultural theory–both in its passive, socially reductive mode & in its active atomistic rationalism–fails to allow for the criticism of preferences, & shares with liberalism an ahistorical view of the origins of political values. Adapted from the source document.

93Z5040
Gilbert, Mark, Pacifist Attitudes to Nazi Germany, 1936-45, *Journal of Contemporary History*, 1992, 27, 3, July, 493-511.
¶ The Peace Pledge Union's (PPU) apologist tendencies & bizarre equivocal stance toward Nazi Germany between 1936 & 1945 are analyzed. The PPU explained Nazism & Italian fascism initially by the fact that Germany & Italy lacked economic access due to British colonialism. After the 1938 Munich meeting, the PPU *Peace News* launched a campaign to paint a positive picture of German life & culture. Even the 1938 rampage against the Jews in Germany, *Kristallnacht*, was dismissed as minor. However, the economic access argument disappeared with the German annexation of Czechoslovakia in 1938. The PPU's alternative explanation for the political paths of Germany & Italy was that capitalist democracy had dehumanized their communities. Germany's invasion of the USSR in 1941 caused a rift in the PPU between leftists & profascists. However, since neither the leadership nor the membership at large espoused fascist principles, & were in fact morally opposed to totalitarianism, the continued PPU support for Germany or Italy thereafter must have come from ignorance. Goldstein, Joshua S. & Rapkin, David P. (U Southern California, Los Angeles 90089-0043), **After Insularity: Hegemony and the Future World Order,** *Futures*, 1991, 23, 9, Nov, 935-959.
¶ An examination of the links between hegemony & insularity in the technological age, hypothesizing that hegemonic nations rise to positions of global leadership by controlling military & economic power after the downfall of other nations weakened by war. Hegemons maintain their advantage by strategic insular positions. At some point in their past, the Netherlands, GB, & the US have been hegemons with geostrategic insularity, in support of the thesis. In each of these historical cases, access to water empowered the countries to protect themselves militarily & ensured long-distance trade. Insularity has little value in the face of technological developments that bring together formerly distant nations on political, economic, & cultural levels. Although the future world order resulting from such changes makes hegemony & power struggles appear less attractive, possible scenarios are offered, including Japanese hegemony, anarchy, & renewed US hegemony. However, the most likely option involves cooperation of the great powers under US leadership. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Golubović, Zagorka, The Condition Leading to the Breakdown of the Yugoslav State: What Has Generated the Civil War in Yugoslavia?, *Praxis International*, 1992, 12, 2, July, 129-144.
¶ It is argued that six factors contributed to the breakdown of the Yugoslav state: the development of nationalism, particularly among Serbians in the Kosovo region; the lack of a symbolic *universum* (ie, shared meanings & symbols that unite a society) in post-WWII Yugoslavia; the emergence of social, political, & economic crises in the early 1980s; the fall of communism in 1989/90; & the number of uneducated & illiterate people. Though these factors made civil war inevitable, it is contended that Yugoslavia missed opportunities to democratize socialism in the 1950s & during the 1968 student movements. Reflections on the future of the region are offered, & the impact of intellectuals & peace activists on the civil war is discussed. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Gould, Bryan, What's Left of the Left?, *New Statesman & Society*, 1991, 4, 149, 3 May, 14-15.
¶ The current status of the political Left is examined. Belief in socialism stems from outrage over social injustice. Zeal & moral outrage do not in themselves produce a socialist; a true socialist must act on this zeal, following a coherent political philosophy that identifies not only symptoms but also causes of social injustice. Though the collapse of Eastern European regimes suggests the end of socialism, it will remain as long as power is concentrated in the hands of the few & social injustice persists. The content & form of socialism may change with changing social & political conditions, but socialism is founded in the commonsense proposition that the world is a better place if each individual is allowed to make his or her full contribution to society. Graizbord, Boris, La eficacia del voto y la eficiencia electoral de los partidos en la elección de diputados federales de 1988 (The Efficacy of the Vote and the Electoral Efficiency of the Parties in the 1988 Election of Federal Deputies), *Estudios Sociológicos*, 1991, 9, 25, Jan-Apr, 189-209. (SPA)
¶ An analysis of the efficiency & effectiveness of contending parties in obtaining the 78 seats available in the Chamber of Deputies for Mexico's central region in 1988–defining electoral efficiency as the capacity to optimize votes in one's favor to obtain the greatest number of deputies, & effectiveness as the ability to achieve the greatest number of votes possible in each & every district in which a party runs candidates. Such a distinction is necessary because, in the Mexican system, deputies are not only elected by the relative majority in each electoral district, but by a proportional distribution of votes that assigns so-called "plurinominal" deputies. The electoral bias in this system results in a difference between the number of votes & the number of seats a party obtains; ie, votes can be wasted or excessive. In the analysis of wasted or excessive & effective votes in the 1988 election, the minority parties converted a large number of votes into efficient ones. In a system other than proportional distribution, these votes would have been wasted. This system works if the district limits are adjusted in the face of changing territorial distribution of the national urban population. 5 Tables, 3 Figures, 19 References. M. Pflum (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Grell, Jan M. & Gappert, Gary (U Akron, OH 44325), **The Future of Governance in the United States: 1992-2002,** IM *The Annals of the American Academy of Political and Social Science,* 1992, 522, July, 67-78.

¶ An argument is made for more governance & less government over the next decade in the US. Political barriers to this conversion are discussed, contending that an individual, political, & institutional transformation is required. Currently, the US is entering a new era of redefining the purpose of leaders & institutions, restructuring old ideologies, & redirecting the focus of responsibilities to meet the global challenges ahead; this era will continue well into the twenty-first century. The key elements necessary for successful governance are outlined, including a new democracy, strategic cooperation, a new federalism, decentralization, a new moral infrastructure, individual responsibility & new leaders, collaborative partnerships & stability, & increased competition & technological growth. (ITA)

¶ A discussion of the various paths taken by Eastern European nations since the collapse of communism in 1989, with focus on the construction of democracy & national identity. It is argued that communists came to power in Bulgaria, Czechoslovakia, Hungary, Romania, & Poland due not to a proletarian revolution but to the occupation by USSR armed forces after WWII. Continuing economic crises, changes in the leadership of the USSR, the growing effervescence of civil society, & the delegitimization of communist power led to the ultimate downfall of these regimes. In the case of Hungary & Poland, the same regimes stayed in power though an abrupt liberalization occurred. Violence in Bulgaria was largely contained, while considerable violence took place during the ouster of Nicolae Ceausescu in Romania. Intermediate regimes were established in Czechoslovakia & the former East Germany. In 1990 the initial euphoria wore off & the tasks of reconstructing a market economy & a democratic system became clear. People are becoming more informed about their basic rights, political parties are forming, & new constitutions are being written. In economic matters, austerity, crises, & a decrease in consensus prevail. The resurgence of long-suppressed nationalism is also considered. 47 References. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

PRI y PRD en la coyuntura actual** (Political Culture and Transition to Democracy. PRI and PRD in the Current Opportunity), *Sociológica,* 1989, 4, 11, Sept-Dec, 43-57. (SPA)

¶ An attempt is made to establish a connection between the political culture of the two major parties in Mexico–the Partido Revolucionario Institucional & the Partido Revolucionario Democrático–& the possibilities of constructing a truly democratic political system. Emphasized are the difficulties arising from the histories of these organizations & their antecedents. The democratic transition & the form it takes depends on how each of these organizations understands & interprets events & their role in them. It is argued that for a democracy to emerge, these groups must become more flexible & competitive. 8 References. Adapted from the source document as translated by J. Taylor. Habermas, Jürgen (U Federal Rio de Janeiro, 21941 Brazil), **Que significa socialismo hoje? Revolução recuperadora e necessidade de revisão de esquerda** (What Does Socialism Mean Today? A Recuperative Revolution and the Necessity of Reviewing the Left), *Novos Estudos CEBRAP,* 1991, 30, July, 43-61. (POR)

Translated from German by Márcio Suzuki.

¶ In this translation (original publication information not specified), it is contended that the recent upheavals in Eastern Europe urgently necessitate reflection on socialism & its relationships with complex modern societies. An analysis is presented of six different interpretive models of historical events producing profound transformations in socialism: (1) Leninist, (2) Stalinist, (3) reform communist, (4) postmodernist, (5) anticommunist, & (6) liberal. The limits of these concepts are illustrated in terms communicative action theory. An attempt is made to establish conditions capable of transferring the potential solidarity generated by communicative practice to mediated juridical & administrative solutions. Hackey, Robert B. (Dept Politics Saint Anselm Coll, Manchester NH 03102), **Competing Explanations of Voter Turnout among American Blacks,** IM *Social Science Quarterly,* 1992, 73, 1, Mar, 71-89.

¶ A standard socioeconomic model, social-psychological model, & black exceptionalism hypothesis regarding the effects of individuals' characteristics & attitudes on black voter turnout are tested using data from the 1977-1988 General Social Surveys. Findings do not support explanations of black political participation that emphasize the importance of shared group experiences. Blacks' feelings of influence over decision making are only weakly related to turnout, & their feelings of mistrust & efficacy are not significant. It is suggested that the relative weakness of group consciousness as a predictor of black electoral turnout illustrates that the political behavior of black Americans may share more in common with that of other ethnic groups than is commonly thought. The most significant factors influencing black turnout in presidential elections includes strength of partisanship, socioeconomic status, & factors that lower the cost of voting for an individual. The importance of efforts by local public officials to encourage citizens to bring their problems & concerns to government suggest possibility for increasing black voter turnout. 2 Tables, 35 References. Hampach, Daniel (Czechoslovak Academy Sciences, Jilská 1 CS-11000 Prague 1 [Tel: 02-235-89-68-71; FAX: 02-235-78-88]), **Současné vývojové trendy místní správy v evropských zemích** (Current Trends in Local Government in Europe), *Sociologický Časopis,* 1992, 28, 4, 520-527. (CZE)

¶ The study of local government systems merits as much attention as that of the national government. As an important element in Europe's liberal democracies, local governments provide a range of services designed to match local needs &, as the level of government closest to the people, have a special role in advancing the interests of the local community. Two typologies of local government are integrated to provide a theoretical framework for evaluation of current reforms: (1) analysis of different roles played by local government in various countries, eg, clientelism-patronage, economic development, & the welfare state; & (2) the functionalist perspective, focusing on the relationship between the local & national government. Differences are noted between local governments in northern & southern Europe. In most European countries there is a trend toward increasing local control; in contrast, the trend in the UK is toward more centralization. Both trends are responses to the fiscal crises of the 1970s. 1 Table, 9 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Heilbronner, Oded (Center German History Hebrew U Jerusalem, Mount Scopus IL-91905 Israel), **The Failure that Succeeded: Nazi Party Activity in a Catholic Region in Germany, 1929-32,** *Journal of Contemporary History,* 1992, 27, 3, July, 531-549.

¶ The validity of the arguments that the agrarian Catholic sector of Germany did not support the Nazi party, & that Nazi party electoral success

in various agrarian Catholic regions of German was evidence of the Nazi party's effective propaganda machine, is challenged by examining the records of the German Catholic Black Forest region. In the early 1900s, not all Catholics in the region supported the Catholic party (Zentrum); eg, the Catholic bourgeoisie supported the National Liberal party. As the Zentrum moved to the Right, the peasants & workers in the region moved away from it &, by 1928, were joining the Nazi party. In the Black Forest & other Catholic areas of Germany, these shifts occurred even in localities in which there was no local Nazi party branch, in branches with weak connections to the Nazi party central, & in branches with weak local leadership. Thus, Nazi party organization, activities, & propaganda were not sufficient to account for local successes; instead, local groups tailored propaganda messages to address local political conditions, & the political traditions of the Black Forest supported a party like the Nazis, at least until 1933. 2 Tables. M. Pflum

Heřmanová, Eva, Illner, Michal & Vajdová, Zdena (Sociologický ústav ČSAV, Jilská 1 CS-11000 Prague 1 Czechoslovakia (Tel: 02-235-89-68-71; e-mail: soc@cspgas11.bitnet)), **Politické jaro 1990 na venkově a v malém městě** (Political Spring 1990 in the Countryside and in Small Towns), *Sociologický Časopis*, 1992, 28, 3, 369-385. (CZE)

¶ To investigate how the downfall of communism affected rural life in Czechoslovakia, a study was conducted in 35 communities with populations under 10,000 between Nov 1989 & the parliamentary elections of Nov 1990. The smaller towns responded to the Velvet revolution differently from & later than the cities. More continuity was preserved in institutions, people, behavior, & values. Village life was less politicized & polarized. Later institutional changes occurred as municipalities disintegrated & were reconstructed, & with the founding of new political parties (eg, the Civic Forum) & the reshaping of old ones. The local communist party survived in a weaker form. The structure of social organizations & the leadership of local economic organizations were transformed, though the type & degree of change depended on the character of the municipality. 4 Tables, 7 References. Hermsen, Hanneke & Verbeek, Albert (Instit Empirical & Theoretical Sociology U Utrecht, NL-3584 CS Netherlands), **Equilibria in Multi-Party Systems**, UM *Public Choice*, 1992, 73, 2, Mar, 147-165.

¶ Examined are equilibria in multi- & two-party political systems. Drawing on the work of Anthony Downs (*An Economic Theory of Democracy*, New York: Harper & Row, 1957), a rational-choice model of governmental decision making is presented that has a one-dimensional policy space for the positions of parties & voters, & assumes an arbitrary continuous density of voters, voters for the nearest party, & parties that try to maximize the number of votes. Sufficient & necessary conditions for equilibria are given, from which it is deduced that for systems with a large number of parties, equilibria are rare unless the density of voters is uniform. 1 Figure, 1 Appendix, 10 References. Adapted from the source document.

Herrera, Cheryl Lyn, Herrera, Richard & Smith, Eric R. A. N. (Political Science Dept Arizona State U, Tempe 85287-2001), **Public Opinion and Congressional Representation**, *The Public Opinion Quarterly*, 1992, 56, 2, summer, 185-205.

¶ It is argued that legislators should be responsive to public opinion in a representative democracy, & that political representation is best examined both collectively & dyadically. Using data from the 1986 National Election Study & a 1987 mail survey of the US House of Representatives (N = 126), a moderate degree of collective representation is found between leaders & followers, with leaders usually taking more extreme positions on issues. Using Christopher H. Achen's measures of dyadic representation, it is found that representatives' views are fairly close to those of constituents; they are efficient at positioning themselves at the mean constituent position, & likely to respond to shifts in liberalism/conservatism in their districts. It is concluded that individual members of the House of Representatives do a better job of representing their constituents than the House as a whole does of representing the nation. 36 References. Hill, Kim Quaile & Leighley, Jan E. (Texas A&M U, College Station 77843), **The Policy Consequences of Class Bias in State Electorates**, UM *American Journal of Political Science*, 1992, 36, 2, May, 351-365.

¶ US Census Bureau data for 1984 & 1986 elections are used to test the proposition that an electorate disproportionately representative of higher-class citizens will be rewarded with public policies in favor of its economic interests at the expense of those of lower-class citizens. Analysis reveals a consistent negative relationship between the degree of class bias favoring the upper class & the generosity of indigenous state social welfare spending. This relationship is principally explained by underrepresentation of the poor rather than the overrepresentation of the wealthy. Implications for democratic theory generally & for present-day concern about the composition of the US electorate are discussed. 4 Tables, 41 References. Adapted from the source document.

Hughey, Michael W. (Dept Sociology Moorhead State U, MN 56560), **Americanism and Its Discontents: Protestantism, Nativism, and Political Heresy in America**, *International Journal of Politics, Culture and Society*, 1992, 5, 4, summer, 533-553.

¶ US social & political organization is examined through an analysis of the religious foundations of the normative conception of the US political community. Drawing on the work of Gunnar Myrdal (*An American Dilemma: The Negro Problem and Modern Democracy*, New York: Harper & Brothers, 1944), it is argued that values, images, & ideals derived from Protestantism have influenced the organization of racial, ethnic, religious, & other group interactions. The dimensions of this religious legacy are examined via an examination of ideological heresy against nationalism & nativist reactions to it. It is concluded that nativist opposition to "un-American" groups offered participants a chance to assuage their anxiety about nationalism by directly participating in an ideological struggle. W. Howard

(RUS)

¶ For any society, science can be the source of serious conflicts involving a political dimension. In socialist societies, such conflicts may involve disputes between intellectuals & other social groups. These disagreements are shaped by the social context in which knowledge is produced. The effective production of knowledge requires common values between the scientific community & the public at large. Traditional, closed societies are contrasted with contemporary, open societies. The intensive internationalization of modern science is emphasized. It is the social distance between the primary subjects of modernization that creates a definitive motivational stimulus for the transformations of the classical traditional society into a modern society, leading to expansion of its scientific community & acceleration of social change. 57 References. M. Meeks

Illner, Michal (Czechoslovak Academy Sciences, Jilská 1 CS-11000 Prague 1 [Tel: 02-235-89-68-71; FAX: 02-235-78-88]), **K sociologickým otázkám místní samosprávy** (Sociological Problems of Local Government), *Sociologický Časopis*, 1992, 28, 4, 480-492. (CZE)

¶ The sociology of local government & politics is a new subdiscipline in Czechoslovakia, following the return to democracy in Nov 1989. Unlike the situation in Poland, no research on this theme was permitted under Czechoslovak communist rule. Localism developed under the totalitarian regime as a way to legitimize decentralization; however, the resulting one-sidedness is detrimental to municipalities, leading to control by nonpolitical elements, thereby complicating the rebirth of democracy. The forced combination of smaller communities into larger ones by the communists during the 1960s is currently being undone; the number of communities rose 50% after the "velvet revolution." The 1994 municipal elections will probably show a more stable form of social politicization in view of increasing socioeconomic stratification, the rebirth of the private sector, & the emergence of the new middle class. 28 References. Jenkins, J. Craig & Schock, Kurt (Dept Sociology Ohio State U, Columbus 43210), **Global Structures and Political Processes in the Study of Domestic Political Conflict**, UM *Annual Review of Sociology*, 1992, 18, 161-185.

¶ The paradigm shift within theories of political conflict from traditional system integration approaches to theories that emphasize the political & structural sources of protest & rebellion is examined. Traditional theories of political conflict have reached a theoretical impasse & are being replaced by newer theories that focus on the relationships between political processes, the state, the capitalist world economy, the interstate system, & the origins & dynamics of social protest & political rebellion. Two such theories are the political process theory, emphasizing the impact of internal political institutions & processes, eg, political exclusion, indigenous organization, & political opportunity structures; & theories of global structures that focus on the external or international processes of incorporation into the capitalist world economy, the social effects of foreign capital penetration, & political dependence on core states. Examining these two theories alternatively in an additive fashion or through specifying indirect effects suggests that a synthetic theory of political conflict may have greater explanatory power then either theory alone. 145 References. Khanum, Saeeda (*New Statesman & Society*, 38 Kingsland Rd London E2 8DQ England), **Inside Iraq**, *New Statesman & Society*, 1991, 4, 152, 24 May, 12-16.

¶ Post-Gulf war conditions inside Iraq as viewed by a medical relief team are described. Though the headlines of the Saddam Hussein-controlled Iraqi news media proclaim the coming of a bountiful harvest, Iraq today is little more than a devastated police state. Food & water are in short supply, electricity is unreliable & sporadic, illness abounds, & medical supplies hardly exist. Aid that does reach Iraq is siphoned off by high-level authorities before it reaches the common people. The rural areas are even more devastated than the cities. In contrast to the scarcity of material benefits, evidence of central authority can be seen everywhere. Endless security checkpoints exist, manned by four different entities: the Republic Guard, the militia, the police, & the regular army. Secret police patrol the streets. Portraits of Saddam Hussein adorn buildings, freshly painted & restored amidst the devastation. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Lijphart, Arend (Dept Political Science U California San Diego, La Jolla 92093-0521), **Democratization and Constitutional Choices in Czecho-Slovakia, Hungary and Poland 1989-91,** *Journal of Theoretical Politics*, 1992, 4, 2, Apr, 207-223.

¶ In an examination of the constitutional choices made by Czechoslovakia, Hungary, & Poland with regard to their new electoral systems (ranging from extreme proportional representation to a moderately majoritarian system) & with regard to parliamentarism-presidentialism (ranging from a semipresidential to a pure parliamentary system), it is contended that Stein Rokkan's two explanations of the adoption of proportional representation in continental Western Europe around 1900 (*Citizens, Elections, Parties: Approaches to the Comparative Study of the Processes of Development*, Oslo: Universitetsforlaget, 1970), which can be logically extended to the choice of parliamentarism or presidentialism, provided the best explanations for the consitutional choices of these three East European countries around 1990 as well: (1) the logic of democratization, which requires a bargain between old-established & new parties; & (2) the needs of ethnically diverse societies. These factors were reinforced, but not fundamentally determined, by the attachment to single-member district representation, distrust of political parties, the influence of earlier & foreign democratic models, & inaccurate assessments of partisan strengths. 1 Figure, 28 References. Lindeman, Marjaana (U Helsinki, SF-00100 Finland), **Poliittisten asenteiden voimakkuus ja äänestyskäyttäytyminen** (The Strength of Political Attitudes and Voting Behavior), 1992, 29, 1, 35-44. (FIN)

¶ An investigation of the attitudes of students at 3 Helsinki universities (N = 211) toward 9 Finnish political parties are assessed, based on questionnaires measuring the Ss' overall evaluation, extremity, intensity, centrality, & committed action. Focus is on the influence of method of measurement on strength of attitudes revealed. Results indicate that voting behavior could be reliably predicted by the strength of political attitudes, particularly in Ss who had a positive attitude toward the party in question. The intensity scale was found to be the only dimension tested that identified equally well Ss with positive & negative attitudes. 3 Tables, 20 References. Adapted from the source document.

Lukšič, Igor, Politična stranka–hegemonska sila (Political Party–Hegemonic Power), *Anthropos*, 1992, 24, 1-2, 173-181. (SLV)

¶ An analysis is presented of Antonio Gramsci's concept of a political party in *Quaderni del carcere* ([Notes from Prison] Turin: Einaudi, 1977). In his descriptions of political mechanisms & actual actors of change, he criticized & outgrew the juristic approach to political science. For Gramsci, political parties were not limited to interest groups struggling for power, but also included journal or newspaper staffs. Political parties operate not just as organizations, but also as Sorelean myths. Gramsci connected the idea of the political party with Niccolo Machiavelli's concept of the new prince, updating this image for the modern political world. 11 References. Luthardt, Wolfgang (Freie U Berlin, D-1000 33 Federal Republic Germany), **"Krise" der Volksparteien–oder "Differenzierung" und "Verfestigung" im bundesdeutschen Parteiensystem?** (A "Crisis" of the People's Parties–or "Differentiation" and "Strengthening" in the German Party System?), *Journal für Sozialforschung*, 1991, 31, 2, 127-145. (GER)

¶ An examination of recent debates within West German political science, focusing on the development of the party system & the large political parties (catch-all parties). It is argued that there is a legitimation crisis, a decline of electoral support of the catch-all parties, & a widening of the political gap between the political parties & the party elites on one side & the membership, the electorate, & the citizenship on the other. It is argued that these criticisms overlook the functional importance of the catch-all parties & the necessity of the amorphous form of these parties as a sociological response to the diffuse complexity of the modern West German society. Catch-all parties were able to act as dominant political actors during the reunification period & established liberal & pluralist patterns in the former German Democratic Republic; however, they produced problems of legitimation & political acceptance in East Germany because of their typical Western political style. 91 References. Marsden, Richard (Athabasca U, Alberta T0G 2R0), **'The State': A Comment on Abrams, Denis and Sayer,** *Journal of Historical Sociology*, 1992, 5, 3, Sept, 358-377.

¶ A response to queries concerning the nature of the state posed by P. Abrams ("Notes on the Difficulty of Studying the State," *Journal of Historical Sociology*, 1977, 1, 1) & Claude Denis (see SA 38:3/90V5460) via an examination of D. Sayer's *The Violence of Abstraction: The Analytic Foundations of Historical Materialism* (Oxford: Blackwell, 1987). A realist reconception of the notion of relations of production & their ideal superstructures, Sayer offers an alternative to traditional Marxism that warrants a reappraisal of the relationship between Karl Marx & the work of Michel Foucault. Foucault shares with realists like Sayer a desire to explain the structure of social relations & forms of thought, or forms of power-knowledge. It is concluded that civil society & the state are simply two faces of production relations that are encompassed by Foucault's notion of "disciplinary practices." 55 References. Marsh, Robert M. (Dept Sociology Brown U, Providence RI 02912), **Authoritarian and Democratic Transitions in National Political Systems,** *International Journal of Comparative Sociology*, 1991, 32, 3-4, Sept-Dec, 219-232.

¶ Phillips Cutright formulated an equilibrium theory of the relationship between societies' levels of socioeconomic & political development (see SA 11:6/63A6702). His data on 77 nations for the period 1940-1960 showed that while most were in equilibrium–their level of political party competition was what would be expected when regressed on their level of socioeconomic development–several nations were extremely out of equilibrium. Between 1940 & 1960, Chile & the Philippines were more democratic than expected on the basis of their low levels of socioeconomic development, while Spain, Portugal, & Saudi Arabia were the most extreme outliers in the opposite direction. Qualitative evidence from the history of these five nations supports the equilibrium-theoretic prediction that, after 1960, Chile & the Philippines would move toward greater equilibrium by becoming less democratic (more authoritarian), while Spain & Portugal experienced transitions from dictatorships to democracy. Among these five cases, only Saudi Arabia has remained in disequilibrium, contrary to the prediction, with a high level of economic development but an authoritarian political system. 1 Figure, 29 References. Miller, Alan S. (Dept Sociology U Charlotte, NC 28223), **Are Self-Proclaimed Conservatives Really Conservative? Trends in Attitudes and Self-Identification among the Young,** *Social Forces*, 1992, 71, 1, Sept, 195-210.

¶ Data from the General Social Survey & National Election Study, 1974/75 & 1985/86, for 3 US cohorts born 1928-1954 (total N not provided) are drawn on to investigate the relationship between shifts in the social desirability of a label & the willingness of young people to apply the label to themselves. Analysis indicates that over this period, the % of young people willing to apply a conservative label to themselves increased, holding constant attitudes typically indicative of conservatism. This suggests that perceived increases in conservatism reflect not only a shift in attitudes but also a change in the social desirability of a conservative label. Results highlight the limitations of labeling theory, which

tends to ignore the incentive side of self-labeling. 4 Tables, 6 Figures, 1 Appendix, 23 References. Adapted from the source document.

Moisés, José Álvaro (Centro Estudos Cultura Contemporánea, rua Airosa Galvao 64 São Paulo 05002 Brazil), **Ciudadanía y participación popular dentro de la nueva Constitución en Brasil** (Citizenship and Popular Participation within the New Constitution in Brazil), *Estudios Sociológicos*, 1991, 9, 25, Jan-Apr, 15-34. (SPA)
Translated from Portuguese by Graciela Salazar J.

¶ The Brazilian constitution of 1988 proposed new mechanisms to achieve popular participation in public life, including referendums, plebiscites, & legislative initiative; however, the degree to which these legislative instruments are methods of popular control over the governing bodies vs means to maintain political hegemony is discussed. In a historical analysis, the plebiscite of 1963 on the issue of parliamentarianism is described. The actual reason for the plebiscite was to provide the hegemonic groups veto power to impede the vice president, João Goulart, from succeeding the dead president, Getulio Vargas. Thus, in contrast to referendums, which tend to integrate themselves within the dynamics of the functioning of the political system, plebiscites are used to achieve public support for a power scheme. This example shows that the 1988 Constitution did not achieve its objective of articulating a representative democracy with the societal aspirations of direct democracy. Nevertheless, these instruments of direct legislation, in particular, the popular legislative initiative, represent a democratic advance. 31 References. M. Pflum

Plasser, Fritz, Ulram, Peter A. & Grausgruber, Alfred (U Innsbruck, A-6020 Austria), **The Decline of '*Lager* Mentality' and the New Model of Electoral Competition in Austria**, *West European Politics*, 1992, 15, 1, Jan, 16-44.

¶ A discussion of the subcultural underpinning of Austria's consociational system, the so-called *Lager*. Secondary survey & statistical data, 1951-1990, are drawn on to identify processes, eg, the decline of *Lager* mentality, by which Austria's encapsulated subcultures have been eroded. Implications of these ongoing developments for the previous hyperstability of Australian electoral behavior are discussed, & explanations are offered as to how & why Austria's electorate has of late become increasingly volatile. Detailed analysis of the 1990 general election demonstrates: (1) the declining salience of traditional determinants of voting behavior, & (2) eight new clusters or segments of voters that may constitute the bases for a restructuring of party competition & a possible realignment of the party system. 22 Tables. Adapted from the source document.

Preuss, Ulrich K. (U Bremen, D-2800 33 Federal Republic Germany), **The Politics of Constitution Making: Transforming Politics into Constitutions**, UM *Law & Policy*, 1991, 13, 2, Apr, 107-123.

¶ Conventional views of the interrelations between revolutions & constitutions posit that constitutions perpetuate the interests of the victorious forces of the revolution. Here, the distinctive character of the revolutions of 1989 in East & Central Europe is analyzed with respect to their claim to constitutionalism. The main characteristic of these revolutions is the disbelief of their proponents in the postulate of a homogeneous unitary popular will that imposes itself on the society. Instead, two different concepts of civil society have emerged, both connected with a more elaborate notion of constitutionalism. Constitutions can be understood as institutional devices that encourage the endurance of their legality without being entirely dependent on either the principle of self-interest or the idea of prepolitical consensus. 27 References. Adapted from the source document.

93Z5092

Pritchard, Anita (Dept Political Science Florida Atlantic U, Boca Raton 33431), **Changes in Electoral Structures and the Success of Women Candidates: The Case of Florida**, UM *Social Science Quarterly*, 1992, 73, 1, Mar, 62-70.

¶ Based on 1972-1990 election data for Fla, the effects of structural changes on two processes that limit the number of women elected to public office–the opportunities to gain office, & decisions by nonincumbents to contest for office–are analyzed. It is suggested that the proportion of women serving in the Fla legislature increased in 1982 because the opportunities to gain office increased, as did the proportion of women candidates. Requiring elections in all senate districts clearly helped women candidates because the effects of incumbency were reduced. Decisions by incumbents & nonincumbent candidates were also partially responsible for the increase in women's representation. This pattern may be explained in terms of the structural changes that influence the decisions of electoral elites: when elites operate in a fairly stable electoral environment, a consensus based on past experience often develops with respect to which incumbents are vulnerable & when nonincumbents can gain office. The Fla experience suggests that the attitudes of various actors in the electoral arena are a barrier to women's recruitment in "normal" elections, since electoral elites' opinions concerning who can win are generally based on past election outcomes & serve as a barrier to increased representation of an outgroup. 3 Tables, 5 References. Adapted from the source document.

Reidy, David A., Jr. (U Kansas, Lawrence 66045), **Eastern Europe, Civil Society and the Real Revolution,** *Praxis International,* 1992, 12, 2, July, 168-180.

¶ Examined are strategies for social change used by East European intellectuals during the 1980s when confronted by the probability of continued Soviet domination & the implausibility of both revolution & reform. Turning to Poland, these intellectuals rediscovered the notion of civil society & developed the idea of self-limiting revolution. They reasoned that the reconstruction of civil society would ultimately lead to the creation of a legalistic state, which would then lead to the establishment of a pluralistic, democratic state. A brief history of the notion of civil society is given, tracing its origins to John Locke & examining its articulation in Marxism. Reflections are offered on the kind of democracy that East European countries should adopt, concluding that the path to real social change begins with the reconstruction of civil society. W. Howard

Rippl, Susanne, Schmidt, Peter, Schürhoff, Roland & Seipel, Christian (Justus-Liebig-U Giessen, D-6300 Federal Republic Germany), **Determinanten der Parteisympathiefür die Republikaner: Eine regionale Studie** (Determinants of Party Sympathy for the "Republikaner": A Regional Study), *Journal für Sozialforschung,* 1991, 31, 2, 147-162. (GER)

¶ In 1989, a telephone survey of a random sample of 200 Ss was carried out in Giessen, Germany to investigate various attitudes of sympathizers of the *Republikaner*, a German right-wing political party. Sociodemographic variables & two social-psychological constructs–external political efficacy & authoritarianism–are measured. Results of a structural equation model show that the sociodemographic variables, except gender, affect sympathy for the *Republikaner*. Authoritarianism has a distinctly higher coefficient than any of the other variables, & external efficacy has a lower, but also statistically significant, effect. 1 Table, 11 Figures. Modified AA

93Z5098

Rustin, Michael, Demokracia ako monopol dvoch strán (Democracy as a Monopoly of Two Countries), *Sociológia,* 1991, 23, 1-2, 61-69. (SLO)

Interviewed by Iveta Radičová.

¶ In an interview, Iveta Radičová queries Michael Rustin on the following topics: political problems specific to the UK; opposition to Thatcherism; British democracy as authoritarian democracy; changes in Eastern Europe; democratization & pluralism; radical economic reforms; the main orientation of UK political sociology; a comparison of the departments of sociology at Oxford U, Cambridge U, & the London School of Economics & Political Science; & changes in the UK due to economic integration with the European Community. M. Meeks

93Z5099

Salazar, Luis (Instit Investigaciones Filosóficas UNAM, 04510 Mexico DF), **Partidos políticos y transición a la democracia en México** (Political Parties and Transition to Democracy in Mexico), *Sociológica,* 1989, 4, 11, Sept-Dec, 27-42. (SPA)

¶ Characteristics of the principal political parties in Mexico are considered in light of a potential transition to democracy. It is proposed that such a transition can be complete only following drastic reforms of the state & depends on the ability of political groups to come to an agreement on a series of ruptures with past practices. Obstacles present in the main parties (ie, the Partido Revolucionario Institucional, Partido Acción Nacional, & Partido Revolucionario Democrático) are outlined. Adapted from the source document as translated by J. Taylor.

93Z5100

Schimank, Uwe (Max-Planck-Instit Gesellschaftsforschung, D-5000 Koln 1 Federal Republic Germany), **Erwartungssicherheit und Zielverfolgung: Sozialität zwischen *Prisoner's Dilemma* und *Battle of the Sexes*** (Security of Expectations and Pursuit of Goals: Society between the Prisoner's Dilemma and the Battle of the Sexes), *Soziale Welt,* 1992, 43, 2, 182-200. (GER)

¶ Social actors open to a variety of anthropological experiences have a dual social experience. While society offers them the sureness of institutionalized expectations as shown by social actor theory, society also restricts the individual's goals, as demonstrated by the current understanding of the *homo economicus* (economic (person). However, Ralf Dahrendorf's *Homo sociologicus* in his *Pfade aus Utopia* ([Paths from Utopia] Munich, 1967), in contrast to some interpretations, is essentially a social actor concept addressing this ambiguity, while relating to the maintenance of social order. Game theories can be used to give more precision to actor concepts. Society then seems to switch back & forth between a battle of the sexes in the creation of social order & a prisoner's dilemma in keeping social order. 2 Figures, 56 References. M. Meeks

93Z5101

Schissler, Jakob (ZENAF Johann Wolfgang U, D-6000 Frankfurt Federal Republic Germany), **Politische Kultur, Öffentliche Meinung und politisches System in den USA** (Political Culture, Public Opinion, and Political System in the USA), *Protosoziologie,* 1992, 3, July, 104-122. (GER)

¶ Public opinion (PO) in the US is influenced by various structural constraints & social interactions. It is necessary to assume certain methodological presuppositions to understand the relationship between PO & political culture. A qualitative macrosociological approach is argued to be more fruitful than one of methodological individualism. US political culture illustrates several features of PO: republicanism, the liberal tradition, populism, civil religion, & "can-do" philosophy. The schema approach used in cognitive psychology would be useful for analyzing the complex system of PO evidenced in surveys. Adapted from the source document as translated by M. Meeks.

93Z5102

Seleny, Anna (Dept Political Science Massachusetts Instit Technology, Cambridge 02139), **Hidden Enterprise and Property Rights Reform in Socialist Hungary**, IM *Law & Policy*, 1991, 13, 2, Apr, 149-169.

¶ Using the case of Hungary, it is argued that socialist reforms, even when justifiably assessed as ineffective attempts at improved efficiency, interacted with an expanding second economy to alter in a gradual but profound manner the state-imposed relationship between the political & economic realms in Eastern Europe. This process of incremental social & ideological change politicized the economy & partially privatized the public sector, albeit often in informal ways. The turning-point was a 1982 reform of property rights that legalized much of the second economy & opened up newly-legitimate channels for its cooperation with the state sector. By formalizing the previously informal relationship of mutual dependence between the state & the second economy, these statutes engendered new economic & political contradictions & possibilities in the system, as the enfranchisement of previously-excluded groups led to further concessions on the part of the state. The legalization of the second economy, the public campaign to legitimize the private sector, & the creation of new private partnership forms constituted a significant difference between the legacy of Hungarian socialism & other East European varieties. 38 References. Simonetti, Styliani & Ackermann, Alice (U Maryland, College Park 20742), **Eastern Europe: Identity Formation and Security Considerations**, *Peace & Change*, 1992, 17, 2, Apr, 229-247.

¶ The dissolution & prospective of rebuilding of strong individual, group, & national identities & the reinstitution democracy in Eastern Europe are examined. The political transformations in Eastern Europe have resulted in not only institutional breakdown but also fragmented & degraded individual & group political identities. Both must be reconstituted for democratic values to emerge. However, cooperative coexistence is hampered by ethnic diversity, complex psychocultural processes, & the history of Marxist-Leninist international ideology, which froze ethnic tensions & stifled development of institutions to deal with them. Hope for democracy lies in empowering Eastern Europe's democratic elites, & in developing tolerance, empathy, & integration. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Sopóci, Ján (Sociologický ústav Slovak Academy Sciences, Obrancov Mieru 49 CS-814138 Bratislava Czechoslovakia), **Východiská sociologického skúmania roly občana v podmienkach miestnej samosprávy** (Starting Points for Exploring the Role of the Citizen under the Conditions of Local Self-Government), *Sociológia*, 1991, 23, 1-2, 118-125. (SLO)

¶ Points of departure for exploring the role of the citizen in local self-government include: (1) the individual's relationship to society & human evolution; (2) analysis of results from the scientific study of this process; & (3) an explanation of basic categories, eg, citizen, state, & local self-government, providing a framework for studying the revitalization of a democratic civil society. History shows that, before the French revolution, it was only possible to speak about the individualization of various societies; after 1789 the individual was freed from subordination to the social entity. In a democracy the community is the key link between the citizen, civil society, & the state. During the democratization of Eastern Europe, the role of the citizen in relationship to local & central government will be rejuvenated. Adapted from the source document as translated by M. Meeks. Spreafico, Alberto, Partidos, elecciones y sistemas de partidos en Italia y en España (Parties, Elections, and Party Systems in Italy and Spain), *Revista Española de Investigaciones Sociológicas*, 1991, 56, Oct-Dec, 281-330. (SPA)

Introduction, 277-280. **Translated from Italian by Miguel Angel Ruiz de Azúa.**

¶ In **In memoriam Alberto Spreafico** (In Memory of Alberto Spreafico), Miguel Beltrán (U Autónoma de Madrid, Spain) describes Spreafico's work in comparative political science, mourning the loss of a tireless researcher. His impact on Spanish political science is noted. Following this introduction, Spreafico compares the structure & functioning of the political party system of Spain & Italy, drawing on official federal election data for 1979-1983. Results show a shift in relations of power among parties & alliances of parties in Spain, where both Right & Left coalitions gained in power, while the central coalition lost support; in Italy, the center, Right, & Left coalitions did not change in terms of support, with the Left & center parties retaining a stronger position than the Right. The distribution of votes between parties is also compared, & voter participation effects are considered, along with factors related to party ideology & institutionalization. The possibility of the emergence of two-party systems is discussed. 25 Tables, 7 Figures. J. Taylor (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Thielemann, Gregory S. (Graduate Program Political Economy U Texas, Dallas 75083-0688), **The Rise and Stall of Southern Republicans in Congress**, IM *Social Science Quarterly*, 1992, 73, 1, Mar, 123-135.

Comment, 136-140, **Reply**, 141-143.

¶ Reasons behind the apparent stagnation of the Republican party in district-level US elections are analyzed by developing a model of congressional voting in the South that concentrates on three independent variables: incumbency advantage, coattail effects, & the level of primary competition. The model is used to explain southern voting at the district level 1956-1986, using pooled election data. The most important finding is that it is very difficult to defeat incumbents in the region. Because Democrats control more seats, they are numerically more likely to benefit from incumbency. The variation between off- & on-year elections is greater for Republicans than for Democrats, explaining the tendency of the former to ride coattails & then rapidly lose in the region. With respect to intraparty competition, the Republican weakness is evident. A negative effect to running only one candidate may be in not establishing traditions of partisan voting. The lack of primary competition apparently hurts a party's chances in the general election. In **Southern Republicans in Congress: Have They Fallen and They Can't Get Up?**, Harold W. Stanley (U of Rochester, NY) suggests that inclusion of noncontested general elections miscontrues the analysis, since almost all such congressional elections in the South stem from lack of a Republican candidate. It is also contended that competition in the primary may not raise the party's chance to win the general election so much as reflect the perceptions of that chance. Any analysis of congressional elections must additionally consider the possibility of autocorrelation error, candidate quality, & campaign finance. Thielemann agrees with Stanley on this last point in **Party Development in the South: The Case for Southern Exceptionalism**, but contends that the effects of national level trends are too limited in the local domain to substantiate the use of primary competition to explain Republican success at the congressional level. Even if Stanley is correct, the plausibility of long-term benefits from primary competition & party development remains. 2 Tables, 18 References. Adapted from the source document. Thomas, Nicholas (Australian National U, Canberra ACT 2601), **Anthropology and *Orientalism***, *Anthropology Today*, 1991, 7, 2, Apr, 4-7.

¶ A discussion of the relevance of Edward Said's *Orientalism* (New York: Vintage Books, 1978) for social & cultural anthropology. Although Said has been extensively discussed in the discipline, most responses have been critical & defensive, & have overstated the extent to which Said postulates a homogeneous Orientalist discourse that denigrates non-Western peoples. In particular, it has been assumed that Said is preoccupied with the ways in which Orientalism falsifies or distorts Oriental societies, an interpretation that neglects the influence of Michel Foucault on Said, & hence the interest in the particular kinds of truth & authority that discourses such as Orientalism create. Said's work nevertheless has faults & omissions, & for anthropology it is particularly relevant that it fails to adequately address positive, sentimental, & idealized renderings of other cultures, which overlap with anthropological constructions to a much greater degree than negative & racist images. Tóth, Rastislav (Faculty Philosophy Comenius U, CS-81806 Bratislava Czechoslovakia), **Politická sociológia v našom svete** (Political Sociology in Our World), *Sociológia*, 1991, 23, 3, 201-212. (SLO)

¶ The most substantial parts of society's political life include the common phase & culmination moments, eg, revolutions or election. The emergence of civil society in Czechoslovakia after the collapse of communism in Nov 1989 was a culmination leading to an emphasis on the individual & reflection on social reality. The key to civil society lies in its power to participate in decision making. Political sociology is expected to play an additional role in helping to educate the Czechoslovakian public about the new democratic system. 6 References. Adapted from the source document.

Traugott, Michael W. & Price, Vincent (Center Political Studies, Box 1248 Ann Arbor MI 48106), **Exit Polls in the 1989 Virginia Gubernatorial Race: Where Did They Go Wrong?**, *The Public Opinion Quarterly*, 1992, 56, 2, summer, 245-253.

¶ In the 1989 Va gubernatorial election, L. Douglas Wilder narrowly defeated his opponent, winning by barely .2%. Yet an experienced research firm, Mason-Dixon Opinion Research, conducted an exit poll for several TV stations in Va & Washington, DC, & estimated an easy Wilder victory–by a 10% margin. This exit poll raised several interesting methodological questions & promoted a variety of speculations about what might have caused the error. Some suspected that sampling problems were to blame; others suggested that not weighting the results for differential turnout across the state caused the problem. The fact that the exit interviews were conducted face-to-face rather than through a self-administered questionnaire raised as well the prospect that issues of social desirability might have been involved. Here, these issues are explored through a variety of secondary analyses, suggesting that the estimates from the exit poll more likely stemmed from the use of face-to-face interviews than from a problematic sample of precincts by congressional district. The ecological patterns uncovered are at least consistent with the notion that the errors resulted from the misreporting of votes by whites. This illustrates the risks inherent in conducting surveys on politically or culturally sensitive topics. In any survey setting, careful attention must be paid to details of sampling, weighting, & mode of administration. Although it is possible that asking sensitive questions anonymously will reduce bias, exit polls conducted at the end of racially charged political campaigns require careful attention to other potential sources of bias. 1 Table, 24 References. Webber, Michael J. (U California, Santa Cruz 95064), **Campaign Finance and the New Deal: Did the Mass Consumption Industries Support the Democrats in the 1936 Presidential Election?**, *Journal of Political and Military Sociology*, 1991, 19, 2, winter, 253-271.

¶ The relationship between business & political parties is examined through analysis of campaign contributions to the 1936 US presidential election made by the officers & directors of the largest firms in the mass-consumption sector, particularly exploring the claim that industries supported the Democrats because their dependence on consumer demand led them to support policies that would increase purchasing power. Findings indicate that the mass-consumption industries were not particularly supportive of Franklin Roosevelt. The voting & financial strength of the Democratic party during the 1930s was an unstable alliance of Southerners, Jews, Catholics, labor unions, small businesses, & urban political machines. Other variables that should be considered in determining the material basis of the major political parties, particularly the Democrats, include religion & region. 8 Tables, 36 References. Westle, Bettina (Fakultät Sozialwissenschaften U Mannheim, D-6800 1 Federal Republic Germany), **Strukturen nationaler Identität in Ost- und Westdeutschland** (Structures of National Identity in East and West Germany), *Kölner Zeitschrift für Soziologie und Sozialpsychologie*, 1992, 44, 3, Sept, 461-488. (GER)

¶ In an investigation of whether East & West Germans share a common political identity, archived survey data collected 1990/91 are analyzed to determine: respective affective ties to community, state, & federal republic; the relationship between affective identities & the evaluation of political order & political power; & satisfaction with the political order & political parties. Findings reveal that both East & West Germans mainly identify themselves with the united Germany & no extreme nationalism has developed. However, while West Germans show support for the democratic regime, East Germans with affiliation to the small party *Linke Liste* show ideological opposition to democracy. In both regions, people do not distinguish between political order & political office holders, which poses the danger that dissatisfaction with office holders may lead to a rejection of political order. East Germans' future support for the democratic government will depend on its economic & political outputs. 11 Tables, 1 Graph, 48 References. Adapted from the source document.

Wildavsky, Aaron (Survey Research Center U California, Berkeley 94720), **Are American Political Parties Pretty Much the Same as They Used to Be in the 1950s, Only a Little Different, or Are They Radically Different? A Review Essay**, *Journal of Policy History*, 1992, 4, 2, 228-247.

¶ A review essay on books by: Nicol C. Rae, *The Decline and Fall of the Liberal Republicans from 1952 to the Present* (New York: Oxford U Press, 1989); Steve Bruce, *The Rise and Fall of the New Christian Right: Conservative Protestant Politics in America, 1978-1988* (Oxford: Clarendon Press, 1990); Gillian Peele, *Revival and Reaction: The Right in Contemporary America* (Oxford: Clarendon Press, 1984); & Edward G. Carmines & James A. Stimson, *Issue Evolution: Race and the Transformation of American Politics* (Princeton: Princeton U Press, 1989 [see listings in IRPS No. 66]). Differences between current US political parties & those in the 1950s are revealed in these four books. Rae provides an excellent narrative history of a once dominant faction in Republican politics–liberal Republicans. Bruce traces the rise & fall of the New Christian Right, & argues that the objects of fundamentalist hate–the substitution of science for religion, the growth of knowledge that challenges authority–are products of modernity. Bruce is criticized for identifying secular humanism with modernity. Peele examines the New Right in US politics via an analysis of its different factions, thinktanks, & politicians, & identifies the religious & the political Right with populism. Carmines & Stimson provide an original & well-substantiated exploration of what happened to US politics when race emerged as a political issue in the late 1950s & 1960s. 1 Figure. W. Howard

Wong, Loong (Faculty Social Science Deakin U, Victoria 3280 Australia), **Authoritarianism and Transition to Democracy in a Third World State**, *Critical Sociology*, 1991, 18, 2, summer, 77-101.

¶ Growing authoritarianism under the leadership of the People's Action party has accompanied the celebrated rapid economic development in Singapore. It is suggested that this rule is not of the bureaucratic-authoritarian kind identified with Latin American countries. Singapore's history, integration into the world economy, & the development of its polity have made its form of control unique. Its recent attempt at democratic transition is state-led, although this hegemony is increasingly under challenge. As the state responds to these challenges, new sites of contestation are opened up, which will lead to either continued authoritarian rule or increased opportunities for further democratization. 72 References. Adapted from the source document.

——, **Adeus ao socialismo?** (Goodbye to Socialism?), *Novos Estudos CEBRAP*, 1991, 30, July, 7-42. (POR)

¶ A round-table discussion on the crisis in socialism was held 9 Apr 1991, sponsored by the Brazilian Center for Analysis & Planning. Paul Singer addressed the need to reformulate socialist theory. Fábio Wanderley Reis discussed the necessity for developing a socialist model of the market. Luiz Felipe de Alencastro discussed difficulties with the concept of the welfare state. Francisco de Oliveira spoke on the need to develop new socialist models in light of the advance of capitalism in many parts of the world. Maria de Conceção Tavares described the continuing validity of Marxism as an analytical instrument. Lenina Pomeranz examined the implications of *perestroika* for Soviet socialism. Gabriel Bolaffi noted the inherent theoretical problems of making planning compatible with markets under socialism. Antôio Flávio Pierucci emphasized that the debacle of Eastern European socialism was much worse than many Brazilian socialists could admit. José Arthur Giannotti spoke on the theme of Marxist eschatology. Marco Aurélio Garcia commented on recent social transformations. Ozéas Duarte described the realization of Marxism as a socialist Utopia. Maria Hermínia Tavares de Almeida addressed the difference between social democracy & bureaucratic socialism. Vilmar Faria concluded that scientific socialism is dead. Roberto Schwarz spoke on economic issues in light of recent political changes. M. Meeks

----, **Review Essay**, *Theory and Society*, 1992, 21, 3, June, 383-408.

Comments, 408-414, **Responses**, 415-418.

¶ In **The Left's Deadly Sin: Reflections on Richard Flacks's *Making History***, Alan Wolfe (New School for Social Research, New York, NY) discusses Richard Flacks's book, *Making History* (publication information not provided), which offers a comprehensive analysis of the history of radicalism, focusing on problems of the new Left. Flacks argues that left-wing movements have made little headway in the US because Americans tend not to concern themselves with larger questions of world events, instead focusing on the demands of day-to-day living. When protest movements do arise, Flacks's argument that elites are responsible for the inordinate amount of meaning given to the terms "Left" & "Right" is challenged. In **Alan Wolfe's Simple Gifts**, Richard Flacks (U of California, Santa Barbara) assesses Wolfe's argument, proffered in *Whose Keeper?* (publication information not provided), that modernity provides citizens with an unprecedented range of freedoms & opportunities, but has also created much uncertainty about moral obligation. Wolfe is praised for defining a distinctive role for sociology & for making social-constructionist perspectives essential for articulating an adequate moral philosophy. In **What We Can Learn from Flacks and Wolfe**, Robert N. Bellah (U of California, Berkeley) asserts that Flacks would have been less vulnerable to Wolfe's critique if his vision of the history of US politics had been less influenced by Marxism & social democracy. Bellah is also critical of Wolfe for his facile dismissal of Flacks's argument concerning the reason why left-wing politics never took hold in America. In **Response to Wolfe**, Flacks defends his argument for the continued vitality & validity of the tradition of the Left. In **Response to Robert Bellah**, Wolfe argues that his book neglects religious life because its focus is public space, not religion. W. Howard

93Z5122

De Swaan, Abram (U Amsterdam, NL-1012 WX Netherlands), **Perspectives for Transnational Social Policy**, *Government and Opposition*, 1992, 27, 1, winter, 33-51.

¶ A transnational welfare scheme implies that some nations would contribute to payments made to the citizens of other nations in a systematic manner & under binding arrangements. Given the political & economic integration presently occurring in Western Europe, conditions might operate to overcome the exclusionary mechanisms that work in national care systems, moving from isolated systems into an increasingly interdependent whole. The emancipation of Eastern Europe provides an enormous challenge as unemployment & massive migration materialize. The reaction of Western states has been to advocate a policy of accelerated investment in Eastern Europe & to stem the flow of migrants by administrative measures. The ability of poor countries to develop national welfare systems of their own & the likelihood of rich countries assuming the

care for poor countries are discussed. Developments in the fields of ecology & emigration, which create global & reciprocal dependencies, are also examined with respect to the power balance between rich & poor nations. Transnational social policy that is directed at the neediest & that aims to improve the economy by increasing consumer purchasing power, thereby stimulating the domestic economy from the demand side, is advocated. Dines, Gail (Wheelock Coll, Boston MA 02215), **Capitalism's Pitchmen: The Media Sells a Business Agenda,** *Dollars and Sense,* 1992, 176, May, 18-20.

¶ Arguing the conservative nature of US media sources, evidence is amassed to show that views presented by the media generally range from center to right. Although control is imperfect, the media became "capitalism's pitchmen" through indirect control by advertising sponsors & direct control by nonmedia ownership of media companies, as discussion of Time-Warner, Whittle Communications, General Electric, & Proctor & Gamble clearly demonstrates. Moreover, a content analysis of the "voices" in network news programs show that white, male, conservatives speak most often; the Left tends to be ignored. The result is the absence of any serious challenge to US economic structures emanating from within the watch-dog media. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5124

Griffen, Sarah, Poor Relations: The Backlash against Welfare Recipients, *Dollars and Sense,* 1992, 176, May, 6-8.

¶ The contemporary situation faced by welfare recipients is explored, & structural inequalities are shown to be the cause of entrenched mass poverty. Despite this fact, conservative proposals–including wedfare, workfare, & learnfare, which are based on race- & gender-biased images of welfare recipients–continue to blame the victims, not the system, & thereby miss the mark entirely. Indeed, these proposals purport to solve the crisis by more closely controlling the lives of women on welfare rather than opening up economic opportunities for them & their children. The US welfare system needs to be redrafted by those who clearly understand the causes of poverty & the goals of welfare. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Howard, Christopher (Massachusetts Instit Technology, Cambridge 02139), **Sowing the Seeds of "Welfare": The Transformation of Mothers' Pensions, 1900-1940,** *Journal of Policy History,* 1992, 4, 2, 188-227.

¶ Examined is the transformation of state mothers' pension (MP) laws into a federal program, Aid to Dependent Children, between 1920 & 1940. The transformation consisted of an institutional component (the actions of the Children's Bureau) & a social-movement component (the disintegration of the reform coalition that initially supported MPs). Existing literatures concerning welfare state development & the origins of MPs are surveyed, & important features of the development of MPs during the 1920s & 1930s are examined based on the records of the Children's Bureau. Reasons why MPs never lived up to the promise held by Progressive reformers are given, & it is suggested that the transformation of MPs may cause scholars to rethink the development of welfare states & social programs. 2 Tables. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5126

Israel, Joachim (Lund U, S-22100 Sweden), **Sweden: Rise and Decline of a Welfare State,** *Revue Internationale de Sociologie/International Review of Sociology (nouvelle serie/new series),* 1992, 1, 95-140.

¶ Following a short history of the Swedish welfare state & its development, especially after WWII, four of its characteristic social aspects are discussed: (1) the notion of a "people's home," put forward in 1928 when the leader of the Social Democratic party suggested that a good society can be compared to a good family home; (2) the emphasis on full employment to allow the efficient use of human resources, prevent the psychological & physical stress associated with unemployment, & strengthen workers' position in relation to capital; (3) the absence of a ruling class; & (4) class cooperation between the political elite of the labor movement & large, multinational companies & financial institutions. It is argued that today, there exist two main political directions in the West: a welfare state capitalist market economy & the neoliberal, conservative, so-called free market economy of the Thatcher-Reagan type. These two types of economic & political organizations are separated by four basic conditions: (A) whereas the neoliberal version is implicitly based on the notion of methodological individualism, welfare capitalism accepts a version of collective holism; (B) strategic action characterized by using material resources & power to obtain one's goals is contrasted with communicative action; (C) instrumental rationality is posed against value rationality, emphasizing justice & equality; & (D) utilitaristic morals are contrasted with distributive justice. Implicit in these four aspects are ontological assumptions concerning the nature of humanity. The Aristotelian view of humanity is contrasted to the individualistic view usually attributed to John Locke. 30 References. 93Z5127

Luchen, Ingvar (Instit Social Research U Tromsø, N-9000 Norway), **Erosion of Solidarity in Modern Welfare States,** *Innovation,* 1992, 5, 1, 87-95.

¶ The process of social erosion in Norway is examined. The perception of Norway & the other Scandinavian countries as among the best countries in the world stems in large part from their creation of a moral community that has kept individualism in check, promoted mutual trust between institutions & individuals, & engendered hope for the future. However, several factors have acted to unravel the moral community in Norway & produce social erosion: (1) advancement of science & the weakening of institutions such as the church; (2) loss of influence of the labor movement; & (3) the perception of the attainment of a finished society & diminished interest in achieving additional societal goals. The unraveling of the moral community has produced a context of cultural & spiritual poverty that, in turn, has nurtured an ideology of consumption & materialistic economic values, & will lead to further unraveling of the moral community. The process is not inevitable, & its reversal must begin with the acknowledgement of the interdependence of the economy & the moral community. Adapted from the source document. Phyne, John (Saint Francis Xavier U, Antigonish Nova Scotia B2G 1C0), **The Sudden Decline in a Community Service Order Programme: A Critique of the Panoptican Thesis,** *The International Journal of Sociology and Social Policy,* 1992, 12, 1-2, 77-94.

¶ Recently, the panoptican interpretation has dominated discussions on decarceration in the West. Scholars have argued that the dispersal of social control has led to the extension of the state's coercive grip over the carceral subject. Here, this assumption is challenged in an analysis of the sudden decline in a community service order (CSO) program in a medium-sized Canadian city. On the basis of open-ended interviews with judges & prosecutors (N = 16), informal discussions with CSO workers (N not provided), & an analysis of CSO files, it is argued that the dispersal of social control has temporarily weakened the coercive grip of the state. Moreover, the contradictory relations among the CSO private correctional agency, the state organization that contracts out CSO work to the private agency, & the courts results in combination of choices & constraints for those sentenced to CSO. Given this, decarceration is interpreted through the use of Anthony Giddens's theory of structuration. 25 References. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

----, **The Forum,** *Rationality and Society,* 1992, 4, 3, July, 356-367.

Response, 368-369.

¶ *In* **Comment on "An Economic Argument for Affirmative Action,"** David D. Friedman (U of Chicago, Ill) maintains that Dean P. Foster's & Rakesh V. Vohra's argument that discrimination may be rational for an employer yet socially inefficient (see SA 40:4/92Z0457) is problematic

0038-0202/93 $1.50

for two reasons: its logic leads to nondiscrimination laws rather than to affirmative action; & the model on which their argument is based excludes strategies that would be chosen by rational actors. In **Evaluating an Argument for Affirmative Action,** James J. Heckman (U of Chicago, Ill) & Tomas J. Philipson argue that Foster's & Vohra's analysis is incomplete because it lacks historical perspective, & offers no explanation for why discriminatory equilibrium came about in the first place. Educational subsidies are advocated as an alternative to testing, & logical inconsistencies in the case for "race norming" tests are identified. In **Comment on the Article by Dean Foster and Rakesh Vohra, "An Economic Argument for Affirmative Action,"** Glenn C. Loury (Boston U, Mass) faults Foster's & Vohra's analysis for: improperly specifying their model of employer discrimination; failing to realize that the process that produces discrimination also implies problems for affirmative action; & advocating race norming tests. In **Response to Comments,** Foster (U of Chicago, Ill) & Vohra defend their assertion that inefficient forms of discrimination will not be eliminated by free competition. 1 Figure, 3 References. W. Berberoglu, Berch (Dept Sociology U Nevada, Reno 89557), **Nationalism and Ethnic Rivalry in the Early Twentieth Century: Focus on the Armenian Community in Ottoman Turkey,** *Nature, Society, and Thought,* 1991, 4, 3, July, 269-301.

¶ Focusing on Ottoman social formation in the early twentieth century, an examination is made of the Armenian community's class structure, their position & role vis-a-vis European capital, & their political position in the balance of class forces & class alliances within the context of the development of Ottoman economy & society. This allows an exploration of: (1) the class position & role of minority ethnic groups in general & the Armenian community in particular; & (2) the rise of Turkish nationalism ushered in by the Young Turk revolution of 1908 & the subsequent hostilities toward Ottoman minorities that led to the massacre of 1.5 million Armenians in 1915. The implications of this analysis go beyond attempts at understanding the Armenian genocide as such; they help place in the proper context the subsequent rise of Kemalism in post-Ottoman Turkey & the continued oppression of other ethnic minorities, including the Kurds. 64 References. Birnbaum, Pierre (U Paris I, F-75231 Cedex 05 France), **Nationalism: A Comparison between France and Germany,** UM *International Social Science Journal,* 1992, 44, 3(133), Aug, 375-384.

Translated from French.

¶ It is argued that nationalism is not produced by the state, but rather, develops in opposition to a certain type of state in the name of a group identity that has been rejected. A comparative method for studying nationalism is presented, & the concept of nationalism is discussed. In a comparison between German-Romantic & French-style nationalism, it is suggested that the fact of Germany's status as a cultural community & France's status as a political one sheds light on the distinct position occupied by the state in each country & also on the type of nationalism that emerged in each. Several reasons are offered as to why large-scale nationalist movements are seldom seen in the contemporary world, & it is concluded that, in France, easier access to citizenship–which facilitates social integration–appears to have created a radical nationalist mobilization in the name of a cultural identity, which is perceived to be under threat. 2 Illustrations. Kavolis, Vytautas (Dickinson Coll, Carlisle PA 17013), **Nationalism, Modernization, and the Polylogue of Civilizations,** *Comparative Civilizations Review,* 1991, 25, fall, 124-143.

¶ The stratified theory of cultural modernization interprets it as proceeding simultaneously in four directions: the modernist-antimodernist split, thrusts toward archaic local unifications, & postmodern quests. In a world becoming globalized, two-way interchanges occur: local messages must be justified in universal idioms, yet the universal is constantly judged in terms of particular (local) values & experiences. Embedded in these processes, nationalism (orientation toward the nation in cultural & political pursuits) assumes archaic, modernist, antimodernist (fascist), & postmodern forms, identified by different conceptions of the relationship of individual to society, esteemed human qualities, styles of social action, & conceptions of time. Larsen, Knud S., Killifer, Carolyn, Csepeli, Gyorgy, Krumov, Krum, Andrejeva, Ludmilla, Kashlakeva, Nadia, Russinova, Zlatka & Pordany, Laszlo (Dept Psychology Oregon State U, Corvallis 97331), **National Identity: A New Look at an Old Issue,** *Journal of Social Behavior and Personality,* 1992, 7, 2, 309-322.

¶ A sample of 2,027 US students, foreign students in the US, & members of religious & political groups were asked to supply 3 words to specify the US national identity. The same survey procedure was followed with 155 students at 2 Hungarian universities, & with 128 Bulgarian & 24 Greek students at the U of Sofia (Bulgaria) for their respective nationalities. Content analysis revealed 10 major categories for the US national identity, eg, freedom, social development, positive national sentiment, & family values. Foreign students' perceptions of the US national identity were similar to those of the domestic groups. A common national identity emerged that transcended sociopolitical differences within the US sample. The Hungarian national sample yielded 6 identity components; in contrast to the US sample, negative character traits dominated. Fifteen Bulgarian identity components overlapped with the US & Hungarian components, but the fatalistic component was unique to the Bulgarians. The Greeks, Hungarians, & Bulgarians focused on personality-based national identities in contrast to the US focus on the sociopolitical dimension. The concordance across samples suggests the presence of universal values. 4 Tables, 23 References. Adapted from the source document.

Pollini, Gabrielle (Dipt teoria/storia/ricerca sociale U Trento, I-38100 Italy), **Appartenenza nazionale. Tra localismo e cosmopolitismo** (National Belonging. Localism and Cosmopolitism), *Studi di Sociologia,* 1991, 29, 2, Apr-June, 127-142. (ITA)

¶ Cosmopolitism & localism are complementary forces that have helped to shape the European nation-state & contribute to a sense of national belonging. Because of the recent manifestations of regionalism/municipalization in Italy, & the problematic cosmopolitism evident in immigration of non-Europeans into European Community nations, the synergistic action of these forces is reevaluated. It is suggested that the political governing of the increasingly divergent local & national communities has reached a new crisis. These phenomena reflect the citizen's need for autonomy over social unity. 42 References. Adapted from the source document.

Wilterdink, Nico (Sociologisch Instit, Oude Hoogstr 24 NL-1012 CE Amsterdam Netherlands), **Images of National Character in an International Organization: Five European Nations Compared,** *The Netherlands' Journal of Social Sciences,* 1992, 28, 1, Apr, 31-49.

¶ It is suggested that nations differ not only in terms of politics, history, culture, & geographic locale, but also in terms of the mentality or personality of their citizens. It is hypothesized that reducing social interactions to nationally based personality differences is more common in international settings in which people from different nations have frequent interactions, & that within these situations, the individuals involved retreat to these notions of difference. Fieldwork conducted among members of the European University Instit in Florence, Italy, in 1987 provides data concerning their images of the national character of French, English, Germans, Italians, & Dutch. Respondents' views generally conformed to conventional national images, though they were also influenced by social experiences. 1 Table, 38 References. Adapted from the source document.

Bearman, Peter S. & Deane, Glenn (Dept Sociology U North Carolina, Chapel Hill 27514), **The Structure of Opportunity: Middle-Class Mobility in England, 1548-1689,** UM *American Journal of Sociology*, 1992, 98, 1, July, 30-66.

¶ The structure & consequences of middle-class intergenerational mobility in preindustrial (1548-1689) Norwich, England, are investigated, using models that allow the decomposition of mobility into its structural & exchange components. Mobility data obtained from an occupational register of 7,654 freemen reveal that dramatic shifts in the mobility opportunities of sons over time yield distinct political outcomes. Political stability is associated with almost universal upward mobility 1548-1589, while from 1590 to 1639, structural processes leading to massive downward mobility are associated with increased radicalization & participation in the English Civil war. From 1640 to 1689, strata persistence in an unstable political context prevailed. 8 Tables, 1 Appendix, 76 References. Adapted from the source document.

Bonacich, Edna (Dept Sociology U California, Riverside 92521), **Alienation among Asian and Latino Immigrants in the Los Angeles Garment Industry: The Need for New Forms of Class Struggle in the Late Twentieth Century,** *The International Journal of Sociology and Social Policy*, 1991, 11, 6-8, 165-180.

¶ The diffusion of responsibility for exploitation & alienation in late-twentieth century capitalism is described via analysis of the garment industry in Los Angeles, Calif. Data from approximately 40 interviews, official statistics, trade journals, & on-site visits demonstrate how both the immigrant workers–primarily Latinos from Mexico & El Salvador–are exploited by their contractors–largely Asian immigrants–creating racial & ethnic antagonisms. However, both groups are embedded within larger structures of capitalist exploitation. The possibility of class struggle under such circumstances is explored, along with issues of worker alienation & the goals of economic activity. 1 Figure, 25 References. K. Hyatt

Brym, Robert J. (U Toronto, Ontario M5S 1A1), **Some Advantages of Canadian Disunity: How Quebec Sovereignty Might Aid Economic Development in English-Speaking Canada,** UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology*, 1992, 29, 2, May, 210-226.

¶ Drawing on Raymond Breton's "Institutional Completeness of Ethnic Communities and the Personal Relations of Immigrants" (see SA 13:2/65B5303a), the implication that ethnic groups vary in their degree of institutional completeness or the extent to which group members are serviced by their own formal organizations is illustrated as applied to Canada. It is contended that, in the extreme case, jurisdictional disputes between large, institutionally complete ethnic communities coexisting in a single society may promote so much decentralization of authority that they render the state ineffective in planning & regulating economic development. Decentralization may thus negatively affect the overall production of wealth & lower the entire society's position in the international socioeconomic hierarchy. It is reasoned that Canadian federation is highly decentralized, primarily because of Quebec's centrifugal pull, which makes the country poorer since it has prevented any form of central economic planning. If Quebec separated from the rest of the country, Canada could become more centralized, class issues could become more prominent, & the citizenry's economic well-being could increase. It is suggested that the historical record, authoritative opinion, the results of public opinion polls & attitudinal surveys, & the findings of some comparative political economy research substantiate this contention. 55 References. Darroch, Gordon & Soltow, Lee (York U, North York Ontario M3J 1P3), **Inequality in Landed Wealth in Nineteenth-Century Ontario: Structure and Access,** UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology,* 1992, 29, 2, May, 167-190.

¶ Using data from a systematic sample taken from the 1871 manuscript censuses of 5,699 people age 20+ who reported wealth holding or headed a household, the distribution of land among farming families in Ontario is examined. Land ownership patterns reveal that almost 66% of all adult male (M) farmers were landowners. In this cross-sectional analysis, the class divide between the propertied & propertyless in nineteenth-century Ontario appears fairly deep. Further analysis shows that the proportion of owners increased significantly with age. The social reproduction of a divided landed economy also entailed considerable individual life-cycle opportunity for land acquisition. Land tenancy rates were found to be fairly low for the province, but significant numbers of nonfarmers owned or rented land. Very few women were ever heads of household, but among them nearly 33% owned land, though the rate was lower than among M heads of similar age. The age pattern of farm acreage owned implies that the average size of farms was virtually constant over several decades prior to 1871. 4 Tables, 1 Chart, 57 References. Erikson, Robert & Goldthorpe, John H. (Instit Social Research Stockholm U, S-10691 Sweden), **Individual or Family? Results from Two Approaches to Class Assignment,** *Acta Sociologica,* 1992, 35, 2, 95-105.

¶ An empirical evaluation of the individual vs the conventional family-centered approach to the assignment of class position to women. Both approaches are applied to data from 10 surveys conducted 1973-1987 that looked at subjective class identifications & employment-related class groupings for both working women & their spouses in 8 industrialized nations. Supported by feminist theory, the individual approach considers the woman's class based on her own subjective evaluation & employment, while the conventional approach groups the working woman in the same socioeconomic class as her husband. It is found that married women are more inclined to identify with their husbands' class. Analogous relationships exist between husband's & wife's class & political partisanship; ie, married women generally vote the political preference associated with their husband's class. 2 Tables, 44 References. Adapted from the source document.

Evans, Geoff (Nuffield Coll, Oxford OX1 1NF England), **Is Britain a Class-Divided Society? A Re-Analysis and Extension of Marshall et al.'s Study of Class Consciousness,** *Sociology,* 1992, 26, 2, May, 233-258.

¶ In a reanalysis of the survey data collected by G. Marshall et al, (*Social Class in Modern Britain,* London: Hutchison, 1988), it is demonstrated that the class consciousness index they developed does not measure a unitary concept, & that their conclusions about the preeminence of social class as a structuring influence on identities & attitudes are not supported by the data. Furthermore, it is argued that their approach obscures important distinctions between explicitly class-related identities or perceptions, attitudes toward redistributive policies that benefit individuals in the working class, & attitudes toward redistributive policies that are egalitarian, but that also incur costs for members of the working class. Previously unexamined data are offered to support the argument that class differences over redistributive issues reflect self-interest rather than differences in commitment to egalitarian values. A number of responses to the problems encountered in measuring class consciousness in contemporary GB are considered. 5 Tables, 1 Appendix, 63 References. Adapted from the source document.

Fararo, Thomas J. & Kosaka, Kenji (Dept Sociology U Pittsburgh, PA 15260), **Generating Images of the Shape of a Class System,** *The Journal of Mathematical Sociology,* 1992, 17, 2-3, 195-216.

¶ An extension of a formal theory on how successive social interactions build up the image of stratification & self-location (Kosaka, Kenji, & Fararo, Thomas J., "Self-Location in a Class System: A Formal Theoretical Analysis," in Lawler, E., Markovsky, B., Ridgeway, C., & Walker, H. [Eds], *Advances in Group Processes,* Greenwich, Conn: JAI Press, 1991, 9). In this model, the actual stratification system is a composite of a certain number of ranking systems. A set of principles for ranking is used by all actors, who agree about their relative significance. Given an actual distribution of actors over the composite ranks or class locations, as an actor builds up an image of the composite, the relative proportion of actors in various classes is built at the same time, shaping the class system. These images may resemble simple forms, but will vary as the actor experiences a sequence of interactions with others (a stochastic process), until equilibrium is reached. A model yielding the objective interaction probabilities as a function of the actual distribution of actors in the stratification system & associational bias is generally constructed, & several special cases are analyzed in detail. 4 Tables, 9 References. Gill, Rajesh (Dept Sociology Panjab U, Chandigarh 160014 Union Territory India), **Changing Caste and Occupational Structure in Urban Periphery,** *Guru Nanak Journal of Sociology,* 1990, 11, 1, Apr, 15-30.

¶ Data obtained via interview from random samples of households (total N = 270) in 2 Indian villages–Mullanpur, located outside a service city, & Gill, outside a manufcturing city–are drawn on to investigate the impact of being peripheral villages to cities of different functional type in terms of the relationship between caste & occupational structures. Findings highlight that while the particular kind of infrastructure & job opportunities offered by a city may affect various castes differently, functional type of a city cannot by itself explain the different patterns of change in peripheral settlements. Although industrialization & urbanization may lead to greater change in caste & occupational structures, the role of other intervening factors, eg, historicity of a city & of the rural population must not be underestimated. 3 Tables, 16 References. Adapted from the source document.

Goza, Franklin (Dept Sociology Bowling Green State U, OH 43403), **Differential Income Attainment among Asians in the United States, 1960 to 1980,** UM *International Review of Modern Sociology*, 1990, 20, 1, spring, 1-31.

¶ Data from the Public Use Samples of the 1960-1980 decennial US Censuses are used to investigate earnings differentials between Asian origin & native white males ages 18-64, exploring the extent of income heterogeneity among 5 Asian groups–Chinese, Indians, Japanese, Koreans, & Filipinos–as well as between nativity groups. Income decomposition analyses performed for the 3 time periods indicate a wide range of results. At times, for some Asian groups, 50+% of the observable earnings gap with respect to whites was unattributable to differences in worker socioeconomic or demographic characteristics. These results suggest that unmeasured factors, including discrimination, accounted for this gap. However, aggregate results demonstrate that some ethnic groups earned substantially more than native whites. This occasionally occurred because of extra skills brought to the workplace, while in other instances it reflected higher returns received for human capital. Summary results generally indicate a reduction in statistical discrimination as well as the earnings gap between whites & Asians. 8 Tables, 31 References. Adapted from the source document.

93Z5157

Hagan, John (U Toronto, Ontario M5S 1A1), **Class Fortification against Crime in Canada,** UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology*, 1992, 29, 2, May, 126-139.

¶ Drawing on a review of theoretical & empirical research literature, a theory of class fortification against crime is proposed that modifies & expands Douglas Smith's & Craig Uchida's integrated theory model presented in "The Social Organization of Self-Help: A Study of Defensive Weapon Ownership" (see SA 36:3/88T5873). The theory conceptually & operationally identifies the ways that class interests & threats lead to a society that is fortified against crime, by demonstrating that persons who occupy higher class positions pursue their interests through lifestyles & activities that place them at greater risk of victimization, which in turn increases their sense of concern or threat, thus leading to household fortification. This theory is tested using 1988 national survey data on 6,543 heads of households in Canada. Findings demonstrate that the employer class is especially active & affluent & therefore fearful for their property. In contrast to the US, Canada limits the class fortification of its households to the installation of home security devices, avoiding the widespread acquisition of handguns. 2 Tables, 1 Figure, 21 References. Adapted from the source document.

Hak, Durk (Rijks U Utrecht, NL-3508 TC Netherlands), **Kerksplitsingen en de verwerving van status in een maritieme cultuur** (Denominational Fissions and the Achievement of Status in a Dutch Maritime Community), *Sociologische Gids*, 1992, 39, 4, July-Aug, 254-266. (DUT)

¶ There are a few Dutch villages & towns where community identity is strongly linked to a particular Protestant denomination. Analysis of official statistical data reveals that in the coastal communities of Bunschoten/Spakenburg, Marken, & Staphorst/Rouveen, denominational homogeneity was preserved 1947-1988. In contrast, the number of denominations at Urk increased from three to ten. This change is analyzed in terms of social, economic, & political status within the local community. Explanations are offered for why the newer denominations are oriented toward the experiential wing of Dutch Calvinist spirituality. 3 Tables, 37 References. Adapted from the source document.

93Z5159

Hayes, Bernadette C. & Jones, F. L. (Sociology Program Australian National U, Canberra ACT 2601), **Class Identification among Australian Couples: Are Wives' Characteristics Irrelevant?,** UM *The British Journal of Sociology*, 1992, 43, 3, Sept, 463-483.

¶ The location of women in the class structure has been keenly debated in British class analysis. Here, data from the 1984/85 National Social Science Survey in Australia (N = 3,012 adults, 58% of urban residents who completed interviews, & 59% of rural dwellers who returned mail questionnaires) are drawn on to examine the "conventional," "dominance," "joint," "cross-class," & "individualistic" approaches to the problem of determining women's subjective class placement. Results suggest that Australian married women do not derive their subjective class locations totally or even predominantly from the social stratification characteristics of their spouses. However, among married men, subjective class placement remains a male-derived phenomenon. 12 Tables. Adapted from the source document.

93Z5160

Higginbotham, Elizabeth & Weber, Lynn (Center Research Women Memphis State U, TN 38152), **Moving Up with Kin and Community: Upward Social Mobility for Black and White Women,** *Gender & Society*, 1992, 6, 3, Sept, 416-440.

¶ The subjective experience of upward mobility is examined, incorporating race & gender variables into the analysis, drawing on focused life-history interview data from 200 black & white female professional managers, & administrators ages 25-40 in the Memphis, Tenn, metropolitan area. The experiences of the women paint a different picture from the image of the mobility process that remains from scholarship conducted 20-30 years ago on white males. Ways that relationships with family of origin, partners, children, friends, & the wider community have shaped the way these women envision & accomplish mobility & the way they sustain themselves in their chosen occupation are discussed, along with racial differences in these processes. 1 Table, 43 References. Adapted from the source document.

93Z5161

Hill, R. D. & Shin, Voo Min (Dept Geography & Geology U Hong Kong, Hong Kong), **Occupational and Spatial Mobility in an Overseas Chinese Agricultural Community: The Hakkas of Kudat, Sabah, Malaysia,** *SOJOURN*, 1990, 5, 2, Aug, 194-218.

¶ Genealogical data collected in the field for 4 generations of settlers are used to explore how a small Hakka community in southeast Asia, at first almost entirely agricultural, has become occupationally diversified. Hakkas of Kudat origin now have an occupational profile strongly weighted toward services & the professions (probably in part because of the emphasis on education, especially in English, for both men & women). Occupational mobility has been accompanied by substantial change in predominant place of residence, reflecting not only the continuance of Kudat as a largely agricultural district in which there was, & still is, limited scope for upward occupational mobility, but also the apparent attractions of places outside the district & the state. Furthermore, anecdotal evidence suggests that international chain migration in the group may be commencing. 6 Tables, 5 Figures, 17 References. Adapted from the source document.

Joseph, Antoine (Bryant Coll, Smithfield RI 02917-1284), **Modes of Class Formation,** UM *The British Journal of Sociology*, 1992, 43, 3, Sept, 345-367.

¶ Two different approaches to class formation are examined–as a predisposition to radicalism, & as a form of collective behavior. Incorporating a social history perspective into a rational choice framework suggests that particularistic & universalistic labor movements can be distinguished by the intervening variable of labor militancy. Analysis of cross-sectional data from 14 capitalist democracies suggests that distinct modes of class formation are indeed the product of specific structural characteristics. Labor movement particularism is strongest where the lag between democratization & industrialization is minimal, & industrialization commenced relatively early; greater lag between democratization & industrialization & late industrialization are associated with low militancy & solidaristic labor movements. 1 Table, 2 Figures. Adapted from the source document.

Kikkawa, Toru, Transliterated title not available (Social Stratification and Self-Directedness in Japan), *Soshioroji*, 1992, 37, 1, May, 45-60. (JPN)

¶ A reexamination of theories about the relationship between work & personality postulated by M. Kohn, et al (*Work and Personality*, Ablex: 1982) using empirical data collected in 1979 from Japanese men (N not provided). Focus is on three different components of the self-directed

personality–authoritarian conservatism, idea conformity, & self-esteem–& the ways these are affected by social stratification. Results indicate that education, age, urban residence, & occupational prestige have significant impacts on the different personality dimensions. Additional hypotheses about the relationship between personality & social structural factors in Japan are postulated. 3 Tables, 3 Figures. Adapted from the source document.

Krahn, Harvey & Harrison, Trevor (U Alberta, Edmonton T6G 2E1), **'Self-Referenced' Relative Deprivation and Economic Beliefs: The Effects of the Recession in Alberta,** UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology*, 1992, 29, 2, May, 191-209.

¶ Interview data obtained in 1988 from 1,269 adult residents of Alberta are used to test the theory that feelings of relative deprivation help translate the experience of economic hard times into more left-leaning economic beliefs. Findings reveal that Albertans who had been forced to cut back on expenditures because of the recession of the mid-1980s were more likely to support the need for a redistribution of wealth. This pattern of relationships held among members of the working class but not within the middle class. 2 Tables, 2 Figures, 40 References. Adapted from the source document.

Madariaga, Isabel de (U London, WC1E 7HU England), **Review Article: Class by Any Other Name,** *Government and Opposition*, 1992, 27, 1, winter, 109-114.

¶ A review article on a book edited by Penelope J. Cornfield, *Language, History and Class* (Oxford: Basil Blackwell, 1991 [see listing in IRPS No. 66]). The volume provides illustrations of the way that the word, the concept, & the fact of class have been perceived & analyzed in the past in Western European & Asian nations, as well as in the US. The process of the transition from a perception of a European society composed of social estates into one composed of classes is explored comparatively. The essays on Asia address social stratification & the role of descriptive language. The disparity in attitude toward language between non-Anglo cultures (eg, Indian peoples) & the British conquerors, who attached far more importance to the word as a means of communication than to other "signs," is discussed. The essays generally invite historians to consider the dangers inherent in the translation of concepts, not only from different periods within one language, but from language to language. They also compel the reader to recognize that history, political science, political theory, political philosophy, & historical sociology as taught in the West need to be revitalized by the injection of the Asiatic perception of what people are & how they think of themselves. S. Millett

Matějů, Petr & Řeháková, Blanka (Sociologický ústav ČSAV, Jilská 1 CS-11000 Prague 1 Czechoslovakia [Tel: 02-235-89-68-71; e-mail: mateju@cspgas11.bitnet]), **Od nespravedlivé rovnosti ke spravedlivé nerovnosti? Percepce sociálních nerovností a sociální spravedlnosti v současném Československu** (From Unjust Equality to Just Inequality? Perception of Inequality and Social Justice in Contemporary Czechoslovakia), *Sociologický Časopis*, 1992, 28, 3, 293-318. (CZE)

¶ To determine how Czechoslovaks view changes in socioeconomic inequality since 1989, when the postcommunist era began, questionnaire data were obtained from a nationally representative sample (N = 2,757). The economic changes are bringing about winners & losers according to the realignment of distribution & stratification processes. A wide variety of responses were obtained regarding whether the new order creates more inequalities than did communism, & whether there is a just basis for such inequalities. A visible shift is noted toward more universalism & meritocracy. However, consensus among various socioeconomic groups remains weak. 10 Tables, 6 Graphs, 1 Appendix, 18 References. 93Z5170

Metcalfe, A. W. (School Sociology U New South Wales, Kensington 2033 Australia), **Myths of Class Struggle: The Metaphor of War and the Misunderstanding of Class,** *Social Analysis*, 1991, 30, Dec, 77-97.

¶ Explored is the extent to which Marxist theories of class struggle implicitly call on the metaphor of war. This metaphor is more than a decorative rhetorical device: it profoundly organizes Marxist thought on class struggle. Although the military metaphor has certain strengths, it is nonetheless an unhelpful & dangerous image in many ways. Some of these deficiencies are considered, & an alternative model of class struggle is outlined that is based on a consideration of class as an intimate relation & class struggle as a destructive struggle within an oppressive intimate relationship. It is suggested that theorists have much to learn by looking at class struggle in the terms & styles of argument developed by feminists studying gender relations & struggles. 97 References. AA

93Z5171

Miller, Max, Discourse and Morality: Two Case Studies of Social Conflicts in a Segmentary and a Functionally Differentiated Society, UM *Archives Européennes de Sociologie*, 1992, 33, 1, 3-38.

¶ Emile Durkheim's sociology of morality is examined through an analysis of a social conflict in a segmentary tribal society (land litigation among the Trobriand islanders of Papua New Guinea) & a social conflict in a modern functionally differentiated society (controversy over a nuclear power plant in West Germany). Durkheim's thesis regarding the social construction of morality is examined, as are his central notions of mechanical & organic solidarity. It is maintained that an analysis of social conflicts provides a useful empirical method for analyzing structures of social cooperation. A discourse model for analyzing such structures is presented, & it is shown that different logics of discourse define different levels of moral rationality in segmentary & differentiated societies. Durkheim's sociology of morality, it is concluded, can be better defended & elaborated if recent work on communicative action & discourse is taken into account. 3 Figures, 42 References. W. Howard

Nieuwbeerta, Paul & De Graaf, Nan Dirk (Vakgroep Sociologie Katholieke U Nijmegen, NL-6500 HC Netherlands), **Intergenerationele klassenmobiliteit en politieke voorkeur in Nederland tussen 1970 en 1986** (Intergenerational Class Mobility and Political Preferences in the Netherlands between 1970 and 1986), UM *Mens en Maatschappij*, 1992, 67, 3, Aug, 255-272. (DUT)

¶ To investigate the relationship between present social class (SC), former SC, & political party preference, questionnaire data from 11 Dutch surveys (total N = 20,700 respondents (Rs)) conducted 1970-1986 were analyzed, using techniques from M. E. Sobel's "Diagonal Mobility Models: A Substantively Motivated Class of Designs for the Analysis of Mobility Effects" (see SA 30:3/82M2954). The results show that the effect of Rs' own SC is identical for both upward & downward mobility. For young Rs, the father's SC may have a stronger impact on mobility than their own SC, but after age 30 the SC of origin is less important. 3 Tables, 30 References. Nobe, Masao, Transliterated title not available (Effects of Social Mobility on Social Networks: The Case of Canberra), *Soshioroji*, 1992, 37, 1, May, 21-44. (JPN)

¶ Survey data collected 1986/87 from 316 women in 4 areas of Canberra, Australia, are drawn on to explore the effects of occupational mobility on social networks & social support. Results only partially support the hypothesis that downward mobility has a disruptive effect on interpersonal relationships: occupational status of origin was nonsignificant, & status of destination affected only certain types of relationships. When these status variables were controlled, mobility effects were evident for some specific relationships, ie, neighbors & relatives. An alternative hypothesis regarding the effects of occupational mobility on different types of network ties is proposed, & suggestions are offered for further research to test it. 11 Tables, 51 References. Adapted from the source document.

Ogmundson, R. & McLaughlin, J. (U Victoria, British Columbia V8W 2Y2), **Trends in the Ethnic Origins of Canadian Elites: The Decline of the BRITS?**, UM *La Revue Canadienne de Sociologie et d'Anthropologie/The Canadian Review of Sociology and Anthropology*, 1992, 29, 2, May, 227-242.

¶ While a new consensus has emerged that overall ethnic stratification at the mass level in Canada is minimal & declining, an entrenched British upper class may continue to dominate the key decision-making positions at the elite level of society. Here, it is explored whether a decline in the role of the British has actually taken place, based on a literature review, most notably John Porter's 1965 study, *The Vertical Mosaic* (Toronto: U of Toronto Press). The consistency of results for each of Porter's seven elites (the political, public service, mass media, intellectual, religious, labor, & business) provides some confidence that the results are robust. A second generation of trend studies, using identical methods & measures over time, indicates that the domination of Canadian elites by those of British ancestry is coming to a close, & that the original imagery of the vertical mosaic needs revision. Thus, changes at the mass level earlier reported by Porter & others may now be reaching the highest levels of Canadian society. It is suggested that this overall picture may obscure important variations in the relevance of ethnic origin by region, institution, & generation. Results may imply that liberal capitalist democracy has again demonstrated a capacity for meaningful social change. 6 Tables, 68 References. Adapted from the source document.

Oommen, T. K. (Centre Study Social Systems Jawaharlal Nehru U, New Delhi 110067 India), **Reconciling Pluralism and Equality: The Dilemma of 'Advanced' Societies**, *Revue Internationale de Sociologie/International Review of Sociology (nouvelle serie/new series)*, 1992, 1, 141-172.

¶ The two most important ideological dimensions invoked to characterize homogeneous "advanced" societies of Western Europe are equality & individualism. Discussed here are three historical & contemporary developments that have drastically transformed the internal milieu of these societies: (1) European colonialization, which led to the creation of the first "new nations" that were racially & culturally heterogeneous; (2) the emergence of the European community, whose complexity is manifold compared with the European nation-states; & (3) the ongoing process of globalization, which implies internationalization of capital, labor, & market. These developments have led to the persistence & increase in inequalities among the collectivities that constitute advanced societies. Therefore, it is suggested that (A) diversity/heterogeneity is a social fact & pluralism is an attitude, a value orientation to that social fact; (B) there is a qualitative difference in the meaning of equality, & pursuantly of inequality, in homogeneous & heterogeneous societies; (C) the notion of inequality between individuals is conceptually inadequate to cope with the complexity of socially heterogeneous societies; (D) the ongoing process of globalization is bound to render advanced societies increasingly heterogeneous; (E) therefore, pluralism as a value orientation is to be nurtured if these societies are to deserve the appellation "advanced"; & (F) the dilemma they face can be tackled only by combining the pursuit of individual-based equality with pluralism, a collectivity-oriented value aimed at intergroup equality. 2 Tables, 25 References. Osti, Giorgio (Dipt teoria/storia/ricerca sociale U Trento, I-38100 Italy), **Mobilità geografica e sociale delle classi agricole** (Geographical and Social Mobility of the Rural Classes), *Studi di Sociologia*, 1991, 29, 3, July-Sept, 297-310. (ITA)

¶ The influence of migration on social mobility is analyzed using survey data obtained in northeastern Italy (N = 1,042 respondents). Occupation was used as an indicator of social class, & intergenerational change as the measure of social mobility. Findings reveal that migration had a contradictory influence on absolute mobility: people moving from the countryside to big towns registered a downward mobility. With respect to relative mobility, a change of residence had no effect on social mobility, except in very specific cases. People from farming families, although they more frequently altered their class position, never obtained advantages relative to other classes. In particular, people with farmworker (*salariati*) backgrounds, regardless of migrant status, were most disadvantaged in terms of upward mobility. 3 Tables, 36 References. Modified AA

Phelan, Thomas J. & Phelan, Jo (State U New York, Stony Brook 11790), **In Search of a New Class: Evidence from Australia**, UM *Journal of Political and Military Sociology*, 1991, 19, 2, winter, 181-194.

¶ Attitudes of Australian & US professionals, managers, & blue-collar workers (total N = 857) toward egalitarianism, business, & labor were compared via 1985 International Social Survey Program data. In the US, attitudes of professionals & managers were conservative in contrast to those of blue-collar workers, & attitudes of social/cultural & technical professionals were not significantly different. In Australia, attitudes of professionals & blue-collar workers were liberal in contrast to those of managers. Social/cultural professionals were significantly more egalitarian than technical professionals but did not differ from them on issues related to business & labor. The bearing of these results on new-class theories is discussed. 2 Tables, 2 Appendixes, 28 References. Adapted from the source document.

93Z5179

Piccone, Paul, The Crisis of American Conservatism, UM *Telos*, 1987-1988, 74, winter, 3-29.

¶ It is contended that, despite the Right's political, social, & cultural hegemony in the US during the 1980s–resulting in three Republican presidential victories–conservative ideology is fragmented. This paradox is reflected in the failure–or, at best, quasi-success–of right-wing initiatives on issues ranging from school prayer, to taxation, to foreign policy. Further, the Republican party, which has been paying only lip service to cultural populism, is meeting strong resistance against its commitment to wealth & privilege. Had the Democratic party been able to mobilize its divergent forces, the right wing might have fallen some time ago, but the liberals have been equally unable to achieve hegemony. This situation has led to political chaos, which can be expected to continue for the foreseeable future. J. W. Stanton

Reed, Adolph, Jr. (Northwestern U, Evanston IL 60208), **The Underclass as Myth and Symbol: The Poverty of Discourse about Poverty,** IN *Radical America*, 1990, 24, 1, Jan-Mar, 21-40.

¶ Though the concept of the underclass has achieved acceptance in both popular & academic arenas, it rests on questionable assumptions & has more symbolic power than substance. Beyond agreement that the underclass is nonwhite, urban, & amounts to 10%-20% of the poor population, the qualities that denote underclass membership vary & center on victim-blaming presumptions & the perspective that poor people are behaviorally or attitudinally deficient & different from the nonpoor. The appeal of the underclass concept stems from four factors: (1) the sociology of the policy research community; (2) ahistorical individualism; (3) affirmation of racial & class prejudices; & (4) flattery by comparison of the petit bourgeois blacks. An alternative or reoperationalized concept that focuses not on myth & prejudice but on what actually causes poverty is needed. 2 Charts, 10 Photographs. D. Generoli

Requena, Felix (Faculty Economics U Málaga, El Ejido E-29071 Spain), **Social Resources and Occupational Status Attainment in Spain: A Cross-National Comparison with the United States and the Netherlands,** *International Journal of Comparative Sociology*, 1991, 32, 3-4, Sept-Dec, 233-242.

¶ A cross-national analysis of the thesis of relational capital, focusing on the relationship between social resources & occupation attained, comparing data from a 1989 social survey in Spain (N = 609), N. D. De Graaf's & H. D. Flap's study on the US (see SA 37:2/89U3979), & Nan Lin's, John Vaughn's, & Walter M. Ensel's study on the Netherlands (see SA 30:2/82M2089). Results confirm previous studies except for the finding, only in Spain, that greater social resources do not provide better jobs. Further, Spanish people without much formal education obtain jobs using informal channels, while in US, high occupational levels are obtained through informal methods. 4 Tables, 1 Figure, 1 Appendix, 20 References. Modified AA

93Z5182

Roe, Emery M., Management Crisis in the New Class, IN *Telos*, 1988, 76, summer, 134-143.

¶ Responding to Paul Piccone's discussion of the emergent social conflicts between the technocratic-bureaucratic elite & those they manage in the contemporary US (see abstract in this section of SA 41:1), it is argued that conflicts also exist among the technocratic-bureaucratic elites themselves; ie, the US government has become overadministered, yet undermanaged, because the rules & regulations have expanded much more quickly than management, rendering senior- & middle-level administrators unable to manage effectively. As this process unfolds, the US problems appear increasingly akin to those of developing nations. A comparison is drawn to make this point. M. Maguire

93Z5183

Rosenfeld, Rachel A. (Dept Sociology U North Carolina, Chapel Hill 27599), **Job Mobility and Career Processes,** IN *Annual Review of Sociology*, 1992, 18, 39-61.

¶ Opportunity structure, resources, & time are three primary factors affecting individual job mobility & its outcomes. Vacancy-driven models provide the background for many conceptions of opportunity structure, with recent work on labor markets & economic segmentation identifying characteristics of particular structures. Individuals' job-relevant resources, constraints, & contacts interact with structural characteristics to create careers. Careers take place over time but different aspects of time--eg, time in the firm & time in the labor force--have different implications for mobility. More specific definition of the dimensions & mechanisms of opportunity structures & resources, examination of complete work histories, & consideration of the impact of the life-course framework & various other career timing factors on job mobility are methodological concerns for future research. 137 References. Schoemaker, Juan, Clase social como factor determinante del comportamiento reproductivo: el caso de Bolivia (Social Class as a Determining Factor in Reproductive Behavior: The Bolivian Case), IN *Revista Paraguaya de Sociología*, 1991, 28, 82, Sept-Dec, 83-98. (SPA)

¶ Numerous theoretical alternatives exist for studying the relationship between social class (SC) & fertility--eg, demand theory, Marxist theory on reproduction of work, & flow of riches theory--but these have not been empirically tested because of the difficulty in operationalizing SC. In a preliminary effort, using fertility data on 5,488 married women, ages 15-49, from the National Survey of Demography & Health of Bolivia, SC was operationalized as husband's occupation & level of education, yielding 4 classes: agricultural, lower, middle, & upper. Mother's level of education was highly correlated with SC, & SC with the availability of running water & modern plumbing in the residence. Multiple classification analysis showed that when SC was controlled, the effect of mother's education on fertility was diluted, confirming the hypothesis that SC is an equally important variable in fertility. Fertility indices declined when moving from the farming to upper class group, coinciding with the usage of contraception. 6 Tables, 1 Appendix, 22 References. M. Pflum

93Z5186

Shenhav, Yehouda & Haberfeld, Yitchak (Dept Sociology & Anthropology Tel-Aviv U, Ramat-Aviv IL-69978 Israel), **Organizational Demography and Inequality,** IN *Social Forces*, 1992, 71, 1, Sept, 123-143.

¶ In stratification research, the minority power hypothesis posits that inequality between minority & majority groups can be attributed to the former's lack of power. Inequality theorists reject this conjecture on the strength of consistent findings showing that the minority earnings level is negatively related to its group size. A valid test of the minority power hypothesis requires an organizational analysis where a distinction can be made between minority size & minority share in managerial positions. These two effects on wage inequality between females & males, as well as between blacks & whites, are investigated here, drawing on 1972/73 statistical data on 117 work organizations in Detroit, Mich. Findings do not support the minority power argument. 3 Tables, 73 References. Adapted from the source document.

Singh, Bhupinder (Dept Sociology Punjabi U, Patiala 147002 India), **Partition, Gandhi and the Sikhs: A Semiological Perspective,** *Guru Nanak Journal of Sociology*, 1990, 11, 1, Apr, 89-92.

¶ The 1947 partition of India into Hindu India & Muslim Pakistan was a controversial move mandated by the Indian Congress, led by Muhammad Jinnah, but opposed by Mohandas Gandhi. This polarization left out the Sikhs, a separate syncretistic group, which historically emerged to resolve conflicts between the two religions. Gandhi advocated a multicentric plural society in which all religions were equally supported & tolerated; but in the Constitution, the Sikhs lost their separate identity & were considered a part of Hindu India. It is concluded that they may never rectify this situation unless they seek a structural solution through a decentralized political body. J. Sadler

93Z5188

Stoecker, Randy & Schmidbauer, Mary (Dept Sociology/Anthropology/Social Work U Toledo, OH 43606), **Local State Reform and Class Struggle: The Case of Toledo, Ohio,** *Critical Sociology*, 1991, 18, 3, fall, 99-123.

¶ The dynamics of labor-capitalist struggles concerning the structure of the local state are examined via a pluralist & class analysis of the struggle over local state restructuring in Toledo, Ohio, 1927-1949. Research on the structural location of the local state in the overall state system & its role in contradiction management, in capitalist-labor struggles for control of the local state, & in the early twentieth-century municipal reform movement is drawn on to explain the outcomes of the Toledo reform struggles. Analysis shows that capitalists depoliticize the local state while labor will attempt to politicize it, & that labor is able to achieve politicization only when it is unified & capitalists are divided. 119 References. Voekel, Pamela (U Texas, Austin 78712), **Peeing on the Palace: Bodily Resistance to Bourbon Reforms in Mexico City,** *Journal of Historical Sociology*, 1992, 5, 2, June, 183-208.

¶ Examined are measures instituted by the state to transform the mores of the poor in late-eighteenth-century Mexico City, where the French Bourbon bureaucracy & cultural elites mounted an unprecedented campaign to rid the urban poor of vices & to inculcate in them the virtues of hard work, sobriety & proper public propriety. This created an antagonism between elite & popular culture that manifested itself both in the changing topography of the city & in the new threshold of shame & embarrassment of the body. Through institutions such as the *alcaldes de barrio* (town mayors), elites maintained a firm, though often contested, monopoly on cultural access to public places. The Bourbon reform measures not only impacted Mexico City's daily life, but also provided a focus for elite identity formation. Adapted from the source document.

Wegener, Bernd (Dept Sociology U Heidelberg, D-6900 Federal Republic Germany), **Concepts and Measurement of Prestige,** UM *Annual Review of Sociology*, 1992, 18, 253-280.

¶ Major stratification theories of prestige include the rational-order, rational-conflict, normative-conflict, & normative-order theories. The theories differ in basing prestige either on achievement, esteem, honor, or charisma, respectively, but are similar in being unable to solve the theoretical problem of merging the concept of social closure with that of hierarchy of positions. The dominant view of prestige measurement, arguing for prestige consensus in society, is defended. Prestige appears to reflect material advantage & exhibits high cross-cultural & temporal stability. Despite interrater variation, it is warranted to base prestige scales on individual prestige judgments. The inferior role of prestige in status attainment models & dissensus in prestige judgments, particularly of the prestige of women, are suggested as research concerns. 1 Figure, 183 References. Adapted from the source document.

Zweigenhaft, Richard L. (Guilford Coll, Greensboro NC 27410), **The Application of Cultural and Social Capital: A Study of the 25th Year Reunion Entries of Prep School and Public School Graduates of Yale College,** *Higher Education*, 1992, 23, 3, Apr, 311-320.

¶ Pierre Bourdieu posited that wealthy children are able to acquire not only the economic capital, but also the cultural capital, necessary to reproduce the wealth & power of their parents ("Cultural Reproduction and Social Reproduction," in *Power and Ideology in Education*, Karabel, J., & Halsey, A. H. [Eds], New York: Oxford Press, 1977). Bourdieu's concepts are applied to the postgraduate experiences of 149 members of Yale Coll's class of 1963 who were listed in the Twenty-Fifth Reunion Class Book. Their Class Book submissions were analyzed for type of high school attended (elite or nonelite prep school, or public school), the accumulation of cultural capital (references to postgraduate education, wives' education, & the length & type of reunion book entry), & the accumulation of social capital (references to membership in prestigious societies & the schooling of their children). Public school graduates were more likely than prep school graduates to have accumulated higher degrees–with the exception of the Master of Business Administration degree–& to write longer entries showing more Yale loyalty. This is taken as evidence of public school graduates' utilization of higher education to acquire cultural capital. Elite prep school graduates were more likely to exercise social capital through business activity & social club membership. 3 Tables, 39 References. Adapted from the source document.

Aulen, Sharyn L. Roach (Flinders U, Bedford Park South Australia 5042), **The Professionalisation of Social Work? A Case Study of Three Organisational Settings**, *Sociology*, 1992, 26, 1, Feb, 23-43.

¶ Data collected from interviews with 40 Australian social work personnel in a general hospital, a government child welfare agency, & a probation service, as well as from field observations, provide a case study that suggests that conflict & tension arising from specific bureaucratic requirements combined with professional workers' claims for autonomy are not the inevitable outcome of organizational employment. By defining spheres of competence & exclusive jurisdiction, organizational guidelines protect social workers from encroachment by, & competition with, members of other professions, which strengthens the position & increases the legitimacy of social work within an organization. In addition, social workers depend on complex organizations for essential resources, including employment opportunities & clients, which contributes to professional-organizational interdependence & integration. 40 References. Asdrubal, Madeleine, Jacobi, Daniel & Savy, Herve, Formation professionnelle et installation des agriculteurs: nouveaux enjeux (The Professional Education and Training of Farmers: New Questions), *Société Alfred Binet et Théodore Simon*, 1991, 91, 1-2(626-627), 71-87. (FRE)

¶ The economic organization of French agriculture after WWII did not follow along the same lines as industrial & other sectors. Rather, changes in agriculture occurred due to the specifics of this type of economic activity & the special type of rural education preparing students for agricultural careers. Continuing adult education is emerging as a technique for coping with the highly dynamic business of agriculture. Attempts to maintain agricultural income on a level with that of other sectors are reviewed. The preservation of the rural environment & lifestyle is a key concern. Special attention is given to rural education models & the role of economics in the curriculum. M. Meeks

Augestad, Liv Berit & Levander, Sten (Dept Sports U Trondheim, N-7055 Dragvoll Norway), **Personality, Health and Job Stress among Employees in a Norwegian Penitentiary and in a Maximum Security Hospital**, *Work & Stress*, 1992, 6, 1, Jan-Mar, 65-79.

¶ The psychosocial working environment–particularly the relation between personality factors & self-reported health status, & the coping strategy used in a self-chosen stressful situation–is examined via questionnaire data collected from 122 employees at the Brøset maximum security hospital & the Tunga penitentiary, both located in Trondheim, Norway. Analysis of data from multiple scales, questionnaires, & inventories show a selective recruitment of employees to the 2 institutions based on personality characteristics. Brøset employees reported a higher level of job stress with respect to issues of leadership, communication, & institutional goals. Employees with higher anxiety scores also reported significantly more job stress & health problems. Employees with lower scores in socialization scored higher in job stress. There was no association among coping strategies, job stress, & personality characteristics. 8 Tables, 34 References. Adapted from the source document.

Betrus, Patricia A. & Hoffman, Agnes (Dept Psychosocial Nursing U Washington, Seattle 98195), **Psychiatric-Mental Health Nursing: Career Characteristics, Professional Activities, and Client Attributes of Members of the American Nurses Association Council of Psychiatric Nurses**, *Issues in Mental Health Nursing*, 1992, 13, 1, Jan-Mar, 39-50.

¶ The current status of 525 psychiatric-mental health nurses in the US was explored via a mail questionnaire that elicited information on career characteristics, professional activities, & client attributes. Respondents, who worked primarily in acute care institutions or hospitals, described the typical client as white, middle-class, & adult. The focus of care in mental health is moving to the community. If psychiatric nurses want a viable role in the mental health system of the future, they must begin to develop a system of care for at-risk populations in the community now. 3 Tables, 21 References. Bond, John (School Health Care Sciences U Newcastle upon Tyne, NE2 4AA England), **The Politics of Caregiving: The Professionalisation of Informal Care**, *Ageing and Society*, 1992, 12, 1, Mar, 5-21.

¶ An overview of the literature on caregiving, most of it social-policy oriented & atheoretical, & on professionalization of health care, drawn from a rich theoretical tradition in sociology. Focus is on the care of dementia sufferers, with particular reference to the role of family & other informal caregivers. The theoretical contributions on informal & formal caregiving have been dominated by issues of gender & profession, to the detriment of other aspects of structure. Inherent contradictions in society's desire to provide care to dementia sufferers without compromising the position of informal & formal caregivers are illuminated. 1 Table, 82 References. Abstracted from the source document.

Burton, Gene E. (School Business & Administrative Sciences California State U, Fresno 93740-0006), **Medical Doctors and Consumers View Medical Advertising**, *Health Marketing Quarterly*, 1991, 9, 1-2, 81-95.

¶ Mail questionnaire data from 269 doctors (MDs) & 103 consumers in central Calif are drawn on to explore attitudes toward medical advertising, & the behavior & intentions of MDs who advertise. Results indicate that consumers approve more of medical advertising & perceive it as more consumer-beneficial than do MDs, & do not view advertising as unprofessional. MDs expressed fear that advertising could lead to unrealistic consumer expectations. Specialized dentists had more positive attitudes toward advertising than other MDs but all MDs surveyed reported that advertising is growing in their specialty. 3 Tables, 25 References. Cassidy, Margaret L. (U Wisconsin, Eau Claire 54702-4004), **Gender Differences in Work-Related Status within Selected Female- and Male-Dominated Occupations**, *Current Research on Occupations and Professions*, 1990, 5, 111-129.

¶ An examination of differences in the work-related status of women & men employed in the female (F)-dominated "semiprofessions" & in male (M)-dominated professional/managerial occupations, based on data from a 1986 mail survey of 1970-1984 graduates from a midwestern university (N = 500 respondents [Rs] in the F-dominated fields of education, social work, or nursing; & 500 Rs in the M-dominated fields of business, or the natural sciences, yielding 446 usable replies. Multiple regression analyses confirm that Ms in both F- & M-dominated occupations have significantly higher earnings than do Fs. Rs with higher levels of education, employed for a greater length of time, working longer hours, &/or employed in a private setting receive greater economic rewards. In F-dominated occupations, supervisors report higher earnings, while those with higher occupational prestige earn less. It is concluded that, although other variables appear to have greater effects on earnings, gender continues to be a factor that should be considered when assessing work status differentials. 7 Tables, 39 References. Coats, Patricia Boyne & Overman, Steven J. (c/o Overman–Dept HPER Jackson State U, MS 39217), **Childhood Play Experiences of Women in Traditional and Nontraditional Professions**, *Sex Roles*,

1992, 26, 7-8, Apr, 261-271.

¶ Hypothesizing that gender-specific differences in childhood experiences may limit female (F) occupational choices in adulthood, 110 white professional Fs from Miss were asked to complete mail questionnaires on their childhood environment, play behavior, & parental encouragement of behaviors. Of the sample, 43% were employed in traditional, 44% in moderately nontraditional, & 14% in highly nontraditional professions. Analysis showed no differences in the complexity of childhood play experiences between traditional & nontraditional professionals. Fs in business professions had participated more in competitive sports during middle childhood than had nonbusinesswomen, & also differed from the others in their adult avocations. Businesswomen & those in highly nontraditional professions were more likely to have played with boys than with girls. Forms of encouragement by fathers differed from that of mothers, & Fs in nontraditional professions received different forms of parental encouragement than those in traditional professions. 21 References. Ericksen, Karen Paige & Hodge, Robert W. (Dept Psychology U California, Davis 95616), **Occupations and Ritual in Contemporary Egypt,** UM *Journal of Quantitative Anthropology*, 1991-1992, 3, 3, 207-227.

¶ Assuming that both rituals & occupations are significant activity clusters in a society, & that both are located on a shared cognitive map, then the locations of occupations relative to the locations of ritual practices in that map should define the hierarchical ranking of the occupations. To test this hypothesis, 92 adults from various areas & social strata in Egypt arranged 45 stimulus cards (common cultural objects; ritual practices like male circumcision, female clitoredectomy, & virgin tests; symbols; & occupations) into clusters of objects they perceived as similar. Nonmetric multidimensional scaling showed that 3-dimensional solutions were satisfactory for the total sample, individuals, & pairs of subgroups (men vs women, literate vs illiterate, & those sorting in many vs few clusters). The 7 distinct clusters of frequently paired objects & respondents' verbal explanations for sorting indicate that occupational cognitions are governed by developmental as well as status dimensions. Ritual practices latently governed the status hierarchy of occupations, with the highest status occupations forming a bridge to the ritual clusters, & with the lowest status occupations closely anchored by economic development symbols, supporting the hypothesis. 3 Tables, 2 Figures, 30 References. Evetts, Julia (School Social Studies U Nottingham, NG7 2RD England), **Dimensions of Career: Avoiding Reification in the Analysis of Change,** *Sociology*, 1992, 26, 1, Feb, 1-21.

¶ A literature review provides an examination of the different ways that sociologists have studied careers. Various dimensions in careers research that constitute a developing research tradition are considered, as are problems associated with reification in analyses of career that are either implicit in particular models or are addressed in others, but in ways that fail to resolve the difficulties. It is suggested that the analysis of processes of change in career structures & career experiences can best enable researchers to avoid reification in their conceptualizations of career. 59 References. Ferrarese, Maria Rosaria (Facoltà giurisprudenza U Trento, I-38100 Italy), **Potere e competenza nelle professioni giuridiche** (Power and Competence in the Legal Professions), *Sociologia del Diritto*, 1992, 19, 1, 43-62. (ITA)

¶ An examination of the increasingly privatized legal professions, in which power is derived from a resourceful, entrepreneurial articulation of technical legal skills. Combining power & competence functions in a variety of ways, legal professionals (lawyers & judges) link society with state power in legitimate uses of constitutional power & in all symbolic legal resources. Professional legal power derives from the privileged, exclusive use of technical legal skills. In the vague areas between legality & illegality, lawyers use their technical skills to construct new notions of legality. In addition, lawyers are increasingly involved in extrajudicial affairs, as expert advisors & consultants, & in corporate or commerical law. Judges have recently taken on a more actively aggressive penalizing role in Italy, & have been granted powers of penal initiative. The traditional image of a publicly accessible legal profession is yielding to a skills-based, competitive, privatized business. 19 References. Adapted from the source document as translated by J. Sadler.

Florentine, Robert & Cole, Stephen (Neuropsychiatric Instit U California, Los Angeles 90024-3511), **Why Fewer Women Become Physicians: Explaining the Premed Persistence Gap,** *Sociological Forum*, 1992, 7, 3, Sept, 469-496.

¶ Telephone interview data obtained in 1986 from 302 male & 240 female (F) persisting & defecting premed students at the State U of New York, Stony Brook, are used to test 4 explanations of the persistence gap that are consistent with the structural barriers, normative barriers, & cognitive differences theories of gender inequality. Results do not support the "perception of discrimination," "discouragement," "self-derogation," or "anticipated role conflict" hypotheses. Rather, the evidence suggests another explanation–the normative alternatives approach–which holds that contemporary gender norms offer Fs fewer disincentives to changing or lowering their high-status career goals when encountering hardship, self-doubt, & the possibility of failure. 9 Tables, 43 References. Friedman, Isaac A. (National Instit Research Behavioural Sciences, Jerusalem IL-96583 Israel), **High- and Low-Burnout Schools: School Culture Aspects of Teacher Burnout,** *Journal of Educational Research*, 1991, 84, 6, July-Aug, 325-333.

¶ School factors associated with teacher burnout were evaluated for a sample of 1,597 elementary school teachers who were given a modified version of the Maslach Burnout Inventory, including a background information section, followed by interviews with principals, teachers, & other school incumbents. Findings indicate that four major school culture vari-

ables contribute to teacher burnout: (1) the drive toward measurable goal-achievement behavior imposed on teachers by school administration, (2) lack of trust in teachers' professional adequacy, (3) circumscribing school culture, & (4) disagreeable physical environment. Age, sex, level of education, & number of years in teaching are background variables also associated with levels of burnout. 2 Tables, 1 Appendix, 34 References. Adapted from the source document.

Grace, Gerald (School Education U Durham, DH1 1TA England), **The State and the Teachers: Problems in Teacher Supply, Retention and Morale,** *Evaluation and Research in Education,* 1991, 5, 1-2, 3-16.

¶ It is argued that supply, retention, & morale problems related to teaching are surface manifestations of deeper historical, structural, & ideological contradictions within state policy in education. Such issues are examined here with reference to the radical changes in state policy in education that have transformed both the terms & conditions of service for teachers & the nature of the educational process in England & Wales. Recent historical trends in teacher-state relations that are relevant to contemporary policy issues are reviewed, & the consequences of these changing social & power relations for teacher supply, retention, & morale problems discussed. The options available for a contemporary education policy informed by the insights of critical scholarship rather than by the decontextualized analysis of policy science are outlined. 1 Graph, 38 References. Harrington, Mary Kathryn (Writing Skills Program California Polytechnic State U, San Luis Obispo 93407), **Faculty Writing: Redirection and Renewal,** *Innovative Higher Education,* 1991, 16, 2, winter, 187-196.

¶ Many faculty dislike writing & only do it under pressure; procrastination & guilt about not writing may take their emotional toll. Nonwriting faculty usually are: new faculty who just finished writing their dissertation, tenured faculty who write painfully, & established senior faculty who are bored with writing. Mentoring can encourage the new group to write; but for the others, faculty writing workshops are useful. Creativity needs to be emphasized; writing needs to be actively supported by the institution; & faculty writing should be expanded to include other genres, eg, the popular media, & trade journals. Overall, writers should not be isolated, but adopted into a community of writers. 3 References. Adapted from the source document.

93Z5218

Harris, Susan (Division Education U Sheffield, S10 2UN England), **A Career on the Margins? The Position of Careers Teachers in Schools,** *British Journal of Sociology of Education,* 1992, 13, 2, June, 163-176.

¶ Interviews were conducted with 43 careers teachers in 12 schools of higher education in the UK to explore their educational tracks, specialization areas, training, & salaries. It was found that these teachers' careers are mostly unplanned, & their status in school is low. They do not compete for influence through claims of special knowledge or membership in a department; rather, they work individually &, apart from teaching labor market skills, do not claim an area of specialty. The ambiguity of the careers teacher role contributes to its risky situation. To preserve their role in schools, careers teachers need to completely redefine their tasks, eg, as coordinators of careers programs. 5 Tables, 36 References. Adapted from the source document.

Kulis, Stephen S. & Miller-Loessi, Karen (Dept Sociology Arizona State U, Tempe 85287-2101 (e-mail: atssk@asuacad.bitnet)), **Organizations, Labor Markets, and Gender Integration in Academic Sociology,** UM *Sociological Perspectives,* 1992, 35, 1, spring, 93-117.

¶ Data from a representative 1984 national survey of 230 US sociology departments are used to explore several facets of gender integration within academic sociology: total segregation (eg, all-male faculties); appointments of women in token or solo positions; variations in the departmental faculty sex ratio; & the ghettoization of women in lower academic ranks & positions with heavy committee assignments. These outcomes are analyzed at the organizational level as the product of the operation of internal & external labor markets in academia. Multivariate analyses indicate that a large proportion of the variation in gender integration from one department to the next can be predicted from the organizational context. Several organizational factors appear to militate against total segregation while promoting balance in the faculty sex ratio & in the distribution of academic rank. These include demand for labor in the form of job opportunities, especially those created through turnover; women in the institutional power structure, including a spearate women's studies program; & a state legislative climate favoring women's legal & political rights. 4 Tables, 1 Figure, 70 References. Labaree, David F. (Dept Teacher Education Michigan State U, East Lansing 48824), **Power, Knowledge, and the Rationalizing of Teaching: A Genealogy of the Movement to Professionalize Teaching,** UM *Harvard Educational Review,* 1992, 62, 2, summer, 123-154.

¶ A genealogy is presented of the movement to professionalize teaching that began in the late 1980s. It is argued that teacher professionalization is an extension of the effort by teacher educators to raise their own professional status. Closely related is the effort by teacher educators to develop a science of teaching. The efforts of the Carnegie Task Force on Teaching as a Profession & the Holmes Group are discussed, arguing that they may promote the rationalization of classroom instruction by generating momentum toward an authoritative, research-driven, & standardized vision of teaching practice. 67 References. 93Z5224

Lambert, David A. & McGuire, Thomas G. (Edmund S. Muskie Instit Public Affairs U Southern Maine, Portland 04103), **Determinants of Stringency of Psychologist Licensure,** *International Journal of Law and Psychiatry,* 1991, 14, 4, 315-329.

¶ While two contending theories (public interest & provider interest) typically explain professional regulations governing psychologists, a more expansive model is proposed to test the confluence of four independent variables: providers' economic self-interest, states' public interest, consumers' interest in quality assurance, & conditions in the mental health market. The American Assoc of State Psychology Boards provided data from 3 exams (1977/78) that document the relative difficulty of passing the Examination for Professional Practice in Psychology, currently required in forty-nine states but scored independently by each state. Running an ordinary least squares regression found stringent licensure dependent on: the ratio of psychologists to psychiatrists statewide, but not the absolute number of psychologists; the cumulative number of psychologist doctoral graduates, but not the actual number of licensees; & the population's mobility. Avenues for further research are suggested. 3 Tables, 2 Appendixes, 20 References. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Miller, Gale (Instit Family Studies Marquette U, Milwaukee WI 53233), **Work as Reality Maintaining Activity: Interactional Aspects of Occupational and Professional Work,** *Current Research on Occupations and Professions,* 1990, 5, 163-183.

¶ An approach to the sociology of work is presented that focuses on lan-

guage use as an activity used by workers to accomplish their practical ends & sustain shared senses of reality. The perspective is developed by analyzing the sequential ordering of interactions in work settings (work as orderly talk), & how accounts are produced & used in them, & then applied to professional-client interactions. Highlighted are ways that clients collaborate with professionals in constructing & maintaining professional realities, & professional-client relationships. 70 References. Modified AA

Montgomery, Andrew C. (Dept Public Health & Nursing U Illinois, Chicago 60680), **Space, Time and Architects: Careers in the Architectural Profession,** *Current Research on Occupations and Professions,* 1990, 5, 91-109.

¶ The architectural profession is examined using a classical model of careers in which time-related increases in skill & experience more or less push an incumbent through the various stages of a career. Based on published empirical research, three distinct stages of the architectural career are identified–draftsman, architect, & principal or partner–each clearly defined by a set of tasks & related to the length of time in the profession. Career flow is examined in relation to recruitment & socialization variables. Father's socioeconomic status; presence of role models; school performance; geographic mobility among home, school, & eventual work site; & type of sponsorship are shown to affect career flow. 10 Tables, 1 Figure, 15 References. Modified AA

Morrison, D. L., Dunne, M. P., Fitzgerald, R. & Cloghan, D. (Dept Psychology U Queensland, 4072 Australia), **Job Design and Levels of Physical and Mental Strain among Australian Prison Officers,** *Work & Stress,* 1992, 6, 1, Jan-Mar, 13-31.

¶ Questionnaire data from 274 prison officers in Australia are used to examine the joint influence of negative affectivity & perceptions of demands, discretion, & support on mental & physical well-being. It was hypothesized that those high in negative affect would be particularly strained by jobs perceived as being demanding. The hypothesized relationship between job demands, discretion, & support was weak & at times inconsistent. Social support, in particular, had both positive & negative consequences for different aspects of well-being. Those high in negative affect suffered lower mental well-being. More importantly, the interactive effect of negative affectivity & job demands significantly predicted the majority of the dependent variables. Adapted from the source document.

Oakland, Thomas & Hu, Sherman (U Texas, Austin 78712), **Professionals Who Administer Tests with Children and Youth: An International Survey,** *Journal of Psychoeducational Assessment,* 1991, 9, 2, June, 108-120.

¶ Questionnaire data collected from 53 respondents (Rs) involved in test administration & supervision in 44 countries are used to review the characteristics of professional groups who use tests. Sixteen professional groups were identified; those most likely to employ tests included school or educational psychologists, teachers, counselors, & clinical & general psychologists. Also, school or educational psychologists are most likely to use all of the 10 common types of tests (eg, intelligence, personality, achievement). Psychologists are more likely to use foreign-developed tests, while teachers are more likely to use tests developed in their own country. The mean years of postsecondary education among all Rs is 5; those using individually administered measures tend to have more education than those using group tests. The correlation between perceived adequacy in test use & years of postsecondary education is significant. Implications for the use of tests by professionals are discussed. 3 Tables, 37 References. Adapted from the source document.

Ogus, E. Dara (2 Millbank Ave, Toronto Ontario M5P 1S3), **Burnout and Coping Strategies: A Comparative Study of Ward Nurses,** *Journal of Social Behavior and Personality,* 1992, 7, 1, Jan, 111-124.

¶ The relationship between burnout & nurses' strategies for coping with job stress is examined. Multiple regression analyses of survey data from 128 female nurses from 3 major community hospitals in a large Canadian city demonstrate the different effects of palliative, preventive, & existential coping. Greater burnout is reported among nurses using higher levels of palliative coping, & lower burnout among nurses using higher levels of preventive &/or existential coping. Medical ward nurses are found to employ the maladaptive palliative coping strategies more regularly than surgical ward nurses, & therefore suffer greater burnout. 7 Tables, 26 References. Adapted from the source document.

Olgiati, Vittorio & Ioppa, Patrizia (Facoltà giurisprudenza U Milano, I-20122 Italy), **Le credenziali professionali del notariato italiano** (Professional Credentials of the Italian Notary), *Sociologia del Diritto,* 1992, 19, 1, 87-110. (ITA)

¶ Institutional & cultural changes in the Latin-type (civil law) model of the Italian notary public are sketched. Traditionally operating as public official or freelance professional, the notary intervenes in professional jurisdictional conflicts between judges & lawyers. The control of legal knowledge has been transformed in a three-stage, state-sponsored professionalization project aimed at notaries, involving publication of textbooks on the art of the notary, establishment of law schools, & statutes regulating their work. As a result of greater accessibility to professional legal education, notaries have expanded their area of expertise & employment base. 1 Appendix. Adapted from the source document as translated by J. Sadler.

Onnen-Isemann, Corinna & Osswald, Ursula (Instit Soziologie U Oldenburg, D-2900 Federal Republic Germany), **Berufliche und familiale Laufbahn–ein Widerspruch? Eine Retrospektivebefragung bei westdeutschen Professorinnen** (Professional and Family Life Course–A Contradiction? A Retrospective Survey of West German Female Professors), *Zeitschrift für Sozialisationsforschung und Erziehungssoziologie,* 1992, 12, 2, Apr, 148-165. (GER)

¶ To investigate how women can combine professional & family careers, interview data were obtained from 13 female (F) & 10 male (M) professors at western German universities. Analysis shows that the subjective life course of most Fs did not correspond to objective professional models, while the opposite was true for most Ms. Fs have more problems being promoted & achieving tenure, & do so more slowly than Ms. Fs received less financial support while obtaining their degress than did Ms. It is noted that Fs who deviate from traditional family life patterns enjoy greater job advancement opportunities. 15 Tables, 2 Graphs, 36 References. Adapted from the source document as translated by M. Meeks.

Oosterhuis, G., De carrière van marineofficieren en de dynamiek van een interne arbeidsmarkt (The Careers of Naval Officers and the Dynamics of the Internal Labor Market), *Mens en Maatschappij,* 1992, 67, 3, Aug, 231-254. (DUT)

¶ A study of the career patterns & life courses of 515 officers in the Dutch Royal Navy, divided into 3 cohorts by period of service: (1) 1895-1945; (2) 1930-1970; & (3) 1953-1991. The importance of trainability, performance, responsibility, seniority, age at enlistment, & family background is investigated. Although seniority plays a key role, performance is a more important consideration in advancement for the latter part of the career & for the younger cohorts. Developments in naval human resources management during the 1980s are reviewed from the perspective of internal labor market theory. 6 Tables, 46 References. M. Meeks

Orzack, Louis H. & Calogero, Caroline (Rutgers U, New Brunswick NJ 08903), **Midwives, Societal Variation, and Diplomatic Discourse in the European Community,** *Current Research on Occupations and Professions,* 1990, 5, 43-69.

¶ An analysis of variations in behaviors of midwives across national settings in Western Europe, highlighting the weakness of the common sociological assumption of national insularity in exchanges between public authorities & practitioner associations. Among the topics discussed are: midwife autonomy, separation from or subordination to nursing or medicine, involvement in family planning & postpartum contacts with mothers, use of drugs & performance of episiotomies, status of aspirants as

students or employees, & educational requirements. Evidence is presented demonstrating the growing impact of international public authorities, eg, the European Community (EC), on national patterns of work behaviors, access to practitioner roles, educational standards, & licensing arrangements. EC directives call for action by member states to allow educationally qualified specialists in many professions to work, offer services, & acquire licenses by reciprocity throughout the EC. Creation of international liaison committees of national practitioner associations & inclusion of professions on international diplomatic agendas have occurred in consequence of these efforts. 4 Tables, 26 References. Pawlson, L. Gregory (Dept Health Care Services George Washington U, Washington DC 20052), **Impact of the *Cruzan* Case on Medical Practice,** UM *Law, Medicine and Health Care,* 1991, 19, 1-2, spring-summer, 69-72.

¶ The impact of the US Supreme Court's (Nancy) *Cruzan* decision on doctor-patient relationships is examined. Ethical medical decision making combines consideration of the well-being of the patient, treatment alternatives, respect for patient self-determination, & quality of life concerns, & has traditionally relied on the critical support & involvement of the family, particularly in cases where patients are unable to make their own decisions. The *Cruzan* decision has damaged traditional family-mediated medical decision making by allowing the state to intrude in the decision-making process. The clear & convincing standard suggested by *Cruzan* is ambiguous & poses the dilemma of choosing between traditional ethical medical practice & legal precept. D. Generoli

Shimahara, Nobuo K. & Sakai, Akira (Graduate School Education Rutgers U, New Brunswick NJ 08903), **Teacher Internship and the Culture of Teaching in Japan,** *British Journal of Sociology of Education,* 1992, 13, 2, June, 147-162.

¶ A one-year teacher internship requirement was instituted in 1988 in Japan, after a three-decade conflict between the Ministry of Education & the Teachers' Union (consisting of most Japanese public school teachers), which battled for autonomy of education & independence of the schools from state control. The government fostered the internship in an attempt to consolidate & control education. The history of the conflict is reviewed, based on observations in 3 public schools. It is shown that the internship has been modified significantly in practice, & that the interns are generally treated as experienced teachers. Interns report that teaching practice, not program meetings, are more helpful to their development. It is concluded that government educational policy planning should always involve teacher participation. 44 References. Adapted from the source document.

Shostak, Arthur B. (Drexel U, Philadelphia PA 19104), **Air Traffic Controllers: A Prototype of Tomorrow's Information-Processing Blue-Collarites,** *Current Research on Occupations and Professions,* 1990, 5, 3-28.

¶ The evolution & future of the "brainy" blue-collar occupational role, as typified by the air traffic controller (ATC), are examined. Though viewed as mild-mannered & inconsequential technicians, ATCs are emerging as a labor force. Their evolution is traced from concerns over hardware adequacy & the creation of the Professional Air Traffic Controllers Organization (PATCO) to the 1981 ATC strike & the decertification to reunionization as the PATCO. The ATC & other similar information-processing technicians are highly intelligent blue-collar workers who do not respond well to old-fashioned methods of labor management. They tend toward militancy in pursuing their labor goals & shun alliances with other trade groups that might dissipate their achievement. They are skeptical of high technology & artificial intelligence innovation replacing their work. Labor relations with such occupational groups will prove challenging in the future. 35 References. D. Generoli

Stevens, Robert E., Lawrence, Lesa W. & Loudon, David (Coll Business Administration Northeast Louisiana U, Monroe 71209), **The Public's Image of Doctors, Dentists, and Pharmacists,** *Health Marketing Quarterly,* 1991, 9, 1-2, 97-105.

¶ Using a telephone questionnaire, a random sample of 150 residents of a southern metropolitan area were asked to evaluate 7 health professions on: (1) social standing (prestige), (2) honesty & ethical standards, (3) importance to society & nation, & (4) interest & challenge for occupation. Overall findings indicate that doctors rated significantly higher than dentists, & pharmacists in all areas except honest & ethical standards, on which 3 groups were rated equally. Cross tabulations of respondents by income, age, education, & sex revealed that there were no significant differences in ratings on the basis of socioeconomic characteristics, except for pharmacists: male respondents rated pharmacists significantly lower than did female respondents. 5 Tables, 9 References. Stohs, Joanne M. (U Wisconsin, Green Bay 54311-7001), **Young Adult Predictors and Midlife Outcomes of "Starving Artists" Careers: A Longitudinal Study of Male Fine Artists,** UM *The Journal of Creative Behavior,* 1991, 25, 2, 92-105.

¶ Empirical studies of fine artists indicate that many subsist on a series of unrelated, lower-status jobs, consistent with the sociocultural images of starving artists. Here, the capacity of fine artists to sustain such a lifestyle over time is explored for a group of 30 male fine artists (former students at the Art Instit of Chicago (Ill)) followed over 18 years (from the start of their worklife until midlife), using questionnaire, scale, & job history data. The 33% who persisted with the starving artist lifestyle were more artistically talented, more socially withdrawn, & less conventional in religious orientation as young adults. By midlife, the starving artists were in lower prestige jobs & made significantly less money, both overall & in art-related endeavors, than their peers. There were no differences among the artists in terms of art success; however, starving artists had less stable marriages. No differences were found among the artists on overall measures of life or job satisfaction at midlife. It is concluded that those who persist with the starving artist lifestyle are more intrinstically focused than those who abandon it. 8 Tables, 20 References. Modified AA

Szafran, Robert F. (Stephen F. Austin State U, Nacogdoches TX 75962), **Measuring Occupational Change over Four Decennial Censuses, 1950-1980,** UM *Work and Occupations,* 1992, 19, 3, Aug, 293-326.

¶ US Census data are used to analyze shifts in the occupational structure of the civilian employed labor force 1950-1980. In all four periods, a majority of the labor force was employed in a minority of occupations. The 1950s, 1960s, & 1970s each witnessed significant changes in the detailed occupational structure involving a shift of 10% to 15% of the labor force into different occupational categories. Over the entire period 1950-1980 period, most detailed occupations experienced decades of growth as well as decline, with their 1980 share of the labor force substantially different from their 1950 share. 4 Tables, 1 Figure, 1 Appendix, 22 References. Williams, Christine L. (Dept Sociology U Texas, Austin 78712-1088), **The Glass Escalator: Hidden Advantages for Men in the "Female" Professions,** UM *Social Problems,* 1992, 39, 3, Aug, 253-267.

¶ Indepth interview data obtained from 99 urban US males (Ms) & fe-

males (Fs) in 4 predominantly F professions–nursing, elementary school teaching, librarianship, & social work–are drawn on to address M under-representation in these fields, focusing on the degree to which discrimination disadvantages Ms in hiring & promotion decisions, the workplace culture, & in interactions with clients. Results suggest that Ms do not face discrimination in these occupations, but do encounter prejudice from individuals outside their professions. In contrast to the experience of Fs who enter M-dominated professions, men generally encounter structural advantages in these occupations that tend to enhance their careers. Because Ms face different barriers to integrating nontraditional occupations than do Fs, the need for different remedies to dismantle segregation in predominantly F jobs is emphasized. 1 Table, 33 References. Yue, Hing Ai (Dept Sociology National U Singapore, 0511 Singapore), **Technical Workers in a Newly Industrialising Economy: The Work Experience of Engineers in Singapore,** *International Journal of Comparative Sociology,* 1991, 32, 3-4, Sept-Dec, 321-333.

¶ Data from in-depth interviews & a survey of 250 engineers working in Singapore's top 20 multinational electronic firms disclose that, contrary to the idyllic picture painted by visionaries of work life in high tech societies, the work experience of a large proportion of engineers is constituted by overwork, unrealistic deadlines, & moderate to extreme levels of stress due to a large number of situations in the work place. The negative evaluation of work life is linked with the declining position of engineers in Singapore's class structure. Globalization, dependent wage work, & organizational hierarchies have been identified as the primary reason for this trend of development. 2 Tables, 21 References. AA

93Z5248

Zucchetti, Eugenio, Leggere la disoccupazione (Reading Unemployment), *Studi di Sociologia,* 1991, 29, 3, July-Sept, 311-323. (ITA)

¶ During the 1980s it became difficult to interpret unemployment statistics due to changes in the structure & function of the labor market in the industrialized Western countries. In Italy the unemployment rate grew, as did the number of people holding down two jobs & the number of immigrants entering the country, adding up to a highly paradoxical situation by the standards of classical economics. Moreover, the same unemployment rates that would have been considered explosive during the 1970s were quietly tolerated in the 1980s. Further, a large economic expansion did not decrease unemployment. Both sociologists & economists have been at a loss to explain these phenomena. The end of economic & industrial determinism & the current segmentation process led to a complex & fragmented labor market. It is suggested that supply & demand will not be so rigidly determined as in simpler times. Special attention is given to cases of long-term unemployment in Lombardy. 33 References. M. Meeks

Bergmann, Theodor, The Re-Privatization of Farming in Eastern Germany, *Sociologia Ruralis,* 1992, 32, 2-3, 305-316.

¶ An examination of the long-term consequences of unification for the agricultural sector in the former German Democratic Republic (GDR). Agriculture was radically reformed after 1945 in the former GDR with the enforced collectivization of farms, while in the western zones, it was characterized by a slow process of structural change. The specific problems of each agricultural system are described. After unification, the German government exerted strong pressure on the collective farms to dissolve, guided by an agricultural policy based on the independent family farm. Secondary data from several surveys demonstrate that the majority of collective farms prefer to continue some form of cooperative agriculture. Apart from lack of capital & other resources, they are hesitant to give up social security. The lack of political & social concern for the specific problems of ex-GDR farmers has caused an immense crisis in agriculture: the agricultural work force is declining drastically & farm production output has decreased in all sectors. 6 Tables, 15 References. Adapted from the source document.

93Z5251

Bodiguel, Maryvonne (Groupe recherches sociologiques CNRS, F-75700 Paris France), **La Question du rural** (The Rural Question), *Société Alfred Binet et Théodore Simon,* 1991, 91, 1-2(626-627), 61-69. (FRE)

¶ France remains one of the most rural of the Western European societies partially due to its large geographic size & partially because its agricultural sector retained key importance in the national economy, as compared to the UK & the Low Countries, which by the late eighteenth century were already primarily urban & industrial. However, although 85% of France's landscape may still be classified as rural, only 33% of the population still live in the countryside. This population shift to the cities implies a weakening in the political influence of many rural regions. Analysis of agricultural data reveals that as the margin of profitability of farming is falling, the number of full-time farmers is decreasing while the number of part-time farmers is increasing. Implications for impending European economic integration are reviewed. M. Meeks

93Z5252

Brown, David L. & Deavers, Kenneth L. (Agricultural Experiment Station Cornell U, Ithaca NY 14853), **The Changing Context of Rural Economic Policy in the United States,** *Research in Rural Sociology and Development,* 1989, 4, 255-275.

¶ Changes in rural economic conditions in the US since the 1970s & their implications for rural economic policy in the 1980s are examined. Changes are attributed to: (1) industrial restructuring; (2) financial stress in the farm industry; (3) delayed rural recovery from the 1979-1982 recession; (4) changes in the age & family composition & regional location of rural poverty; (5) reduced nonmetro population growth & migration; & (6) changes in the federal government. In determining future rural policy, the US government must articulate national strategies for rural areas, refine or modify existing urban-designed federal programs, & make more creative use of existing spending levels, eg, by reallocating funding for existing commodity deficiency payments. 4 Tables, 4 Figures, 22 References. Cho, Woong K. & Ogunwole, Stella U. (c/o Ogunwole–Division Agriculture/Research/Applied Sciences Alcorn State U, Lorman MS 39096), **Black Workers in Southern Rural Labor Markets,** *Research in Rural Sociology and Development,* 1989, 4, 189-206.

¶ The nature & extent of black labor force participation in rural labor markets of the US South are examined, drawing on data from previous research. Despite the growth of economic opportunity there, agricultural & nonfarm black workers, as measured by earnings, employment levels, & job mobility, still maintain a labor market position inferior to that of whites. Factors affecting black employment opportunities include mechanization of agriculture, outmigration, inadequate training or education, & lack of referral services or networks. Data obtained in 1981 from 2,580 household heads in low-income southern counties reveal that compared to whites, blacks feel that their employment opportunities are particularly affected by inadequate job information, lack of transportation, & racial discrimination. 1 Table, 62 References. D. Generoli

Cornfield, Daniel B. & Leners, Mark V. (Vanderbilt U, Nashville TN 37240), **Unionization in the Rural South: Regional Patterns of Industrialization and the Process of Union Organizing,** *Research in Rural Sociology and Development,* 1989, 4, 137-152.

¶ Determinations of unionization under conditions of uneven, regional economic development are explored through analysis of the organizational inroads made by the United Furniture Workers into rural southern US labor markets, 1963-1982. Under such conditions, unionization is determined in part by the actions of corporations & unions, which organize workers to achieve their own goals, & in part by regional legacies. In the southern US, two legacies are particularly important: (1) the movement of capital away from industrialized, urban labor markets to rural, nonunion labor markets & subsequent unionization in these regions; & (2) the preindustrial way of life & racially segregated, split labor of the South, which may inhibit industrialization & unionization. The inadequacy of classical theories to explain unionization in the southern US is discussed. 3 Tables, 52 References. D. Generoli

Deseran, Forrest A. (Louisiana State U, Baton Rouge 70805), **Part-Time Farming and Commuting: Determinants of Distance to Off-Farm Work for Louisiana Farm Couples,** *Research in Rural Sociology and Development*, 1989, 4, 171-188.

¶ An examination of patterns of commuting behavior for off-farm work among a sample of 403 La farm men & women, analyzing potential determinants based on 1982 mail survey data. The major dependent variable is distance to off-farm employment, but 3 sets of independent variables are examined: structural–the industrial & occupational characteristics of jobs held by the respondents; individual–gender, income, age, & education; & household–the presence of younger children at home & the off-farm work status of the spouse. Findings indicate a distinct gender-specific stratification system in rural labor markets. Farm men are more likely to be employed in core industries &, under all conditions, travel greater distances to off-farm jobs than do farm women. Occupation is the best predictor of distance to off-farm work for men, while for women, individual variables, especially age, are influential. Implications of these findings for gender stratification & local labor market research are discussed. 4 Tables, 35 References. AA

Fandino M., Juan Mario (Federal U RGS, Porto Alegre Brazil), **Agricultural Modernization and Soil-Conservation Practices: A Sample from Southern Brazil,** UM *International Review of Modern Sociology*, 1990, 20, 2, autumn, 163-178.

¶ Theoretical postulates from the literature on soil conservation in small & large-scale farming in the US are applied to the context of agricultural modernization of southern Brazil. Modifications in the analytical model are proposed in terms of distinguishing land holding size, use of modern equipment, & technical assistance as separate independent factors in soil-conservation practices. Several conflicting hypotheses related to the effects of these independent variables on soil-conservation practices are tested through a regression analysis of 1984 census data for a sample of 137 soy-bean, wheat, & cattle farms, utilizing a behavioral index of soil-conservation practices as the dependent variable. Analysis indicates that use of modern equipment & technical assistance are positively associated with soil-conservation practices, whereas land-holding size is negatively associated. 4 Tables, 19 References. Figueroa, Victor M. (U Autónoma, 98000 Zacatecas Mexico DF), **Factores de la subordinación del ejido: el caso de Zacatecas** (Factors of the Subordination of the *Ejido*: The Case of Zacatecas), *Sociológica*, 1990, 5, 13, May-Aug, 171-189. (SPA)

¶ An examination of the displacement of *ejido* (a government grant of community land that cannot be sold) workers as an important source of basic agricultural products in Zacatecas, Mexico, in the 1980s, drawing on government statistics. Due to increased costs of growing traditional crops, & to the economic decline in general, *ejido* workers are forced to find other sources of income (usually migrating out of the region or the country), intensify their production, change crops, or go into debt. The role of small transporters & small wholesalers in this process is also described. It is concluded that *ejido* farmers should organize to enhance their control of the market & their ability to respond to market demands. 7 Tables, 6 References. Adapted from the source document as translated by J. Taylor.

Fratkin, Elliot & Roth, Eric Abella (Dept Anthropology Pennsylvania State U, University Park 16802), **Drought and Economic Differentiation among Ariaal Pastoralists of Kenya,** *Human Ecology*, 1990, 18, 4, Dec, 385-402.

¶ Data consisting of 1985 postdrought livestock counts & informants' statements of species-specific drought loss are compared to similar data of 1976 on the same 38 households to examine the effects of the 1984 drought on household wealth differences in a community of Ariaal pastoralists of northern Kenya. Analysis confirms the hypothesis that drought resulted in increased household wealth inequalities. It is suggested that the combination of differential herd growth, participation in the cash market, & loss to the drought has contributed to a polarization within Ariaal of rich & poor, resulting in rural proletarianization & urban migration. 5 Tables, 5 Figures, 43 References. Adapted from the source document.

93Z5262

Fritscher, Magda (Dept Sociología U Autónoma Metropolitana, Iztapalapa 09000 Mexico DF), **Los dilemas de la reconversión agrícola en América Latina** (The Dilemmas of Agricultural Transformations in Latin America), *Sociológica*, 1990, 5, 13, May-Aug, 15-35. (SPA)

¶ An exploration of the modernization of agriculture in Latin America in the 1960s & 1970s & its stagnation in the 1980s due to the global economic crisis, offering examples from Brazil, Chile, & Mexico. The role of international finance in the modernization process is described, highlighting how the diffusion of technology was selective & unequal, favoring export products & large producers. It is argued that agricultural modernization resulted in an emphasis on exports, reducing food production for national needs, &, consequently, creating a dependence on imported food. The global economic crisis of the 1980s, which included a reduction in prices for agricultural products on the national market & a sharp decline in the flow of investment & aid, halted modernization in Latin America. It is concluded that a development model that assumes a high level of resources & an expanding market is no longer viable; small agricultural producers will have the opportunity to recover in an atmosphere that will favor low-cost technologies & production for internal markets. 21 References. Furze, Brian (Dept Social Science U New England, Armidale New South Wales 2351 Australia), **Ecologically Sustainable Rural Development and the Difficulty of Social Change,** *Environmental Values*, 1992, 1, 2, summer, 141-155.

¶ The importance of environmental perception in the context of crafting alternative agrarian social relations is explored. Because the dominant development paradigm is so deeply entrenched, it is important to consider the ways in which supporters of environmental perception construct an alternative agenda for agrarian practice, as well as how they posit change. In addition, the significant obstacles they will likely encounter must also be underscored. A case study of a rural landsharing collective in Victoria, Australia, situates these broad social issues & analyzes the findings with respect to the movement to plan & implement politically & economically devolved, ecologically sustainable agrarian practices based on permacultural design. 30 References. Gómez, Sergio, Producción y uso de la investigación social sobre el medio rural en Chile en los años 80 (Production and Use of Social Re-

search on the Rural Sector in Chile in the 1980s), UM *Revista Paraguaya de Sociología*, 1991, 28, 82, Sept-Dec, 39-68. (SPA)

¶ The organizational usefulness of social science research on the rural sector in Chile is analyzed by reviewing the dominant research institutions (government, universities, independent centers, & international organizations), research themes, the academic paths of researchers, the relationship between research producers & users, & the different logics of different uses. A clear segmentation of efforts appears: social research is largely conducted by independent centers in circumscribed rural localities; & economic research, drawing on secondary sources, is conducted by the universities. This segmentation, which results from the thematic priorities & motivations of the different researchers, is hypothesized to be linked to the historical moments in which sociology & economics formally became social sciences in Chile. A plea is made for the universities to adopt research of a macrosocial character, taking into account the agrarian structural changes in Chile in the past several decades. 63 References. M. Pflum

Goodwin, H. L., Jr. & Thomas, John K. (Dept Agricultural Economics & Rural Sociology Texas A&M U, College Station 77843), **Agricultural Employment in the Texas Lower Rio Grande Valley Labor Market Area, 1978-1984**, *Research in Rural Sociology and Development*, 1989, 4, 123-135.

¶ Changes in employment patterns in the Lower Rio Grande Valley (LRGV) of Tex, 1978-1984, are examined through analysis of data from a 1984 survey (N not given) of the LRGV citrus & vegetable industry, the US Census 1960-1980, unpublished Texas Employment Commission reports, & other secondary sources. Employment in the agriculturally based economy of the LRGV significantly decreased 1960-1984, while employment in the service industries dramatically increased. Technological advances, weather conditions, & the availability of inexpensive Mexican immigrant labor have further concentrated the agricultural economy in the vegetable & citrus industries, but these industries are following the trend of technological advancement, & demand for semi- & unskilled labor is decreasing. Lack of employment, housing, services, & resources, & the continuing migration of foreign citizens from Mexico, pose social & economic problems for the region. 5 Tables, 2 Figures, 13 References. Guarnaccia, Peter J., Angel, Jacqueline Lowe & Angel, Ronald (Cook Coll Rutgers U, New Brunswick NJ 08903), **The Impacts of Farm Work on Health: Analyses of the Hispanic Health and Nutrition Examination Survey**, UM *International Migration Review*, 1992, 26, 1(97), spring, 111-132.

¶ The effect of farm work on health in Hispanics is examined through analysis of survey data on 7,462 Mexican Americans in the southwestern US, 2,834 Puerto Ricans in the NY area, & 1,357 Cubans in Miami, Fla, from the 1982-1984 Hispanic Health & Nutrition Examination Survey. Those who participate in farm work report more work-related disabilities & poorer health than those who do not work on farms though age & low socioeconomic status may contribute to this effect. Farm work may be connected with specific long-term health consequences, eg, kidney problems, diabetes, high blood pressure, heart attack, cataracts, & liver disease. Limitations of the study include: inadequate operationalization of the farm work variable, the retrospective self-report approach of the study, & focus on chronic or acute health problems. 5 Tables, 1 Appendix, 27 References. Adapted from the source document.

Gyenei, Márta, Munkás-Paraszt "szövetség" és településpolitika (1950-1956) (Worker-Peasant "Alliance" and Settlement Policy (1950-1956)), *Szociológia*, 1990, 1-2, 29-62. (HUN)

¶ A continuation of a historical analysis of agrarian reform in Hungary (for abstract of Part I, see SA 39:1/91X3539). It is shown that the Communist party was suspicious of the peasants in spite of the lip service & temporary allowances it offered to them in the immediate aftermath of WWII. In the 1950s, the peasants were forced to bear a heavy economic burden when collectives were organized after the more prosperous farmers were removed. A secret classification of all communities into three categories based on their population would determine the distribution of resources for many years to come; the rural communities suffered at the expense of more urbanized ones. Adapted from the source document.

Henry, Mark S. (Dept Agricultural Economics Clemson U, SC 29634), **Some Economic Perspectives on Rural Labor Markets**, *Research in Rural Sociology and Development*, 1989, 4, 29-54.

¶ Economists, sociologists, geographers, & other regional analysts often give different meanings to the same words, especially when discussing labor markets (LMs). Economists usually analyze LMs from the perspective of aspatial behavioral models; ie, a profit-maximizing employer hires labor so that the last unit of labor hired is paid a wage that is equal to the added value of the product obtained from that labor unit. This LM also reflects the behavior of households that attempt to maximize utility in a leisure-income tradeoff process, & thus offer different quantities of labor services as the prevailing wage rate varies. Therefore, to most economists, the LM is a process whereby business firms & households interact to determine employment levels & wage rates. Conceptual & methodological issues in economics that are pertinent for analyzing rural LMs are reviewed to suggest operational techniques for the analysis of rural LM problems. 2 Figures, 60 References. Hudečková, Helena & Lošťák, Michal (Dept Rural Sociology Agricultural U, Prague Czechoslovakia), **Attitudes to Privatization in Czechoslovak Agriculture: Results of a 1990 Sociological Survey**, *Sociologia Ruralis*, 1992, 32, 2-3, 287-304.

¶ The transition of Czechoslovak agriculture requires a correspondingly flexible & rational agrarian policy based on, among other things, an understanding of the opinions of those who are concerned with the changes. Presented here are the results of 2 investigations exploring farm people's attitudes to the reestablishment & development of family farms, cooperative forms of farming, & other, nontraditional forms of farming. Data obtained in 1990 via a newspaper survey (N = 2,506 respondents [Rs]) & interviews (N = 185 Rs) imply a degree of inertia in the thinking of the agricultural work force, with their being accustomed to the hitherto familiar form (ie, cooperative farming). These attitudes are explained in terms of the overall political & social situation during this period, including the legal & economic spheres. 3 Tables. Adapted from the source document.

Ivo, Anete Brito Leal (Centro Recursos Humanos U Federal Bahia, 40210 Salvador Brazil), **El problema agrario y la crisis en el aparato del Estado** (The Agrarian Problem and the Crisis in the State Apparatus), *Estudios Sociológicos*, 1991, 9, 25, Jan-Apr, 61-74. (SPA)

Translated from Portuguese by Nelson Minello & edited by Vania Salles.

¶ During Brazil's democratic transition, social conflicts have arisen around specific interests related to land monopoly & control of agrobusiness production. These class-based contradictions have had repurcussions in the state apparatus & have created schisms & contradictions in the public & private spheres. The exclusive character of recent economic

growth in Brazilian society has resulted in a heterogeneous group of workers & an "excluded" group; in the agrarian area, the new republic needs to recognize the political rights of these groups & integrate them into the process of development & modernization. However, the state is caught in a paradox, needing to extend social benefits to these groups within the context of a disintegrating political system, & with the popular sectors demanding political reform. The 1985 Proposal for a National Plan for Agrarian Reform called for restoration of access to land for dispossessed workers. The large rural property owners reacted to this proposal on an ideological level by directly influencing the press to reinterpret the argument, & on an institutional level by pressuring the state apparatus. Through structural selectivity, the dominant classes reoriented the interests of rural workers & the demands of the popular classes toward their own program. Adapted from the source document as translated by M. Pflum.

Katz, Yossi (Dept Geography Bar-Ilan U, IL-52100 Ramat-Gan Israel), **Agricultural Settlements in Palestine, 1882-1914,** *Jewish Social Studies,* 1988, 50, 1-2, winter-spring, 63-82.

¶ Ten different methods of agricultural settlement were developed by Jewish immigrants to Palestine, 1882-1914, most of which vanished after WWI. Described here are the background, formation, principles, & fate of these settlements, including: (1) *moshava,* a private enterprise settlement with some common agricultural work; (2) settlements by individuals; (3) estates for those with small capital; (4) plantation centers; (5) large capitalist farms; (6) agricultural training farms; (7) female worker training farms; (8) *kvutzah,* ie, communal life with independent work; (9) *cooperatsia,* ie, communal farms; & (10) the beginning of the *moshav* idea, ie, self-employed, small-scale farmers. The relation between these forms & postwar agricultural settlement-types, the *kibbutz* & the *moshav,* are discussed. The proliferation of settlement methods is ascribed to the Zionist desire to settle Palestine, search for an optimal settlement method, & learning from experience. I. Shagrir

Kelleher, Ann (Pacific Lutheran U, Tacoma WA 98447), **Questioning the Traditional-Modern Dichotomy: Two Thai Village Case Studies,** *The American Journal of Economics and Sociology,* 1992, 51, 3, July, 273-291.

¶ Drawing on observational & interview data from case studies of two Thai villages, the positive contributions of traditional agriculture in Thailand in terms of its production of domestic capital & foreign exchange is discussed. Findings reveal factors that contributed to successful development in these villages, including: established, respected, traditional leaders who undertook development initiatives; traditional value systems that provided the rationale for development; & self-sustaining, gradual, & constructive change. The villagers also adopted practical suggestions & carried them out themselves to improve their daily lives. Further, change was achieved with minimal outside help under the direction of the village leadership. It is suggested that traditional values & practices can lead to constructive change, & that the concepts "traditional" & "modern" disregard the contradictory complexity of reality. 1 Table, 13 References. Kennedy, Eileen (International Food Policy Research Instit, 1776 Massachusetts Ave NW Washington DC 20036), **The Impact of Drought on Production, Consumption and Nutrition in Southwestern Kenya,** *Disasters,* 1992, 16, 1, Mar, 9-18.

¶ To study the differential impact of drought on rural households' ability to respond by altering production & income strategies, experiences of Kenyan households during the 1984/85 drought & the 1985-1987 normal period were compared. Survey data were collected from 504 households in 1984, with 462 households participating in a 1985-1987 follow-up survey. Households were categorized by type: sugar & nonsugar farmers, landless, & merchant households. The drought's impact on agricultural production, shifts in income sources, patterns of food consumption, & health & nutrition effects are noted. Incomes were slightly lower during the drought. Small differences were also found in production & food availability, but not in health & nutritional status. Implications for policymakers emphasize enhancing diversity of cropping patterns & income sources. 3 Tables, 5 References. Adapted from the source document.

Kirschenbaum, Alan & Goldberg, Albert I. (Faculty Industrial Engineering & Management Technion-Israel Instit Technology, Haifa IL-032000 Israel), **The Rural Village Commuter: Social Constraints on Labor Force Activity,** *Israel Social Science Research,* 1992, 7, 1-2, 119-134.

¶ Commuting from rural villages to the urban-industrial labor market can preserve traditional village culture while restricting labor activity, as is shown by a case study of a religious ethnic minority in Israel, the Druse, based on interviews with 250 Jews & Druse working in Haifa Port regarding labor mobility & work environment. Descriptive analysis shows that the Druse were demographically homogeneous--all male, married, mostly with large families, & under age 45. They commuted via organized transportation to their workplaces, 20-60 kilometers from their villages, & were concentrated in a single department, that of stevedores. With such concentration, the structure of their work could take on the social structure of the village. The Druse were much less willing than Jews to move their residence if asked to work at another site, because moving would separate them from their village & friends. However, they were much more willing than Jews to make intra- & interdepartmental changes. They saw their self-segregation in a single department as limiting their career opportunities, but they still put family, clan, & village interests above labor considerations. 3 Tables, 35 References. Lichter, Daniel T. & Eggebeen, David J. (Population Research Instit Pennsylvania State U, University Park 16802), **Child Poverty and the Changing Rural Family,** UM *Rural Sociology,* 1992, 57, 2, summer, 151-172.

¶ The changing family composition & economic status of nonmetropolitan US children were investigated by examining child records from the 1960-1980 Public Use Microdata Samples & the Mar 1990 Current Population Survey (total N = 229,846). Direct standardization methods were used to trace 4 types of poverty--official, deep, relative to US income levels, & relative to nonmetropolitan or metropolitan income levels only. Child poverty in both nonmetro & metro areas declined in the 1960s, but then increased again in the 1980s. Nonmetro children had higher rates of official, deep, & relative (US) poverty than metro children at all times. Between 1960 & 1990, but especially in the 1980s, the proportion of both metro & nonmetro children living with a female (F) household head increased, which increased poverty rates; however, these effects were larger in nonmetro areas. Increases in child poverty due to changes in family structure were not offset by increasing F employment, rising education levels, & declining family size in nonmetro areas. Metro-nonmetro differentials in parental employment, education, or family size did not explain the disparities between metro & nonmetro child poverty. Although nonmetro child poverty is often overshadowed by reports of urban poverty, a substantial risk to nonmetropolitan children remains. 3 Tables, 2 Figures, 53 References. Adapted from the source document.

McMurry, Sally (Pennsylvania State U, University Park 16802), **Women's Work in Agriculture: Divergent Trends in England and America, 1800 to 1930**, UM *Comparative Studies in Society and History*, 1992, 34, 2, Apr, 248-270.

¶ English women cheese makers 1800-1930 worked in a setting in which cultural values, agricultural conditions, & the nature of their work combined to support their continued participation. The status of these women is reviewed, seeking to answer the historigraphic question of when & why women gradually disappeared from many kinds of agricultural work in Western societies. The fact that cheese making women enjoyed an elevated status in family & community is explored, as is their decline in status with the advent of capitalist grain farming. The contrast between the experience of women in English & US cheese making suggests that the pace of defeminization depended on a favorable demographic & cultural context (as found in England), which was resistant to social transformation by the forces of capitalism. L. Dorn

Naredo, José Manuel, Sobre el declive de la producción agraria en la economía de la sociedad rural (On the Decline of Agrarian Production in the Economy of Rural Society), *Política y Sociedad*, 1991, 9, 3-13. (SPA)

¶ An examination of the declining importance of agricultural production in Spain's rural communities, drawing on official statistics & other published data 1950-1989. Focus is on the effects of the rural real estate market & the increased importance of farmers' income from sources other than agricultural production. Results show how income derived from agricultural production has lost importance, reflecting changes in agricultural production itself, which has become more mechanized & commercialized, requiring greater outlays of money that must be earned outside agriculture or borrowed, & the increased value of the land for uses other than agriculture–eg, urban expansion & vacation homes for urban dwellers. It is concluded that all these factors must be considered in studies of the rural economy. 7 Tables, 3 Figures. Adapted from the source document.

Pass, Martha White (Carleton Coll, Northfield MN 55057), **Family Labor Strategies in Early Modern Swabia**, UM *Journal of Family History*, 1992, 17, 2, spring, 233-240.

¶ Extensive archival records for the period 1480-1618 in Augsburg, the chief city of Swabia (Germany), suggest that peasant families faced a number of constraints in dealing with economic change. Inheritance practices & village rights provided options to a growing stratum of peasants & helped to promote an integrated labor market. The supply of labor was influenced by market forces, primarily grain price & land increases, which forced peasants into auxiliary enterprises to earn cash for fodder crops. The rise in agricultural prices enjoyed by holders of larger land plots was generally not shared by peasants on small holdings, which were vulnerable to harvest failure. On the demand side, real wages in both rural & urban areas were forced down by the structure of produc-

tion & long-distance trade. Within this context of constraints, Swabia's rural community could, by 1618, be termed a "sector," in that it was integrated with the urban trading sector in a type of protoindustrialization. As such, the individual decisionmakers began to respond to increasingly complex market forces, rather than to tradition or command, demonstrating modern economic behavior. 3 Tables, 10 References. Adapted from the source document.

Pegan, Srečko (Arhitektonski fakultet sveučilišta U Zagreb, 41000 Croatia), **Planiranje industrije u ruralnim područjima Hrvatske** (Industrial Planning in Rural Croatia), *Sociologija sela*, 1991, 29, 111-114, Jan-Dec, 85-90. (SCR)

¶ To investigate factors influencing the development & spatial distribution of industry in rural Croatia, official census data 1981-1989 were analyzed. By calculating the quotient of location & the regional factor, an optimal form could be obtained for the secondary-function spatial distribution in the process of spatial planning. By comparing the quotient of location with the regional factor & by conducting highly detailed research about smaller spatial units, indicators can be obtained showing the advantages industries would enjoy when locating in certain regions. Key goals & specific features of industrial planning in rural areas involve the careful choice of site, limits in the type & scope of business, & conditions for protecting the natural environment. 3 Tables, 13 References. Adapted from the source document.

93Z5290

Picut, Pierre, Les Grandes Evolutions du monde rural et conséquences induites sur l'éducation (Great Changes in the Rural World and Their Consequences for Education), *Société Alfred Binet et Théodore Simon*, 1991, 91, 1-2(626-627), 51-59. (FRE)

¶ During the twentieth century, great demographic & economic shifts have taken place in the French countryside. The first half century saw the movement of many peasants to the cities. From the 1960s onward, population growth was fueled by urban residents moving to the countryside, completely changing the cultural character of certain regions. Further, the total % of rural residents engaged in farming is falling precipitously due to increasing mechanization & conglomeration of agricultural production, resulting in a smaller, more highly specialized agricultural workforce. The rural educational system must adapt to these new demographic realities; eg, in addition to teaching the standard curriculum, the rural schools need to impart the special skills necessary for successful careers in the countryside. M. Meeks

Powers, Edward A. & Kivett, Vira R. (U North Carolina, Greensboro 27412-5001), **Kin Expectations and Kin Support among Rural Older Adults**, UM *Rural Sociology*, 1992, 57, 2, summer, 194-215.

¶ Interview data collected 1985/86 are used to explore kin ties among 368 rural adults age 65+ living in the Piedmont region of NC. Examined are the extent respondents expect & receive assistance from the range of affinal & consanguineal kin & the factors that best explain the current level of support provided by each of the kin types in the family system. Expectations were much higher than the actual level of kin support provided. Both expected & actual levels of assistance declined as the level of consanguineous kin & associated affinal ties decreased. The level of support provided by kin groups was mainly a function of geographic distance & norms of obligation. 5 Tables, 50 References. Adapted from the source document.

Pyle, Alison S. (91 Whidborne Bldg, Tonbridge St London WC1H 8HE England), **The Resilience of Households to Famine in El Fasher, Sudan, 1982-89**, *Disasters*, 1992, 16, 1, Mar, 19-27.

¶ An examination of issues related to famine resilience, drawing on interview data collected in 1989 from 100 households who migrated from famine-affected rural communities in northern Darfur to the provincial capital, El Fasher, in western Sudan. Results indicate that asset wealth did not enhance household resilience to famine; rather, households who reportedly practiced more numerous survival strategies before migration were on the whole able to stay longer before migrating. Deteriorating rural conditions were also often mitigated by participating in intracommunal sharing of resources. Timing of migration was also influenced by previous familiarity with the economic opportunities in the provincial capital. 9 Tables, 18 References. Adapted from the source document.

Rodríguez Eguizabal, Angel Blas & Trabada Crende, Xosé Elías, De la ciudad al campo: el fenómeno social neoruralista en España (From the City to the Countryside: The Social Neoruralism Phenomenon in Spain), *Política y Sociedad*, 1991, 9, 73-86. (SPA)

¶ An exploration of neoruralism–population migration from cities in rural areas–in an attempt to define its Spanish manifestation through the sociodemographic, socioeconomic, & motivational characteristics of individuals who have moved to the country, drawing on interview data collected in 18 towns (N not provided). Results indicate that moves were precipitated by the economic recession of the 1980s, coupled with a perceived loss of values in cities. It is argued that moves are rarely made in isolation, but usually as part of a group. Motives for leaving the city are described, & the impact of emigration on rural villages & the relationships between natives & transplanted urbanites are analyzed. 1 Table. Adapted from the source document.

Schlumbohm, Jürgen (Max-Planck-Instit History, Göttingen Federal Republic Germany), **From Peasant Society to Class Society: Some Aspects of Family and Class in a Northwest German Protoindustrial Parish, 17th-19th Centuries,** UM *Journal of Family History,* 1992, 17, 2, spring, 183-199.

¶ Drawing on data from prior research, demographic & social development 1650-1830 in the rural parish of Belm, comprising nine villages in northwest Germany, is examined. During that period population trebled, while the number of peasant holdings remained relatively stable. The simultaneous development of the agrarian system & of cottage linen industry made it possible for increased numbers of propertyless people to marry & have families. As a consequence, a class of rural proletarians came into existence, comprising 66+% of all households in the early nineteenth century. The seasonal character of the linen industry was so closely interwoven into the agrarian system that the holders of real property remained unchallenged in their predominance. By the mid-1800s, protoindustrial conditions had begun to deteriorate, & the division of the commons had taken away much of the agrarian resources from the *Heuerlinge* (local landlords). Social differentials in demographic behavior & household structure, social mobility & the selection of mates, & the economic & noneconomic ties that linked propertied & propertyless families together are discussed. The analysis suggests that kin relationships across or within classes was a relevant factor in the formation of modern social classes. 6 Figures, 32 References. Adapted from the source document.

Simpson, Ida Harper, Wilson, John & Jackson, Robert A. (Duke U, Durham NC 27706), **The Contrasting Effects of Social, Organizational, and Economic Variables on Farm Production,** UM *Work and Occupations,* 1992, 19, 3, Aug, 237-254.

¶ Telephone interview data obtained from operators of a sample of 683 NC farms, varying in size from 50 or fewer to 4,500+ acres, indicate that the social organization of production & the occupational community of farming signficantly affect production, net of the influences of agricultural resources & the sociodemographic characteristics of the farm operators. Participation in the occupational community & having a production organization that is family based, with relatively high variation across status groups in task performance, have substantial payoff in farm sales. Resources are most important for the productiveness of small farms, whereas social organizational influences are more significant for medium to large farms, suggesting that farms must achieve a minimum scale of operations for social organizational variables to be most effective. 5 Tables, 1 Appendix, 19 References. Adapted from the source document.

Štambuk, Maja (Instit društvena istraživanja sveučilišta U Zagreb, 41000 Croatia), **Društvene mijene ruralnog prostora Hrvatske** (Social Change in Rural Croatia), *Sociologija sela,* 1991, 29, 111-114, Jan-Dec, 1-10. (SCR)

¶ Over the last forty years, rural Croatia underwent huge social changes. The overall population decreased, as did the number of workers employed in farming. Moreover, the total number of farms, their average size, & the amount of acreage also decreased. There were increases in the number of part-time workers & farmers, & in new residents arriving from the cities to change the character of the village. Although to many rural residents these changes seem overwhelming, they are nothing in comparison to the changes that occurred many years ago in the industrialized nations of Western Europe. It may be said that the radical restructuring of the Croatian countryside is only in its initial stages. 23 References. Adapted from the source document.

Symes, David (School Geography & Earth Resources U Hull, HU6 7RX England), **Agriculture, the State and Rural Society in Europe: Trends and Issues,** *Sociologia Ruralis,* 1992, 32, 2-3, 193-208.

¶ An overview of the agricultural restructuring occurring throughout Europe. In the West, the period of productivism & protectionism is ending as agricultural policy responds to both international pressure for greater freedom of trade & domestic concerns for the environmental effects of modern intensive farming systems. In central & eastern Europe, new forms of agricultural enterprise that facilitate the switch to a market economy without threatening a dislocation of food supplies are being sought. An agenda of issues confronting the student of rural affairs in the postproductivist era in both food production & environmental stewardship is outlined, focusing on the changing functions of the state in helping to manage economic & social restructuring & their environmental impacts. 24 References. Adapted from the source document.

Trigueros L., Paz (Dept Sociología U Autónoma Metropolitana, Azcapotzalco 02000 Mexico DF), **Proceso de moderaización agrícola en el distrito de riego Morelia-Queréndaro y la inserción de la producción ejidal en él** (The Agricultural Modernization Process in the District Morelia-Querendaro and the Installation of Ejido Production There), *Sociológica,* 1990, 5, 13, May-Aug, 145-170. (SPA)

¶ Based on government statistics for 1946-1981, agricultural modernization in the irrigation district of Morelia-Querendaro, Mexico, is examined. Increased use of machines & irrigation since the 1940s has caused a shift in the crops raised: more cash crops are raised to pay the added costs of modern agricultural methods, & less corn is raised. Also, these more expensive methods have created a dependence on credit & increased outmigration as family members seek work outside the area to support the family's cash needs. The role of government agencies in promoting these changes is outlined. 7 Tables, 27 References. Adapted from the source document as translated by J. Taylor.

93Z5304

Van Onselen, Charles (African Studies Instit U Witwatersrand, Johannesburg 2050 South Africa), **The Social and Economic Underpinning of Paternalism and Violence on the Maize Farms of the South-Western Transvaal, 1900-1950,** *Journal of Historical Sociology,* 1992, 5, 2, June, 127-160.

¶ Examined is the role played by paternalism in the historical evolution of South African rural life, focusing on the southwestern Transvaal, where paternalistic social relations existed on the maize farms during the first half of the twentieth century. A historically anchored materialist explanation of the ideology of paternalism questions some of the more commonly accepted linkages between paternalism, violence, & quiescence.

The nature of paternalism is explored, the necessary historical preconditions for its development are described, & the production & reproduction of paternalistic social relations are discussed. It is argued that paternalism & violence are not necessarily exclusive phenomena, & that the very presence of paternalistic relationships can, at various historical junctures, intensify the propensity for violence. It is suggested that in the course of the farm tenant's life cycle, there were certain predetermined moments when the black dependent was predisposed to challenge–sometimes violently–the white patriarch. Adapted from the source document.

Whitener, Leslie A. (US Dept Agriculture, 14th & Independence Ave SW Washington DC 20250-0001), **The Agricultural Labor Market: A Conceptual Perspective,** *Research in Rural Sociology and Development*, 1989, 4, 55-79.

¶ A review of the farm labor literature leads to identification of conceptual & measurement issues that should be considered in future research on the agricultural labor market. In addition, several critical issues that have important implications for the number, income, & working conditions of agricultural workers in the future are discussed, including: immigration reform, continuation of the current farm financial crisis, changing farmworker legislation, & efforts to stabilize farm employment & wages. 1 Table, 86 References. Adapted from the source document.

93Z5308

Wilkinson, Kenneth P. (Pennsylvania State U, University Park 16802), **Community Development and Industrial Policy,** *Research in Rural Sociology and Development*, 1989, 4, 241-254.

¶ The role of industrialization in US rural policy is examined from a Marxian perspective. Capitalistic industrialization has produced uneven spatial development, inequalities grounded in spatial location, & rural underdevelopment. Industrialization can bring investment into rural areas, but must be checked by community development considerations to curtail capitalistic exploitation. Policy intervention is essential to ensure viable community development. The central elements of an effective rural policy–including reduction of deficits in economic resources in rural areas, job development aimed at serving the needs of rural residents, & promotion of community development–are discussed. 44 References. Andersen, Hans Thor & Engelstoft, Sten (Instit Geography U Copenhagen, DK-1050 Denmark), **Material Production and the Urban Concept,** *Research in Urban Sociology,* 1992, 2, 273-295.
¶ A theoretical discussion of the urban concept, in a spatial sense, in which the city is perceived as a unity of social development & spatial structures–concretely, as the built environment, ie, the socially created physical landscape. Two main questions are addressed: the utility of the term urban–primarily ideological, & never theoretically justified; & the connection between the material world & the urban concept. It is concluded that the urban concept cannot be precisely determined, but must be defined through a concept anchored both in a theoretical framework & in the material world. Based on field observations & general statistics, the theoretical discussion is supported by a case study of Copenhagen, Denmark: the relation between the physical structure of industrial areas & their activities is outlined to demonstrate their interdependency. 2 Tables, 3 Figures, 4 Maps, 25 References. Modified AA

Ball, Michael & Harloe, Michael (Dept Economics Birkbeck Coll U London, WC1E 7HX England), **Rhetorical Barriers to Understanding Housing Provision: What the 'Provision Thesis' Is and Is Not,** *Housing Studies,* 1992, 7, 1, Jan, 3-15.
¶ Recent critiques of the concept of "structures of housing provision" (SHP) are reviewed, & an effort is made to clarify the concept's nature & status. It is argued that SHP is not a theory of housing, nor does it imply a production-centered approach to housing analysis. Rather, SHP is a metatheoretical concept or analytical framework which, together with other theories, may be of use in the examination of particular aspects of housing development. 36 References. Adapted from the source document.

93Z5314
Barton, Stephen E. & Silverman, Carol J., Public Life in Private Governments: The Transformation of Urban Social Space, *Research in Urban Sociology,* 1992, 2, 95-111.
¶ An exploration of the internal structure of residential development associations (common interest development organizations) in the US & their implications for people's understandings of the separation of public & private worlds, drawing on a mail survey of neighborhood association board presidents (N = 579) in Calif, case studies of 12 associations in northern Calif, & interview data from industry professionals & residents (N = 50 & 20, respectively). It is concluded that common interest developments are private governments that establish & define a relationshp between private property owners, in contrast with other forms of private property ownership, which define boundaries between individuals who can then choose their own relationships. The associated property owners establish uniform rules governing unchosen social relations & adjudicate resulting conflicts. Differences between such government & public government are outlined. 38 References. J. Taylor

Bundgaard, Frank (Instit Cultural Studies U Copenhagen, DK-1017K Denmark), **Space and the Analysis of Social Processes,** *Research in Urban Sociology,* 1992, 2, 213-227.
Translated from Danish by Ray Hutchinson.
¶ Based on a review of the literature in urban sociology, explored are various approaches to the potential relevance of space for social processes. The work of Manual Castells (eg, *The Urban Question,* London, 1977) on this subject is analyzed, arguing that Castells's perception of the spatial relation is much too narrow, making an independent theory of space both uninteresting & unnecessary. P. Saunders's critique (eg, see *Social Theory and the Urban Question* (see IRPS No. 10/81c00098)) of Castells's approach is outlined & expanded on, arguing that it further demonstrates the inability of urban sociology to grasp the dialectics of social processes & spatial structure. 26 References. J. Taylor

Carmon, Naomi (Faculty Architecture & Town Planning Technion-Israel Instit Technology, Haifa IL-32000), **Housing Renovation in Moderately Deteriorated Neighbourhoods: Public-Individual Partnership in Israel and Its Lessons,** *Housing Studies,* 1992, 7, 1, Jan, 56-73.

¶ Evaluated is a public-individual partnership for renovating moderate-income households in Israel, drawing on data from 20,000 households in 10 neighborhoods, 1979-1983. Established in 1977, Project Renewal's ultimate goal was to reduce disparities in living conditions between the residents-including Arabs-of distressed neighborhoods & inhabitants of better-off residential areas. A strategy of housing renovation was developed based on the concept of housing as a service rather than a product, & emphasizing the practice of responsive housing. The strategy recommends: intervention in moderately deteriorated neighborhoods; eligibility criteria by place of residence; subsidizing home ownership, including purchase of public housing units by their tenants; & assisting adaptation of the dwelling units by present needs & preferences of residents. 2 Tables, 74 References. Adapted from the source document.

93Z5321

Chaichian, Mohammad A. (U Dubuque, IA 52001), **Urban Public Housing in China: The Case of Tianjin,** *Habitat International,* 1991, 15, 1-2, 127-140.

¶ Based on a review of the literature, interviews (N not given), field observations, & reports from authorities in 1989, examined & evaluated are recent reform policies to privatize housing ownership in Tianjin, People's Republic of China. Measures of the policies' success include decreasing private housing prices, provision of adequate shelter for the needy, increase in construction & investment, & improved building standards. Under these policies, real estate corporations are taking over the construction industry. Improvements in housing adequacy, availability, & accessibility are examined in comparison with other developing countries. 3 Tables, 2 Figures, 21 References. I. Shagrir

Fidel, Kenneth (DePaul U, Chicago IL 60604), **End of Diversity: The Long-Term Effects of Gentrification in Lincoln Park,** *Research in Urban Sociology*, 1992, 2, 145-164.

¶ The concept of gentrification is substructured, describing five forms of neighborhood change characterized by distinct historical antecedents & distinct social processes, exemplified in the fates of neighborhoods in Chicago's Lincoln Park community (Ill). The five patterns of gentrification include status persistence, classic gentrification, spillover gentrification, large-scale land clearance, & factory/warehouse conversion. US Census data (1960-1980) are drawn on to examine neighborhood patterns of demographic change, change in the composition & social status characteristics of the population, & changes in the housing stock associated with each form of gentrification. Findings indicate that all patterns of gentrification led to population homogenization in the gentrified neighborhoods. 1 Map, 1 Appendix, 12 References. AA

93Z5330

Friedenfels, Roxanne (Dept Sociology Drew U, Madison NJ 07940), **Gentrification in Large American Cities from 1970 to 1980,** *Research in Urban Sociology*, 1992, 2, 63-93.

¶ The amount of gentrification in a 2-mile area around the central business districts (ie, the city core) of the 54 largest US cities, 1970-1980, is estimated using census tract & other data, measuring gentrification via data on median family incomes &/or education levels. Analysis of variables from neoclassical, ecological, feminist, & political economy theories of urban land use reveals: a positive effect for % of the core population that is single, historic places, managers & administrators in the core, & % of the core labor force that is female; & a negative effect for the gross population density of the core, the service-manufacturing jobs ratio, 1960s racial conflicts, & *Fortune* 500 company headquarters. Overall, political-economic variables have the greatest effect. It is concluded that the central underlying structural cause is increasing global production of goods & services & the resultant effects on corporations & the US economy. 4 Tables, 50 References. Gilbert, Alan (University Coll London, WC1E 6BT England), **Renting and the Transition to Owner Occupation in Latin American Cities,** *Habitat International*, 1991, 15, 1-2, 87-99.

¶ In an examination of self-help home ownership today, data drawn from surveys (N not specified) conducted in three Mexican cities are drawn on to explore the nature of the residential transition from rentals to home ownership, the socioeconomic characteristics of tenants & owners, & the nature of urban change. Policy recommendations are offered, particularly the need for governments to work toward creating a better balance of residential choices for the poor. Cities need both rental accommodation & the option of home ownership. 1 Table. Adapted from the source document.

Gottdiener, Mark & Feagin, Joe R. (Urban Studies Program U California, Riverside 92521), **El cambio de paradigmas en la sociología urbana** (Change of Paradigms in Urban Sociology), *Sociológica*, 1990, 5, 12, Jan-Apr, 209-236. (SPA)

Translated by María Rosales Ortega & Luis Escala Rabadán.

¶ The theoretical paradigms of urban ecology & new urban sociology are compared, contrasting the applications of each to: restructuring of the central city, suburbanization, & the Sunbelt phenomena. It is argued that the new urban sociology provides a better understanding of these urban processes because it considers such diverse elements as the individual urban actor, on the one hand, & the global context, on the other. Future possibilities for the new urban sociology are described. 66 References. Adapted from the source document as translated & modified by J. Taylor.

Herzog, Lawrence A. (San Diego State U, CA 92182), **USA-Mexico Border Cities: A Clash of Two Cultures,** *Habitat International*, 1991, 15, 1-2, 261-273.

¶ Because urban planning along the US-Mexico border involves First World-Third World transnational discourse, it is important for both sides to understand cultural differences. An attempt is made here to initiate such a cultural dialogue, focusing on differences in urbanization patterns. A historical review of urban & environmental design in Mexico highlights the "grid pattern" configuration, ie, central zone planning. The differential impact of culture on city planning is exemplified in an examination of Tijuana, Baja California-San Diego, Calif: Tijuana is a spatially compact pedestrian city, while San Diego is a diffused metropolis dependent on freeway travel. Sharp differences exist in location patterns of rich & poor residents. 2 Tables, 2 Figures, 50 References. I. Shagrir

93Z5334

Hutchinson, Ray (Dept Urban & Public Affairs U Wisconsin, Green Bay 54311-7001), **Gentrification and the Transformation of Urban Space,** *Research in Urban Sociology*, 1992, 2, 1-14.

¶ In the postwar period the study of urban sociology has shifted focus from describing the decline of the inner city (in the 1960s), to explaining the consequences & significance of this decline (in the 1970s), to investigating the consequences of federal policies & metropolitan change on the physical well-being & life opportunities of inner-city population groups (in the 1980s). The major theme throughout this period has been the decentralization of population & employment from the central city to the suburban fringe, a spatial restructuring that has cost many central cities a loss of 33%-50% of their population. Urban sociology has sought a theoretical vantage point to explain such a dramatic shift of metropolitan functions, & one such point is gentrification. The studies in this volume focus on such topics as: the underlying causes of gentrification, its impact on central city residents, characteristics of old & new residents within gentrifying neighborhoods, the political economy & ecological variables needed to understand how & why gentrification occurs, the homogenization that has replaced inner-city demographic diversity, costs for low-income & minority residents of inner-city neighborhoods, & differences in values & conceptions of community of new vs long-term residents of neighborhoods that have undergone gentrification. 31 References. Irwin, Michael D. & Hughes, Holly L. (Dept Sociology Louisiana State U, Baton Rouge 70803 [e-mail: soirwi@lsuvm.bitnet]), **Centrality and the Structure of Urban Interaction: Measures, Concepts, and Applications,** UM *Social Forces*, 1992, 71, 1, Sept, 17-51.

¶ Since sociological measures of network structure were constructed to reflect binary interactions, they are of limited use in analysis of urban systems. Recently, several measures have been refined to accommodate the asymmetric continuous flows of people & information across space, making them appropriate for urban models. Here, the applicability of graph theoretic measures to the urban system is evaluated. It is concluded that graph theoretic conceptualizations of centrality are consistent with theoretical specifications of urban hierarchy, & that such measures elucidate key substantive issues relevant to increasingly complex sociospatial structures. 7 Tables, 6 Figures, 2 Appendixes, 88 References. Adapted from the source document.

Joas, Hans, Berlin lieu et objet de la recherche sociologique (Berlin as the Location and the Object of Sociological Research), *Critique (FR)*, 1991, 47, 531-532, Aug-Sept, 643-654. (FRE)

Translated from German by R. Rochlitz.

¶ It is noted that Berlin, Germany, has not had an easy relationship with the discipline of sociology. It is difficult to maintain the necessary balance between social engagement & neutral distancing in a city that has been the stage for so many sensitive historical high & low points. Although numerous renowned German sociologists are closely associated with Berlin, eg, Georg Simmel & Max Weber, the city has never been the center of German work in this discipline. Thus, Berlin's brand of sociology is diverse & dispersed. The post-WWII division of Germany is viewed as being the cause of the inability or disinterest on the part of Berliners to examine their own sociological situation: whereas West German citizens were in a position (emotionally as well as geographically) to be more objective, the people who inhabited the island territory of Berlin were extremely affected by the reality of their situation. The theme of sociological research in Berlin is explored in detail in a four-volume work by Harold Hurwitz entitled *Demokratie und Antikomunismus in Berlin nach 1945* ([Democracy and Anticommunism in Berlin after 1945] Cologne: Verlag Wissenschaft & Politik, 1983-1990), which is outlined here. 93Z5337

Knudsen, Tim (Instit Political Science U Copenhagen, DK-1017K Denmark), **The Forgotten Professionals,** *Research in Urban Sociology,* 1992, 2, 257-271.

¶ Based on intensive study of the birth of modern urban planning in Copenhagen, Denmark, it is argued that research should pay more attention to the role of professional planners in urban politics & planning. It is stressed that professionals have important informal ways to influence politicians & citizens concerned with urban politics, & can offer solutions fitting into the coalition of interests dominating urban politics. Planners, at least in some historical situations, can informally influence other political actors, which might be ignored if urban politics is approached in a formal way, & as a mechanical system. In particular, the rather mechanical way in which Marxist urban theory has inspired researchers to approach local politics is critiqued. 1 Table, 21 References. AA

London, Bruce (Dept Sociology Clark U, Worcester MA 01610), **Land-Based Interest Groups and Gentrification: Corporate Capital, Competitive Capital, and Urban Neighborhood Change,** *Research in Urban Sociology,* 1992, 2, 47-62.

¶ After summarizing the literature on gentrification & documenting the underemphasis on the relationship between growth machine politics & this kind of urban development, the role of land-based interest groups–eg, real estate developers & investors & large corporations–in gentrification is explored via a review of the literature & analysis of US census data, data from the 1982 *National Registry of Historic Places,* published data on the location of corporate headquarters for *Fortune* 500 companies, & other published data for 48 US cities. Results indicate that political-economic indicators are most closely associated with gentrification. 1 Table, 60 References. J. Taylor

Moore, James E., II & Gordon, Peter (Dept Economics U Southern California, Los Angeles 90089-0042), **A Sequential Programming Model of Urban Land Development,** *Socio-Economic Planning Sciences,* 1990, 24, 3, 199-216.

¶ The decentralized process of urban land development determined by sequential activity shifts resulting from locators' efforts to maximize net revenues by mitigating congestion costs & other externalities is modeled by solving a series of linear assignment problems that track urban land use over time. In this model, network costs are endogenous, & locators update site bids by combining recent experience with a *ceteris paribus* viewpoint. Vacancy is considered as a null activity that can be assigned to various sites. Locators that have been outbid by vacancy are displaced from the land use system, but may continue to formulate bids & compete for sites. 1 Table, 5 Figures, 2 Appendixes, 23 References. Adapted from the source document.

[illegible], Robert (Dept Sociology/Social Policy/Social Work Studies U Liverpool, L69 3BX England), **Labour and Housing Markets in Inner City Regeneration,** *New Community,* 1992, 18, 3, Apr, 371-386.

¶ Differences in the economic bases & political cultures of London & Liverpool, England, in mediating the impact of inner-city growth or regeneration policies are examined. Both London & Liverpool have dockland developments in proximity to minority neighborhoods. In London, a high concentration of capital is creating the commercial pressure for gentrification & is impacting the Bangladeshi community of Spitalfields. The city & local development authorities are seeking to deal with the Bangladeshi problem through immigration control. In Liverpool, no commercial pressure on land in the inner city exists & the docklands development has not impacted the neighboring black community. The Liverpool city authorities are seeking community consultation & participation to develop cooperative development plans for the inner city. 1 Table, 16 References. Adapted from the source document.

Moreno Armella, Florita (Dept Sociología U Autónoma Metropolitana, Azcapotzalco 02000 Mexcio DF), ***Transporte y contaminación ambiental en la ciudad de México* de Jorge Legorreta con la colaboración de Angeles Flores** (*Transporte y contaminación ambiental en la ciudad de México* by Jorge Legorreta with the Collaboration of Angeles Flores), *Sociológica,* 1990, 5, 12, Jan-Apr, 271-274. (SPA)

¶ A review essay on a book by Jorge Legorreta, with the collaboration of Angeles Flores, *Transporte y contaminación ambiental en al ciudad de Mexico* ([Transportation and Air Pollution in Mexico City] Mexico City: Centro de Ecodesarollo, 1989 [see listing in IRPS No. 66]). Legorreta places the problem of air pollution in Mexico City within the context of the processes of the social construction of the city. Using a structural analysis model, the processes of the institutional formation of government structure are linked to the deterioration of air quality. Of particular interest is the role of capitalist development in the distribution of poor air quality in different areas of the city. J. Taylor

93Z5343

Mullings, Beverley (Faculty Social Sciences Open U, Milton Keynes MK7 6AA Buckinghamshire England), **Investing in Public Housing and Racial Discrimination: Implications in the 1990s,** *New Community,* 1992, 18, 3, Apr, 415-425.

¶ The impact of racial discrimination on housing policy outcomes in GB is examined. Traditional housing investment & policy underplays the influence of racial discrimination by erroneously assuming that policy has the same impact on black & white households. Recent restrictions on public expenditure on housing have caused the abandonment of comprehensive needs-based policies in favor of market alternatives. This shift has further marginalized black households because the worst public housing estates are least likely to be viewed as having investment potential. Current policy that emphasizes individual enterprise & removal of local control also fails to recognize the impact of racial discrimination on housing policy outcomes. 2 Figures, 14 References. Adapted from the source document.

Musil, Jiří (Středoevropská U, CS-13087 Prague 3 Czechoslovakia), **Změny městských systémů v postkomunistických společnostech střední Evropy** (Changing Urban Systems in Postcommunist Societies in Eastern Europe), *Sociologický Časopis,* 1992, 28, 4, 451-462. (CZE)

¶ A discussion of changes experienced in the cities of Eastern Europe following the collapse of communism in 1989 in: (1) intraurban structure, (2) the national interurban system, & (3) the international system. The local social ecology reacted more quickly to the changes than did interurban structures. The legacy of communism was reflected in the nonexistence of a real estate market & irrational housing policies, adversely affecting urban sociospatial structures. The reintroduction of private property & market mechanisms is leading to the functional differentiation of space. Future trends are likely to include socioeconomic polarization, suburbanization, regional differentiation, & growth in the capital cities & in the westernmost regions of these countries. Berlin (Germany), especially, is predicted to grow in importance, while rivalry will develop between Prague (Czechoslovakia), Budapest (Hungary), Warsaw (Poland), & Vienna (Austria). 8 References. Adapted from the source document.

Pašiak, Ján (Ústav stavebnictva a architektúry Slovak Academy Sciences, Obrancov Mieru 49 CS-814138 Bratislava Czechoslovakia), **Renesancia obecného spoločenstva** (Renaissance of the Municipal Community), *Sociológia*, 1991, 23, 1-2, 23-32. (SLO)

¶ In Sept 1990, the first steps were taken to restore local self-government to Slovak municipalities, following its repression under Hungarian, Austro-Hungarian, Nazi German, & Soviet control. The major cities were controlled de facto by foreign powers, & with the abolition of private property in 1948, control of smaller municipal governments passed from the local citizenry to the state. Nevertheless, during crisis conditions (eg, in 1944, 1968, & 1969), local communities managed to exert some control over social & political activities. The rebirth of local self-government is expected to play a key role in rehumanizing the local environment, reprivatizing the economy, & decentralizing the government. 2 Tables, 5 References. 93Z5347

Qingkang, Yu (China Academy Urban Planning & Design, Beijing), **The Chinese Cultural Heritage and Modern Urban Development**, *Habitat International*, 1991, 15, 3, 73-79.

¶ It is argued that modern urban development in the People's Republic of China has its roots in both traditional cultural heritage & international cultural transfer. Four main aspects of cultural heritage are identified: diversification through simplicity, intricate compactness, integrated natural & man-made environments, & an emphasis on art over practicality. International transfers account for flexibility in planning, pedestrian zones, & pollution. Based on this assessment, three goals for the future of Chinese urban architecture are proposed: the development of cultural heritage with reference to content rather than form, cultural heritage not being built into every new structure indiscriminately, & commitment to harmonious coordination to achieve these goals. 8 Figures. M. Maguire

Rabinowitz, Dan (Dept Sociology & Anthropology Hebrew U Jerusalem, Mount Scopus Israel), **An Acre Is an Acre Is an Acre? Differentiated Attitudes to Social Space and Territory on the Jewish-Arab Urban Frontier in Israel**, UM *Urban Anthropology*, 1992, 21, 1, spring, 67-89.

¶ In Natzerat Illit, a mixed development town in Galilee, the Jewish inhabitants are united behind the stance that the Arab presence, now approximately 10% of the population, is detrimental to the town. They react differently, however, to Arab presence in different parts of town, a spatial variance also found in other urban settings within Israel. Here, the place of Hityashvut (pioneering settlement) as the factor that engenders the Jewish quest for exclusivity over a given tract is explored. Only areas that have been actively transformed by Zionism qualify as genuine Hityashvut, & are hence perceived as loci to be defended from foreign presence. In terms of cultural constructs of social space, the territorial mass of Israel emerges as far less uniform than hitherto assumed. 1 Table, 1 Map, 40 References. Adapted from the source document.

Simpson, Charles R. (Dept Sociology State U New York Coll, Plattsburgh 12901), **The Wilderness in American Capitalism: The Sacralization of Nature**, *International Journal of Politics, Culture and Society*, 1992, 5, 4, summer, 555-576.

¶ It is argued that wilderness, a category of rural landscape socially constructed in the US from the ideas of the English Romantic movement, obfuscated & displaced aboriginal subsistance land use patterns & locally oriented farm communities. In the Adirondack Mountains of NY, the urban industrial elite in the last half of the nineteenth century were able to extend this wilderness definition of landscape in a way that legitimated their social roles as stewards of the general welfare, consolidating their aristocratic pretensions as a landed upper class. Travel writers, American scene painters, & the Protestant clergy played a leading role in this cultural redefinition of landscape, a definition later taken up by the suburban middle class & operationalized by the state as NY's Forest Preserve & Adirondack State Park. In displacing & obscuring prior subsistance land use patterns, wilderness is a political category employed by elites at the expense of historical accuracy & marginal populations. 41 References. AA

Suchar, Charles S. (Dept Sociology DePaul U, Chicago IL 60604), **Icons and Images of Gentrification: The Changed Material Culture of an Urban Community**, *Research in Urban Sociology*, 1992, 2, 165-192.

¶ A summary of social & cultural changes that have taken place in Lincoln Park, a gentrified urban community in Chicago, Ill, drawing on fieldwork conducted 1985/86, including photography & interviews with 6 households. Residents can be divided into: original inhabitants (living in the area through its decline after the 1930s); urban pioneers who arrived in the 1960s & 1970s & began to rehabilitate household stock; & recently arrived, young, affluent, single-person households or couples without children, who took over housing stock & invested in reconstructing interior spaces. These groups are differentiated by their views on the meaning of the home environment, the significance of material possessions, & community optimism. The relationship between the attitudes toward & perceptions of the community & attitudes toward private space & belongings is described for each group. 6 Photographs, 4 References. J. Taylor

Tacchi, Enrico Maria, Le nuove forme di urbanità. Note sul Convegno Nazionale della Sezione "Sociologia del Territorio" dell' Associazione Italiana de Sociologia (New Forms of Urbanity. Notes on the National Meeting of the "Sociology of Territory" Section of the Italian Sociology Association), *Studi di Sociologia*, 1991, 29, 3, July-Sept, 325-327. (ITA)

¶ The fourth national study meeting of the "Sociology of Territory" Section of the Italian Sociological Assoc was held 14-15 Nov 1991 in cooperation with the Sociology Dept of the U of Bologna. F. Martinelli opened the meeting, identifying the principal scientific contributions in territorial & environmental sociology over the past several years. The four thematic sessions included: (1) major tendencies in population settlement, space, & technology; (2) stratification & inequality; (3) identity, groups, & new lifestyles; & (4) types of housing. M. Meeks

93Z5353

Terrazas Revilla, Oscar (Dept Sociología U Autónoma Metropolitana, Azcapotzalco 02000 Mexico DF), ***Los productores del espacio habitable. Estado, empresas y sociedad en la ciudad de México* de Martha Schteingart** (*Los productores del espacio habitable. Estado, empresas y sociedad en la ciudad de México* by Martha Schteingart), *Sociológica*, 1990, 5, 12, Jan-Apr, 265-270. (SPA)

¶ A review essay on a book by Martha Schteingart, *Los productores del espacio habitable. Estado, empresas y sociedad en la ciudad de México* ([Producers of Habitable Space. The State, Firms, and Society in Mexico City] Mexico: COLMEX, 1989 [see listing in IRPS No. 66]). This work presents an important recapitulation of the problematics of urban land use in Mexico City. It explores the processes of irregular occupation of communal lands in the face of urban expansion. Regulation of land use & the expropriation of land on the periphery of the city are also described, based on empirical data. The book presents information on territorial location of residential processes, socioeconomic conditions of the population, & the level of consolidation of neighborhoods, providing essential information for those interested in urban growth. 6 References. J. Taylor

93Z5354

Thomsen, Leif (Instit Organization, Copenhagen Denmark), **Hegemony and Space: Civil Society and Social Movements,** *Research in Urban Sociology*, 1992, 2, 229-255.

Translated from Danish by Lynn Walter.

¶ An attempt is made to determine the factors that are decisive for the structure of cities & their spatial differentiation, introducing key concepts–hegemony, culture/ideology, social movements, & civil society–& testing them via case studies & examples drawn from previously published data. Demonstrated are: how culture & ideology enter into a dominating urban hegemonic system of meanings in the city's space & social relations; & conversely, how countercultures, subcultures, & social movements are developed. The transformation of these elements into differentiated space is a process of conflict & struggle in which alternative cultures create their own spaces, while historically dominant cultures & ideologies are offensively & defensively resistant. 39 References. J. Taylor

Tilly, Charles (Center Studies Social Change New School Social Research, New York NY 10003-4520 (FAX: 212-477-5409)), **K čemu je dobrá historie města?** (What Good Is Urban History?), *Sociologický Časopis*, 1992, 28, 4, 437-450. (CZE)

Translated from English by Eva Musilová.

¶ An argument is presented in behalf of the "new historicism" in the social sciences. Over the last five years, the tendency has been to see social life as a discussion rather than as a truth that can be reconstructed through objective observation. Sociological historicism studies how the residues from a previous activity determine the course of subsequent events. This approach challenges the ahistorical view of urban life as the direct result of market forces, social attitudes, or other factors independent of previous events. Special attention is given to Allen Pred's *Place, Practice and Structure* (Cambridge: Polity, 1986) & other works, calling for the study of structuration, ie, temporally & spatially delimited historical situations, accepted by people as external social facts. Urban social history should explain the complex relationship between universal structural changes & everyday social life. Since urban history is the quintessence of social history, urban historians should address major problems of social change influenced by economics, geography, & quality of life. Special attention is given to changes reflected by urban immigration processes. 60 References. Adapted from the source document.

93Z5356

Tonboe, Jens Christian (Dept Economics/Politics/Public Administration Aalborg U Center, DK-9100 Denmark), **From Urban Theory of the Sociology of Space,** *Research in Urban Sociology*, 1992, 2, 195-212.

¶ An attempt to rejuvenate Danish urban theory as a response to previous national trends in theory & practice, & to ongoing European & US debates, focusing on: the sociology of space instead of a sociology of the urban, & adopting a cross-disciplinary social science approach rather than a narrow sociological approach. This rejuvenation has its roots in both an international & a national network of scholars of approximately the same age group, & professional & political inclination, but from sociology, human geography, architecture & planning, political science, & economics. This vigorous network has produced theory & research about the sociology of space in broad terms that have formed an interactive parallel to the endeavors pioneered by such theorists as Anthony Giddens, John Urry, Derek Gregory, Phil Cooke, Chris Pickvance, Edmond Preteceille, Ed Soja, & Mark Gottdiener in England, France, & the US. 61 References. Topalov, Christian (Centre national recherche scientifique, F-75700 Paris France), **Hacer la historia de la investigación urbana. La experiencia Francesa desde 1965** (Making the History of Urban Research. The French Experience since 1965), *Sociológica*, 1990, 5, 12, Jan-Apr, 175-207. (SPA)

Translated from French by Anne Lyotard.

¶ Urban research in France since 1960 is traced, drawing on a review of the literature. In the 1960s, geographers & historians began to construct detailed descriptions of urbanization & to explore the history of urban social life. Urban research changed radically in 1968, with a division into: statist orientations, linked to corporate financial backing of urban planning; & a Marxist perspective among independent academics. The field was transformed from investigation for the purposes of making government policy to research that included the state & its politics in the field of analysis. The 1970s-1980s economic recession resulted in a decline in urban growth, & also in the importance of urban research. Theoretical & methodological approaches arising in this context are commented on, & the influence of other national research traditions is noted. Implications for the future of urban research in France are considered. 127 References. J. Taylor

93Z5358

Toth, James (Dept Anthropology U Alexandria, Egypt), **Doubts about Growth: The Town of Carlisle in Transition,** UM *Urban Anthropology*, 1992, 21, 1, spring, 1-44.

¶ Economic reorganization in the US over the past two decades in the form of deindustrialization has been well documented in urban centers: the once-flourishing industrial economy is being converted to a stagnant service sector economy. Extensive oral history interviews with Carlisle, Pa, residents (N not specified) reveal that similar transformations are underway in smaller towns, echoing the pre- to postwar shift in the role of small-town elites first noted by C. Wright Mills (eg, see *White Collar. The American Middle Class* [SA 6:4/585049]). Specific concerns of residents regarding four class-based crisis areas–youth recreation, housing, crime, & employment–are discussed, & it is concluded that the city's new identity will depend on whether the middle- or working-class vision is ultimately championed. 58 References. Verlič, Barbara (Inštit družbene vede U Ljubljana, 61111 Slovenia), **Analitički modeli urbanizacije** (Analytical Models of Urbanization), *Sociologija sela*, 1991, 29, 111-114, Jan-Dec, 65-72. (SCR)

¶ To examine differences in the social standard among citizens of the various Yugoslav republics & to characterize its structural disharmony, questionnaire data were obtained from representative samples of respondents in Slovenia in 1984 (N = 2,470), throughout all of Yugoslavia in 1987 (N = 2,241), & in Slovenia in 1991 (N = 1,395). Two European models of the urbanization process are contrasted. Both the suburbanization & excessive urbanization models show a discontinuity between the growth rates of urbanization & industrialization & are applicable to at least some parts of Yugoslavia. Developed regions have effective distribution of services & commodities supplied through a polycentric network of cities, towns, & rural villages. The suburbanization model is applicable to the less developed south & east. 43 References. Adapted from the source document.

Weiss, Dieter (Freie U Berlin, D-1000 33 Federal Republic Germany), **An Evolutionary Approach to the Informal Sector in Third World Metropolitan Areas,** *Socio-Economic Planning Sciences*, 1990, 24, 2, 97-105.

¶ Conventional public planning strategies have proven inadequate to deal with urban agglomerations in Third World countries in which 60%-70% of the populations live in slum & squatter areas. The sheer numbers involved indicate that these settlements are no longer marginal phenomena, but rather a central issue in need of resolution. An evolutionary approach emphasizing flexibility & self-organization is suggested as an al-

ternative to traditional town planning, which has clearly failed. Empirical data for 5 slum areas in Bangkok (Thailand) provide the basis for arguing that general problem-solving skills & suitable regulatory systems should be developed that allow for grass-roots mobilization, self-help measures, political participation, & decentralized decision making. Prospects for the future are analyzed. Adapted from the source document.

Wilson, Frank Harold (Dept Sociology U Wisconsin, Madison 53706), **Gentrification and Neighborhood Dislocation in Washington, D.C.: The Case of Black Residents in Central Area Neighborhoods,** *Research in Urban Sociology*, 1992, 2, 113-143.

¶ Gentrification & neighborhood dislocation in Washington, DC, are examined, focusing on residential changes of blacks in two community areas, using 1970 & 1980 US census tract data. Results indicate that gentrification has been characterized by rapid increases in owner-occupied units, escalating property values, & a decreasing supply of renter-occupied units. These "supply side" changes have been accompanied by racial turnover & black residential decreases, dislocation of residentially stable & mobile black residents, & changes in the social structure of the black community. Theoretical models of turnover & displacement are considered in the context of this analysis & deemed inadequate. Implications of these findings for the next decade are suggested. 4 Tables, 46 References. J. Taylor

Wittberg, Patricia (Indiana U-Purdue U, Indianapolis 46202), **Perspectives on Gentrification: A Comparative Review of the Literature,** *Research in Urban Sociology*, 1992, 2, 17-46.

¶ After first comparing the basic theoretical approaches to urban land use & succession that have been advanced by the Chicago school of urban sociology & by the newer critical (neo-Marxist) school, each perspective's treatment of urban gentrification processes is summarized & compared. Special mention is made of the underlying theoretical assumptions & the methodology employed by researchers in each school, the causes & consequences of gentrification postulated by each perspective, & the principal actors assumed to be involved. Strengths & weaknesses of each approach are evaluated, & suggestions made for future research. 146 References. AA

----, **Review Symposium,** IM *Contemporary Sociology*, 1992, 21, 4, July, 448-451.

¶ A review symposium on a book edited by Christopher Jencks & Paul E. Peterson, *The Urban Underclass* (Washington, DC: Brookings Instit, 1991 (see listings in IRPS No. 66)). In **Unpacking the Urban Poverty Problem,** Clarence Stone (U of Maryland, College Park) suggests that the volume's lofty ambition of scrutinizing the idea of the urban underclass from several perspectives is a useful one, but further conceptualization & more detailed analyses are needed if the problem is to be resolved. In **Why Not Study the American "Overclass"?,** Joe R. Feagin (U of Florida, Gainesville) views the book as a strong contribution to theoretical debate about the underclass but suggests that macrolevel analyses also benefit from a critical examination of both the accepted official data & the view of the US "overclass." M. Maguire

Antaki, Charles & Leudar, Ivan (Dept Psychology Lancaster U, LA1 4YF England), **Explaining in Conversation: Towards an Argument Model**, UM *European Journal of Social Psychology*, 1992, 22, 2, Mar-Apr, 181-194.

¶ The argumentative & social cognitive views of conversation are examined through analysis of one of a corpus of forty unobtrusively recorded conversations reported by J. Svartik & R. Quirk (*A Corpus of English Conversation*, Lund, Sweden: Gleerup, 1980). Analysis reveals that the majority of what appear to be causal attributions are actually argumentative claim-backings. Quasi-pragmatic rules for deciding whether any given utterance is better understood as an argument or a causal explanation revolve around the speaker's apparent intention & the projected relationship between the clauses in what she or he says. The analysis does not support attribution theory's model of explanation as the reporting of a cause, but does lend support to an argumentative model of ordinary explanation. 27 References. Armer, J. Michael (Florida State U, Tallahassee 32306), **Social Psychological Effects of Literacy by Language Combinations in an African Society**, UM *Sociological Inquiry*, 1992, 62, 3, summer, 308-326.

¶ Two views of the impact of literacy are compared: the "autonomous" model holds that literacy in any language produces uniform consequences for individuals, eg, interest in current affairs, personal efficacy, status aspiration, & logical thinking, while the "ideological" model argues that consequences vary across languages depending upon the processes through which literacy is acquired & the purposes for which it is intended. These competing views are tested with survey data from 576 young men in Kano, Nigeria, regressing 16 autonomous dependent variables on dummy variables of illiteracy (the comparison category) & major literacy combinations in 3 languages–Arabic, Hausa, & English. Results show many insignificant effects & wide variations in coefficients for different literacy combinations, even when adjustments are made for Arabic literacy measurement limitations & for social selectivity in literacy acquisition. The evidence provides support for the ideological model of literacy consequences; theoretical implications for the control & use of literacy for personal & social development are discussed. 3 Tables, 1 Appendix, 36 References. Beach, Wayne A. (San Diego State U, CA 92182), **Avoiding Ownership for Alleged Wrongdoings**, *Research on Language and Social Interaction*, 1990-1991, 24, 1-36.

¶ A case study & dialogue examining how second speakers in conversations attempt to avoid ownership for & mitigate the attribution of wrongdoing. Interactional techniques for achieving avoidance are identified as (1) discounting accounts or explanations, (2) no talk (silence), (3) attempts to close prior topics & restart alternative ones, & (4) humorous responses to problematic & serious allegations. It is concluded that "avoidance" is an interactional achievement, sensitive to & arising within ordinary, & thus collaboratively produced, circumstances of everyday life. It is suggested that analysis of a wider variety of speaking occasions may reveal recurrent features, specifically, the universality of interactants' methods for attributing & negotiating such concerns as "right from wrong" & "responsibility." In these & related speaking occasions, the communication of alternative & contrasting orientations to "concerns & troubles" is problematic. 1 Appendix, 42 References. H. L. Stidger (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5367

Beach, Wayne A. (San Diego State U, CA 92182), **Searching for Universal Features of Conversation**, *Research on Language and Social Interaction*, 1990-1991, 24, 351-368.

¶ Discussed are the universal features of conversation in relation to Michael Moerman's *Talking Culture: Ethnography and Conversation Analysis* (Philadelphia: U of Pennsylvania Press, 1988). Small & apparently taken-for-granted features of social action are examined in an exploration of conversational phenomena that appear in unrelated languages–candidate conversational universals. The token *eh* in Swedish conversation is investigated as an "acknowledgment token" along with specialized markers receipting news offered by the teller. Issues of method & analysis are analyzed. It is concluded that many issues emerging from a proposed integration of ethnography & conversation analysis stem from problems in discerning empirical status of "background understanding" & "locale knowledge." It is suggested that a likely point of focus for future dialogue will involve further explanation of a foundational element in Moerman's mysticism: the role of applied phenomenological license in the recognition & verification of conversational structures. 26 References. Blommaert, Jan (IPRA Research Center Rijks U Centrum Antwerpen, B-2020 Belgium), **Methodologische suggesties voor taalonderzoek in de studie van mentaliteiten** (Methodological Suggestions for Linguistic Research in the Study of Mentalities), *Tijdschrift voor Sociale Wetenschappen*, 1992, 37, 3, July-Sept, 283-291. (DUT)

¶ A number of methodical & methodological proposals for linguistic research as part of the study of mentalities are formulated, situating them against the theoretical & disciplinary background of linguistic pragmatics, & building on the fundamental embeddedness of language in society, & therefore in history. The concept of "genre" as a historical phenomenon is explored, & it is argued that genre study is a form of social historiography, & reveals the underlying imagery, folk notions, & ideologies of texts. 31 References. Boullata, Kamal, La Pensée visuelle et la mémoire sémantique arabe (Visual Thinking and the Arab Semantic Memory), *Peuples Méditerranéens/Mediterranean Peoples*, 1991, 54-55, Jan-June, 93-110. (FRE)

Translated by Lianne Falli.

¶ Critiqued is the notion that the dominance of language in Arabic culture, manifested in elaborate calligraphy & absence of naturalist representation in plastic arts, is rooted in an iconoclastic tradition. It is suggested that the Arab "aesthetics of concept" & "aesthetic typology" emerged from the primordial Arab visual world, ie, the desert, & several hundred terms are used in Arabic to typify the desert landscape. Emphasized is the dichotomy between the ambiguity of such visual terms as line, design, & form, & the infinite number of colors. This dichotomy, it is suggested, is the basis of the "semantic memory" that fashioned Islamic art. Adapted from the source document. Brun-Cottan, Francoise (Xerox Corp, 800 Long Ridge Rd Stamford CT 06902-1293), **Talk in the Workplace: Occupational Relevance**, *Research on Language and Social Interaction*, 1990-1991, 24, 277-295.

¶ Workplace interactions are examined by analyzing activities that occurred in the operations room of a mid-sized US airline that is being analyzed by the "Workplace Project" at Xerox PARC. Personnel studied were responsible for monitoring & disseminating information about events. Extensive samples of dialogue are used to investigate the relevance of conversation & culturally contexted conversation analysis to job-related activities. It is shown how the occupational & organizational orientations of the participants are used to accomplish mutual intelligibility, & how these orientations are structured by the particular settings & members' familiarity with technical detail. This technical familiarity enables participants to construct meaningful order in collaboration. 1 Table, 12 References. H. L. Stidger (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Chen, Victoria (U Florida, Gainesville 32611), ***Mien Tze* at the Chinese Dinner Table: A Study of the Interactional Accomplishment of Face,** *Research on Language and Social Interaction,* 1990-1991, 24, 109-140.

¶ A study of "face" or *mien tze* (politeness) at a Chinese dinner table where there is a host-guest relationship. The notion of face is employed to examine how it can be enacted, augmented, & lost through coordinated ritual performance. An in-situ ethnographic study of Chinese dinner table interaction in a restaurant was conducted during a visit to Taiwan. In addition, four Chinese informants were interviewed separately. Descriptive, structural, & contrasting questions were used to elicit open discourse from the informants. Chinese dining rituals & norms are delineated. It is concluded that the interaction at the Chinese dinner table supports the argument that face is not a psychological concept or image to be cherished. *Mien tze* is located in the flow of events & is continually being constructed, negotiated, & accomplished through the course of interaction. It is demonstrated that positive & negative face wants are not two mutually exclusive dimensions. The reflexive connection of these two aspects suggests that sometimes it is necessary to disregard one's negative face in order to accomplish one's own & others' positive wants. 1 Appendix, 19 References. H. L. Stidger

Edwards, Derek (Loughborough U, Leicester LE11 3TU England), **Categories Are for Talking: On the Cognitive and Discursive Bases of Categorization,** *Theory & Psychology,* 1991, 1, 4, Nov, 515-542.

¶ A distinction is drawn between cognitive & discursive approaches to linguistic categorization. It is claimed that cognitive approaches have ignored the prime importance of discourse. It is argued that talk enlists cognition as a powerful element in the rhetoric of description & reality construction. Features of categorization include prototype structures, indefiniteness of membership, indexicality of application, & contrastive organization. These make sense as features designed for the situated rhetoric of talk, rather than for displaying a person's abstracted understanding of the world. Cognitive theories, while providing important insights into semantic organization, manage to sustain the explanatory primacy of perception & cognition by using methods that systematically remove the flexibilities & action orientation of talk, while using imaginations of situated talk as a basis for semantic analysis. 73 References. Adapted from the source document.

Fishman, Joshua A., Language International Interview: Johsua A. Fishman, *Language International,* 1991, 3, 5, Oct, 27-31.
Interviewed by Bertie Kaal.

¶ In an interview, Joshua A. Fishman defines the sociology of language–which he founded–as inclusive of sociolinguistics, & discusses his methodology. The research professor's background is reviewed before the interview focuses on the political issue of minority language maintenance throughout the world &, in particular, in the European Economic Community. The outlook is said to be bleak in terms of efficient solutions. Finally, work in progress is briefly discussed. M. Perdoux

93Z5374

Fitch, Kristine (U Colorado, Boulder 80309), **A Ritual for Attempting Leave-Taking in Colombia,** *Research on Language and Social Interaction,* 1990-1991, 24, 209-224.

¶ Presented in relation to Michael Moerman's *Talking Culture: Ethnography and Conversation Analysis* (Philadelphia: U of Pennsylvania Press, 1988) is a conversational enactment of a leave-taking ritual, which, it is argued, is an archetype for Colombian spoken life. Audiotaped, naturally occurring conversation recorded in Colombia in 1987 is utilized to describe a conversational sequence that performs a symbolic activity during leave-taking from social gatherings. Also elucidated is what ethnographic information may (or may not) emerge from conversation analysis. Speech patterns revealing interpersonal ideology revolving around the importance of human connectedness over individual desires are elaborated. The communication ritual of *Salsipuede* & the ethnographic practice of "noticing" are outlined. It is concluded that there is risk involved in relying too heavily on conversational data in an ethnographic examination & that conversation analysis can be a useful methodological step in ethnography of communication. It is suggested that ethnography involves noticing what natives pay attention to & encouraging a reader to notice what researchers believe natives are attending to in their spoken lives. 11 References. Goodwin, Marjorie Harness (U South Carolina, Columbia 29208), **Retellings, Pretellings and Hypothetical Stories,** *Research on Language and Social Interaction,* 1990-1991, 24, 263-276.

¶ An investigation of the structure of a family of stories that are linked to each other: stories that are retellings of past events, pretellings of future events, or hypothetical tellings about possible events. Demonstrated through selective filtering & reorganization are some of the ways in which internal story structure is responsive to both the immediate local context & the social projects in which the participants are engaged. The study is based on tape recordings of playground activity of children (N = 44, ages 4-14) from a black working-class neighborhood in west Philadelphia, Pa, emphasizing older females (ages 9-14). It is concluded that rather than accepting informants' reports as instances of the events they describe, social science researchers must seriously investigate the process of reporting itself as a situated conversational activity. 9 References. H. L. Stidger

Greenhill, Pauline (U Winnipeg, Manitoba R3B 2E9), **English Immigrants' Narratives of Linguistic and Cultural Confusion: Examples of Ethnic Expression from Ontario,** *Ethnic and Racial Studies,* 1992, 15, 2, Apr, 236-265.

¶ The experiences of English immigrants to Canada are examined in the context of defining ethnicity as an invented cultural construct rather than as an objective fact. Although English are not usually seen as ethnics in Canada, personal experience & generalization narratives of English immigrants to Ontario focus on experiences of cultural & linguistic distinctions between themselves & other Canadians. These stories help immigrants develop a concept of English ethnicity that centers on cultural & linguistic differences, which facilitates a common evaluation of the correctness & naturalness of the English alternative. 46 References. Griffiths, Sara (Istit Luigi Sturzo, Via delle Coppelle I-00186 Rome Italy), **An Analysis of the Quantitative Paradigm's Linguistic Variable and Its Explanations for Gender Linguistic Differences,** *Sociologia,* 1992, 26, 1, 225-235.

¶ The influence of feminism on pre-1970s gender-linguistic research is analyzed by discussing the biases generated by the use of a quantitative analytical tool, the "linguistic variable." Focus is on two studies investigating linguistic variants in the pronunciation of sounds in specific speech communities (see, respectively: Labov, William-Labov, *Sociolinguistic Patterns,* Philadelphia: U of Pennsylvania Press, 1972); & Trudgill, Peter, *The Social Differentiation of English in Norwich,* Cambridge U Press, 1974). The general validity of the major finding of these studies- ie, that women speak a more formal language & use more prestige forms than men, which has resulted in the stereotyping of women prior to research–is criticized. Also evaluated are the selection of linguistic criteria & measuring instruments used by the linguistic variable & the explanations that have emerged to explain this finding, arguing that these explanations often are contradictory & are insufficient to explain why women speak differently than men. It is concluded that the quantitative paradigm's linguistic variable may serve as a useful analytical tool in quantifying linguistic variants within a wide range of specific speech communities, provided that its limitations & biases are kept clearly in mind while researching the more general characteristics of gender speech differences. 43 References. Gross, Sabine (Dept German U Wisconsin, Madison 53706), **Reading Time–Text, Image, Film,** *Time & Society,* 1992, 1, 2, May, 207-222.

¶ The temporal dimension of reading (or viewing) is examined, focusing on how the reader's physiological & cognitive activity is affected by the way the respective sign systems operate. It is argued that the three media types examined–texts, images, & films–store time in different ways, with

each medium providing visual access to the time it represents & challenging the reader to transform the medium back through a temporal process in which reading & decoding are complementary rather than mutually exclusive. It is shown that the activity of the reader dissolves oppositions such as seeing/reading & space/time, & that all three media are read in a transformation of spatial layout into temporal sequence. 46 References. Adapted from the source document.

Heritage, John (U California, Los Angeles 90024), **Intention, Meaning and Strategy: Observations on Constraints on Interaction Analysis,** *Research on Language and Social Interaction,* 1990-1991, 24, 311-332.

¶ An exploration of the notions of intention, meaning, & strategy through observations of constraints on interaction analysis. In this response to Michael Moerman's *Talking Culture: Ethnography and Conversation Analysis* (Philadelphia: U of Pennsylvania Press, 1988), focus is on the social contribution of meanings, class, roles, emotions, guilt, & aggression. Constraints on analysis involved in building theories to the specifications that interactions require are elaborated. Intention, meaning, & action are addressed in an analysis of social action & interaction. The concepts of strategy, intentionality, & rationality are delineated as they relate to talk. Numerous examples from speech excerpts are provided. Consciousness & the procedural basis of social actions are discussed. Three main areas of difficulty in assigning intent to the procedure of an utterance are identified: (1) discerning intent in contexts where such intent is ambiguous or invisible, (2) determining the point at which intention was formed, & (3) the problematic nature of "intentionalist" analysis of action & the understanding of action. 40 References. H. L. Stidger

93Z5380

Hirst, Graeme (Dept Computer Science U Toronto, Ontario M5S 1A4 [e-mail: gh$cs.toronto.edu]), **Review Article: Does Conversation Analysis Have a Role in Computational Linguistics?,** *Computational Linguistics,* 1991, 17, 2, June, 211-227.

¶ A review article on a book edited by Paul Luff, Nigel Gilbert, & David Frohlich, *Computers and Conversation* (London: Academic Press, 1990 [see listing in IRPS No. 66]), which discusses human-computer interaction (HCI) in light of research in conversational analysis (CA). Contributions to the book, which is based on a Sept 1989 symposium at the U of Surrey (England), either seek to apply CA to specific areas of HCI (eg, advice systems, dialogue repair) or discuss whether CA is relevant to HCI research. Arguments on both sides of this question are criticized, & it is claimed that CA accounts for intent without loss of empiricism or listener-response orientation. The possible role of CA in HCI design has not yet been explored adequately. 42 References. J. Hitchcock

93Z5381

Hopper, Paul J. (Dept English Carnegie Mellon U, Pittsburgh PA 15213), **Times of the Sign: Discourse, Temporality and Recent Linguistics,** *Time & Society,* 1992, 1, 2, May, 223-238.

¶ The relationship between temporality & the linguist's view of grammar (ie, linguistic structure) is investigated. As a discipline that aims to grasp the essential features of language, linguistics has adopted methods & assumptions that require suppression of the temporality of speech & exclusive attention to its atemporal dimension. It is argued that in focusing on the atemporality of language, linguistics fails to acknowledge that the structure of language is distributed over time & across persons. Some of the consequences of this for the theory & practice of linguistics are discussed, & several alternatives that bring linguistics closer to the epistemes of poststructuralist & postmodern thought are reviewed. 25 References. Adapted from the source document.

93Z5382

Hopper, Robert (U Texas, Austin 78712), **Ethnography and Conversation Analysis after *Talking Culture*,** *Research on Language and Social Interaction,* 1990-1991, 24, 161-170.

¶ A synopsis of research in ethnography & conversation analysis is placed in relation to the publishing of Michael Moerman's *Talking Culture: Ethnography and Conversation Analysis* (Philadelphia: U of Pennsylvania Press, 1988). In this introduction, the work found in the following articles in this journal issue is delineated & categorized. Moerman's contributions & recommendations pertaining to the examination of "living culture" are described. H. L. Stidger

93Z5383

Hopper, Robert, Doany, Nada, Johnson, Michael & Drummond, Kent (U Texas, Austin 78712), **Universals and Particulars in Telephone Openings,** *Research on Language and Social Interaction,* 1990-1991, 24, 369-387.

¶ An examination of universals & particulars in telephone openings based on a review of Michael Moerman's work (*Talking Culture: Ethnography and Conversation Analysis,* Philadelphia: U of Pennsylvania Press, 1988). Candidate universals are determined by using specifications from conversational analysts. Telephone openings in various other cultures are compared to North American English norms as described by Emanuel A. Schegloff's four-stage canonical model (see SA 35:1/87R1518). Telephone openings of strangers & intimates are also discussed. Also presented are generalizations across languages & multilingual instances of telephone openings. It is concluded that telephone openings are important as a species of opening performed only with sound alone at a definite moment in time. 16 References. H. L. Stidger

93Z5384

Katriel, Tamar (U Haifa, Mount Carmel IL-31999 Israel), ***Sodot*: Secret-Sharing as a Social Form among Israeli Children,** *Research on Language and Social Interaction,* 1990-1991, 24, 141-157.

¶ An examination of the social uses of secret-sharing among Israeli children. Major uses include (1) self-oriented secrets that contribute to both a heightened sense of self & the establishment of intimate relations through dramatization of interpersonal choice, (2) the exchange of other-oriented secrets that constitute a strategic move in the establishment or shifting of social hierarchies & social groupings, & (3) secret-sharing games in which patterns of exchange define culturally shared contexts in which relations of reciprocity are regulated in such a way as to give concrete form to various interpersonal & group bonds. Examples of secret-sharing are provided through written accounts by children. It is concluded that secret-exchange patterns serve to give form & stability to Israeli children's social world. Notably, it is the expectations of reciprocity that attend all secret-exchange patterns, which induces a measure of continuity & coherence into children's interpersonal & group life. 15 References. H. L. Stidger

93Z5385

Kleining, Gerhard (Instit Soziologie U Hamburg, D-2000 13 Federal Republic Germany), **Textanalyse als Heuristik: Zur Entwicklung der Hermeneutik** (Text Analysis as Heuristics: On the Development of Hermeneutics), *Angewandte Sozialforschung,* 1990-1991, 16, 1-2, 23-29. (GER)

¶ Various methods used in the interpretation of texts are discussed, focusing on the development of hermeneutics in this context. Several problems associated with the hermeneutic method of text analysis (eg, subjectivity, stability, & structure) are addressed. It is contended that these areas of difficulty can be resolved through the application of heuristic methods, which are briefly surveyed here. Examples of heuristic observation, experiments, & research strategies are provided. 25 References. Adapted from the source document.

93Z5386

Knuf, Joachim (U Kentucky, Lexington 40506), **Greeting and Leave-Taking: A Bibliography of Resources for the Study of Ritualized Communication,** *Research on Language and Social Interaction,* 1990-1991, 24, 405-448.

¶ A bibliography of resources for the study of ritualized communication, specifically, greetings & leave-taking. The work is based on an initial literature search by H. Walter Schmitz & contains a variety of materials of different quality, age, & perspective, listing only those contributions that are of sufficient detail to be useful for comparative purposes. All entries are numbered & have been examined & verified. H. L. Stidger

93Z5387

Kramarae, Cheris (U Illinois, Urbana 61801), **Book Reviews, III** *Signs,* 1992, 17, 3, spring, 666-671.

0038-0202/93 $1.50

¶ A review essay on books by: Julia Penelope, *Speaking Freely: Unlearning the Lies of the Fathers' Tongues* (Elmsford, NY: Pergamon Press, 1990); Deborah Tannen, *You Just Don't Understand: Women and Men in Conversation* (New York: William Morrow, 1990); & Telling It Book Collective (Ed), *Telling It: Women and Language across Cultures* (Vancouver: Press Gang Publishers, 1990 (see listings in IRPS No. 66)). These three books come from different countries, demonstrate very different worldviews, & grow out of different time periods. *Speaking Freely* asks English-speaking readers to confront how they say what they say, & to comprehend how language hurts us & others. *You Just Don't Understand* denies the existence of a patriarchal culture & encourages women & men to learn more about the speech of the other & to respect their differences, using anecdotes, movie dialogue, personal experience, & transcripts to illustrate points. *Telling It* passionately analyzes issues of racism & homophobia, drawing on talks, edited transcripts, stories, social critique, & poetry from Native-American, Asian-Canadian, & lesbian communities. L. Dorn (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5388

Mandelbaum, Jenny (Rutgers U, New Brunswick NJ 08903), **Beyond Mundane Reason: Conversation Analysis and Context,** *Research on Language and Social Interaction*, 1990-1991, 24, 333-350.

¶ An investigation of the posture of conversation analysis toward context, & the supposition that conversation analysis may supply added details of cultural context. Two notions of context are given & Michael Moerman's culturally contexted conversation analysis (CCCA) theory is reviewed. The contrast between CCCA's talk-intrinsic sense of context, & conversation analysis is demonstrated in a dialogue from Moerman's *Talking Culture: Ethnography and Conversation Analysis* (Philadelphia: U of Pennsylvania Press, 1988). It is concluded that conversation analysts' challenge to ethnography is to make findings talk-intrinsic: to specify how talk-intrinsic factors operate upon social action. Conversation analysts' work is inherently contextual in its expansion of our sense of "context" into & beyond mundane reasoning. 22 References. H. L. Stidger (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Mignolo, Walter D. (U Michigan, Ann Arbor 48109), **On the Colonization of Amerindian Languages and Memories: Renaissance Theories of Writing and Discontinuity of the Classical Tradition,** UM *Comparative Studies in Society and History*, 1992, 34, 2, Apr, 301-330.

¶ In a discourse on the colonization of language via European expansion in the Americas, specific focus is on the philosophy behind the Spaniard's intellectual decision to write down Amerindian grammars & memories, while resisting the spread of Western literacy. Also examined is the philosophy underlying the actions taken by missionaries & men of letters to civilize the natives of the so-called New World. It is concluded that the theoretical approach to colonial situations advanced forty years ago could benefit from more recent theories in the social sciences, the contributions of disciplines centered on language, & the perspective that the humanities can bring to hard-core social science. 2 Illustrations. L. Dorn (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Moerman, Michael (U California, Los Angeles 90024), **Exploring Talk and Interaction,** *Research on Language and Social Interaction*, 1990-1991, 24, 173-187.

¶ Talk & interaction are examined in an analysis of cultural aspects of a Tai-Lue village. The manner in which events observed & experienced in the village made sense to inhabitants is explored. Language universals & particulars & the ethnography of speaking are discussed, & similarities between conversation in Thailand & the US identified. Talking in interaction is discussed as giving emphasis to the central phenomenon of conversation analysis: that interaction is not something newly added on to sequential organization & that all units of conversation are social actions. The importance of the social actions accompanying talk along with other components of participation frameworks & activities is stressed. 42 References. H. L. Stidger (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5391

Nilan, Pamela (Dept Education U Newcastle, New South Wales 2308 Australia), **Kazzies, DBTs and Tryhards: Categorisations of Style in Adolescent Girls' Talk,** *British Journal of Sociology of Education*, 1992, 13, 2, June, 201-214.

¶ The process of inclusion & exclusion of individuals in adolescent girls' friendship networks is ethnologically studied, based on analysis of transcribed excerpts of informal interviews with 3 girls age 14 in an Australian girls' high school. Much of their talk focused on clothing styles; they classified other girls by style characteristics, according to a stylistic hierarchy, descending from perceived originality to commercial fashion trends. It is suggested that clothing styles are used to distinguish social boundaries & to articulate identity, & they are related to the girls' residence area & family background. 23 References. Philipsen, Gerry (U Washington, Seattle 98195), **Situated Meaning, Ethnography, and Conversation Analysis,** *Research on Language and Social Interaction*, 1990-1991, 24, 225-238.

¶ An examination of situation meaning, ethnography, & conversation analysis using transcriptions from Frederick Wiseman's film *High School* (1968). Michael Moerman's interpretive method (*Talking Culture: Ethnography and Conversation Analysis*, Philadelphia: U of Pennsylvania Press, 1988) is applied to "person references" from the film in a culturally contexted conversation analysis. Preferences in conversation for reference to persons are discussed & interpretations of the film's dialogue are provided. It is concluded that the system of conversation analysis used in the study provided a way to locate sayings in which interlocutors were using cultural components to do some kind of communicative practice. Further, it is suggested that situating occasions of person reference within a model of conversational sequence facilitates the investigators' understanding of what is being said & done with the various forms used. This work illustrates how the combination of ethnographic approaches & the sequential models of conversation brought together in culturally contexted conversation analysis is applied to ethnographic description & interpretation. 3 References. Pomerantz, Anita (Temple U, Philadelphia PA 19122), **Mental Concepts in the Analysis of Social Action,** *Research on Language and Social Interaction*, 1990-1991, 24, 299-310.

¶ Mental concepts in the analysis of social actions are investigated in the context of Michael Moerman's *Talking Culture: Ethnography and Conversation Analysis* (Philadelphia: U of Pennsylvania Press, 1988). Strengths & weaknesses of the book are delineated. Two contrastive approaches to the concept of orientation are drawn from research with recordings of a high school attendance office clerk's telephone calls to homes of absent students. Original focus was on the clerk's references to the attendance office records during these calls. Evidence was found of the clerk's orienting to the records as "incomplete." Two analytic attempts toward analyzing that orientation are offered: a mental approach, & an approach that is sensitive to circumstances that caused the clerk to orient in a given way toward the records. 2 References. Streeck, Jürgen (U Texas, Austin 78712), **Tao/Sao: Talking Culture with Rousseau,** *Research on Language and Social Interaction*, 1990-1991, 24, 241-261.

¶ It is claimed that the analysis of talk & language as cultural artifacts reveals nature. This claim is placed in relation to the work of Michael Moerman (*Talking Culture: Ethnography and Conversation Analysis*, Philadelphia: U of Pennsylvania Press, 1988), which can be read as a modern extension of the theories of Jean-Jacques Rousseau. Using data from the Ilokano language spoken in the Philippines, talk & language are investigated in verbal reports gathered from 2 Ss from the provincial capital of Bayombong. Syntax, semantics, & social action are also reviewed. It is concluded that when studying talk-in-interaction, one must bring language back into the picture. The communal mind is the

most accurate unit of analysis for studying culture & language. It is suggested that today it is possible to reconcile naturalism & humanism on the basis of empirical science & naturalistic observation. 25 References. H. L. Stidger

Tracy, Karen & Eisenberg, Eric (U Colorado, Boulder 80309), **Giving Criticism: A Multiple Goals Case Study,** *Research on Language and Social Interaction,* 1990-1991, 24, 37-70.

¶ Giving criticism is examined in a multiple-goals case study of workplace criticism simulations. Research issues are identified as work role & gender influences on speaker goals, the accuracy of perceptions of speaker goals, & discourse correlates of perceptions of speaker goals. The study combines discourse analytic & experimental methods in placing participants in similar communication situations, allowing them to act in ways they normally would. Ss' (N = 24) actual communicative choices were related to a variety of relevant self-reports & observer judgments. Criticism givers also filled out open- & closed-ended self-report measures that indicated their degree of concern for task & relational goals. Results are consistent with current recommendations about criticizing, eg, establishing an appropriate climate by exchanging pleasantries, being clear, & being consistent. Further results showed that Ss thought they should criticize differently in one role than in the other. It is suggested that racial & gender difference in work situations be studied to determine their significance in criticism usage & style. 4 Tables, 3 Appendixes, 44 References. H. L. Stidger

Vaida, Clifford (Ohio State U, Columbus 43210), **Saving the Appearances: A Critique of Sanders' Theory of Strategic Communication,** *Research on Language and Social Interaction,* 1990-1991, 24, 389-394.

Reply, 395-404.

¶ A critique of Robert E. Sanders's *Cognitive Foundations of Calculated Speech: Controlling Understandings in Conversation and Persuasion* (Albany: SUNY Press, 1987). Problems with Sanders's basic theory–ie, that strategy is being able to anticipate what an interlocutor will say & do, & thus formulate one's entries to a dialogue so as to control the interlocutor's response–are identified as the same problems that plague all discourse-centered approaches. It is argued that there is a broader range of ways of being strategic than Sanders allows for. It is concluded that a strategic communicative practice that seeks principles upon which researchers can reflect & deliberate is likely to have more "social utility" than one that merely seeks success through applying objective grounds for interpretations. In **In Reply to Vaida and Incidentally to Heritage as Well,** Sanders (State U of New York, Albany) responds to Vaida's argument & deals specifically with constraints on options of topic & utterance. Also discussed are theories in studies of language & social interaction & aversion to such studies as proposed by John Heritage (see abstract in this section of SA 41:1). Inflated expectations of theory are delineated & it is stated that understanding the demands made on actors by the forms & structures of language & social interaction requires the exposition of principles underlying those forms & structures & their role in strategic communication. 17 References. H. L. Stidger

van den Berghe, Pierre L. (Dept Sociology U Washington, Seattle 98195), **Language and Politics in South Africa: A Response to Neville Alexander,** *South African Sociological Review,* 1990, 3, 1, Oct, 56-61.

¶ A review essay on a book by Neville Alexander, *Language Policy and National Unity in South Africa/Azania* (Cape Town: Buchu Books, 1989 [see listing in IRPS No. 66]). In Alexander's blueprint for the future of a nonracist, nonethnicist South Africa, he suggests, in utopian fashion, that the state must refrain from suppressing anyone's language rights, but at the same time should utilize English as the lingua franca & promote two neo-Bantu languages. Alexander's proposals are inconsistent with his democratic premises & with the realities of language use. Placing English as the official language reproduces the elitism that Alexander accuses Afrikaans of having; however, Afrikaans is a creole, not a European, language. A neo-Bantu language is also likely to be unsuccessful in a nation formed of indigenous national groups, eg, the Zulu, Zhosa, etc. Standardization of preeixsting languages would be preferable to syncretic languages, & a decentralized federal system with regional bilingualism & federal multilingualism is recommended. Yingling, Julie M. (Humboldt State U, Arcata CA 95521), **"Does That Mean 'No'?": Negotiating Proto-Conversation in Infant-Caregiver Pairs,** *Research on Language and Social Interaction,* 1990-1991, 24, 71-108.

¶ An analysis of the discourse between infants & caregivers demonstrating how infants resist as well as reciprocate communicative action in play routines initiated by the caregiver. Proto-conversational skills used by infants in interactions that build pragmatic frameworks for later linguistic knowledge are examined. Four infant/caregiver pairs, two mother/daughter & two mother/son, were videotaped every two weeks from the ages of 22 to 36 weeks. Each mother was told to interact normally with her child. A descriptive analysis of the discourse in these encounters is presented with a set of coherent interaction sequences emerging. Results are organized by two types of interaction contexts: caregiver trying to engage & maintain infant activity while the infant withdraws, & caregiver attempts to take a favored object & infant resists. Infant/caregiver negotiations of control are delineated. It is concluded that caregivers & infants are highly adaptive because their interpretive procedures are more dependent on interactional context than on established cultural or relational norms. 1 Appendix, 62 References. Adorno, Theodor W., The Aging of the New Music, *Telos,* 1988, 77, fall, 95-116.

Introduction, 79-94. Translated from German & edited by Robert Hullot-Kentor & Frederic Will.

¶ In **Popular Music and Adorno's "The Aging of the New Music,"** Robert Hullot-Kentor introduces Adorno's essay (first delivered as a lecture in 1954 at the Stuttgart Week of New Music (published as "Das Altern der neuen Musik," *Gesammelte Schriften* (Collected Works), Frankfurt: Suhrkamp, 1973, 143-167), reiterating his rejection of popular music & postmodernism as authentic artistic innovations. Adorno's defense of high culture is also explicated. In the essay, Adorno describes "new" or popular music in the twentieth century as distressing & confused, & contends that its aging represents not a revolt, but an ebbing away of its fundamental tensions & critical impulse. Parallels are drawn to changes in the larger society, & illustrative examples are offered to compare new music with the classical compositions of the heroic era. K. Hyatt

Barthel, Diane (Dept Sociology State U New York, Stony Brook 11770), **The Role of Science in the Production of Art,** *Current Perspectives in Social Theory,* 1992, 12, 137-153.

¶ It is argued that the concept of parallelism (ie, the interpenetration & parallel development of the cultural systems of art, science, & religion) does not adequately explain the confluence of cultural fields, & that the relationship between cultural fields must be historicized & contextualized to be adequately grasped. Literature arguing for parallelism between science & art is reviewed, & it is contended that science, in the early modern period, contributed to a rational view of society that minimized power as a force for artists to contend with in both state & civil society. The relationship between technology, architecture, & the visual arts is discussed, as is the impact of the computer on artists. It is concluded that, for both modern artists & architects, science provided not only a legitimating ideology, but also key technological innovations that spawned new artistic forms. 66 References. Cyzyk, Mark, Book Review: Zolberg's *Constructing a Sociology of the Arts*, *Berkeley Journal of Sociology*, 1991, 36, 189-193.

¶ A review essay on a book by Vera L. Zolberg, *Constructing A Sociology of the Arts* (New York: Cambridge U Press, 1990 [see listing in IRPS No. 66]). Zolberg offers an interesting topical history of the sociology of the arts, but fails to synthesize sociological & humanist approaches to the study of the production of art. The book examines the social construction of artists & the social uses of art, & offers informative summaries of the work of such sociologists of art as Diana Crane, Theodor W. Adorno, Pierre Bourdieu, & Howard S. Becker. It is argued that Zolberg's inability to synthesize sociological & humanist theory stems from her ignorance of the literature. Nonetheless, the work is recommended as a solid, if long-winded, contribution to the sociology of the arts literature. 4 References. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Goehr, Lydia (Wesleyan U, Middletown CT 06457), **Writing Music History,** UM *History and Theory*, 1992, 31, 2, May, 182-199.

¶ A review essay on books by: Carl Dahlhaus, *Nineteenth-Century Music* (Robinson, J. Bradford [Tr], Berkeley, 1989); Leonard B. Meyer, *Style and Music: Theory, History, and Ideology* (Philadelphia, 1989) & Leo Treitler, *Music and the Historical Imagination* (Cambridge, Mass, 1989 [see listings in IRPS No. 66]). Informed by methodological trends in contemporary cultural history, these three books represent attempts to reconcile the desire to treat musical works as purely musical entities, with the wish to account for the social, historical, & psychological contexts within which music is produced. Dalhaus's book describes the legacy of romanticism & the traits of nineteenth-century musical genres, focusing on how the lowbrow & highbrow traditions of opera, instrumental music, & folk music helped to create the contradictory social, aesthetic, political, & psychological myths of nineteenth-century musical culture. Meyer's book develops a historical method to explain the "elite egalitarian" ideology inherent in musical romanticism, & to understand the process of musical production. A collection of ten essays, Treitler's book offers imaginative interpretations of several musical works to illustrate his methodological arguments regarding the writing of music history. The three works are faulted for inadequately treating the conflict between the musical & the extramusical. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5405

Janssen, Margriet (U Amsterdam, NL-1012 Netherlands), **Better Little than too Much,** *Visual Sociology Review*, 1991, 6, 1, summer, 13-23.

¶ Museum restoration is discussed as a rapidly evolving profession with profound ties to the past. Roy Hesterman, restorer for the Rijksmuseum in Amsterdam, Netherlands, was the subject of a visual sociological study as he restored a Kruseman painting. Nine days of interviews & nineteen rolls of film allowed for an exploration of three themes: technical practices of restoration, the role of craftsmanship, & the restorer himself as worker. Limitations of the project are suggested, including the absence of a theoretically informed sociology of occupations, the tendency to only superficially explore the diverse themes, & the awkward use of photography during the interview sessions. 11 Photographs, 3 References. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Knulst, Wim (Netherlands Social & Cultural Planning Agency, PO Box 37 NL-2280 AA Rijswijk), **An Elitist Rearguard: An Effort to Explain Changes in the Extent and Composition of the Arts Audience in the Age of Television,** *The Netherlands' Journal of Social Sciences*, 1992, 28, 1, Apr, 72-94.

¶ A review of findings from a previous study (Knulst, W. P., "Van vaudeville tot video. Een empirisch-theoretische studie naar verschuivingen in het uitgaan en mediagebruik sinds de jaren vijftig" [From Vaudeville to Video, an Empirical-Theoretical Study of Change in Going Out and Media Use since the Fifties] Alphen ald Rijn, Samson U: 1989) on transformations in the size & composition of the audience for mass (electronic media) & high culture (concert, theater, & reading) in the Netherlands, 1955-1985. Though there is little doubt about the trend toward increasing consumption of mass-produced cultural products at home & decreasing consumption outside the home, it is not clear how these cultural forms are interrelated & what the shift from one cultural form to another may portend. The hypothesis that differences in acceptance of cultural products are based on inequality in competence & access is supported by data from nationwide surveys conducted 1962-1987, challenging the trickle-down model. 2 Tables, 4 Figures, 1 Appendix, 35 References. Kuti, Eva (Economic Research Instit, Budapest Hungary), **Review,** *Voluntas*, 1991, 2, 2, Nov, 108-113.

¶ A review essay on a book edited by Paul J. DiMaggio, *Nonprofit Enterprise in the Arts: Studies in Mission and Constraint*, New York/Oxford: Oxford U Press, 1986 (see listing in IRPS No. 66]). The role & significance of the nonprofit enterprise in the arts, & sources & ways of financing culture are examined. The high costs of & relatively low demand for live performing arts forces art organizations to rely on donations, which are more freely given to nonprofit vs profit organizations. Nonprofit organizations have also been favored by upper-class patrons of the arts striving for exclusivity & control of prestigious culture. Financing culture through independent foundations, corporate giving programs, nonprofit earnings, & government policy initiatives, eg, tax incentives & state subsidies, are discussed. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5408

Luke, Tim, The Political Economy of Colorization: Reel Rehab?, UM *Telos*, 1988, 77, fall, 127-138.

¶ In the 1980s, the US economy at large did not create new goods & services, but recycled old ones via "paper entrepreneurialism." Since filmmaking tends to be more entrenched in the logic of corporate marketing & financial management than other art forms, it is not surprising that the entertainment industry has followed the paper entrepreneurialism trend. Turner Entertainment purchased scores of old black & white films for computer colorization, viewing them as commodities to be gentrified & made more attractive to modern (paying) audiences. On the other side, film artists view mass colorization as a violation of artistic freedom & historical authenticity. Colorization sets a precedent for modernizing older films in other ways–reimaging, rewriting, rescoring, or sequelling. These possibilities raise a disturbing question about the autonomy of film as an art form in a world dominated by capitalist exchange relations. M. Pflum (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5409

Macias, José (U Utah, Salt Lake City 84112), **Informal Education, Sociocultural Expression, and Symbolic Meaning in Popular Immigration Music Text,** UM *Explorations in Ethnic Studies*, 1991, 14, 2, July, 15-31.

Comment, 31-32.

¶ Drawing on fieldwork data collected in 1987 as part of a transnational study in Mexico & Calif, the effect of a particular genre of popular *norteña* (northern) music on immigration to the US is examined. Selected examples of song texts are used to illustrate that the music is a unique way that people learn about immigration to & life in the US, thus motivating potential immigrants. Their messages support an existent belief system purporting that jobs, money, &, therefore, the solutions to problems, await north of the border. In **Critique,** Gloria Eive adds that older narrative styles of music took on new significance during the Mexican Revolution as musical outlets for expressions of popular sentiment & as anthems of nationalistic fervor; they now serve to chronicle & immortalize the events & heroes of Mexican emigration. The examples cited by Macias imply emigration to the US is an inevitable & inexorable destiny. S. Millett (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5410

Marcus, Julie (National Museum Australia, POB 1901 Canberra ACT 2601), **Postmodernity and the Museum,** *Social Analysis*, 1991, 30, Dec, 10-19.

¶ Discussed are recent theoretical challenges to the foundational con-

cepts underpinning museums–the real, its truth, authenticity, & originality. An exploration of recent Australian museum exhibitions & collections illuminates the relations of power through which museums work to create familiar historical narratives & the ways that the dynamic of naming & classifying necessarily subverts a more egalitarian discourse, which aims to challenge. 17 References. Rantala, Velkko (Dept Philosophy U Tampere, SF-33101 Finland), **The Work of Art: Identity and Interpretation,** *Semiotica,* 1991, 87, 3-4, 271-292.

¶ The links among the identity of a work of art, its interpretation, & the role of intentions are explored. After discussing the three basic aesthetics classifications for a work of art (a mental, a perceptual, or a blended mental/physical object), a fourth conceptualization of art as object of intentionality is debated, highlighting the problem of the intentional fallacy. Once it is assumed that intentional actions directly result in a work of art, it is then possible to interpret intentions to determine the art's identity. Finally, the theory developed here is tentatively applied to a musical work. In outlining the semantics & logical structure of a musical artwork, it is noted that expressive qualitities of music are subjectively, pragmatically, & textually constrained. 4 Figures, 20 References. Spassova, Pravda (Instit Philosophy Bulgarian Academy Sciences, "7 Noemvri" 1 BG-1040 Sofia), **Perspectives on Art after the Failure of Real Socialism,** *Praxis International,* 1992, 12, 2, July, 163-167.

¶ Discussed are the hopes & the prospects of changes that began under the name of *perestroika* in the socialist countries some years ago, concentrating on the optimistic predictions for the development of a flourishing cultural life in Bulgaria free of censorship. Using examples from the situation of the Polish arts, a bright & desired model, it is concluded that the sheer market valuation & orientation interfere with the existence of cultural institutions, & that even if Bulgaria succeeds in adjusting to the future global economy, the perspectives for the development of national art are minor. Modified AA

93Z5414

Taylor, Victor (Humanities Doctoral Program Syracuse U, NY 13244), **Postmodernism and the Double Question of the Frame: The Adjudication of Art as Policing and Silencing of Dissent,** *Legal Studies Forum,* 1991, 15, 4, 305-326.

¶ The fiction of Franz Kafka is drawn on to critique the postmodern notion of "framing," which refers to the grounds & rules for inquiry, defining what is inside & outside of inquiry, what is irrelevant to the scope of questioning, & where inquiry begins & ends. The legal clash between artist Robert Mapplethorpe & the legal institution is used to illustrate frames. Mapplethorpe's frame is the gay community & discussions of artistic representations. The legal frame is the legal institution & its procedures of repression, by which debate about the politics of law are foreclosed. Analysis of the clash of these two frames demonstrates that an indexical present, provided by a political art that calls for an overthrow of instantiated frames, is responsible for framing transformative moments. 27 References. Frisby, David (U Glasgow, G12 8QQ Scotland), **Between the Spheres: Siegfried Kracauer and the Detective Novel,** *Theory, Culture & Society,* 1992, 9, 2, May, 1-22.

¶ Presented is a reading of Siegfried Kracauer's *The Detective Novel,* in which a sociological theory of the spheres of reality is developed. Completed in 1925, Kracauer's book begins with a structural analysis of higher & lower spheres of human existence, & goes on to suggest that the detective novel reflects the fragmentation of meaning in modern societies. By treating the detective novel as a modern allegorical form, Kracauer offers a substantive critique of formal reason & idealist philosophy. He sees the action of the detective as a series of rational thought experiments on a reality reduced to fortuitous happenings. It is concluded that the uniqueness of Kracauer's analysis stems from his interpretation of the allegory of a world dominated by a formal rationality which guarantees that the allure of the detective novel transcends specific socioeconomic formations. 35 References. Grodin, Debra (U Louisville, KY 40292), **The Interpreting Audience: The Therapeutics of Self-Help Book Reading,** *Critical Studies in Mass Communication,* 1991, 8, 4, Dec, 404-420.

¶ An investigation of how the use of self-help books is enacted in everyday life, & how such use illuminates important aspects of women's lives in the contemporary US. Questionnaire data from 33 women in Lexington, Ky, & intensive interviews with 11 of these respondents (Rs), establish that although the self-help genre has been criticized for its recipe format, readers use self-help books in complex & quasi-empowering ways, in an attempt to extricate themselves from patriarchal authority & to establish personal autonomy. Rs simultaneously construct an experience with the texts that helps them establish a sense of what is shared among readers. This abstract notion of community provides a sense of what constitutes shared cultural knowledge, which Rs are apparently unable to glean from their everyday personal interactions. 54 References. Maciotl, Manfredo, L'arte nera: lo sviluppo della stampa a caratteri mobili in Oriente ed in Europa (Black Art: The Development of the Movable Type Printing Press in the East and in Europe), UM *La Critica Sociologica*, 1991, 99, Oct-Dec, 71-75. (ITA)

¶ The first rudimentary printing presses can be traced back to ancient China, where Tsai-Lin made a crude reusable press between 95 & 105 AD. The press arrived in Korea by 385 & in Japan by 610. After the Arab conquest of Samarkand, the press was introduced to Baghdad & Damascus, & by 1150 it was introduced to Europe through Spain. The primitive presses were xylographs made entirely of wood. Various small improvements were introduced in the three centuries prior to Johannes Gutenberg's development of a movable metallic type press in Germany between 1440 & 1450. In light of technological refinements made over this time period, it is more accurate to say that the press was invented by the Koreans. 6 References. M. Meeks

Marrouchi, M. Ben T. (U Lethbridge, Alberta TMK 314), **Literature Is Dead, Long Live Theory**, UM *Queen's Quarterly*, 1991, 98, 4, winter, 775-803.

¶ An inquiry into the relationship between literature & theory in the context of global changes taking place in print, publishing, curriculum, & literature. Only when literature is seen in its full social context rather than in purely aesthetic isolation will the needed new humanism appear. Only when we understand that literature can disappear from culture & consciousness will the dangers stand out of "hermeneutics of suspicion" which tell that the so-called great books have no meaning any longer, advocate sexist hegemony, racism, & ethnocentrism, & are the tools of cultural imperialism. Only when we understand that literature has a history, & a fairly short one, will it be clear how important it is in these parlous times for all book-centered activities to say plausible & positive things about literature once again. Eurocentrism has been challenged definitively; most scholars & students in the contemporary academy are now aware that society & culture have been the heterogeneous product of heterogeneous people in an enormous variety of cultures, traditions, & institutions. To see theory as the destroying angel sent to literature is more truthful as well as more intriguing than dyspeptic fulmination. It is concluded that literature is dead because theory is now the field where we come face-to-face with literature itself & where the real things happen. 51 References. Modified AA

Taylor, Ian (U Salford, M5 4WT Lancashire England), **The British University and the Culture of Deceit**, *Theory, Culture & Society*, 1992, 9, 3, Aug, 139-148.

¶ A review essay on a book by Ian Carter, *Ancient Cultures of Conceit: British University Fiction in the Postwar Years* (London: Routledge, 1990 (see listing in IRPS No. 66]). Carter explores the campus novel genre & the troubled state of British higher education. The campus novel, written mostly by cultural elites thoroughly indoctrinated with the ideology of Cambridge & Oxford university life, emerged as a critical response to the development of mass education. Carter examines 196 fictions published since 1945 on British university life & manners, arguing that the elite culture of Oxford & Cambridge is elaborated in postwar campus fiction as a reaction to & polemic against "barbarous proletarians," scientists, women, & foreigners (particularly Americans). The book also discusses the ideology of university life in New Zealand, North America, & Australia, & argues for improved access to higher education. 3 References. W. Howard

Aylm, Maryann (Faculty Education U Western Ontario, London N9G 1G7), **Dominance and Affiliation: Paradigms in Conflict,** *Informal Logic*, 1991, 13, 2, spring, 79-88.

¶ A review of practices in critical thinking classes & an informal sampling of TV programs & daily news events in the US leads to the argument that the dominant style of speech (male) is aggressive & confrontational & so is behavior in general. A comparison of how two conflicting paradigms–confrontation & control vs nurturance & affiliativeness–as applied to a variety of real-life issues & meanings shows that the paradigms emerge from gender patterns in language usage & behavior. Confrontation is differentiated from competition. Competition, or striving for superior quality, is seen as a necessary skill in the classroom. The search for quality does not exclude cooperative activities. Only the sense of competition as striving for something against another is inconsistent with nurturant cooperative ideals. Suggestions are made for classroom application of a nurturant-affiliative style of interaction that retains competitive skills. 20 References. Adapted from the source document. Bank, Barbara J., Biddle, Bruce J. & Slavings, Ricky L. (Center Research Social Behavior U Missouri, Columbia 65211), **What Do Students Want? Expectations and Undergraduate Persistence,** UM *The Sociological Quarterly*, 1992, 33, 3, fall, 321-335.

¶ Longitudinal data obtained via questionnaire & examination of university records for 1,017 students at a large midwestern university are used to: examine the expectancies of entering freshmen; distinguish these expectancies from 3 other types of expectations–self-labels, attributed norms, & own norms; & investigate the extent to which all 4 types of expectations predict who leaves & who stays at the university. Social expectancies were most frequently mentioned, & expectancies concerning specific positions best predicted students' persistence. On average, however, expectancies more weakly predicted persistence than did self-labels & own norms, which were shaped, in part, by attributed norms. 3 Tables, 37 References. Bless, Gérard & Amrein, Christine (Heilpädagogisches Instit U Freiburg, CH-1700 Switzerland), **The Integration of Pupils with Learning Difficulties: The Results of Research into the Effects of Integration,** *European Journal of Special Needs Education*, 1992, 7, 1, Mar, 11-19.

¶ Data obtained via questionnaires & tests administered longitudinally are used to assess social & emotional characteristics & academic achievement among 1,864 fourth- & fifth-grade students in German-speaking cantons of Switzerland, enrolled in regular classrooms, regular classrooms with additional remedial teaching for students with learning difficulties, & self-contained special classes for students with learning difficulties. The academic achievement of students with learning difficulties was clearly better if they were in regular classes with or without remedial support (ie, integrated classes). However, students with learning difficulties in integrated classrooms were less popular than nonproblem students & also assessed themselves as less popular; these students also assessed their academic skills more negatively than their classmates did. These alarming results on the social & emotional development of students with learning difficulties support self-contained classrooms, although integrated classrooms are preferable in terms of cost-effectiveness & academic achievement. Integration is encouraged, with attention to the socioemotional needs of the special students. 1 Figure, 6 References. Adapted from the source document. Boutilier, James (Dept History Royal Roads Military Coll, Victoria British Columbia V0S 1B0), **Hard Choices: Educational Dilemmas in the Pacific Islands,** UM *Anthropology and Education Quarterly*, 1992, 23, 1, Mar, 79-82.

¶ While the significance of education, particularly in terms of the priorities of small nation-states, is often overlooked, an understanding of educational issues is crucial to any appreciation of colonial domination & contemporary development in Pacific microstates. Pacific islanders have generally viewed education as a vehicle for social mobility, a nontraditional avenue to prestige, power, & opportunity. On the other hand, colonial regimes saw education as a means of: producing tractable populations, assimilating colonial peoples, serving their strategic needs, or meeting external expectations regarding the responsibilities of trustee nations. It is suggested that educational initiatives in Micronesia can be seen in these terms. Imported educational systems have been generally hostile to traditional cultures, given their roots in values incongruous with the recipient cultures. At the center of the debate is the polarity between countryside & the port town & between vocational & professional education. Underlying the debate are difficult questions with respect to choosing a langauge for formal education, providing a sufficient number of teachers & places for graduated students, & coping with the high cost of education vs illiteracy. 1 Reference. Browne, Angela W. & Barrett, Hazel R. (Dept Geography Coventry Polytechnic, CV1 5FB England), **Female Education in Sub-Saharan Africa: The Key to Development?,** *Comparative Education*, 1991, 27, 3, Oct, 275-285.

¶ Links between female education & the process of development in sub-Saharan Africa are explored, using Gambia as an example, focusing on infant & child mortality (under age 5) & agricultural production as indications of development. Gambian government & UN data suggest that if education & literacy could be enhanced, women's horticultural & other income-generating activities would be more successful, which would generate economic development. Further, the social benefits of maternal education in terms of health, nutrition, & child survival rates would also contribute to agricultural productivity. Trends in education & literacy are also discussed, noting a drop in school enrollment rates since the early 1980s, particularly among girls, & the declining public expenditure on education. 3 Tables, 1 Figure, 36 References. Carter, Carolyn (Ohio State U, Columbus 43210), **Science-Technology-Society and Access to Scientific Knowledge,** *Theory into Practice,* 1991, 30, 4, autumn, 273-279.

¶ It is argued that access to scientific knowledge & positive public perception of science are dependent on the decontextualization of science & its removal from social concerns. The decontextualization of science, which began in the seventeenth century, has resulted in a perception of science as objective & impersonal, which has had negative consequences for contemporary science education. Two science-technology-society (STS) approaches for increasing access to scientific knowledge are described, both of which endeavor to recontextualize science, situating it in culture, history, & society. It is argued that a viable STS approach will test alternatives to current structures & metaphors for science & technology instruction, & will be open to different cultural perspectives on science. 21 References. Chambers, John H., The Difference between the Abstract Concepts of Science and the General Concepts of Empirical Educational Research, UM *The Journal of Educational Thought/Revue de la Pensée Educative,* 1991, 25, 1, Apr, 41-49.

¶ The limited results achieved by empirical educational research are hypothesized to be the result of a fundamental difference between the general concepts used therein & the abstract concepts used in the natural sciences. The work of Galileo & Isaac Newton is discussed to illustrate the contrast between generalization & abstraction, demonstrating how success is achieved through the ability to penetrate the flux of observable empirical phenomena to reach universal conceptual abstractions & relations between these. Two pieces of modern empirical educational research are also discussed, arguing that such studies make use of general rather than abstract concepts of the scientific sort, which lack the possibility of the precise manipulation used in the natural sciences. 10 References. Cross, William T. (Michigan State U, East Lansing 48824), **Pathway to the Professoriate; The American Indian Faculty Pipeline,** UM *Journal of American Indian Education,* 1991, 30, 2, Jan, 13-24.

¶ A descriptive analysis of the pathway to the professoriate for American Indians is presented, using data from the National Center for Education Statistics (1990) & from a report by D. Thurgood & S. Coyle ("Summary Report 1987 Doctorate Recipients from United States Universities," Washington, DC: National Academy Press, 1989). Higher education is playing an increasingly significant role in the educational & economic development of Indian communities. Findings demonstrate that while the number of Indian students graduating from high school & choosing to attend college at both the undergraduate & graduate level has been increasing since 1976, the number of Indian students who graduate has been decreasing since 1989. Indian women have been making consistent gains in all categories of higher education, outnumbering Indian men in earning associate, bachelor, & master's degrees, & will lead men in the number of doctorates awarded if current trends continue. The fact that 33% of all master's degrees & almost 50% of all doctorates awarded to Indians are in the field of education limits the pool of possible Indian professors. Further research is recommended to identify how to cultivate additional Indian faculty & to better understand the potential contributions of Indians. 13 Tables, 15 References. Danner, Stefan, Die Relativität der Unterrichtsinhalte und die individuelle Lebenstotalität des Schülers. Über Simmels Strassburger Vorlesungen zur Schulpädagogik und ihr Verhältnis zur *Philosophie des Geldes* (The Relativity of Instructional Content and the Individual Totality of Individual Student Life. Simmel's Strasbourg Lectures on School Pedagogy and Its Relationship to *Philosophy of Money*), *Simmel Newsletter,* 1991, 1, 2, winter, 111-122. (GER)

¶ Georg Simmel's *Schulpädagogik* ([School Pedagogy] Osterwieck/Harz: Karl Hauter, 1922) is a compilation of lectures delivered at the U of Strasbourg, France, during the winter term of 1915/16. Simmel felt that they were not up to the level he would have liked them to have been & accordingly asked that they be published posthumously. In order to see the connection between his pedagogy & philosophy, particularly that in *Philosophie des Geldes* ([Philosophy of Money] see SA 8:1/606923), it is necessary to understand his relativistic viewpoint. Special attention is given to his treatment of the categories of truth & dialectic & to his anthropological presuppositions. Also discussed is his emphasis on an integrated curriculum & on the child as a whole person. 13 References. M. Meeks

Daunt, Patrick (4 Bourn Bridge Rd, Little Abington Cambridge CB1, 6BJ England), **Social and Curricular Integration–Models and Realities: Reflections on Pijl and Meijer,** *European Journal of Special Needs Education,* 1992, 7, 1, Mar, 29-35.

Reply, 36-37.

¶ This response to Sip J. Pijl's & Cor J. W. Meijer's "Does Integration Count for Much? An Analysis of the Practice of Integration in Eight Countries" (*European Journal of Special Needs Education,* 1991, 6, 2, 100-111) faults their presentations of cross-cultural statistical data & describes the need to address not only the structures but the priorities of mainstream educational systems. Pijl's & Meijer's use of E. E. Kobi's levels of integration ("Praktizierte Integration: Eine Zwischenbilanz" [Practiced Integration: A Balance], *Vierteljahresschrift für Heilpädagogik & ihre Nachbargebiete,* 1983, 52, 196-216) is discussed, & noting difficulties with the identity of particular levels & the interaction between them. It is recommended that the notion of levels be dropped entirely, because social, curricular, & psychological integration are not sequential, but parallel & interactive processes. In **The Integration Concept: Reflections on Daunt,** Pijl (U of Groningen, Netherlands) & Meijer argue for the usefulness of Kobi's model in ordering the complexities of integration. Social integration can & does precede curricular integration because it is an easier process. 7 References. Adapted from the source document.

De Lange, Rob & Rupp, Jan C. C. (c/o Rupp–Kromme Nieuwe Gracht 35A, NL-3512 HD Utrecht Netherlands), **Ethnic Background, Social Class or Status? Developments in School Attainment of the Children of Immigrants in the Netherlands,** *Ethnic and Racial Studies,* 1992, 15, 2, Apr, 284-303.

¶ The influence of social class vs social status on school attainment of Turkish/Moroccan immigrant children in the Netherlands was examined through analysis of files on all school-age children (N = 2,400) fin-

ishing their final grade of elementary school in Utrecht 1984-1986. Though the influence of immigrant background on school attainment is largely mediated by social class & status, ethnicity also has an independent effect on education. The educational motivation of immigrant families can have a positive effect as evidenced by the reasonable performance of Turkish/Moroccan schools, but can also have a negative effect as evidenced by the poorer performance of immigrant children in comparison with indigenous Dutch children at schools with a high level of aspiration. 6 Tables, 32 References. Dede, Christopher J. (George Mason U, Fairfax VA 22030), **Education in the Twenty-First Century,** *The Annals of the American Academy of Political and Social Science*, 1992, 522, July, 104-115.

¶ Possible developments in US education in the twenty-first century are discussed, focusing on the educational implications of the emergence of a global marketplace, the challenge of ethnic diversity, new methods of teaching & learning, & efforts to restructure schools. It is argued that the US's multiple educational systems have not kept pace with changes in society. The emergence of a global economy, coupled with the growing challenge of ethnic diversity, necessitates a rethinking of traditional educational paradigms. It is suggested that the development of advanced technologies for teaching, learning, & school management, in concert with the initiation of a restructuring movement to facilitate school reform, may encourage the implementation of new models for education. Despite this opportunity for reform, a future of little or no change in US education is likely. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Donsbach, Wolfgang (Pfarrer-Goedecker-Str 26, D-6500 Mainz 43 Federal Republic Germany), **Journalistikstudenten im internationalen Vergleich** (An International Comparison of Journalism Students), *Publizistik*, 1990, 35, 4, Oct-Dec, 408-427. (GER)

¶ Interview data are used to investigate differences in professional attitudes among journalism school students in 22 nations (total N = 2,640). Respondents (Rs) from Western democracies & India indicated a desire to reduce the influences of various businesses over their profession, while Rs from socialist & most Third World nations sought to reduce the influence of political parties & government paternalism. Additional differences were noted in the areas of professional prestige, & desired & actual levels of influence on public opinion. Professional motivation factors included a talent for writing, personal gratification, & altruism. In particular, students from the former West Germany tended to view their career in political terms, & were very willing to present their own subjective impressions. 10 Tables, 1 Figure. Eberhard, David R., American Indian Education: A Study of Dropouts, 1980-1987, *Journal of American Indian Education*, 1989, 29, 1, Oct, 32-40.

¶ A contrastive study of urban secondary school dropouts vs stayers among 4 cohorts (entry year, 1980-1983) of American-Indian students (total N = 368). To test hypotheses about academic achievement, family constellation, gender, family mobility, school attended, & tribal affiliation, both parents & children were interviewed. Findings show that: the dropout rate averaged 29%, which was substantially higher than that reported by the school district; between grades 9 & 12, there was a 61% attrition rate for all the cohorts; 50+% of Ss reported a tribal affiliation; academic achievement was significantly greater for stayers than dropouts; Ss from 2-parent families tended to stay in school; gender had no bearing on dropout; & Ss from families that moved were more likely to drop out. Of the 10 schools studied, a majority of Ss who dropped out were from 3 schools with a low cultural identity; Navajo students had the highest staying rate. 4 Tables, 4 References. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Edwards, Bob & McCarthy, John D. (Dept Sociology Catholic U America, Washington DC 20064), **Social Movement Schools,** *Sociological Forum*, 1992, 7, 3, Sept, 541-550.

¶ A review essay on five books by: Richard J. Altenbaugh, *Education for Struggle: The American Labor Colleges of the 1920s and 1930s* (Philadelphia, Pa: Temple U Press, 1990); John M. Glenn, *Highlander: No Ordinary School, 1932-1962* (Lexington: U of Kentucky Press, 1988); Aimee Isgrig Horton, *The Highlander Folk School: A History of Its Major Programs, 1932-1961* (Brooklyn: Carlson, 1989 [1971]); Myles Horton, *The Long Haul* (New York: Anchor, 1990); & Myles Horton & Paulo Freire, *We Make the Road by Walking: Conversations on Education and Social Change* (Philadelphia, Pa: Temple U Press, 1990 [see listings in IRPS No. 66]). These books offer insights into the success of the Highlander folk schools, which were informal grass-roots academies held in churches, beauty parlors, & homes throughout the South that were crucial to the eventual development of the civil rights movement. Glenn & Aimee Horton chronicle the development of the Highlander schools, focusing on the strategies educators used to instill in students new social & cultural values with which to build a new social order. Myles Horton offers reflections on his student days at Highlander, discusses the school's role in facilitating the Congress of Industrial Organizations' insurgency during the 1930s, & accounts for the withering of the school's ties with organized industrial unionism. Horton & Freire outline a methodology of adult education, based on the Highlander model, that fosters progressive social change. Altenbaugh's book, though primarily about three of the most widely known labor colleges, provides many penetrating insights into the reasons for Highlander's survival. 8 References. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Eisner, Elliot W. (Stanford U, CA 94305), **Educational Reform and the Ecology of Schooling,** *Teachers College Record*, 1992, 93, 4, summer, 610-627.

¶ Numerous efforts to reform the US education system have been made. Despite enthusiasm for President Bush's reform agenda--announced at a 1988 educational summit of the nation's governors & high-ranking educators--little has changed in US schools. The conditions that make change difficult are described, including institutional durability, internalization of teachers' roles, attachment to familiar pedagogical routines, enduring standards for appropriate behavior, teacher isolation, conservative expectations for the function of schools, the distance between reformers & teachers implementing change, & artificiality of barriers between disciplines & between teachers. A framework for developing a more effective reform agenda is presented, based on intentions, structure, curriculum, pedagogy, & evaluation. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5443

Falgout, Suzanne, Hierarchy vs. Democracy: Two Strategies for the Management of Knowledge in Pohnpei, *Anthropology and Education Quarterly*, 1992, 23, 1, Mar, 30-43.

¶ Theories of knowledge & strategies for cultural transmission implicit in Pohnpei (Micronesia) & US models of education are compared, & the unintended results of foreign schooling efforts in Pohnpei described, based on 1980-1982 fieldwork. It is contended that, implicit within each education model, are different epistemological assumptions & strategies for the transmission of knowledge that are more or less consistent with a culture's sociopolitical ideals, including unique concepts of self & guidelines for proper social interactions. Social hierarchy & its importance in traditional Pohnpei society are highlighted, as are differences in the traditional Pohnpei model of hierarchy among persons & knowledge & the US-based model of democratic schooling that still exists on the island. The analysis shows that US-style schooling has wrought dramatic transformations in traditional Pohnpei knowledge & society, & has

played a large part in altering not only the content of knowledge held by the Pohnpei people but also their understandings of its nature, value, & uses. It has also significantly contributed to changes in Pohnpei concepts of personhood, gender, & status, & styles of social interaction. 21 References. Adapted from the source document.

Fergusson, D. M., Lloyd, M. & Horwood, L. J. (Dept Paediatrics Christchurch Hospital, New Zealand), **Family Ethnicity, Social Background and Scholastic Achievement–An Eleven Year Longitudinal Study,** *New Zealand Journal of Educational Studies,* 1991, 26, 1, May, 49-63.

¶ The relationship between family ethnicity & measures of cognitive ability, achievement, & school performance was studied in a cohort of 1, 265 children born in Christchurch, New Zealand, in 1977. Analysis reveals consistent tendencies for children of Maori & Pacific Island background to achieve lower scores on a range of measures, including verbal intelligence, word recognition, reading comprehension, mathematical ability & teacher ratings of mathematics, written expression, reading, & spelling. However, ethnicity was unrelated to measures of performance intelligence obtained from the WISC-R. After adjustment for a range of socioeconomic factors, there were no significant associations between ethnicity & test scores, suggesting that the apparent associations between these factors were largely socioeconomic in origin. Implications of these results are discussed, with emphasis on the effects of regional variations on correlations between ethnicity & school achievement. 5 Tables, 27 References. Adapted from the source document.

93Z5445

Fischer, Frank & Mandell, Alan, Relegitimating Meritocracy: Educational Policy as Technocratic Strategy, UI *Telos,* 1988, 76, summer, 50-64.

¶ The contemporary crisis in US education has been the subject of numerous studies, many of which have proposed policy recommendations (often in sharp contrast to each another). It is argued here that the ways in which the crisis is defined & the assumptions that underlie the definition are dubious at best. Some of the most widely shared assumptions suggest that: schools should function as the path to success in this high-technology era, declining test scores document school failure, & therefore, schools should augment students' training in & commitment to civic values. The unity of these premises & their questionable basis in fact–as well as their ideological transformation into policy-linked values, eg, excellence & meritocracy–are critically examined. M. Maguire

Flinn, Juliana (U Arkansas, Little Rock 72204), **Transmitting Traditional Values in New Schools: Elementary Education of Pulap Atoll,** UI *Anthropology and Education Quarterly,* 1992, 23, 1, Mar, 44-58.

¶ Drawing on 1979/80 field data for the people of Pulap, an atoll in Chuuk State (Micronesia), the role of indigenous culture in transforming schooling is explored. With the introduction of new jobs, goals, attitudes, & social problems, schooling in Chuuk has experienced significant change. Education is necessary for many jobs, & the education system itself is the single largest employer. Despite the introduction of the US educational model after WWII, Pulapese values, attitudes, & standards of behavior are transmitted along with the new ideas & aspirations by local teachers. The school is far from the central Micronesian administration, & the Pulapese maintain primary control over their education system. It is suggested that, both deliberately & accidentally, the Pulapese have transformed the Western schooling model to a form more consistent with their own culture. However, while Pulapese schooling contributes to maintenance of cultural identity & pride, it does not encourage the critical thinking & individualism valued in US education, particularly at the college level, putting Pulapese who choose to attend college in the US at a disadvantage. 16 References. Freeman-Moir, John & Scott, Alan (U Canterbury, Christchurch 1 New Zealand), **Looking Back at Education: The Abandonment of Hope,** *New Zealand Journal of Educational Studies,* 1991, 26, 2, Nov, 109-124.

¶ A working-class balance sheet is offered of educational as well as socialist hopes & frustrations for the modern period of capitalist development, WWII-present, in New Zealand. It is contended that, during the past two decades of capitalist crisis & restructuring, the liberatory hopes of social democracy have either collapsed or been destroyed. The talk of equal opportunity & free public education during these postwar years was overinflated. Under the most favorable possible conditions during the long economic boom, even the most liberal of capitalist societies still operated with education systems that restricted access & achievement for working-class children in myriad ways, & in particular, in New Zealand, for girls, Maori, & migrants. The repressive nature of education & its contradictory aspirations for real democracy are evaluated with respect to the failure of the socialist movement, & of progressive intellectuals, to successfully articulate a socialist politics aimed at abolishing capitalism & the capitalist state. Garcia-Ruiz, Jesús (Groupe sociologie religions CNRS, F-75700 Paris France), **El misionero, las lenguas mayas y la traducción: nominalismo, tomismo y etnolingüística en Guatemala** (The Missionary, Mayan Languages, and Translation: Nominalism, Thomism, and Ethnolinguistics in Guatemala), *Archives de sciences sociales des religions,* 1992, 37, 77, Jan-Mar, 83-110. (SPA)

¶ An exploration of the controversy surrounding the translation of the Roman Catholic catechism to Guatemalan indigenous languages in the sixteenth century, drawing on historical documents & fieldwork in modern Quiche & Cackchiquel communities. The Inquisition had forbidden the translation of the gospel into native American languages, but Franciscan & Dominican missionaries renounced this ban & learned pre-Hispanic languages in order to develop dictionaries & translate catechisms. However, the publication of a dictionary of Guatemalan languages & native-language catechisms in 1551 sparked a confrontation between these orders. Franciscans, imbued with philosophical nominalism, argued that one word could not be substituted for another because the concept could not be separated from the terminological implications. The Dominicans considered the concept autonomous & not dependent on the word that expressed it. Resulting ethnolinguistic & semantic problems are analyzed. 1 Map, 50 References. Gaude, Peter & Leischulte, Dietmar (Wissenschaftliches Prüfungsamt, Kantstr 163 D-1000 Berlin 12 Federal Republic Germany), **Systemberatung in der Praxis–Funktionstraining für Schulräte** (System-Oriented Counseling in Practice–A Training for Becoming a School Inspector), *Pädagogik heute,* 1991, 43, 10, Oct, 34-38. (GER)

¶ Based on a new concept of school psychology called *Systemberatung* (system-oriented counseling) developed by Peter Gaude (*Schulpsychologie in Berlin–actueler Stand und Perspektive für die 90er Jahre* (School Psychology in Berlin–Present Status and Perspective for the 1990s), Berlin, 1986), a training program for future school inspectors in Germany is described. The two major guidelines of *Systemberatung*–(1) prevention is better than reaction, & (2) multiplication of resources & competences is better than division–are the guidelines of the training program. After giving theoretical & practical reasons for training future school inspectors before they reach that position, the elements & methods of the curriculum are outlined. A preliminary evaluation is offered, based on the reactions of the pupils & the experience of the trainers. 1 Figure, 2 Photographs, 11 References. AA

Gillborn, David (Division Education U Sheffield, S10 2TN England), **Citizenship, 'Race' and the Hidden Curriculum,** *International Studies in Sociology of Education,* 1992, 2, 1, 57-73.

¶ The systematic exploitation of black people by whites is revealed by exploring how hidden curriculum teaches English students powerful lessons about the second-class citizenship of blacks. Using qualitative data from 2 years of fieldwork in 2 comprehensive schools in the UK, the role of teachers, one that reflects many complex influences but is open to change, is explored. Rather than focusing on ideal types & models that present the UK as a positive example of a pluralist state, lessons are highlighted that, through the hidden curriculum, the schools are already teaching about citizenship for black people. 54 References. Gleeson, Denis (Dept Education U Keele, Staffordshire ST5 5BG England), **School Attendance and Truancy: A Socio-Historical Account,** UI *The Sociological Review,* 1992, 40, 3, Aug, 437-490.

¶ Considered are ways in which truancy, as a form of social exclusion, has its origins in the history & politics of compulsory education in the UK. A sociohistorical account of school attendance is given, & various sociohistorical & policy perspectives on the evolving relationship between the state, family, economy, & schooling are reviewed. Despite much rhetoric regarding the superiority of schooling a century ago, it is argued that there was no "golden age" of schooling against which modern educational practices can be compared & judged. The analysis also considers the strategic role of the family in delivering state education policy, focusing on women, welfare, & the law, & investigates issues regarding mass education. It is concluded that: the explanation of truancy as a form of individual pathology is over-simplistic, universal secondary education for all is a relatively recent concept, & patterns of school attendance have remained consistent over time. 165 References. Gmelch, Walter H. & Carroll, James B. (Educational Administration Dept Washington State U, Pullman 99164), **The Three Rs of Conflict Management for Department Chairs and Faculty,** *Innovative Higher Education,* 1991, 16, 2, winter, 107-123.

¶ Modern management techniques espouse principled conflict as something to be encouraged in a productive organization. In higher education, however, the view persists that intrainstitutional conflict is destructive & should be eliminated. The goals of principled resolution of conflict are to recognize the nature & causes of the conflict, explore response options, & practice principled conflict resolution, which includes agreement, positive outcomes for participant interactions, expediency, & effectiveness. This application of management techniques should be useful to department chairs who generally lack management training, but intuitively understand creative conflict. 2 Tables, 2 Figures, 24 References. Gonzalez, Andrew (De La Salle U, D-406 Manila 1004 Republic Philippines), **Higher Education, Brain Drain and Overseas Employment in the Philippines: Towards a Differentiated Set of Solutions,** *Higher Education,* 1992, 23, 1, Jan, 21-31.

¶ After describing the mismatch between manpower needs & the output of the higher education system in the Philippines, solutions are proposed that vary according to the nature of the problem, ie, oversupply or undersupply of trained graduates for certain fields. The problem with regard to employment of needed personnel in specific fields is not so much lack of numbers, but rather, maldistribution of talent away from the rural areas where they are most needed in favor of urban centers, particularly metropolitan Manila. Overseas employment is suggested as a viable option for oversubscribed professions, given its source of foreign exchange & a natural way of population control. A system of incentives linked to a period of mandatory service is proposed for undersubscribed professions, after which the beneficiary may exercise her/his options. It is concluded that, by allowing market forces to dictate development, government planning programs in many areas have failed. However, some government intervention in professions like health care is necessary to fund a system of incentives providing student aid in exchange for a period of service in underserved areas after graduation. 36 References. Gordon, Liz (Education Dept U Canterbury, Christchurch 1 New Zealand), **Educational Reform in New Zealand: Contesting the Role of the Teacher,** *International Studies in Sociology of Education,* 1992, 2, 1, 23-42.

¶ It is argued that the recent educational reforms in New Zealand, which have been informed primarily by neoliberal views of the role of education & the state, are designed to remove teachers from their professional role in all aspects of the education system, & to proletarianize them into a reduced role, merely as classroom teachers. The antidemocratic nature of these policies excludes teachers from central policy processes, undermining new democratic alliances that teachers have built within civil society, especially with trustee boards & school communities. Implications of these alliances are briefly discussed. 48 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Gordon, Tuula (Dept Sociology U Helsinki, SF-00500 Finland), **Citizens and Others: Gender, Democracy and Education,** *International Studies in Sociology of Education,* 1992, 2, 1, 43-56.

¶ While Western women have achieved a legal personality & citizenship, the idea of them as "individuals" is still problematic, especially in the construction of the individual as a citizen. It is argued that citizens as individuals is a masculine construction within structures of power that marginalize some groups as "others." By looking at progressive education, the tensions generated by possibilities & limitations of individualism, & antisexist initiatives & the difficulties they encounter, equality is shown to be an elusive & contradictory strategy. Drawing on implications of the development of Nordic welfare states for women, the debate on the feminization of schools in Finland & its problematic effects on boys are discussed. The particular role that women play through the semiprofessions in the welfare state, based on the female power of prohibition, is also explored. 43 References. Adapted from the source document. Grasmick, Harold G., Morgan, Carolyn Stout & Kennedy, Mary Baldwin (Dept Sociology U Oklahoma, Norman 73019), **Support for Corporal Punishment in the Schools: A Comparison of the Effects of Socioeconomic Status and Religion,** UI *Social Science Quarterly,* 1992, 73, 1, Mar, 177-187.

¶ Hypotheses linking variation in public support for corporal punishment in the schools to social class & to religion are developed & tested using data obtained in 1989 via interviews with 330 adults living in a southern US metropolitan area. Results support the hypothesis that individuals affiliated with fundamentalist Protestant denominations are more supportive than others of corporal punishment in the schools; other Protestants do not differ from Catholics or from those claiming no religious affiliation. While socioeconomic status (SES) has some direct effect on support for corporal punishment, its effects are important only in the form of respondent's level of education. This suggests that SES functions not in terms of occupational experiences or financial resources, but rather, in terms of attitudes & beliefs that are linked to educational attainment. It is contended that the greater support for corporal punishment in the schools among fundamentalists might be one manifestation of a more general punitive attitude. 2 Tables, 36 References. Haddad, Yahya (Sociology Dept Kuwait U, 13060 Safat), **Arab Universities: Goals and Problems,** *Journal of Arab Affairs,* 1992, 11, 1, spring, 91-105.

¶ The goals of Arab universities are: (1) transmission of knowledge & preservation of Arab culture; (2) preparation of leaders & specialists for the human resource demands of development; (3) promotion of modernization through development of youth; & (4) promotion of research, particularly to solve economic & social problems. In large measure, the Arab university is dependent on the West for production of knowledge & information & the language of instruction. This trend is countered by

increasing use of Arabic as a medium of instruction; establishment of a research tradition for production has made progress but has not entirely met the manpower challenge of development. Acute shortages exist, particularly in the fields of medicine, science & technology, agriculture, & engineering. Arab universities have borrowed rather than developed their own educational systems, curricula, & teaching methods, & have had little modernizing impact. Arab universities have emphasized teaching, & promotion of research has fallen short of their goal. 15 References. D. Generoli

Hansen, Marianne Nordli & Rogg, Elisabet (Instit sosiologi U Oslo, Blindern N-0316 3 Norway), **Høyere utdanning i Norge. Rekruttering, finansiering og omfordeling** (The Educational System in Norway. Recruitment, Financing, and Redistribution), *Tidsskrift for samfunnsforskning*, 1991, 32, 5, 387-416. (NOR)

¶ Recent developments in social inequality in higher education in Norway are examined, drawing on recruitment & enrollment statistics for 1977-1985. Results show that: inequality in recruitment to higher-level university education has been high & persistent over time; students studying abroad in 1977 closely resembled the student body as a whole, while in 1986, students abroad were disproportionately from the higher social classes (SCs); & among students in general, government financial support was spread equally among students from different SCs in 1977, but in 1986, more financial support was received by students from higher than from lower SC backgrounds. These results indicate a redistribution of economic resources from the lower to the higher SCs. It is concluded that as the number of students increased during the economic recession, support for each student declined, with greater consequences for potential students from the lower SCs. 4 Tables, 4 Figures, 1 Appendix, 44 References. Hartmann, Michael (Ruhr-U Bochum, D-4630 Federal Republic Germany), **Entwertung von Expertenwissen und Bildungsexpansion–Akademikerrekrutierung, Datenbankeinsatz und duales Ausbildungssystem in der Versicherungswirtschaft** (Devaluation of Expert Knowledge and Educational Expansion–Recruitment of Graduates, Databank Usage and the Dual Training System in the German Insurance Industry), *Zeitschrift für Sozialisationsforschung und Erziehungssoziologie*, 1992, 12, 1, Jan, 80-96. (GER)

¶ To investigate both university education & company-sponsored training as two tracks for professional advancement, interview data were obtained from medium-sized & large insurance companies in 8 regions of Germany. Analysis of the expansion of the university system since the 1960s together with databank usage in the insurance industry shows 3 main patterns: (1) despite the devaluation of a university education in light of the simplification of many tasks by computers, there is still a trend toward recruiting college graduates; (2) training continues to be offered through both tracks, although the % of recruits coming from the universities continues to grow; & (3) the trend toward hiring more college graduates is not linked to any changes in the nature of the job. 29 References. Hughes, David & Lauder, Hugh (Education Dept U Canterbury, Christchurch 1 New Zealand), **Human Capital Theory and the Wastage of Talent in New Zealand**, *New Zealand Journal of Educational Studies*, 1991, 26, 1, May, 5-20.

¶ Recent reforms in tertiary education, which stress the need for cost-effective promotion of economic growth in the tertiary (service) sector, are examined in relation to a New Right version of human capital theory. Data from the 1982 Christchurch (New Zealand) School Leavers Study (N = 2,753 secondary school students) demonstrate that a massive waste of talent will be exacerbated as a result of the reforms. Human capital theory is assessed, & its underlying assumptions–expecially the denied importance of class in economic analysis–are found to deviate dramatically from social reality. Discussion of New Zealand's continuing class-dependent talent waste, which predated the introduction of the recent user-pays reforms, further suggests the proposed reforms' theoretic poverty. 5 Tables, 48 References. Adapted from the source document.

Hurtado, Sylvia, Astin, Alexander W. & Dey, Eric L. (Dept Sociology U California, Los Angeles 90024), **Varieties of General Education Programs: An Empirically Based Taxonomy**, *The Journal of General Education*, 1991, 40, 133-162.

¶ To address concerns about distinct student outcomes resulting from the differentiation of college curricula for general education, a taxonomy of current approaches to general education was constructed from the formal academic policies at 322 US 4-year institutions, per their catalogues. Factor analysis identified 4 distribution-based types of curricula: diverse offerings, personalized/individualized, integrative/interdisciplinary, & structured. Some institutions had more than one curiculum type, with large institutions more likely to have diverse curricula characterized by many options & a general education program with an interdisciplinary core. The formal academic policies were compared to findings of surveys of 17,161 college students in 1985, & a follow-up in 1989, regarding student behavior & perceptions of academic environments. Student surveys indicate that, on the aggregate, institutional intentions were reflected in actual student behavior, & that each curricular approach had fairly defined goals for student outcomes. These results show that curriculum differentiation has been extensive & will continue despite attempts to curtail it. 5 Tables, 1 Appendix, 20 References. M. Pflum

Jaenen, Cornelius J. (U Ottawa, Ontario K1N 6N5), **Schools as Agencies of Assimilation: The Case of English-Ruthenian Bilingual Schools in Manitoba, 1897-1916,** *Studi Emigrazione/Etudes Migrations,* 1991, 28, 103, Sept, 407-421.

¶ Public schooling has served as both product & agent in the process of creating a national identity. In nineteenth-century Canada, it was thought that assimilation of new immigrants would materialize as their children were socialized in "national schools," which were charged with administering political indoctrination based on a Christian ethos & principles of efficiency. By the late nineteenth century, the impact of these ideological issues was increasingly evident, as immigrants came from Eastern European countries whose languages & cultures differed. Close scrutiny of the fight for English-Ruthenian bilingual education in Manitoba demonstrates how the debate about multilingual education was inescapably informed by the assimilationist agenda. M. Maguire

Kadri, Aïssi (Dept sociologie U Paris VIII, F-93526 Saint Denis Cedex 02 France), **De l'université coloniale à l'université nationale. Instrumentalisation et "idéologisation" de l'institution** (From the Colonial to the National University. Instrumentalization and "Ideologization" of This Institution), *Peuples Méditerranéens/Mediterranean Peoples,* 1991, 54-55, Jan-June, 151-184. (FRE)

¶ Reform introduced in 1971 into Algerian higher education was intended to cut all ties with the colonial past, & included a restructuration of the academic year, changes in administration & management, & ideologization & Islamization of study materials. It is observed that several drawbacks resulted from the reform: eg, students acquired superficial knowledge on too many subjects, conflicts emerged between the political & pedagogic administration, & excessive centralization occurred. It is concluded that the institutionalization/nationalization reform process in fact led to deinstitutionalization, with higher education controlled by an internal Arabophone circle. 38 References. Lang, Marvel (Center Urban Affairs Michigan State U, East Lansing 48824), **Barriers to Blacks' Educational Achievement in Higher Education: A Statistical and Conceptual Review,** UM *Journal of Black Studies,* 1992, 22, 4, June, 510-522.

¶ Census & other data are used to examine recent trends in the educational achievement of blacks at the secondary & postsecondary levels, presenting a statistical & conceptual summary of factors that affect their educational achievement. Findings show that the % of blacks enrolling in colleges declined 1976-1985, from its peak in the late 1970s. The black male college enrollment decline exceeded that of females. It is argued that a major problem is getting black youths to make the transition from high school graduation to college enrollment, & to stay in college through graduation. Barriers & obstacles relevant to these problems include: college admission exams & requirements, academic preparation, family financial resources & socioeconomic status, & institutional factors. Issues for further research are discussed along with intervention strategies for improving the access, retention, & success of blacks in education systems. 18 References. AA

Leach, Mary S. (Ohio State U, Columbus 43210), **Can We Talk? A Response to Burbules and Rice,** UM *Harvard Educational Review,* 1992, 62, 2, summer, 257-263.

Reply, 264-271.

¶ The feminist universal sisterhood has splintered into different "voices," but the differences between those voices have not been absorbed into some universalizing discourse. In "Dialogue across Differences: Continuing the Conversation" (*Harvard Educational Review,* 1991, 61, 4, 393-416), Nicholas C. Burbules & Suzanne Rice set up conditions necessary to establish & maintain a dialogue across differences. Unfortunately, their approach reinscribes an individualist picture of social relations with its consequences of unequal educational practices, & prescribes communicative virtues that are too closely related to gender. Feminist teachers in the developing world would see their conditions for attitudinal engagement as encouraging an empty pluralism, insensitive to complex ethical & political issues. Feminists are only at the starting point of dialogue, not at a continuation as Burbules & Rice suggest. In **Can We Be Heard? A Reply to Leach,** Burbules & Rice (U of Illinois, Urbana) contend that Leach has badly misinterpreted their position, as they do not espouse a liberal humanism. Their approach to communicative virtues is neither individualistic nor does it contain gender-related styles of self-presentation. Their virtues perspective has a critical dimension in challenging how institutions have been created as barriers against both men & women enacting the full range of communicative virtues. M. Pflum

Lee, Valerie E. & Marks, Helen M. (School Education U Michigan, Ann Arbor 48109), **Who Goes Where? Choice of Single-Sex and Coeducational Independent Secondary Schools,** UM *Sociology of Education,* 1992, 65, 3, July, 226-253.

¶ In the US, where single-sex education is an option only in the private sector, previous research has focused on Catholic schools. Introducing a new population to single-sex school research, examined here is the entire 1989 senior class (3,183 students) in each of 60 secondary schools selected as a stratified random sample of girls', boys', & coeducational independent schools. Data drawn from questionnaires, school records, field notes, & classroom observations are used to explore personal, demographic, & educational characteristics of families & students, as well as their reasons for selecting the particular school they attend, focusing on selection differences by gender. Analysis reveals that a family tradition for private schooling (mostly single-sex) & a religious orientation characterize students who select the single-sex school option. 5 Tables, 1 Appendix, 61 References. Adapted from the source document.

Levin, Paula (Teacher Education Program U California San Diego, La Jolla 92093), **The Impact of Preschool on Teaching and Learning in Hawaiian Families,** UM *Anthropology and Education Quarterly,* 1992, 23, 1, Mar, 59-72.

¶ Ways in which having a child attend preschool transforms teaching &

learning at home are examined in terms of the cultural models that adults have about these learning interactions, based on narratives (N = 77 families) collected as a part of a multidisciplinary effort to develop preschool programs for native Hawaiian children. It is assumed that the study of culture & cognition must explore the organization of social relations in which cognitive activity takes place; thus, analyzed here is how native Hawaiian parents organize their children's learning of household skills (chores) & skills needed to prepare children for school. Findings indicate that the models for such learning in low-income Hawaiian families produce difficulties both at home & at school, & that many native Hawaiian children come to school ill prepared. The school "scripts" that parents have adopted to prepare children for preschool appear to disrupt the comfortable management of adult-child relations in the home & to inhibit the acquisition of literacy skills at home. 1 Figure, 16 References. MacLean, Brian D., The Emergence of Critical Justice Studies in Canada, *Humanity and Society*, 1992, 16, 3, Aug, 414-426.

¶ The development of critical justice studies (CJS) in Canada is examined via an analysis of the pedagogical context from which it emerged. CJS represent an attempt to develop a distinctly Canadian tradition of justice studies, an attempt that was facilitated by the expansion of postsecondary education during the 1960s & 1970s. In the early 1970s, the Canadian Political Economy Network gained widespread acclaim for its historical analyses of the development of the Canadian labor movement. The development & current state of criminology is discussed, along with the rise of legal studies in the 1980s. Primarily through the creation of a group of criminologists who stressed the notion of establishing a multidisciplinary organization committed to broader studies of social justice in Canada, practitioners of CJS came into their own in the mid-1980s, forming the Human Justice Collective & founding the *Journal of Human Justice*. 2 Tables, 16 References. Mehran, Golnar (30th St Park Ave #98, Tehran 15119 Iran), **Social Implications of Literacy in Iran,** UM *Comparative Education Review*, 1992, 36, 2, May, 194-211.

¶ An analysis of literacy education in the Islamic Republic of Iran & its role in educating, Islamizing, & politicizing the adult population, to determine whether literacy training has served as an element of stability or of social change since the 1979 revolution. Discussion includes: the nature & definition of literacy; curricular & textbook content; the moral-political criteria for the selection of instructors; the composition of the participants on the basis of age, gender, & occupation; the impact of obligation vs free will on enrollment in classes; & reasons for & obstacles to the literacy movement's success. It is concluded that literacy education in Iran is limited to teaching the "three R's" & does not include any occupational, technical, or vocational training. The priority is disseminating information about religious matters & approved ideological-political issues. As such, literacy education has served as an agent of social change aimed at transforming values. On the other hand, it has served as an element of stability as an official socialization agent serving to strengthen the ruling ideology & advocate its religiopolitical principles. Modified AA

Miller, Peter (Dept Accounting & Finance London School Economics & Political Science, WC2A 2AE England), **The Tavistock Mission: A Review Essay,** *Human Relations*, 1992, 45, 4, Apr, 411-426.

¶ A review essay on a book edited by Eric Trist & Hugh Murray, *The Social Engagement of Social Science: A Tavistock Anthology, Volume I: The Socio-Psychological Perspective* (Philadelphia: U of Pennsylvania Press, 1990 [see listing in IRPS No. 66]). Given that theoretical models are rarely adhered to universally, it is to the editors' credit that GB's Tavistock model or school is allowed to remain an elusive entity by identifying it among differing intellectual perspectives; ultimately, the three-volume set will also include sociotechnical & -economical perspectives. The current volume is carefully & thoughtfully divided to capture the distinctiveness of the post-WWII movement: wartime legacies, varied group processes, family transformations, organizational change, & the macrolevel concern with the unconscious in culture & society. Morais, Ana, Fontinhas, Fernanda & Neves, Isabel (Faculty Sciences U Lisbon, P-1700 Portugal), **Recognition and Realisation Rules in Acquiring School Science–The Contribution of Pedagogy and Social Background of Students,** *British Journal of Sociology of Education,* 1992, 13, 2, June, 247-270.

¶ In an investigation of the impact of social class (SC) factors on students' recognition & realization skills in science problem solving, 80 Portuguese students ages 10-12 from a working-class area of Lisbon were assigned to 3 groups, & were taught natural sciences using 3 pedagogic practices. In a subject-matter questionnaire & a subsequent interview, students selected answers to science questions, indicating the "best way of thinking" on that question, & explained their choices. Questionnaires from parents provided sociodemographic data. It was found that SC was strongly related to recognition rules & to task realization. Children of lower SC were found less competent. The different pedagogic practices had both a general & a gender differential impact. Implications for development of pedagogic practices are discussed. 22 References. Morcellini, Mario (Dipt sociologia U Roma, I-00185 Italy), **Il diploma universitario come "segno di contraddizione." Tradizione e modernizzazione dei titoli di studio nel campo delle scienze umane e sociali** (The University Diploma as a "Sign of Contradiction." Tradition and the Modernization of Academic Degrees in the Humanities and Social Sciences), *Sociologia e Ricerca Sociale,* 1992, 13, 37, May, 41-52. (ITA)

¶ An assessment of the types of degrees offered to students of the social sciences & humanities at Italian universities. Special attention is given to reforms introduced on 1 Nov 1992, establishing a "first-level" prebaccalaureate degree. Noted is the previous absence of options during the initial years of study, & the lack of instruction in communication sciences. The gap between academic & professional culture is noted. Unnecessary overlap is noted in the course offerings of many social science & humanities departments. Suggestions are offered for the elimination of wasteful duplication of effort, so that financial resources can be channeled into more productive endeavors, including the creation of a second tier of postsecondary institutions, providing a more diversified approach than the traditional university. 4 Tables. O'Sullivan, Denis (Dept Education University Coll Cork, Republic Ireland), **Socialisation, Social Change and Ideology in Adult Education,** UM *The Journal of Educational Thought/Revue de la Pensée Educative,* 1991, 25, 3, Dec, 222-227.

¶ Drawing on relevant literature, some concepts from adult socialization theory are examined, focusing on their utility for how adult education is understood, particularly with respect to social change & ideology. In contrast to the notion that socialization emphasizes the individual's adjustment to society to the exclusion of consideration of any ideological basis, it is contended that concepts from socialization theory, when appropriately used, can significantly contribute to the analysis of ideology in adult education. Concepts relating to role socialization, reality maintenance, cultural violence, misrecognition, & legitimation provide a basis for discussing opposing viewpoints. Further consideration & development of ideology in adult education thought & practice are recommended. 6 References. S. Millett (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Ozga, Jenny (Faculty Education Bristol Polytechnic, BS6 6UZ England), **Review Essay: Education Management,** *British Journal of Sociology of Education,* 1992, 13, 2, June, 279-280.

¶ In lieu of discussing the education management literature in the UK itself, the quality of the ample available material on the subject is reviewed. A prevailing text type in the post-education-reform era in the UK is the "survival guide," which offers basic information on new school procedures & processes, & elementary advice on management. Unfortunately, these books lack relation to the external policy context, or to theoretical frameworks, & they fail to adequately consider ethics & values. They create the misleading impression that education is manageable solely with adequate knowledge of procedures. Historically, it is suggested, the literature on education management has grown without reference to sociology of education or of organizations. Research on the historical context of education management is also absent. 4 References. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Paget, Karen (U California, Berkeley 94720), **Diversity at Berkeley: Demagoguery or Demography?,** *The American Prospect,* 1992, 9, spring, 107-119.

¶ A discussion of ethnic diversity at the U of California, Berkeley (UCB), focusing on issues relating to affirmative action, multiculturalism, & demographic trends in higher education. One of the most ethnically diverse universities in the US, UCB has been criticized recently for admitting minorities with academic records inferior to those of many Asians & whites who were not admitted. University officials have maintained that the achievement of greater diversity has not come at the cost of quality, but critics have argued that the politicization of retention rates, coupled with a facile use of statistics & other measures of quality, has distorted the reality of UCB campus life. Several arguments for & against multiculturalism are reviewed, & a trend toward justifying a diverse student body for civic & social reasons, rather than as a compensatory response to past degradation & discrimination, is identified. Persell, Caroline Hodges, Catsambis, Sophia & Cookson, Peter W., Jr. (Dept Sociology New York U, NY 10003), **Differential Asset Conversion: Class and Gendered Pathways to Selective Colleges,** UM *Sociology of Education,* 1992, 65, 3, July, 208-225.

¶ (A substantially revised version of "Gender, School Type, and Selective College Attendance: Comparing Status Attainment and Status Allocation Theories of Stratification" [see SA 37:6/89S21646/ASA/1989/5462].) Pierre Bourdieu's theory of cultural capital conversion is expanded by specifying a mechanism of differential asset conversion that illuminates the gendered postsecondary educational attainment of females (Fs) & compares it with that posited for males (Ms) in status attainment theory. Data from the 1980-1986 High School & Beyond survey, & 1982/83 secondary survey data on 1,057 seniors at 289 secondary boarding schools, young Fs' economic, cultural, & educational assets generally convert to attendance at postsecondary institutions & selective colleges at lower rates. Thus, Fs need to have more of these assets, along with additional ones to achieve the same attainments as Ms. Overall, there are major differences in the postsecondary outcomes of students who attend public & elite private boarding schools; attending the latter appears to minimize the gendered pathways to postsecondary institutions & selective colleges. 6 Tables, 6 Figures, 78 References. Philips, Susan U. (Dept Anthropology U Arizona, Tucson 85721), **Colonial and Postcolonial Circumstances in the Education of Pacific Peoples,** UM *Anthropology and Education Quarterly,* 1992, 23, 1, Mar, 73-78.

¶ Three types of colonial status relevant for understanding Pacific societies (newly independent nations, colonial territories of Western nations, & former colonies now incorporated into Western nations) are distinguished, & the impact of that status on their educational processes is examined. The discussion focuses on other articles in this journal issue (see abstracts in SA 41:1) that offer examples of the historical dialectic between colonial powers & indigenous populations in the Pacific, where education is perceived by local elites & colonialists as the key to economic development. The articles demonstrate that indigenous forms of internal social differentiation & highly valued local intellectual traditions play a significant role in the interaction between indigenous & Western forms of education. It is suggested that these aspects of life enter into the analysis of education in such communities in a manner that they do not, & perhaps cannot, in the analysis of education of ethnic minorities. 6 References. Pittman, Robert B. (School Education & Psychology Western Carolina U, Cullowhee NC 28723), **Social Factors, Enrollment in Vocational/Technical Courses, and High School Dropout Rates,** *Journal of Educational Research,* 1991, 84, 5, May-June, 288-295.

¶ Follow-up data from the 1982 wave of the High School & Beyond Survey (total N = 2,228 dropouts & graduates) are used to explore whether enrollment in vocational/business courses has special "holding power" for students or whether personal, social characteristics are more salient in the dropout decision. Controlling for reading comprehension, socioeconomic status, gender, geographic region, & community size, path analysis reveals that participation in *vocational/business courses does not* seem related to persistence. Variables that are most highly associated with dropout status reflect the influence of a student's social relationships within the school environment. Peer interest, sense of social belonging, & relationship with school staff are differentially linked to school interest for girls & boys. 2 Tables, 3 Figures, 1 Appendix, 17 References. Abstracted from the source document.

Ramsden, Paul & Moses, Ingrid (Centre Study Higher Education U Melbourne, Parkville 3052 Australia), **Associations between Research and Teaching in Australian Higher Education,** *Higher Education,* 1992, 23, 3, Apr, 273-295.

¶ The relationship between teaching proficiency & research activity is assessed via questionnaires data obtained in 1989 from 890 academic staff members at higher educational institutions in Australia. ANOVAs at the individual level yielded no, or only negative, relationships between research activity & teaching; research output, research activity, & commitment to teaching varied by type of institution & subject area. At the departmental level, there was a modest inverse relationship between teaching & research: highly productive departments were populated by less effective teachers, & vice versa. Professors with high scores on both teaching & research tended to be from pre-1987 universities–ie, those advanced universities that were amalgamated, by law, with technological institutions & smaller colleges in 1987–in social sciences & arts department. However, data do not support a causal interpretation of this association. Student attitudes toward teaching are cited to support these results. Implications of these findings for performance indicators for academic staff, resource allocation, & student choice of courses are discussed. 11 Tables, 4 Figures, 24 References. Reimers, Fernando, Educación y democracia en Venezuela: Desafíos pasados y futuros (Education and Democracy in Venezuela: Past and Future Challenges), UM *Revista Paraguaya de Sociología,* 1991, 28, 82, Sept-Dec, 105-122. (SPA)

¶ With the implementation of new educational reforms in Venezuela in 1992, the evolution, aims, & challenges of the Venezuelan educational system in the last three decades under democracy are reviewed. In 1960, the new constitution established the right to six years of education; in 1980, this right was extended to nine years, & plans for improving teacher training & modernizing & integrating curricula were initiated. Analysis of enrollment data for primary, secondary, & higher education students by social class (in poverty, above poverty) shows that inequality of opportunity exists at all levels, but is more pronounced at the secondary & higher levels, where at least 95% of the students are from urban areas. Poorer, rural children receive inferior education & frequently repeat grades. While the educational level of the labor force increased from 4.6 years in 1975 to 7.7 in 1989, this increase did not translate into the skills needed to obtain productive employment. A review of education financing, teacher training, curriculum development, & evaluation methods shows that: many inefficiencies exist in the highly politicized education bureaucracy, teachers' strikes are frequent, & teachers are not prepared to implement curriculum changes. Overall, the reforms of 1980 have not been implemented; thus, the challenge of 1992 is to make education a priority in Venezuela. 5 Tables, 15 References. M. Pflum

Ribolzi, Luisa (Dipt scienze processi comunicazione/conoscenza/comportamento U Genova, I-16126 Italy), **Ricerca sociale e processi decisionali: I sociologi dell'educazione e le politiche educative** (Social Research and Decision-Making Process: Sociology of Education and Educational Policies), *Studi di Sociologia,* 1991, 29, 3, July-Sept, 243-258. (ITA)

¶ In Italy, sociology has been used to provide theoretical or methodological support for the educational policy decision-making process. The most characteristic element of Italian educational sociology is the strong link maintained between ideology, research method, & the interpretation of data. Problems have often arisen due to conflict between the social commitment of the researcher & the scientific process in which he/she is involved. Two elements influence educational policy & the role of research in this field: the degree of centrality of educational problems & the degree of indeterminacy to be found in the area of educational policy making. Different combinations of high or low centrality of the educational system, & high or low indeterminacy of the context, entail differing possible roles for the researcher. The sociologist's role can also change as a consequence of his relation with decisionmakers in various phases of the decision-making process. The kind of models that have been employed in Italy are essentially perverse: policy making does not take the results of sociological research into account, either because no one interprets the data, or because the policymaker does not use them. In both situations, the role of the sociologist is weakened. A trigger is needed to give the educational sociologist a legitimate basis for the production of knowledge, transforming the straight line that links theory, research, & educational policy into a circular link, so that the success or failure of a policy that has taken its inspiration from a certain theoretical approach should modify the theory itself. 2 Figures, 40 References. Riseborough, George F. (Didsbury School Education Manchester Polytechnic, M20 8RR England), **'The Cream Team': An Ethnography of BTEC National Diploma (Catering and Hotel Management) Students in a Tertiary College,** *British Journal of Sociology of Education,* 1992, 13, 2, June, 215-245.

¶ A participant-observation ethnographic study was conducted among about 20 students ages 17-19 working toward a catering & hotel management diploma at the Business & Technology Education Council school in an industrial British city. The findings are used to explore the concept of "new vocationalism" & to theorize about students' experience in college. The students, primarily of middle-/upper-class background with upward mobility orientations, are committed to attainment of high grades & a diploma, but they are critical of curriculum quantity, quality, & composition; despite this, students conform to school requirements & maintain a highly instrumental relationship with teachers, analogous to the future labor-market relations they know they will need. 1 Figure, 52 References. Adapted from the source document.

93Z5496

Rossouw, D. J., What Industry Demands of Science Educators: A Survey, *Onderwys-Education Bulletin, Transvaal Education Department,* 1990, 34, 1, June, 3-11.

¶ The knowledge, skills, & attitudes of young workers required for science-related jobs in South African industry are examined via interviews with industry officials (N not given) & a questionnaire survey of 93 industrial firms. Though knowledge of statistics & computer literacy are important for science-related jobs in industry, certain skills & attitudes–eg, the ability to use common sense, think critically, analyze problems, & write concise reports–are more important than school-acquired knowledge of science. Common criticisms of young workers include lack of communication & interpersonal skills. 2 Tables, 8 References. D. Generoli

Russell, Alan (School Education Flinders U, Adelaide South Australia 2100), **Parental Role Conceptions Associated with Preschool Involvement**, *The Australian Journal of Education*, 1991, 35, 3, Nov, 273-291.

¶ Parent perceptions of their role in the education of their preschool child are examined through self-report questionnaire & interview data from 39 women & 2 men with children attending a large preschool in Adelaide, South Australia. Analysis of responses identified 4 main conceptions of the parental role in education: (1) parent-teacher partnership in education; (2) support for teachers, but subordinate role for parents; (3) support for teachers & no educational role for parents; & (4) no educational role for parents & reluctant involvement. Belief in educational role was an important factor in parent preschool involvement with parents in the first 3 groups being more involved than parents in the last group. Considerable individual differences in parental involvement existed within each group, indicating the role of factors other than beliefs in parent participation in education. A common pattern of reasons for noninvolvement emphasizing external factors such as time commitments was found in all groups. 2 Tables, 27 References. Adapted from the source document.

93Z5498

Salisbury, Jane & Murcott, Anne (School Social & Administrative Studies University Wales Coll, Cardiff CF1 3XA), **Pleasing the Students: Teachers' Orientation to Classroom Life in Adult Education**, UM *The Sociological Review*, 1992, 40, 3, Aug, 561-575.

¶ Contending that sociological research on classrooms has focused too narrowly on compulsory schooling, results are presented here of a small ethnographic study of 2 adult evening classes conducted by GB's Local Education Authority. Fieldnote & interview data (N not given) suggest that, in contrast to the teacher of school-age pupils, who seeks control & discipline, "pleasing students" is the major orientation to classroom life of the evening class teacher. 23 References. Adapted from the source document.

Schriewer, Jürgen & Keiner, Edwin (Humboldt U, D-1086 Berlin Federal Republic Germany), **Communication Patterns and Intellectual Traditions in Educational Sciences: France and Germany**, UM *Comparative Education Review*, 1992, 36, 1, Feb, 25-51.

¶ Based on data from a comparative-historical research project investigating, in a number of Western European countries, the emergence & intellectual evolution of education as an academic branch of study, French & German educational journals (N = 6 & 3, respectively, including 2,662 articles published 1950-1986) are analyzed to discern the status of the academic field of education in the two countries. The findings point to a remarkable degree of intradisciplinary coherence among German educationists, & an equal degree of cross-disciplinary openness in the French scholarly discourse in education. The striking Franco-German constrasts apparent overall, however, tend to level out when changes over time are considered, revealing parallel developments, especially a progressive embrace of social science disciplines, in both the French & German educationists' communication networks. Nonetheless, it is evident that educationists in France & Germany study & teach in largely divergent intellectual worlds. 7 Tables. Modified AA

93Z5502

Shapiro, Harold T. (Princeton U, NJ 08544), **The Research University and the Economy**, UM *Queen's Quarterly*, 1991, 98, 3, fall, 575-595.

¶ In examining the relationship between universities & societies, particularly the "feedback loop" between the research university & national economic development, it is crucial to gain historical perspective to make informed & nonparochial choices, not only about economic growth but about social goods. A brief sketch of the technological development of the West indicates that, historically, advanced capacity in science & technology has never been a sufficient condition for economic leadership. In addition, universities traditionally were not central to the technological advances of their age. The impact of the university on the national economy has tended to be overemphasized, while the impact of the economy on the university has often been overlooked. Yet the future excellence of universities is tied rather directly to long-term national economic prosperity. One paradoxical aspect of the "feedback" effect between the university & the economy is that the very success of university-based research may result in higher productivity, consequent higher compensation levels across the economy, &, ultimately, increases in the cost of higher education. Current views of the impact of universities on national economic development have not been sufficiently informed by historical perspective & objective analysis of technological progress, productivity, & economic leadership as social phenomena as well as scientific challenges. Slavin, Robert (Center Research Effective Schooling Disadvantaged Students Johns Hopkins U, Baltimore MD 21218), **Class Size and Student Achievement: Is Smaller Better?**, UM *Contemporary Education*, 1990, 62, 1, fall, 6-12.

¶ A review of research on the effects of substantial reductions in class size on achievement in the elementary grades. Across 9 methodologically adequate studies that compared larger classes to those at least 30% smaller, the median effect size was +.17. This small positive effect is contrasted with far larger effects for tutoring & cooperative learning. It is concluded that reducing class size may be worthwhile for outcomes other than achievement, but is not a cost-effective approach to increasing achievement. 2 Tables, 30 References. AA

93Z5504

So, Alvin Y. (Dept Sociology U Hawaii Manoa, Honolulu 96822), **The Black Schools**, UM *Journal of Black Studies*, 1992, 22, 4, June, 523-531.

¶ Analysis of data from the High School & Beyond data set shows that black schools are comparable or even superior to 98% of white schools in physical facilities & teachers' salaries. However, findings also reveal a gulf between black schools & the local community, a high degree of teacher absenteeism, a culturally insensitive curriculum, a high incidence of student disciplinary problems, & high student absenteeism. A correlation analysis suggests that student absenteeism increases with the % of white faculty, with the lack of minority culture courses, & with the

breakdown in school discipline. Evidence is also found that a higher % of black teachers may be related to lower absenteeism, & physical facilities, eg, library volumes & teacher-student ratio, are not that important in reducing student absenteeism in black schools. Policy implications are considered. It is suggested that student absenteeism may be controlled by hiring more black teachers, enriching the minority culture courses, & strengthening school discipline. 2 Tables. Modified AA

93Z5505

Stark, Jerry A. & Johnson, Walter A. (Dept Sociology U Wisconsin, Oshkosh 54901-8633), **Experiences and Outcomes of a Program for First-Year Students: An Application of Sociological Concepts and Research,** *Sociological Practice Review,* 1992, 3, 3, July, 157-164.

¶ Based in the sociological literature on college peer groups & culture, the University Learning Community (ULC) was a three-year residentially based general education program for first-year students at a midwestern state university that incorporated systematic evaluation. Results of that evaluation are reviewed here, & suggest that the 200+ students in the ULC were more likely to participate in an "academic subculture" & to have a more positive experience than did a control group, whose members were more likely to have participated in a "collegiate subculture." Compared to the controls, participants also worked harder, reported a higher level of personal gain from college, & had retention rates well above the university norm, even though their grade point averages were lower. Findings support the utility of sociological concepts & methods for policy formation in higher education. 4 Tables, 46 References. Adapted from the source document.

Sultana, Ronald G. (Dept Educational Studies U Malta, Msida), **Teacher Power and the Struggle for Democracy: An Educational Movement in Malta,** *International Studies in Sociology of Education,* 1992, 2, 1, 3-22.

¶ A case study of the formation of a transformative project in Malta illustrates how an educational social movement can help develop new ways of conceptualizing the link between the work of educators & the quest for democratic & just forms of life. The movement (*Muviment Edukazzjoni Umana*), developed in 1990 by a group of student teachers who wished to link humanistic perspectives with a critical theory of schooling, was primarily a political response to a centralized state educational system that was undemocratic & unresponsive to the needs of students & teachers. The movement's main objective is to develop participatory democracies in school communities, & to work as a pressure group to influence educational policymaking at the national level. As such, the movement has become a multifacted project that includes action groups addressing diverse issues. It is contended that a theoretical tradition that favors social movements can help shift sociology of education's preoccupation with the critique of social & cultural reproduction to a politically effective agenda. 58 References. Troen, S. Ilan (Ben Gurion U Negev, IL-84105 Beersheva Israel), **Higher Education in Israel: An Historical Perspective,** *Higher Education,* 1992, 23, 1, Jan, 45-63.

¶ The origins & development of Israel's universities illuminate the Israeli variation of the widespread phenomenon of transfer & adaptation of Western concepts of higher education to developing countries. Following the examples of the German university & the use of scientific research in the German colonization effort, the World Zionist Organization supported the establishment of the Technion in 1924 & the Hebrew U in 1925. From the beginning there has been a strong utilitarian emphasis on higher education in settling the land & developing the economy, in the regeneration & redefinition of a national culture, & in enhancing national security. It is demonstrated how an emphasis on utility as defined by perceived national needs, has contributed to the structure of educational institutions, defining areas of research & shaping the curriculum. Even with independence (1948) & the enormous expansion of higher education since the 1960s, continuities with the prestate practical ethos still dominate; these have also been maintained in governance & finance since, unlike other national systems, foreign citizens still play a significant role in the management & support of Israeli universities. 39 References. 93Z5511

Väliverronen, Esa (Tampereen yliopisto, SF-33101 Finland), **Akateemiset puhetavat ja sisäänpääsyn esteet yliopistoyhteisöissä** (Academic Discourse Styles and Obstacles to Entrance in University Communities), *Kasvatus,* 1992, 23, 1, 22-29. (FIN)

¶ Several barriers facing new university students in Finland are examined, focusing on the nature of scientific discourse & discussion styles. It is noted that although learning new discourse styles is an important part of a university education & leads to the development of scientific thinking, scientific discourse & discussion styles are not explicitly taught. Instead, students are expected to pick these styles up through academic reading & listening to lectures. The problematic aspects of this & of the prevalent instrumentalist conception of language are addressed. 1 Figure, 24 References. Adapted from the source document.

Van Haegendoren, Mieke & Vanherck, Rina (Centrum Vrouwenstu-

dies U Instelling Antwerpen, B-2610 Wilrijk Belgium), **Vrouwen aan Vlaamse universiteiten** (Women at Flemish Universities), *Tijdschrift voor Sociologie*, 1992, 13, 1, 47-69. (DUT)

¶ In recent years, women's participation in higher education in Flanders increased to where, by 1989, equal numbers of men & women were enrolling in universities. However, women are still very much underrepresented at the faculty level. Analysis of questionnaire data from 700 university students shows that social background, qualification level, family situation, the universities themselves, & respondents' personality may have an effect on employment opportunities. The situation in Belgium reflects that of many other industrialized countries. 7 Tables, 24 References. Adapted from the source document.

Von Kopp, Botho (German Instit International Educational Research, D-6000 Frankfurt Federal Republic Germany), **The Eastern European Revolution and Education in Czechoslovakia**, UM *Comparative Education Review*, 1992, 36, 1, Feb, 101-113.

¶ Political, economic, & ideological structures are being dramatically reformed in Eastern Europe, but it is less clear what direct & indirect influence these transitions will have on the conditions of education in each country. In Czechoslovakia, as euphoria & consensus settle into daily politics, many are aware that the revolution's success–& therefore the nation's potential for transforming the conditions of education–depends not only on the country's internal dynamics, but also on factors in the international arena. Although the West has been captivated by neoconservative free-market policies for nearly a decade, which extend to education, Czechoslovakia would do well to encourage educational reforms based on liberty & plurality. Given the country's historical commitment to education, the potential for educational transformations in structure & content is promising. M. Maguire

Watson-Gegeo, Karen Ann & Gegeo, David Welchman (U California, Davis 95616), **Schooling, Knowledge, and Power: Social Transformation in the Solomon Islands**, UM *Anthropology and Education Quarterly*, 1992, 23, 1, Mar, 10-29.

¶ Traditional education is compared with national schooling in the Solomon Islands, focusing on: the nature, meaning, & transmission of knowledge; the impact of an imposed Western model of schooling on social change; microlevel structuring of teaching-learning interactions, which embody knowledge as content & teach important social values & ways of thinking; macrolevel processes in formal education as it has developed in the Solomons; & societal changes contributed to by schooling as a social institution. Data from historical sources, government publications, observations at a rural primary school, interviews (with headmasters, teachers, & parents [N not given]), & fieldwork over ten years on culture & children's language socialization in rural West Kwara'ae indicate that current schooling in the Solomons is not preparing islanders to make principled decisions on issues that have profound repercussions for the future of the islands. The growing split between urban & rural areas in quality of schooling & educational opportunities has also effectively disenfranchised villagers from political power. Implications for educators in the Solomons are discussed. 1 Appendix, 44 References. Adapted from the source document.

Windolf, Paul (Dept Sociology U Heidelberg, D-6900 Federal Republic Germany), **Cycles of Expansion in Higher Education 1870-1985: An International Comparison**, *Higher Education*, 1992, 23, 1, Jan, 3-19.

¶ Statistical data on enrollment rates are used to examine the expansion of higher education, 1870-1985, in 5 countries–Germany, Italy, France, the US, & Japan–testing 2 hypotheses: human capital theories & the theory of individual status competition. The analysis concentrates on the interaction between the educational & the economic system, particularly during times of economic crisis. Spectral analysis of the cyclical character of the expansion & the relationship between economic growth & increasing enrollment rates reveals that, for the European countries, the theory of status competition is supported: universities expanded particularly fast during times of an economic recession. In the US & Japan, higher education expanded more or less apace with the economic system. 11 Figures, 22 References. Modified AA

Wolfgang, Charles H. & Kelsay, Karla Lynn (Dept Childhood Education Florida State, Tallahassee 32306), **Discipline and Today's Students: They're Sure Not What They Used to Be!**, UM *Contemporary Education*, 1991, 62, 3, spring, 150-155.

¶ It is suggested that today's children have changed but only because the nature of childhood itself has been altered. Traditional notions of the family (single-breadwinner married to full-time child-raiser) have given way to both single-parent & double-breadwinner families. Despite this transformation, teachers incorrectly assume that traditional values continue to be taught at home, including timeliness, spatial motor rules, & concepts of property. As a result, teachers view certain behaviors as disobedience problems rather than value differences. Specific implications for educators are discussed because compensation for value differences is necessary if teachers are to remain effective in the classroom. 5 References. M. Maguire

Wyatt, Gary (Division Sociology/Family Science/Anthropology Emporia State U, KS 66801), **Skipping Class: An Analysis of Absenteeism among First-Year College Students**, *Teaching Sociology*, 1992, 20, 3, July, 201-207.

¶ Variables related to missing college classes were investigated using mail questionnaire data from 110 first-year students at a midwestern university. Ordinary least squares regression analysis confirmed several hypotheses: (1) time spent studying was negatively associated, & being female was positively associated, with absenteeism from both liked & disliked classes; & (2) frequency of alcohol consumption was positively associated, & previous semester's grade point average was negatively associated, with absenteeism from disliked, but not liked classes. Living arrangements, employment, age, & parental income were not related to absenteeism. Implications of the findings are discussed. 3 Tables, 20 References. Adapted from the source document.

Aldridge, Alan (School Social Studies U Nottingham, NG7 2RD England), **Discourse on Women in the Clerical Profession: The Diaconate and Language-Games in the Church of England,** *Sociology,* 1992, 26, 1, Feb, 45-57.

¶ The current discourse within the Church of England on women's subordinate position in the clerical profession is examined. The limited incorporation of women in this profession has been accompanied by prolific discourse on the need for an enriched diaconate & legitimization through appeals to the metaphor of diakonia or service. The diakonia metaphor stems from the portrayal of Jesus Christ as a suffering servant, willing to wash the feet of his disciples, & is hard to dispute. However, diakonia is operationalized in a way that keeps women in subordinate & marginal positions, while reserving for men the offices of priest & bishop. The metaphor of diakonia merely disguises the power struggle over the ordination of women to the priesthood. 31 References. Adapted from the source document. Alexander, June Granatir (U Cincinnati, OH 45221), **Religion and Ethnic Identity in a Slavic Community: Pittsburgh's Slovak Catholics and Protestants,** *Studi Emigrazione/Etudes Migrations,* 1991, 28, 103, Sept, 423-441.

¶ Diversity in US society is clearly a manifestation of immigration patterns, but it is less clear how this process works. The 500,000 Hungarian Slovaks who migrated to Pittsburgh, Pa, 1880-1920 provide a useful comparative case study of the ways in which the religious & ethnic diversity of new immigrant groups have had an impact on US society. By investigating both Catholic & Protestant Slovaks, it is demonstrated that religion stimulated the emergence of a Slovak ethnic identity in the US while, at the same time, the two different churches were individually enculturated into US society. Explored here is how these competing tendencies toward interreligious ethnic solidarity & intrareligious Americanization were played out. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Atkin, Muriel (George Washington U, Washington DC 20052), **Islamic Assertiveness and the Waning of the Old Soviet Order,** *Nationalities Papers,* 1992, 20, 1, spring, 55-74.

¶ The status of Islam in the former USSR, particularly in the republics of Central Asia, is examined. Though the Soviet establishment tends to view Soviet Muslims as increasingly militant, subversive, & extreme, Soviet Muslims are participating in the changes sweeping through the USSR. Muslims, just like non-Muslims, have seen a decrease in repression, increased tolerance of religious expression & expression of nonparty-line opinions, & the assertion of national & religious values. But continued Soviet anti-Muslim sentiment & preferential treatment of Orthodox Christians have caused Muslims to view religious tolerance as applying to the Christian Orthodox Church only, steeling their determination for religious freedom & national expression. 2 Appendixes, 15 References. 93Z5523

Barghouti, Iyad, Religion and Politics among the Students of Najah National University, *Middle Eastern Studies,* 1991, 27, 2, Apr, 203-218.

¶ The religious attitudes & political behaviors of 383 Palestinian students at Najah U (located in the West Bank) were analyzed via questionnaire data. Females, science students, new students, & Gaza-born students were more religious than were males, students with other majors, old students, & West Bank-born students. Children of politically active fathers were also less religious. Most of the religious students were against coeducation, even though the common dress of women at the university is religious clothing, the shar'i. Student political identification was found in 1 of 3 groups: the El Fatah, Yasir Arafat's organization; the heterogeneous Islamic bloc; & different leftist groups. Islamic bloc membership correlated highly with religious observance. The more religious the student, the more he/she favored religion over homeland if forced to choose. 12 Tables. M. Pflum (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Bastian, Jean-Pierre (Apartado Postal 20-656, Mexico DF 01000), **Les Protestantismes latino-américains: un objet à interroger et à construire** (Latin American Protestant Religions: An Object to Investigate and Construct), *Social Compass,* 1992, 39, 3, Sept, 327-354. (FRE)

¶ A sociohistorical approach is adopted to study Protestantism in Latin America, investigating the diversity of non-Catholic religious movements over time. Following a literature review, statistical data are presented to demonstrate the increase of heterodox religious societies. Latin American Protestantism is examined in relation to four theses: (1) the contemporary renewal of popular religion; (2) the notion that Protestantism offers a better way than Catholicism to relate to modernity; (3) the authoritarian, vertical nature of the political culture of Protestant groups; & (4) the interaction between Latin American & international Protestantism, influenced by endogenous interests. 1 Table, 1 Appendix, 81 References. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5525

Bauer, Rudolph (U Bremen, D-2800 33 Federal Republic Germany), **Review Article,** *Voluntas,* 1992, 3, 1, May, 99-103.

¶ A review article on a book by Jochen-Christoph Kaiser, *Sozialer Protestantismus im 20. Jahrhundert: Beiträge zur Geschichte der Inneren Mission 1914-1945* ([Social Protestantism in the Twentieth Century: Contributions to the History of the Home Mission, 1914-1945] Munich: R. Olderbourg Verlag, 1989 [see listing in IRPS No. 66]). This account of social Protestantism &, more specifically, the ecclesiastical history of the Central Committee for the Home Mission (HM) of the German Protestant church, is presented in three parts: (1) an internal perspective of the prehistory of the HM; (2) an external perspective of Germany's history between WWI & WWII, with emphasis on the HM as a social corporation; & (3) the ecclesiastical history of Germany dur-

ing Nazism. Emphasis is given to the relationship of the HM to the institutional church, the state, & society. Shortcomings of the book include its failure to: consider the eighteenth century's liaison between the Pietism movement in Prussia & the Prussian king's central government, explore the legal status of associations & societies as public corporations, & examine economic circumstances in the period & their impact on the HM's development. 7 References. D. Generoli

Bloomquist, L. Gregory, Bonneau, Normand & Coyle, J. Kevin (c/o Coyle-Saint Paul U, Ottawa Ontario K1S 1C4), **Prolegomena to a Sociological Study of Early Christianity: The Example of the Study of Early Christian Leadership**, *Social Compass*, 1992, 39, 2, June, 221-239.

¶ A case study of textual manifestations of authority as a social phenomenon. A contrast of two documents from early Christianity (the *Apostolic Constitutions*, Book II, Chapters 25 & 26, & the corresponding text in *Didascalia*) demonstrates the addition of terms & phrases indicating changes in early Christian leadership. The texts are fourth-century collections of ecclesiastical law written at different periods in early Christianity. Methodology for analysis of the differences between the texts is drawn from techniques developed for study of the Bible through historical-critical methods. The texts are then interpreted according to two divergent sociological models. Ancient texts provide, in some instances, the only available information about past societies. 1 Appendix, 22 References. Adapted from the source document.

Bociurkiw, Bohdan R. (Carleton U, Ottawa Ontario K1S 5B6), **The Ukrainian Greek Catholic Church in the Contemporary USSR**, *Nationalities Papers*, 1992, 20, 1, spring, 17-30.

¶ The Ukrainian Greek Catholic church's efforts to assert its right since *glasnost* are examined. Formally dissolved & driven underground in 1946, the church struggled for decades to open its closed churches but was blocked by administrative obstacles & police reprisals. Not until 1986/87, with the release of Ukrainian religious & political prisioners, did the movement for human, national, & religious rights in the Ukraine take shape. The movement's efforts to legalize the church were rebuffed by Soviet authorities on grounds that legalization was an internal problem best resolved by the Russian Orthodox church. Opposition to legalization was weakened by massive public demonstrations that led to the removal of hardliner public officials, negotiations between the Vatican & the Moscow Patriarchate, the extension of the new law on freedom of conscience & religious organizations, & mass takeovers by Ukrainian Catholics of their former churches. 12 References. Bovay, Claude (Instit ethique sociale, Terreaux 10 CH-1003 Lausanne Switzerland), **Les Eglises vont-elles disparaître?** (Will the Churches Disappear?), *Schweizerische Zeitschrift für Soziologie/Revue Suisse de sociologie*, 1991, 17, 3, 549-568. (MUL)

Introduction, 547-548, **Comments**, 569-593.

¶ Following an **Introduction** by Adalbert Saurma (Schützenmattstr 63, CH-4051 Basel, Switzerland) to this special section on religious organizations & civil society, Swiss voters' attitudes on the separation of church & state are explored in light of ongoing cultural secularization processes. Questionnaire data (N not provided) reveal respondents' speculations on the consequences should churches disappear altogether. Most felt that this would lead to a weakening of the welfare state & to a loss of purpose in life, but that the overall economic structure & level of observing the laws would not change; results did not vary much between Protestants & Catholics. In **Zur Bedeutung der Kirchen in der modernen Gesellschaft** (The Functional Significance of Churches in Modern Society), **Hans** Geser (Soziologisches Instit, U Zurich, CH-8001 Switzerland) discusses how, despite the loss of their traditional societal influence & parts of their membership, churches remain significant actors in modern societies. They (1) provide a basis for various collective activities relatively free from political or economic domination; (2) preserve universalistic & cosmopolitan orientations when ethnocentric attitudes prevail in the surrounding culture & in political action; & (3) represent the major site where the synthesis between traditional & modern values, norms, & role conceptions takes place. However, churches cannot exploit this potential fully because they have preserved outdated organizational characteristics. Comparative community research in Switzerland is reported, & it is demonstrated that, in terms of communal influence, churches are regaining strength in settings where well-to-do & highly educated middle classes prevail, while positive correlations with urban size are limited to the Catholic church. In **Quelques remarques à propos de l'influence de la religion dans la société suisse** (Some Remarks on the Influence of Religion in Swiss Society), Guy Michelat & Yves Lambert (CNRS, F-75007 Paris France) discuss the current role of the churches in increasingly secular societies. While the state is entrusted with matters of maintaining a healthy society, churches are dedicated to the emotional sustenance of those individuals least integrated into society. It is suggested that the gap between younger & older segments of society in terms of religiosity is nothing more than the division between two stages in life of the same culture. In France, declining church attendance by Catholics of all age groups stands in contrast to the high esteem given to the pope. Also, in contrast to the situation in Switzerland, practicing Catholics in France show the influence of church teachings in their social & political attitudes. 4 Tables, 3 Graphs, 15 References. Campiche, Roland J. (Instit ethique sociale FEPS U Lausanne, CH-1003 Switzerland), **La Déconfessionalisation de l'Identité religieuse** (The Deconfessionalization of Relgious Identity), *Schweizerische Zeitschrift für Soziologie/Revue Suisse de sociologie*, 1991, 17, 3, 507-528. (MUL)

Introduction, 505-506, **Comments**, 529-543.

¶ Following an **Introduction** by Enzo Pace (U of Padua, I-35100 Italy), Swiss religious identity is explored, drawing on 1988/89 questionnaire data from 1,315 adult respondents (Rs). Analysis shows that 90+% belong to either Protestant or Catholic churches, with essentially no socioeconomic differences between the denominations. Age makes no difference in religious affiliation, although younger adults are less likely to attend services than older adults. Affiliation is largely determined by fami-

ly background: 80% of Rs belong to the same church that both of their parents did. The belief structures of Catholics & Protestants are not as sharply delineated as in previous times, & most Rs view other Christian denominations in a positive light. A trend toward individualization of belief can be discerned. In **Nivellierte Gesellschaft und konfessionelle Kulturen in der Schweiz** (Homogenized Society and Denominational Cultures in Switzerland), Urs Altermatt (U Freiburg, D-1700 Federal Republic of Germany) compares these findings to those of Alfred Dubachs ("Nivellierung der konfessionellen Kulturen in der Schweiz?" (Leveling of Denominational Cultures in Switzerland?), *Zeitschrift für Schweizerische Kirchengeschichte*, 1991, 85, 233-246). It is found that between 1970 & 1980, the proportion of Catholics held steady near 43%, while the number of Protestants dropped from 55% to 50%, & the number claiming another denomination rose from 1.4% to 5.5%. Great changes have occurred in the character of Catholicism since the Second Vatican Council, the 1970/71 reforms of the Christian Democratic People's Party, & the Bishops' Synod of 1972. An increased similarity in the belief structures of Protestants & Catholics is observed. Implications of secularization & deideologization for political life are discussed. In **Dislocation des systèmes religieux-culturels intégres et assimilation de la religion dans la culture** (Dislocation of Whole Religious Cultural Systems and the Assimilation of Religion into Culture), Danièle Hervieu-Léger (CNRS, F-75017 Paris, France) comments that although the relative % of the Swiss population identifying themselves as Protestant or Catholic has changed very little over the years, religious identity has nonetheless undergone considerable transformations. Most Swiss accord considerable respect to Christian denominations other than their own. Religion & culture have been disjoined & now reassimilated. 1 Table, 9 Graphs, 4 References. M. Meeks

Carter, Miguel (Columbia U, New York NY 10027), **La Iglesia Católica paraguaya: antes y después del golpe** (The Paraguayan Catholic Church: Before and after the Coup), UM *Revista Paraguaya de Sociologia*, 1991, 28, 81, May-Aug, 177-206. (SPA)

¶ An exploration of the role of the Roman Catholic church in the regime of Alfredo Stroessner in Paraguay, based on church documents, interviews with church leaders, & other data. The history of the church in Paraguay is described, emphasizing its corporate, heterogeneous nature. In the 1960s the church challenged some aspects of state authority, but softened its rhetoric in the 1970s, due to the costs incurred in opposing the state. In the 1970s, both internal & external pressures caused the church to change positions several times with regard to the government, sometimes opposing government repression & sometimes tacitly condoning it through inactivity. In the 1980s, the church focused on internal organization & reanimating spiritual life. However, the church contributed to the reawakening of civil life & the fomenting of a crisis of legitimation in Stroessner's government. The church currently has an active role both in the political arena & the provision of civic education for the public. Stresses between conservative & progressive elements in the church continue, as under the Stroessner regime. 50 References. J. Taylor

Chaves, Mark & Cann, David E. (U Notre Dame, IN 46556), **Regulation, Pluralism, and Religious Market Structure. Explaining Religion's Vitality,** *Rationality and Society*, 1992, 4, 3, July, 272-290.

¶ Viewing religion from an economics perspective suggests that less regulation will make it more competitive & vibrant. However, attempts to support this hypothesis are weakened by the use of religious pluralism as a proxy measure for the extent of religious regulation. Here, the analysis of religious market structure is extended by measuring directly the regulation of religious markets in 18 Western democracies based on secondary data. The findings strongly support the hypothesized connection between religious competitiveness & vitality, showing that: (1) the relationship between subsidized religion & religious participation holds in both Protestant & Catholic countries; & (2) its explanatory power is far superior to that of religious pluralism alone. However, certain features of the results suggest that the "economics of religion" should be supplemented with noneconomic variables to achieve adequate sociological explanation. 1 Table, 2 Figures, 13 References. Adapted from the source document.

Chou, Shih-Deh Chang (Feng-Chia U, Taichung Taiwan), **Religion and Chinese Life in the United States,** *Studi Emigrazione/Etudes Migrations*, 1991, 28, 103, Sept, 455-464.

¶ Protestant religious beliefs have long been dominant in US society–to the extent that even Catholics & Jews have suffered religious persecution, despite assurances of the First Amendment. However, they are not alone; non-Protestant beliefs have also served as a basis for discrimination against Chinese immigrants since the 1850s. The role that religion has played in the lives of immigrants is analyzed because, while a source of discrimination, these traditional beliefs have also served as an important source of inspiration for immigrants forced to endure many hardships. Several cases are specifically assessed to shed light on the various functions of different traditional Chinese religions. M. Maguire

Croll, Elisabeth J. (Dept Anthropology & Sociology School Oriental & African Studies, London WC1H 0XG England), **Imaging Heaven: Collective and Gendered Dreams in China**, *Anthropology Today*, 1991, 7, 4, Aug, 7-12.

¶ Critical analyses of posters, billboards, & paintings produced in the first thirty years after the Chinese revolution reveal the persistence of a "rhetorical gaze" in which subjects continually stare off toward the horizon, implicitly suggesting that collective dreams of the future assume precedence over sensual experiences of the present. It is argued that this gaze has traditionally served to colonize the consciousness of the Chinese citizenry by determining how the population understands the present & future. Strikingly, the gaze has shifted in the past decade as deferred gratification has become a seemingly permanent state; implications of this transformation are assessed. 2 Figures, 1 Photograph. M. Davies, Christie (Dept Sociology U Reading, Berkshire RG6 2AH England), **The Protestant Ethic and the Comic Spirit of Capitalism**, UM *The British Journal of Sociology*, 1992, 43, 3, Sept, 421-442.

¶ There have been many jokes & spontaneous humor in capitalist societies about the calculating behavior, rationality, & excessive parsimony of predominantly Calvinist peoples of the late nineteenth & early twentieth centuries. Analysis of some popular humor regarding the Protestant ethic generally supports Max Weber's thesis about the affinity between this ethic & the spirit of capitalism. Nonetheless, since the jokes flourished mightily in Weber's own day, their very existence & vitality cast doubt on Weber's view that, in the contemporary capitalist world, the spirit of neo-Calvinist religious asceticism is no longer significant. It also seems likely that the joke-tellers saw themselves as free individuals enjoying the fruits of an increasingly hedonistic, mature capitalism when they depicted the butts of their jokes as trapped within the cage-like moral compulsions of the Protestant ethic. Dekker, G. (Mozartlaan 15, NL-3741 HT Baarn Netherlands), **De ontwikkeling van de godsdienstsociologie in Nederland** (The Development of the Sociology of Religion in the Netherlands), UM *Mens en Maatschappij*, 1992, 67, 3, Aug, 296-310. (DUT)

¶ A literature review shows areas of the sociology of religion currently being investigated in the Netherlands, most oriented toward Roman Catholicism & the Dutch Reformed Church. The primary universities & research institutes engaged in this research are identified. A count of social science works involving religion published since 1945 includes 1,200+ titles. As the concept of religion is widened, there is a concomitant increase in the scope of the sociology of religion. 69 References. Adapted from the source document.

Deloria, Vine, Jr. (U Colorado, Boulder 80309), **Secularism, Civil Religion, and the Religious Freedom of American Indians**, *American Indian Culture and Research Journal*, 1992, 16, 2, 9-206.

¶ Though the anti-Indian nature of US Supreme Court & congressional decisions is clear, recent rulings reviewed here also reveal an antireligious inclination. The notion of free religious practice is discussed in historical perspective. Forms of modern US religiosity are examined, commenting on the superficial, politically oriented nature of fundamentalist Christian movements. It is suggested that the animosity toward Indian religiosity is related to the fact that American Indians are a fundamentally religious & consistent tribal community desiring freedom to practice values higher than those of the state. Demmitt, Kevin P. (Taylor U, Upland IN 46989), **Loosening the Ties That Bind: The Accommodation of Dual-Earner Families in a Conservative Protestant Church**, UM *Review of Religious Research*, 1992, 34, 1, Sept, 3-19.

¶ A neofunctional theoretical perspective serves as the framework for the hypotheses that nonconformity to traditional family teachings creates conflict between conservative congregations & their member dual-earner families, but also that conservative congregations will reconcile some of the conflict by accepting limited innovations if the family maintains traditional family norms. In-depth interview & mail questionnaire data obtained in 1989 from, respectively, the pastoral staff & approximatley 65 member famlies of a conservative Protestant church in Ind reveal that, although church leaders proclaim that the traditional family model is the ideal, they ultimately concede the final decision to the family. These results demonstrate the usefulness of neofunctional theory in analyzing the relationship between religion & family & give insight into how churches & families negotiate a continuing relationship despite conflict over family lifestyles. 4 Tables, 24 References. Earle, Duncan (4315 Ave H, Austin TX 78751), **Authority, Social Conflict and the Rise of Protestantism: Religious Conversion in a Mayan Village**, *Social Compass*, 1992, 39, 3, Sept, 377-388.

¶ Despite a history of resistance to religious change, the Mayas of Santa Cruz, a village in the Guatemalan highlands, are actively undergoing conversion to evangelical Protestantism. Their conversion process does not conform to any known models; rather, field observation suggests that this type of Protestantism serves as a tool of domination, rather than liberation. Analysis focuses on the social malaise that characterizes the village--social conflict & disintegration nurtured by severe animosities, neocolonial structures of power, & constraint of the traditional authority system. 11 References. Ebertz, Michael N. (Breisgaustr 10, D-7830 Emmendingen 14 Federal Republic Germany), **Le Stigmate du mouvement charismatique autour de Jésus de Nazareth** (The Stigma of the Charismatic Movement surrounding Jesus of Nazareth), *Social Compass*, 1992, 39, 2, June, 255-273. (FRE)

Translated by J. Duhaime & T. Hentrich.

¶ The concept of charismatic movement, first proposed by Max Weber,

can be applied to the Jesus movement of today. This link emphasizes the role of stigmatization in the charismatic movement, as first seen in the early Christian context of Jesus of Nazareth & the disciples. The charismatic movement includes patrons, followers, & opponents in the general population. The Jesus movement had no basis in a veritable stigmatization, & so it produced its own self-stigmatization. The movement emphasized ties between stigma & charism; Jesus represented the prime example of a self-stigmatization charism. 55 References. Adapted from the source document.

Fasce, Ferdinando (U Genova, I-16126 Italy), **The Italian American Catholic Parish in the Early Twentieth Century. A View from Waterbury, Connecticut,** *Studi Emigrazione/Etudes Migrations,* 1991, 28, 103, Sept, 342-350.

¶ Italian Catholicism in the US is analyzed from a parish perspective to show how different facets of community life interrelate with parish life. Specifically, the life & functions of an Italian parish in Waterbury, Conn, (established in 1899) during the early years of its development are explored. Although the Italian community in Waterbury grew by 33% 1900-1910, parish life was generally confined to birth, death, & confirmation celebrations; mass attendance & parishioner offerings disappointed & frustrated the expansion-minded clergy. To understand these circumstances, parish life is contextualized within the broader social life of the community. M. Maguire

Fleury, Philippe (59-61 rue Pouchet, F-75017 Paris France), **L'Ange comme figure messianique dans la philosophie de l'histoire de Walter Benjamin** (The Angel as a Messianic Figure in Walter Benjamin's Philosophy of History), *Archives de sciences sociales des religions,* 1992, 37, 78, Apr-June, 169-177. (FRE)

¶ While the messianic angel paradigm in Walter Benjamin's philosophy of history is found in all of his works, it is epitomized in his 1940 theses. In his autobiographies of the 1930s, the angel represents the individuality of the subject & his personal distress in the eyes of God. The angel emerges in 1940 with a historical, collective message about the future, which paradoxically cannot be revealed in image form, according to Jewish law. In obedience to the Divine Otherness, the angel gathers historical debris in front of the Divinity, then turns his back on the indecipherable future. This expression of messianism can be interpreted either as future salvation through Jesus Christ, or as a return to Genesis & avoidance of history's catastrophic course. 12 References. Free, Marvin D., Jr. (U Wisconsin Marathon Center, Wausau 54401), **Religious Affiliation, Religiosity, and Impulsive and Intentional Deviance,** *Sociological Focus,* 1992, 25, 1, Feb, 77-91.

¶ Questionnaire data from undergraduates at 2 US universities (total N = 916) are used to investigate the impact of denomination on the religiosity/deviance relationship, & to test the utility of the intentional vs impulsive deviance typology. Results indicate that the strength of the inverse relationship between religiosity & deviance varies by denomination. After controlling for the effects of gender, family structure, attachment to school, & involvement in conventional activities, religiosity exhibited the greatest amount of social control on proscriptive Protestants. Religiosity & other sociological variables accounted for more of the variance in intentional deviance than impulsive deviance, & the negative impact of religiosity on both types of deviance was generally greater for more minor norm violations. 6 Tables, 1 Appendix, 48 References. Galarza, Joaquín (CNRS, F-75700 Paris France), **Les Catéchismes indigènes du Mexique** (Native Catechisms in Mexico), *Archives de sciences sociales des religions,* 1992, 37, 77, Jan-Mar, 125-137. (FRE)

¶ The *cuadernillos,* little notebooks containing manuscripts of Christian doctrine in pictorial format, were created by people in Mexico who were quite knowledgeable of the indigenous meso-American ancestral writing system; European missionaries could not have produced these documents. Examples are presented of pictorial texts that were created by Europeans, & rejected by natives who saw no link with their culture. A systematic analysis of these pictographic texts is attempted, based on the *doctrina christiana* (Christian doctrine) codex, with reference to other Mexican manuscripts of the colonial era. The importance of these documents to the understanding of the religious & cultural encounter between conqueror & conquered is highlighted. 6 Figures. I. Shagrir

García-Ruiz, Jesús (CNRS, F-75700 Paris France), **"Arrachés au diable": l'évangélisation de l'Amérique espagnole: présentation** ("Torn from the Devil": The Evangelization of Spanish America: Introduction), *Archives de sciences sociales des religions,* 1992, 37, 77, Jan-Mar, 5-13. (FRE)

¶ In an introduction to this special issue on the evangelization of Spanish America (see abstracts in SA 41:1), it is contended that the conquest of America by Spain should be seen in the context of the Catholic reconquest war in Europe, perceived by the Spanish as part of a divine scheme. Also, the Spanish crown viewed American evangelization as compensation for European lands lost to Protestants (eg, Germany & England) & Muslims (eg, Palestine). The war against American natives was thus understood as a justifiable Catholic war against the devil. Missionaries incorporated this reasoning in three major ways: as justification of slavery, & of the rights of the Crown, but also as defense of the Indians. The subsequent articles are placed in this framework, addressing such issues as socioeconomic & political conditions, mission strategies, & problems of communication. 12 References. I. Shagrir

Garma Navarro, Carlos (División Ciencias Sociales & Humanidades U Autónoma Metropolitana, Iztapalapa Mexico DF), **Pentecôtisme rural et urbain au Mexique: différences et similitudes** (Rural and Urban Pentecostalism in Mexico: Differences and Similarities), *Social Compass,* 1992, 39, 3, Sept, 389-400. (FRE)

¶ A comparative study of the spread of Pentecostalism in Mexico, among a community of rural migrants in Mexico City, & in a mountain village in Puebla, examining: economic behavior, kinship ties & family organization, political activity, & religious practices & rituals. Field observations indicate that belief in miraculous healing was a key motivation in conversion to Pentecostalism in both communities. The urban congregation is more structured & centralized, & their pastor's role more professional, than found in the village. Rural conversion to Pentecostalism follows kinship lines, while urban conversion occurs in the family context. It is suggested that the social impact of Pentecostalism is greater in isolated rural communities, while for new urban residents, the new belief eases the migration process. 43 References. I. Gaspari, Oscar (Istit Luigi Sturzo, Via delle Coppelle 1-00186 Rome Italy), **"La giovane montagna" e l'azione di Giuseppe Micheli per i montanari (1900-1945)** ("La Giovane Montagna," Giuseppe Micheli's Program for the Highland Communities (1900-1945)), *Sociologia*, 1992, 26, 1, 71-110. (ITA)

¶ The review *La Giovane Montagna* (GM), founded by Giuseppe Micheli, began as a weekly for the communities of the Appenine mountain regions between Tuscany & Emilia Romagna in northern Italy & was the official publication of the Giovane Montagna association, a small group of young Catholic intellectuals led by Micheli & based in his home town of Parma. The review's major objective was to propagate not only the religious & moral values of the emerging Catholic political movement, but also the modernization of the mountain communities' economy with the help of the local parish priest. The use of artificial fertilizers was encouraged, as well as the formation of work cooperatives, dairy & wine cooperatives, & local banks, which were all intended to improve farming output & economic conditions, while at the same promoting the Catholic religious ideal. The review also reflected the concerns of the Catholic movement at local & national levels, & supported Catholic candidates during general elections, & Micheli in particular. In 1908, Micheli was elected to parliament, where he defended the interests of the small farmers, & attempted to protect the mountain areas from wartime speculation, meeting with some small success. After WWI, the review became almost entirely political, becoming the local party paper of the Partito Popolare Italiano, of which Micheli was a founding member. Having initially justified Benito Mussolini because of his anticommunist stance, the review then opposed fascism. During the fascist dictatorship, the review had to change in order to survive, becoming a monthly & abandoning political concerns, concentrating rather on historical & folklore studies. After the downfall of fascism in 1943, it supported the war of liberation against German & Italian fascist forces. In 1945, the review ceased publication, primarily because of the difficult economic situation of postwar Italy. Modified AA

Gitelman, Zvi (U Michigan, Ann Arbor 48109), **Judaism and Jewishness in the USSR: Ethnicity and Religion**, *Nationalities Papers*, 1992, 20, 1, spring, 75-85.

¶ The distinction between Judaism & Jewishness in the former USSR is examined. In the USSR, the official Jewish identity is ethnic & not related to religious practice or affiliation. This distinction has allowed the survival of Jewishness despite the near destruction of the Judaic religion. Jewish life now faces the challenge of emigration that will appeal disportionately to the religious community & will likely leave the Jewish population increasingly less religious. Allowed self-determination, Soviet Jewry will likely create new expressions of Judaism & Jewishness & the lines between religion & ethnicity will become blurred, though will still remain much more distinct than in the West. 10 References. Gore, M. S. (N-16 Sector 7, Vashi New Bombay 400703 India), **The Rise and Fall of Buddhism in India: Two Perspectives**, *Indian Journal of Social Science*, 1991, 4, 2, Apr-June, 175-197.

¶ Based on a comparison of their respective accounts of the rise & fall of Buddhism in India, differences in the selective emphases of factual data & interpretations of historical processes by two eminent contemporaries–Jawaharlal Nehru & B. R. Ambedkar–are examined. An attempt is made to develop a limited set of propositions linking nationalist ideology, the social location of a leader, & his interpretation of history in a colonial society. Nehru, as a nationalist leader, tended to deemphasize the internal differences in his society & emphasize the unity & homogeneity of a people occupying a geographical territory & claiming a nationalist identity. Ambedkar, as leader of a deprived minority in the same society, refused to accept this proposition of a cultural unity & growing homogeneity as a dominant historical trend characterizing that society, tending to perceive & emphasize internal division & segmentation as being more characteristic. 7 References. Grasmick, Harold G., Bursik, Robert J., Jr. & Kimpel, M'lou (Dept Sociology U Oklahoma, Norman 73019-0315), **Protestant Fundamentalism and Attitudes toward Corporal Punishment of Children**, *Violence and Victims*, 1991, 6, 4, winter, 283-298.

¶ While the banning of corporal punishment of children is seen by many as a crucial step toward reducing violence in US society, Protestant fundamentalism is closely linked to favorable attitudes toward corporal punishment at home & school, even when controlling for socioeconomic & demographic variables. Interview data collected from 394 people as part of the thirteenth annual Oklahoma City (Okla) Survey in 1991 indicate that the emphasis on biblical literalness among fundamentalist sects is the source of advocacy, rather than personal religiosity or adherence to a punitive image of God. Given the potential political effectiveness of fundamentalist churches, the policy implications of these findings present a difficult challenge for people calling for a prohibition on corporal punishment of children in order to reduce societal violence. 4 Tables, 54 References. Guroian, Vigen (Loyola Coll, Baltimore MD 21210), **Faith, Church and Nationalism in Armenia**, *Nationalities Papers*, 1992, 20, 1, spring, 31-51.

¶ Though the Armenian church in the former USSR has a tradition of giving authorities & the establishment unqualified support by weaving together communist & religionational myths in its discourse, in the late 1980s the church awakened from a long period of stagnation & experienced a religious revival. A more active membership has challenged the church leadership; combined with feelings of Armenian nationalism & the annexation of Nagorno Karabagh, this has made the church's accommodation to the USSR increasingly untenable. Accommodation has gradually been replaced with statements of qualified support for greater national autonomy, though the church remains a very conservative institution. Faith holds a key for the future of the members of the Armenian church as they continue to struggle with feelings of nationalism & pursuit of religious freedom. 3 Appendixes, 8 References. D. Hougland, James G., Jr. (U Kentucky, Lexington 40506), **The State and Observations of Religious Holiday Traditions: Attitudes toward Nativity Scenes on Government Property,** UM *Sociological Analysis,* 1992, 53, 3, fall, 299-308.

¶ A two-year legal debate in Ky initiated in 1988 over the placement of a creche on the state capital grounds presented an opportunity to test attachment to church-state separation among residents of a state dominated by conservative churches. Telephone interview data obtained at the height of the controversy, as well as before the 1989 holiday season (total N = 1,327 respondents (Rs)) are used to evaluate the relative strength of public sentiment during a period when an issue is controversial & when it is not a topic of daily discussion; demographic & attitudinal variables related to support for the installation of the creche on public grounds are also examined. Results suggest that support for the Nativity scene is related to integration into a set of societal & cultural traditions: Rs who were married, had higher incomes or more education, & were Christians relatively supportive of the creche, while urban residents, political liberals, & Democrats were relatively nonsupportive. Predictors of support in the two years were somewhat different, possibly stemming from a higher level of controversy in 1988. While the 1988 support may have been largely a result of a political position, the 1989 support appears to have been a reflection of more personal values & social positions. Implications of the findings for practices involving religious symbols & traditions are discussed. 2 Tables, 23 References. Adapted from the source document.

93Z5568

Jaworski, Gary Dean, Parsons, Simmel and the Eclipse of Religious Values, *Simmel Newsletter,* 1991, 1, 2, winter, 90-102.

¶ An analysis is presented of Talcott Parsons's "Georg Simmel and Ferdinand Tönnies: Social Relationships and the Elements of Action" (unpublished manuscript, Harvard U Archives, 1936) & other works showing the impact of Simmel on the development of Parsons's thought. An alternative approach is used, regarding Parsons's ideas as the products of his whole life, including not only the intellectual context, but also his commitments, prejudices, & life experiences, including his Protestant background. Much has been written about why this manuscript never made its way into any of Parsons's published works. Analysis of Parsons's biography indicates that, during the 1934/35 academic year, he encountered a rival in his attempt to bring German sociology to the US in the person of Howard Becker, also lecturing at Harvard U. Due to Becker's close association with the Simmelian sociologist Leopold von Wiese, Becker was perceived as having closer ties to Simmelian thought. However, in many respects, Becker & Parsons had close positions on many questions. By distancing himself from Simmel, Parsons sought to preserve the distinctiveness of his own approach from that of Becker. M. Meeks

93Z5569

Johnson, Martin & Mullins, Phil, Mormonism: Catholic, Protestant, Different?, UM *Review of Religious Research,* 1992, 34, 1, Sept, 51-62.

¶ Attempting to discern similiarities & differences in Roman Catholic, Protestant, & Mormon religious beliefs & moral values, questionnaire data were obtained from 405 adult members of 12 US congregations representing 6 denominations. Factor analysis of 212 items & multivariate analysis of variance of scales assessing these factors indicate that Mormons have adopted many religious beliefs & moral values accepted by other Christian groups (especially conservative ones), while at the same time strongly holding to a set of religious views very different from those of other Christian groups. 4 Tables, 16 References. Adapted from the source document.

93Z5570

Julliard, André (Groupe sociologie religions CNRS, F-75700 Paris France), **Transmission de savoirs magiques, médicaux et religieux dans les sociétés rurales françaises. Un savoir non désiré: la transmission des dons chez les leveurs de maux** (The Transmission of Magical, Medical and Religious Knowledge in Rural French Societies. The Transmission of Undesired Knowledge), *Société Alfred Binet et Théodore Simon,* 1991, 91, 1-2(626-627), 33-50. (FRE)

¶ To investigate folk healing practice in rural France, interview data were collected from 73 healers in Bresse de l'Ain, a traditionally agricultural region that underwent light industrialization during the 1970s. The healing rituals are thought to be linked to the popular piety & cult of the saints during the Middle Ages. Most healers plan to transmit their skills to other members of the family, but surprisingly, 37 received their training from someone other than a relative. Special attention is given to the rites of the transmission of healing power as well as to the rite of healing per se. M. Meeks

Kanagy, Conrad L. (Pennsylvania State U, Philadelphia 19104), **Social Action, Evangelism, and Ecumenism: The Impact of Community, Theological, and Church Structural Variables,** UM *Review of Religious Research,* 1992, 34, 1, Sept, 34-50.

¶ In an evaluation of the extent to which community, theological, & church structural variables are associated with community outreach activities, social involvement was identified with a strategy of bargaining, evangelism with cooptation, & ecumenism with coalition building. The social environment was operationalized by community population size, per capita income, proportion of elderly, & ethnic mix. The effects of theological church structural variables on church outreach activities were also examined. The findings suggest that the impacts of environmental variables are important to both social involvement (bargaining) & ecumenism (coalition building), but less so to evangelism (cooptation). Theological variables most strongly related to evangelism, & less to both social involvement & ecumenism; structural variables had little effect. 3 Tables, 1 Appendix, 45 References. Kee, Howard Clark (220 West Rittenhouse Sq, Philadelphia PA 10103), **Changing Modes of Leadership in the New Testament Period,** *Social Compass,* 1992, 39, 2, June, 241-254.

¶ Three parallel traditions discussing connotations for terms referring to religious leaders within early Christianity during the time of the writing of the New Testament are studied to illustrate changing modes of leadership & development of authority structures. The synoptic, Johannine, & the Pauline tradition, although analogous, did not develop uniformly. The Q source is the oldest level of the synoptic tradition, & did not prescribe a role for the disciples. Of the disciples, Mark maintained that the disciples should minister the eucharistic service, while Matthew insisted the disciples should make use of the authority Jesus gave them to spread His teachings. John's epistles warned against false doctors & urged obedience to the ancient. Pauline literature gave specific functions & precise definitions to the terms apostle, presbyter, bishop, & deacon. 7 References. Adapted from the source document.

Kerševan, Marko, Ambivalentnost revitalizacije religije v postsocialistični družbi (The Ambivalence of Revitalizing Religion in Postsocialist Society), *Anthropos,* 1991, 23, 6, 240-247. (SLV)

¶ The ambivalence found in the revitalization of religion in the postso-

cialist countries of Eastern Europe has its roots in the ambivalence between modernization & socialism as an ideal & in actual practice. Since communism sought to develop a social system without churches, traditional religions were forced to assume a modern, autonomous position outside of the state organization. Meanwhile the government assumed an unmodern form, with control by one party dominating ideology & all other subsystems. The fall of communism presents a dilemma of choosing between further ecclesiastical modernization or a return to the traditional precommunist position of religion. 36 References. Klor de Alva, J. Jorge (Dept Anthropology Princeton U, NJ 08544), **Raconter des vies: l'autobiographie confessionnelle et la reconstruction de l'être nahua** (Life Accounts: Confessional Autobiography and the Reconstruction of the Nahua Self), *Archives de sciences sociales des religions*, 1992, 37, 77, Jan-Mar, 111-124. (FRE)

¶ After 1526, when the Catholic sacrament of penance was formally introduced in Mexico, baptized natives were required to recount the story of a moral self that was not theirs. The narrative of the self expected during a confession was modeled after an ideal image of the Christian life, where every word, deed, & thought had a sinful side, where every sin threatened eternal damnation, & where only tearful remorse followed by a vocal recitation of one's darkest secrets held the promise of reconciliation. No native, who had constituted himself out of very different self-forming practices than those used in Europe, could see himself reflected in this image. To the extent that acculturation–ie, acceptance of a new regime of self-formation–did not follow baptism, the Indian self was not reconstructed enough to recite a Christian confessional autobiography. Beginning with a comparison of the manner in which Spaniards & Nahuas (the Aztecs & their linguistic & cultural neighbors) were expected to form themselves into ethical subjects & conduct themselves as moral agents, analyzed are the confessional practices through which the Spanish priests attempted to reconstruct the Nahua self. It is concluded that the confessional autobiography, when successfully implanted, led to the reconstruction of the Nahua self, & that this transformation contributed in subtle & not so subtle ways to the solidification of the European world's hold on the native bodies, selves, & fortunes. 46 References. Kodrič, Majda, Religion and Ethnic Identity within the Slovene Community in the United States: The Bases and the Transition to the Second Generation, *Studi Emigrazione/Etudes Migrations*, 1991, 28, 103, Sept, 443-454.

¶ The role of religion in the Slovene-American community has always assumed primary importance. However, the link between Slovene religious faith & ethnic identity was altered between the time when the first Slovene immigrants came to the US & when their US-born children began to assert themselves as the future of this ethnic community. The development that Slovene ethnic identity underwent is explored, & an attempt made to understand how these changes interrelated with the attitudes & activities of the Slovene-American parishes. Close scrutiny of a small, rural Slovene settlement in Stearns County, Minn, demonstrates these processes of change & how they were confronted. M. Maguire

Krüggeler, Michael (Schweizerisches Pastoralsoziologisches Instit, Gallusstr 24 CH-9000 Saint Gallen Switzerland), **"Nenn's wie Du willst..."–Religiöse Semantik unter der Bedingung struktureller Individualisierung** ("Call It What You Will..."–Religious Semantics under the Condition of Structural Individualization), *Schweizerische Zeitschrift für Soziologie/Revue Suisse de sociologie*, 1991, 17, 3, 455-472. (MUL)

Introduction, 453-454, **Comments**, 473-501.

¶ Following an **Introduction**, by Karel Dobbelaere (Catholic U of Leuven, B-3000 Belgium), who reviews the current status of research in the sociology of religion, changes in religious attitudes, beliefs, & practices among 1,325 Swiss adults are explored, drawing on questionnaire data. Focus is on tranformations in the internal structure of religious semantics. A new multidimensional structure of religious semantics is emerging, including non-Christian & nonecclesiastical features, pointing toward the loss of Christianity's former monopolistic position. Pragmatic implications of this shift include a flexibility of doctrine & loss of influence by organized church structures. In **Analyse sociologique de la croyance et sémantique** (Sociological Analysis of Belief and Semantics), Gilbert Vincent (U of Sciences Humaines Strasbourg, F-67084 France) distinguishes between theological & sociological definitions of belief. Special attention is given to the category of religious smentics & to the possibility of heterodoxy among orthodox Christian confessions. In **Zur Messung der Religiosität in den Niederlanden** (Measuring Religiosity in the Netherlands), Osmund Schreuder (Katholieke U Nijmegen, NDL-6500 HK Netherlands) presents data culled from 3 national surveys, 1979-1990 (N = 1,000-3,000 respondents [Rs]). It is concluded that religious consciousness is multidimensional: Rs' predominant attitude is the innerworldly interpretation of the cosmos & human life. The Christian view has become a minority phenomenon; Rs cannot be labeled as nihilists, but see no need for supernatural frames to give sense to their lives. Christian Rs use two competing frames of meaning, an innerworldly & a Christian one. Having a supernatural frame of meaning causes a stronger bond to national tradition, particularly with respect to family patterns & to the maintenance of the existing social order. Sources of traditional Christian religiosity are identified, demonstrating that social characteristics like class, formal education, or urban-rural environment are rather unimportant. In **Particularité et universalité en tension: différents types de croyances**, (Particularity and Universality in Tension: Diverse Types of Beliefs), Denis Müller (U of Lausanne, CH-1015 Switzerland) argues that the sociological analysis of the individualization of belief must also be considered from a theological point of view: the Protestant tradition has a very specific approach to the positive meaning of the secularization of religion in the modern world. Secularization has changed the place & meaning of religion, far from having suppressed it. Such a positive approach implies a very critical view of many syncretistical interpretations of religion, including the apologetic one of Catholic theology. These theories are applied to the ambiguous situation of ethical committees, considering the role of religious ethics in the ethical debate from a new standpoint. 1 Table, 4 Graphs, 28 References. La Barbera, Priscilla A. (Stern School Business New York U, NY 10003), **Enterprise in Religious-Based Organizations,** *Nonprofit and Voluntary Sector Quarterly*, 1992, 21, 1, spring, 51-67.

¶ To illustrate commercial religious enterprise, personal interviews of representatives from 105 Jewish & Christian religious organizations were used to devise 4 case studies. The sacred & secular dimensions of the assets & constraints that affect management are also discussed. Sacred assets identified include committed leadership, staff, & constituents, volunteers, working environment/spiritual vision, & spiritual tools. Tax exemption is identified as a secular asset. Sacred constraints identified are religious laws & imperatives, mission conflict, & refusal to exploit supporters. Secular constraints include staff compensation, limited business experience, & threatened loss of tax exemption. 1 Table, 1 Figure, 11 References. Adapted from the source document.

Latkin, Carl (Dept Mental Hygiene Johns Hopkins U, Baltimore MD 21205), **Seeing Red: A Social-Psychological Analysis of the Rajneeshpuram Conflict,** UM *Sociological Analysis*, 1992, 53, 3, fall, 257-271.

¶ A naturalistic, social-psychological study of intergroup conflict between members of the Rajneeshee commune & other adults in Ore, 1982-1986. Quantitative & qualitative data collected via participant observation, interviews with 40 commune members, & a statewide telephone survey (N = 742 respondents) reveal that the prevailing public attitude was overwhelmingly negative. The public's perceptions of & reactions to the Rajneeshees are explained in terms of a dynamic social-cognitive process, utilizing the psychological concepts of schema, level of abstraction, & stress & coping mechanisms. The construct of "moral exclusion" is of utility in understanding the Rajneeshees' attitudes & hostile actions. 46 References. Adapted from the source document.

Lavallé, Bernard (U Bordeaux I, F-33405 Talence Cedex France), **Evangélisation et exploitation coloniale dans les Andes. Le Cas des *doctrinas* régulières (XVI-XVII siècles)** (Evangelization and Colonial Exploitation in the Andes. The Case of Regular *doctrinas* (Sixteenth-Seventeenth Centuries)), *Archives de sciences sociales des*

religions, 1992, 37, 77, Jan-Mar, 37-56. (FRE)

¶ Based on secular & ecclesiastical records, the relationship between the religious & economic powers of Catholic missionaries in colonial Latin America is examined. In the sixteenth & seventeenth centuries, the *doctrina* (similar to parish) was the basic organizational unit for evangelizing the Indian population, but it is argued here that the *doctrina* was also the unit for economic exploitation. The economic importance of the *doctrinas* is explained, noting their enterprise-like management by the *doctineros* (preachers). Indian complaints on the growing wealth of the preachers, & reactions within the Catholic orders, are recorded. 9 References. I. Shagrir

Levy, Marion J., Jr. (Woodrow Wilson School Public & International Affairs Princeton U, NJ 08544), **Confucianism and Modernization**, UM *Society*, 1992, 29, 4(198), May-June, 15-18.

¶ The role of Confucianism in the modernization process of East Asia is discussed, using Max Weber's theory of Protestantism & capitalism as a starting point. Modernization is characterized by a high ratio of inanimate to animate sources of power, with optimism toward material betterment. Confucianism, it is argued here, has a this-worldly pragmatist orientation. Examining elements of Confucianism, eg, centrality of the family, ancestor worship, & perception of government, the relevance of the Confucian ethic to modernization is explored. Addressing the question why modernization developed only 2,500 years after Confucius, emphasized are changes in the relation between familialism & primacy of national state. I. Shagrir

Mayer, Jean-François (Route des Fougères 1, CH-1705 Fribourg Switzerland), **Nouvelles voies spirituelles en dehors de la tradition chrétienne en Suisse** (New Spiritual Voices from outside the Christian Tradition in Switzerland), *Schweizerische Zeitschrift für Soziologie/Revue Suisse de sociologie*, 1991, 17, 3, 640-650. (MUL)
Introduction, 637-639, **Comments**, 651-666.

¶ Following an **Introduction** by Jacques Waardenburg (U of Lausanne, CH-1015 Switzerland) to this special section on alternative religiosities, the growth of non-Christian religious movements in Switzerland is chronicled. Special attention is given to the parallel religiosity expressed through participation in these new religions. Some people follow one creed exclusively, while others participate in several movements simultaneously. It is questioned whether these religions share any common identity aside from their non-Western spirituality. In **De la religiosité parallèle en France ou la "nébuleuse mystique-ésotérique"** (Parallel Religiosity in France or "Nebulous Mystical Esoterism"), Françoise Champion (CNRS, F-75017 Paris, France) argues that, despite connections between the new mystical esoteric religions developed over the past twenty years & earlier religions, they are uniquely grounded in the specific historical juncture of the 1960s. Three main currents are identified: (1) the emphasis on experience as opposed to belief; (2) the transformation of self through psychocorporal techniques, eg, yoga, meditation, sacred dances; & (3) the progressive character of a monistic concept of the world, representing a retrogressive protest against modern technology. Their common identity comes from their opposition to official religions, science, & medicine. In **"Alternative" Religiosität: Alternative wozu?** ("Alternative" Religiosity: An Alternative to What?), Fritz Stolz (U of Zürich, CH-8006 Switzerland) suggests that the growing tendency in Western Europe to include elements of Eastern religions into the teachings & worship of Christianity, blurs the distinction between normal & alternative religions. The new alternative religious movements are examined, highlighting their embeddedness in the total religious context of society, diachronic & synchronic aspects, organizational forms, & variety & dynamics of the exchange of religious symbols & actions. The increasing emphasis these groups place on individual psychological welfare is illustrated by esoteric doctrines about health & healing. Interreligious contact & competition for adherents in a market-type atmosphere result in the creation of a commonly understood system of symbols. 11 References. M. Meeks

Mock, Alan K. (West Virginia U, Morgantown 26506), **Congregational Religious Styles and Orientations to Society: Exploring Our Linear Assumptions**, UM *Review of Religious Research*, 1992, 34, 1, Sept, 20-33.

¶ To explore the common assumption that a strong linear relationship exists between the religious style of congregations & their orientation to the social world–specifically, that evangelical churches are never found actively engaged in social justice ministries–mail survey data were obtained in 1987 from 5,100+ members of 62 midwestern US congregations of diverse denominational traditions. The findings are drawn on to summarize 9 distinct ways in which congregations integrate their religious style & orientation to the social world. It is shown that many evangelical congregations involve themselves in social service & social justice ministries, & that religiously liberal churches may be virtually uninvolved in such activities. The relationship of the 9 types to denominational traditions, & to members' socioeconomic status & political & economic beliefs are also examined. 3 Tables, 1 Figure, 1 Appendix, 18 References. Murphy, James (Dept Educational Research Lancaster U, LA1 4YW England), **A Most Respectable Prejudice–Boudon**, UM *The British Journal of Sociology*, 1992, 43, 3, Sept, 485-488.

¶ In a reply to Percy S. Cohen's comments (see SA 39:2/91X4759) on the omission of Raymond Boudon from James Murphy's critique of postwar educational research & reform (see SA 38:3/90V6349), it is asserted that Boudon's *Education, Opportunity and Social Inequality* (New York: John Wiley, 1973), on first reading, appears not to fit with his indictment of the parochial pattern of educational research & policy as so preoccupied with education that it has been unable to handle–except as pathological & unfair–class differences in aspiration. Boudon speaks of educational difference, but not educational inequality; however, he appears to have two minds on the issue, because he also suggests that educational inequality can be measured by educational differences. The second view, which implies that class differences in representation stem from inequality, fits with the parochial pattern of educational research & thought. D. Generoli

Olivier de Sardan, Jean-Pierre, Occultism and the Ethnographic 'I': The Exoticizing of Magic from Durkheim to 'Postmodern' Anthropology, *Critique of Anthropology*, 1992, 12, 1, Mar, 5-25.

¶ Ethnocentric attitudes toward non-Western cultures are common among anthropologists, & not only in positivist or classical "realist" anthropology; the use of the ethnographic "I" among postmodern anthropologists & others–detailing the anthropologist's own experiences in a faraway society–easily leads to ethnoegocentrism. Magic & religion seem to be favored domains. The fascination among certain anthropologists with the occult, the sacred, the esoteric, & the supernatural tends to hide the normality & pragmatism of many magico-religious representations & practices in African societies–the fact that these representations are part of daily life & of people's natural attitude. The inevitability that the anthropologist translates from one system of meanings to another requires a break with the exoticizing stereotypes that Western common sense projects on non-Western cultures. 52 References. Ondrejovič, Dušan (Evanjelická bohoslovecká fakulta U Karlova, CS-11636 Prague 1 Czechoslovakia), **Evanjelická A. V. cirkev a jej vplyv na verejný život na Slovensku** (The Evangelical (Augsburg Confession) Church and Its Influence on Public Life in Slovakia), *Sociológia*, 1991, 23, 1-2, 33-40. (SLO)

¶ A historical overview is given of Protestantism in Slovakia. The Reformation spread throughout Slovakia in three ways: (1) by Queen Maria & Count Juraj Brandenburský, who invited visiting scholars & preachers from Hungary; (2) by German colonists in coal-mining towns; & (3) through the official diplomatic invitation of reformers. Tensions existed between Catholics & Protestants; the reformers were particularly successful in printing books, having twenty-eight printing plants in the sixteenth century compared to one for the Catholics. After the proclamation of religious liberty by Josef II in 1781, Evangelical Protestantism developed more intensively. Participation by Protestants in the Slovak national movement, the formation of the Czechoslovak state, & the anti-Nazi movement is discussed. Current efforts in the postcommunist era center on overcoming the alienation between canonical & social life. 5 References. Adapted from the source document as translated by M. Meeks.

Rebillet, Monique, Education, paroles et pratiques signifiantes: voyage en MRJC (Education, Behaviors and Significant Practices: The Rural Christian Youth Movement), *Société Alfred Binet et Théodore Simon*, 1991, 91, 1-2(626-627), 125-134. (FRE)

¶ An investigation of the Rural Christian Youth Movement, a social & religious organization for French Catholic teenagers, based on data obtained via participant observation at a national conference attended by 10,000 youth in Nantes, 22-23 July 1989, as well as an Easter celebration in 1990, & other visits to meetings in the Bourgogne region in 1989 & 1990. The organization is viewed as a popular education movement with objectives of using social collective action to achieve social transformation. Primary goals include the conscientization & reevangelization of the social sector responsible for food production. M. Meeks

93Z5593

Schumann, Olaf, Christians and Muslims in Search of Common Ground in Malaysia, *Islam & Christian-Muslim Relations*, 1991, 2, 2, Dec, 242-268.

Response, 269-274.

¶ The constitution of the federal state of Malaysia states that while Islam is the religion of the federation, other religions may be practiced in peace & harmony. Demonstrated is how, in contradiction to this spirit, the state practices Islamization policies, attempting to increase numbers of Muslims through propaganda, money awards, social & legal inequality, & language restrictions. The reactions of non-Muslims are examined, the dangers of social polarization are outlined, & a call is made for legal equality. In **"Christians and Muslims in Search of Common Ground in Malaysia": A Response**, Bert Breiner (Selly Oak Coll, Birmingham, England) acknowledges the importance of Schumann's essay in highlighting an important area of interfaith conflict & its possible dangers, but addresses a few confusing points, starting with clarification of the terms Malay, Malayan, Malaysia/Malaysian, & *bumiputra*–terms relevant to the constitutional position of Muslims & non-Muslims in the federation–& highlights the gap between Muslim historical pluralist attitude toward other religions & the current dangerous situation in Malaysia. I. Shagrir

93Z5594

Séguy, Jean (Groupe sociologie religions CNRS, F-75017 Paris France), **Religion et culture** (Religion and Culture), *Schweizerische Zeitschrift für Soziologie/Revue Suisse de sociologie*, 1991, 17, 3, 669-684. (FRE)

¶ Following a discussion of culture in the broad sense of civilization, attention is focused on how religion influences culture. In traditional societies, social codes are religious or religiously inspired, & the distinction between civil & religious society is unknown. In modern societies, however, the religious sphere & public life are distinct. Analysis of secularization processes begun in Europe in the eighteenth century shows that reason, science, & technology allied for progress & struggled against various forms of fanatical obscurantism, including various religious influences. Now, however, the failure of many splinter groups claiming to be based on reason, eg, Marxism & other ideologies, is challenging some of the premises of the Enlightenment. Although Western Christianity has changed & lost much of its former cultural influence, it is not about to disappear. M. Meeks

93Z5595

Shamash, Jack, Zealots for the Television Age, *New Statesman & Society*, 1992, 5, 202, 15 May, 20-21.

¶ An examination of the ultrareligious movement of Lubavitch, a Hasidic sect that, instead of shunning the outside world, reaches out to it by trying to persuade more secular Jews to observe their religious heritage. The Lubavitch is characterized by religious zeal, & its members believe that the time of the Messiah is near. Though the identity of the Messiah has not yet been revealed, Lubavitch members universally believe that their leader, Rabbi Menachem Schneerson, will fulfill the Messianic prophecy. Supporters of the movement point to the sincerity of its zeal & the positive contributions the Lubavitch has made to the community. Detractors claim that the movement is little more than a Jewish militant organization that has little respect for non-Jewish culture & wishes to take over orthodox synagogues. D. Generoli

93Z5596

Squire, Anne M., Homosexuality, Ordination, and the United Church of Canada, IM *Queen's Quarterly*, 1991, 98, 2, summer, 338-352.

¶ After ten years of debate within the United Church of Canada over homosexual ordination, the Thirty-Third General Council offered in 1990 a solution of compromise that does little to quell the debate. Under the compromise, gays & lesbians are not prohibited from ordination, but they must win acceptance from those church officials who make ordination decisions. This decision was a disappointment for those church members who believe homosexuality is a sin & view the compromise as an opening of the ministerial doors; it is similarly perceived as a disappointment by homosexual church members & their supporters who wished for acceptance based on abilities & achievements uninfluenced by concerns about sexual orientation. The church, which has prided itself on strength through diversity, will continue to struggle with the issue of homosexual ordination. 10 References. D. Generoli

93Z5597

Stark, Rodney, Do Catholic Societies Really Exist?, *Rationality and Society*, 1992, 4, 3, July, 261-271.

¶ Application of the economic principle that competition makes firms vigorous to religious organizations suggests that the average level of religious commitment among Roman Catholics will vary inversely to the degree that a society is Catholic. Analysis of secondary data for 45 societies confirms this prediction: the lower the level of Catholic commitment, the greater the proportion of Catholics in the population. Moreover, the recent explosive growth of Protestantism in Latin America is concentrated in the most Catholic nations. 1 Table, 20 References. Adapted from the source document.

Voll, Peter (Schweizerisches Pastoralsoziologisches Instit, Gallusstr 24 CH-9000 Saint Gallen Switzerland), **Von der Mitte zum Rand? Zur Lage religiöser Milieus in der soziokulturellen Landschaft der Schweiz** (From the Middle to the Periphery? The Position of the Religious Milieu in the Sociocultural Landscape of Switzerland), *Schweizerische Zeitschrift für Soziologie/Revue Suisse de sociologie*, 1991, 17, 3, 600-617. (MUL)
Introduction 597-599, **Comments**, 618-634.

¶ Following an Introduction in which Lilian Voyé (U Catholique Louvaine, B-1348 Belgium) describes the marginalization of religion in the modern world, it is argued that the sociocultural changes implicit in the transition to a merit-based social structure have negatively impacted Christian churches. Questionnaire data from 1,315 Swiss adults reveal a positive correlation between active participation in organized religion & lower socioeconomic status. Rather than religion, it is profession that determines social standing. In **Discours sur la différenciation structurelle ou différenciation du discours sur les structures** (Discourse on Structural Differentiation or Differentiation of Discourse on Structures), René Levy (U Lausanne, CH-1015 Switzerland) notes several theoretical shortcomings in Voll's approach, & suggests that more studies be performed to examine changes in religious attitudes diachronically. In **Individualisme structurel et religion: limites d'une théorie** (Structural Individualism and Religion: The Limit of a Theory), Jean-Paul Willaime (U Sciences Humaines, F-67084 Strasbourg France) notes with interest Voll's observations on the influence of geographic mobility & mass media on religion, but argues that the social fact of religious individualization does not mean that religion is without cultural & institutional dimensions. 2 Tables, 75 References. Wackenheim, Charles (7 rue Neubourg, F-67580 Mertzwiller France), **Trois initiateurs: Engels, Weber, Troeltsch** (Three Initiators: Engels, Weber, Troeltsch), *Social Compass*, 1992, 39, 2, June, 183-205. (FRE)

¶ A comparison of writings in the sociology of Christianity's origins by three modern thinkers, Friedrich Engels, Max Weber, & Ernst Troeltsch. The work of theologian Troeltsch suggests a socioeconomic climate conducive to, but also constraining, the emergence of a primitive Christianity, which he calls a "typical period" in the development of a religion. Troeltsch's ideal-typical methodology was derived from colleague & friend Weber, although he also drew from philosopher Wilhelm Dilthey. Weber's original notion of a typology in the formation of religions explains the rising status of ecclesiastical institutions as Christianity became more powerful. Underlying traces of Marxist ideological analysis are common to Weber & Troeltsch, & are explicit in Engels's writing. Proposing that religious phenomena spring from the economic infrastructure, earliest Christianity was like modern socialism in its promise of emancipation from oppression. However, Christianity's deliverance occurred on a spiritual level, while the worker's revolution resulted from radical social transformations. 7 References. Adapted from the source document.

Weber, Max, Introduction à ***L'Ethique économique des religions universelles*** (Introduction to *L'Ethique économique des religions universelles*), *Archives de sciences sociales des religions*, 1992, 37, 77, Jan-Mar, 141-167. (FRE)

Introduction, 139-140.

¶ Introduced & translated from German by Jean-Pierre Grossein (U of Paris VIII, France) is a revision by Max Weber of his introduction to a series of papers (1915-1920) published under the title *Die Wirtschaftsethik der Weltreligionen* (The Economic Ethics of World Religions [publication information not provided]), considering the economic ethics of Confucianism, Hinduism, Buddhism, Christianity, Islam, & Judiasm. The analysis of economic ethics is based not on theological writings, but on "practical incitations to action." It is argued that the economic organizational forms of various religions may seem identical, but in reality conceal differing ethics, with diverse historical effects. The economic ethic is fixed in the religious ethic & in the content of a religion's revelation & promise & their impact on social life. Values corresponding to the religious economic ethic are examined, eg, suffering. Ways in which religious societies rationalize modes of life are explored, & aspects of religious authority analyzed. Weyland, Petra (Sociology Development Research Centre Bielefeld U, D-4800 Federal Republic Germany), **International Muslim Networks and Islam in Singapore**, *SOJOURN*, 1990, 5, 2, Aug, 219-254.

¶ Similar to global economic integration, the internalization of religious movements is invariably accompanied by the transmission of ideas, values, & ideologies. This is demonstrated here via analysis of the development of the All-Malayan Muslim Missionary Society, popularly known as Jamiyah, & its changing role in a rapidly modernizing Singapore. The growth of Jamiyah is chronicled from its foundation by a highly charismatic leader & patron into a sophisticated religious body, with modern party-like organizational forms, employing rationalized methods in the dissemination of ideas & knowledge. This transformation not only parallels the development of international Muslim networks supported by Saudi Arabian organizations, but has, to a large extent, been dependent on these linkages. 13 References. Wilcox, Clyde (Georgetown U, Washington DC 20057), **Religion and the Preacher Vote in the South: Sources of Support for Jackson and Robertson in Southern Primaries**, UM *Sociological Analysis*, 1992, 53, 3, fall, 323-331.

¶ The religious sources of support for 2 Baptist ministers seeking the 1988 presidential nomination–Democrat Jesse Jackson & Republican Marion (Pat) Robertson–are investigated using national survey data from 1,538 southern whites. Analysis reveals that religion was a source of support for Robertson, but also served to limit his appeal. Although pentecostal & charismatic Christians responded positively to his campaign, fundamentalists & other evangelicals were less supportive. He was generally unsuccessful in broadening his appeal within the evangelical community or in attracting more secular conservatives. Evaluations of Jackson were partially explained by religious doctrine & denomination, with those who attended evangelical churches but who did not hold evangelical doctrinal beliefs less supportive, & those who attended mainline Protestant churches but who held evangelical doctrinal beliefs more so. 1 Table, 1 Appendix, 11 References. Wilson, Bryan (All Souls Coll, Oxford OX1 4AL England), **Culture and Religion**, *Schweizerische Zeitschrift fur Soziologie/Revue Suisse de sociologie*, 1991, 17, 3, 433-449.

¶ Religion has been a traditional cultural vehicle, shaping the ways human order is transmuted or lifted above animal impulses by constraints that must be learned & nurtured by social agencies. Some might argue that, without religion, it would have been impossible for culture to develop at all. Investigated here are the effects of religion in disseminating a new culture, taking the case of Protestantism spreading throughout Latin America. The traditional Catholic culture is being challenged at the grass-roots level of new sects, especially among the poor of Brazil, Chile, Guatemala, Nicaragua, & Peru. Differences between the new Pentecostalist spirituality & traditional Puritanism are reviewed. In advanced Western society many people, especially the youth, are culturally out of contact with religious symbolism. For both Christianity & Judaism, cultural change implies some risk of abandoning fundamental values. 23 References. Adapted from the source document.

Woodrum, Eric & Hoban, Thomas (North Carolina State U, Raleigh 27695), **Support for Prayer in School and Creationism**, UM *Sociological Analysis*, 1992, 53, 3, fall, 309-321.

¶ Alternative hypotheses on why school prayer & creationism continue to receive widespread public support in the US are tested using data obtained via telephone interviews in NC in 1989 (N = 332 respondents). Logistic regression analysis indicates that low education, religious sa-

lience, & political conservatism increase support for both issues; yet multivariate findings indicate the social support bases of school prayer & creationism are substantially distinct. Biblical literalism is critical to creationist support, whereas biological ignorance is not. School prayer support derives from more heterogenous sources than does creationism. Findings are interpreted in terms of moral communities & competing worldviews held by religious traditionalists vs modern secularists. Despite considerable public support, it is concluded that political prospects for these proposals are limited. 2 Tables, 45 References. Adapted from the source document.

Wright, Pablo G. (CONICET-Carlos Casares, 1357-1644 Victoria Buenos Aires Argentina), **Toba Pentecostalism Revisited,** *Social Compass,* 1992, 39, 3, Sept, 355-375.

¶ Various theoretical models are synthesized to analyze the Argentine socioreligious movement, Toba Pentecostalism, established in the mid-1940s. The principal model is that of Elmer Miller (*Pentecostalism among the Argentine Toba,* dissertation, U of Pittsburgh, 1967), though the views of other researchers are also discussed. Problems are noted in the theorizations & analyses, eg, in the use of typologies & categories to define the nature of the movement. It is suggested that the structural approach to socioreligious movements be abandoned in favor of a historical symbolic approach, ie, investigation of historical processes & interpretation of symbols in social action. 69 References. Zaret, David (Dept Sociology Indiana U, Bloomington 47405), **Calvin, Covenant Theory, and the Weber Thesis,** UM *The British Journal of Sociology,* 1992, 43, 3, Sept, 369-391.

¶ Malcom H. MacKinnon's challenge (see SA 36:4/88T7062 & 88T7063) to Max Weber's interpretation of Calvinism (*The Protestant Ethic and the Spirit of Capitalism* [see SA 7:1/595444]) is examined. MacKinnon suggests that without the concepts of salvation anxiety & predestination, which were removed from Calvinism by Puritan covenant theology, Weber's thesis has no basis & stems from distorted readings of religious texts. It is argued here that this analysis grossly distorts the primary & secondary evidence showing that Puritan covenant theology contained the essential elements attributed to the Protestant ethic by Weber. MacKinnon's criticism results from two types of selectivity effects that bias sociological interpretations of belief systems-one that originates in exegetical practices, & another in those of clerical authors whose texts constitute the primary data. The flaws in MacKinnon's critique should be understood in terms of bad sociology of knowledge, rather implicit in his analysis, & not necessarily as a reflection of his evident animus toward Weber. Adapted from the source document.

----, **Bibliographie internationale de sociologie des religions 1991/ International Bibliography of Sociology of Religions 1991,** *Social Compass,* 1992, 39, 3, Sept, 465-496. (MUL)

¶ A reference list of specialized articles relating to the sociology of religion, organized under the following subheadings: (1) organization & development of research in sociology of religion; (2) epistemology & methodology; (3) fundamental theoretical approaches; (4) religion & global society-eg, religion & social stratification, economy, & politics; (5) geographical distribution of religions in the world by continents; (6) morphology of the religious field by religions & aspects of religious systems-eg, authority, theology, & morals; & (7) religious change-ie, religious movements & secularization. A list of journals consulted is provided. I. Shagrir

93Z5615

----, **A Faith for All Seasons,** *Islam & Christian-Muslim Relations,* 1991, 2, 2, Dec, 295-299.

¶ A two-part review article on a book by Shabbir Akhtar, *A Faith For All Seasons: Islam and Western Modernity* (London: Bellew Publishing, 1990 [see listing in IRPS No. 66]). **Michael Nazir-Ali** describes this book's twofold objective: to alert Muslims to the consequences of secularization, & to advocate the credibility of Islam in secularized Muslims. However, it is contended that the work is apologetic & too polemical in its view of Christianity & Judaism. **Syed Vahiduddin** notes that Akhtar is not a traditional Muslim, but is modern, & often secular, in his philosophical stance. Key issues facing Islam in the modern world are identified in the book, but the question of Islamic modernism is inadequately addressed. I. Shagrir

93Z5616

----, **The Forum,** *Rationality and Society,* 1992, 4, 4, Oct, 470-476.

Reply, 476-480.

¶ In **The Understanding of Religious Vitality Needs Additional Factors,** Raymond Boudon (U of Paris IV, F-75230 Cedex 05 France) compliments Mark Chaves's & David E. Cann's "Regulation, Pluralism, and Religious Market Structure: Explaining Religion's Vitality" (see abstract in this section of SA 41:1), & identifies other variables (eg, levels of modernization, degree of religious regulation) that might explain the international variation in the vitality of religion. In **Market and Political Explanations of Religious Vitality: Comments on Chaves & Cann,** Xiaoxi Tong (U of Chicago, Ill 60637) agrees that Chaves's & Cann's use of a Tocquevillian argument-which focuses on the church/state relationship-to explain international differences in religious vitality is valid. In **Reply to Boudon and Tong,** Chaves (U of Notre Dame, Ind 46556) & Cann defend their proposition that state regulation of religion produces decreased levels of religious participation, respond to Boudon's analysis of the relationship between secular religions & religious participation, & discuss methodological issues raised by both Tong & Boudon. Berends, Miek (Rijks U Groningen, NL-9700 AB Netherlands), **An Elusive Profession? *Lawyers in Society*,** *Law and Society Review*, 1992, 26, 1, 161-188.

¶ A review essay on four books by: Richard L. Abel, *The Legal Profession in England and Wales* (Oxford: Basil Blackwell, 1987); & Richard L. Abel & Philip S. C. Lewis, *Lawyers in Society, Vol. 1: The Common Law World; Vol. 2: The Civil Law World, & Vol. 3: Comparative Theories* (Berkeley: U of California Press, 1988, 1988, & 1989, respectively [see listings in IRPS No. 66]). Abel examines three main theoretical streams underlying research on the sociology of the legal profession: the structural-functionalist, the Marxist, & the Weberian. Volumes 1 & 2 of the Abel & Lewis compendium present a historical description & developmental analysis of the legal profession in 19 countries, while Volume 3 assesses these national reports from different perspectives to the study of the legal profession. The trilogy, however, suffers from a scarcity of data, lack of theoretical underpinnings, & limited analyses. 71 References. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Bergalli, Roberto (Instit Criminologia U Barcelona, E-08007 Spain), **La quiebra de los mitos. Realidades de la independencia judicial y de la selección de los jueces en Latinoamérica** (The Bankruptcy of Myths. The Reality of Judicial Independence and the Selection of Judges in Latin America), *Sociologia del Diritto*, 1992, 19, 1, 63-86. (SPA)

¶ A non-normative approach is used to demythify two pillars of the Latin American legal culture: judicial independence & judge/magistrate selection. Cases from Mexico, Brazil, Colombia, & Argentina illustrate how judges are externally & internally tied to the political system, changing their image as needed to fit public & self-opinion. Aligning with more progressive European standards in the administration of justice, critical legal approaches are emerging in Latin America that propose a truly autonomous sociopolitical agenda for judges–one that balances their role as guardian of positivist legality with technical legal expert–& a restructuring of a legitimized judicial institution. 24 References. Brisbin, Richard A., Jr. & Hunter, Susan (Dept Political Science West Virginia U, Morgantown 26506), **Perceptions of Justice: Clientele Evaluations of Conflict Adjustment by a Utility Regulatory Agency,** *Social Justice Research*, 1992, 5, 1, Mar, 3-30.

¶ A series of hypotheses about the sociopsychological dimensions of justice were evaluated, & models of the relationship between the public's perception of justice in institutionalized government activity in the dispute adjustment process were assessed by surveying clientele of the Public Service Commission (PSC) of WVa's Customer Relations Division on their attitudes toward informal & formal complaint resolution in the utility-PSC context. Telephone surveys were conducted with businesses or public utility parties involved in 201 PSC dispute procedures Nov 1989-Mar 1990. Bivariate analyses provided support for hypotheses drawn from previous studies: participation in the dispute adjustment process was not associated with enhanced procedural neutrality evaluations, but decision control was. Formal processes did not increase perceptions of procedural neutrality; informal processes were just as positively evaluated. Disputants were concerned about institutional procedures & how they were treated by PSC staff, & wanted to connect at the personal level. The linkage of these concepts to the legitimacy of the political regime is considered in conclusion. 11 Tables, 3 Figures, 57 References. Adapted from the source document. Carrier, John & Kendall, Ian (London School Economics & Political Science, WC2A 2AE England), **Law and the Social Division of Welfare,** *International Journal of the Sociology of Law*, 1992, 20, 1, Mar, 61-87.

¶ An exploration of links between law & welfare focuses on how judicial welfare is inserted into the development of welfare states in the UK. Welfare pluralism, or the mixed economies of welfare, includes state-funded social welfare programs, which are complemented by developments in tax incentives (fiscal welfare) & employers' benefits (occupational welfare), as well as nonstate welfare institutions, in the form of voluntary organizations that also target the needy. It is argued that judicial welfare from court-ordered redistributions should continue to add to the mixed economy of welfare. However, the role of UK judicial welfare in the twentieth century has been diminished overall. While the benefits of continued judicial welfare are evident in certain areas (medical accidents, malpractice, antidiscrimination legislation, mental health & child care legislation), the advantages it provides as arbiter, distributor of services, & definer of citizen guarantees warrant an expanded contributing part in the social division of welfare. 1 Figure, 62 References. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5622

Cowan, Gloria (Dept Psychology California State U, San Bernardino 92407), **Feminist Attitudes toward Pornography Control,** *Psychology of Women Quarterly*, 1992, 16, 2, June, 165-177.

¶ Drawing on questionnaire data for 119 feminists (110 women & 9 men) solicited through the readership of the National Organization for Women newsletter in a small southern Calif community, attitudes toward legislative control of pornography are explored. Findings support Carol Gilligan's model of moral reasoning (*In a Different Voice*, Cambridge, Mass: Harvard U Press, 1982): feminists who prioritized responsibility for the welfare of others over freedom & individual rights were more likely to favor pornography control. In this sample, the choice was related to attitude toward control, & those who viewed pornography & pornography control more as moral issues favored legal control. It is apparently not the perceived morality of rights & freedom of expresion that underlies its importance to feminists. The most important variables in understanding mainstream feminist attitudes in this regard appear to be related to the consequences of pornography. 2 Tables, 22 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5623

Dolder, Fritz & Buser, Mauro W. (U Basel, Klingelbergstr 70 CH-4056 Switzerland), **Zur systematischen Inhaltsanalyse von Rechtstexten–Klassifizierung von Urteilsbegründungen zum Schutzbereich von Patenten mit der partitionierenden Cluster-Analyse** (The Systematic Content Analysis of Legal Texts–Classifying Judicial Argumentation for Patent Protection with Partitioning Cluster Analysis), *Zeitschrift für Rechtssoziologie*, 1992, 13, 1, June, 110-130. (GER)

¶ To examine judicial argumentation on patents in Austria, the former West Germany, & Switzerland, a content analysis was performed of 16 topics covered in 90 court cases. A matrix of binary data was divided using partitioning cluster formations as described in Helmut Spath's

Cluster-Formation und Analyse ([Cluster Formation and Analysis] Munich, 1983). Six clusters were retained as statistically significant. The four clusters with an average density of argumentation included formal, functional, combined, & general law. Germany was overrepresented in formal patent law clusters, while Austria was overrepresented in general clusters. No correlation was observed between specific clusters & the court ruling on whether an infringement had occurred. Cluster formation & content variation are discussed in light of an instrumental & expressive function of argumentation. 6 Tables. Adapted from the source document.

93Z5624

Douzinas, Costas & Warrington, Ronnie (U Lancaster, LA1 4YW England), **Posting the Law: Social Contracts and the Postal Rule's Grammatology**, *International Journal for the Semiotics of Law/ Revue Internationale de Sémiotique Juridique*, 1991, 4, 11, 115-135.

¶ Critical readings of political philosophy & jurisprudence have argued that the linguistic & social bonds created by social & legal institutions are inescapable ontological conditions. But a closer look at the law of contracts & the social contract shows that when the semiotic moment of communication is temporarily or permanently separated from the hermeneutical moment of shared meaning, the free circulation of signs & the possibility of telling the stories of tradition differently take precedence over uniformity & the law. The "postal rule" of contract law helps to deconstruct the metaphysics of presence that permeate the law & to clear the path for a postmodern jurisprudence. AA

93Z5625

Douzinas, Costas & Warrington, Ronnie (U Lancaster, LA1 4YW England), **"A Well-Founded Fear of Justice": Law and Ethics in Postmodernity**, *Law and Critique*, 1991, 2, 2, autumn, 115-147.

¶ An attempt to determine whether a postmodern ethics that accepts the pragmatic, epistemological, & ontological critiques of modern moral philosophy is possible given postmodernism's tendencies toward cynicism & passivity. This is examined through an analysis of the writings of Jean-François Lyotard, Jacques Derrida, & Harold Levinas, & via an examination of three judgments from the British House of Lords & the Court of Appeal, of which two involve a number of Tamils from Sri Lanka seeking asylum in GB. In policing borders & demarcating its own territory & subjects, British immigration law commits a kind of violence founded on strategies of exclusion. It is concluded that the justice of a judgment is inscribed & suspended in the space between the statement of a law & the invocation of an ideal state of affairs. W. Howard

93Z5626

Edelman, Lauren B., Abraham, Steven E. & Erlanger, Howard S. (U Wisconsin, Madison 53706), **Professional Construction of Law: The Inflated Threat of Wrongful Discharge**, *Law and Society Review*, 1992, 26, 1, 47-83.

¶ An exploration of ways that the personnel & legal professions shape employers' legal understanding, focusing on the implied contract theory of wrongful discharge (WD), which allows employees to sue their employers for being fired without just cause. Analysis of published data on WD cases from 6 states indicates that the actual risk employers face from implied contract doctrine is relatively small. However, analysis of professional protrayal of risk through review of 43 relevant articles from personal journals, law reviews, & law practice journals reveals that the personnel & legal professions exaggerate the risk of wrongful discharge litigation. The professional power explanation is discussed as the reason for the inflation of the threat of WD litigation to employers. 5 Tables, 64 References. Adapted from the source document.

93Z5627

Ehrlich, Eugen, Die Gesellschaft, der Staat und ihre Ordnung (Society, the State and Their Order), *Zeitschrift für Rechtssoziologie*, 1992, 13, 1, June, 3-15. (GER)

¶ Beginning with an anthropological analysis of the genesis of law in primitive societies, a historical sketch is given of the various categories of law developing through increasingly complex levels of civilization. A community can exist only through, in, & with the system of norms that it develops. Contrary to popular practice, law should not be examined apart from social customs. M. Meeks

93Z5628

Gaete, Rolando (South Bank U, London SE1 0AA England), **Postmodernism and Human Rights: Some Insidious Questions**, *Law and Critique*, 1991, 2, 2, autumn, 149-170.

¶ Human rights are one of the achievements of modernity. They are invoked as the law of the law, grounded on human autonomy, capable of granting legitimacy to power or withdrawing it from power. Here, this modern discourse is examined from an ironical standpoint beyond modernity, arguing that human rights must be treated as a language-object, a game that subjects play by formulating their relations to power & to themselves in a particular way. Judicial discourse on human rights is examined, showing that opposite conclusions can be rhetorically derived from the same humanist principles. Questions raised by this indeterminacy about the relations between truth & ethics & between power & legitimacy are also considered. AA

93Z5629

Geissler, Rainer & Marissen, Norbert (U Gesamthochschule Siegen, Adolf-Reichwein Str 9 D-5900 Siegen Federal Republic Germany), **Milde für junge Frauen bei der Strafverfolgung. Der Frauenbonus oder das Paradox der geschlechtsspezifischen Gleichbehandlung** (Clemency for Young Women in Sentencing. The Bonus for Being a Woman or the Paradox of Gender-Specific Equality), *Kölner Zeitschrift für Soziologie und Sozialpsychologie*, 1992, 44, 3, Sept, 549-561. (GER)

¶ It is argued that results of a study investigating the relationship between criminal sentencing & gender conducted by Wolfgang Ludwig-Mayerhofer & Dorothea Rzepka (see SA 40:2/92Y6664) do not disprove results of an earlier study (see SA 37:1/89U2508) revealing that young women receive milder punishments in court for criminal behavior than young men, as derived from an analysis of 7,000 criminal sentences in Stuttgart, Federal Republic of Germany. In part, the stiffer sentences identified for men are connected with the fact that men tend to commit more serious crimes & more often have a prior criminal record. Further, Ludwig-Mayerhofer's & Rzepka's data do not uphold their assertion that gender & sentencing are not connected. In **Vom Denken, Vom Rechnen und davon, wie beide vielleicht doch miteinander zusammenhängen. Anmerkungen zu Geissler und Marissen** (On Thinking, on Calculating, and on How Both Could in Fact Be Connected. Comments on Geissler & Marissen), Ludwig-Mayerhofer (Münchner Projektgruppe für sozialforschung e. V., Dachauerstr 189/III, D-8000 19 Federal Republic of Germany) & Rzepka respond to Geissler's & Marissen's main accusation concerning an insufficient theoretical foundation for their argumentation, emphasizing Geissler's & Marissen's poor empirical presentation. M. Maxfield

93Z5630

Gibson, Suzanne (New Coll, Oxford OX1 3BN England), **Law Representing Life-Reflections on Darwinian Jurisprudence**, *Law and Critique*, 1992, 3, 1, spring, 99-142.

¶ The applicability of modern ethology to the task of understanding legal behaviors is discussed through a review of recent work of this kind. It is argued that ethology has been largely misunderstood by social scientists & that it may offer insight in appropriately selected areas of social research. Darwin's theory of evolution by natural selection is considered in the light of contemporary social theory (especially postmodernism), which has challenged the philosophical realism on which positivist science relies. Possible future directions for Darwinian jurisprudence & ethology of law are also discussed. Modified AA

93Z5631

Grayson, J. Paul (Atkinson Coll York U, North York Ontario M3J 1P3), **Vigilantism in Canada and the United States**, *Legal Studies Forum*, 1992, 16, 1, 21-39.

¶ Using the 1984 Bernhard Goetz incident in NY, & the 1986 Stephen Kesler case in Calgary, Alberta, as focal points, it is argued that despite a presumed respect for law & order, lower crime rates, relative confidence in police & courts, & the absence of a vigilante tradition, support for spontaneous vigilantism in contemporary Canada is as widespread as in the US. In addition, the stance of deviance defining elites notwithstanding, Canadians become involved in spontaneous vigilantism where

conditions are appropriate to it. These findings suggest a need for rethinking some notions regarding differences between Canadian & US cultures, at least with regard to law & order. 1 Appendix, 44 References. AA

Holmes, Malcolm D., Daudistel, Howard C. & Taggart, William A. (Administration Justice Program U Wyoming, Laramie 82071), **Plea Bargaining Policy and State District Court Caseloads: An Interrupted Time Series Analysis,** *Law and Society Review,* 1992, 26, 1, 139-159.

¶ The relation of court caseloads to plea bargaining practices is investigated empirically, examining the effects of a 1975 felony plea bargaining ban in the district courts of El Paso, Tex. A quasi-experimental interrupted time series model with annual data for 1968-1983, is used to test the hpothesis that the discontinuance of plea bargaining negatively affects court caseloads, specifically the proportion of cases going to jury trial & the disposition rate. Conviction rate is also examined, exploring whether the existence of plea bargaining encourages prosecutors to accept weak cases. Analysis reveals a considerable increase in the proportion of cases going to jury trial immediately after the ban's implementation, & a substantial but gradual decrease in the disposition rate. The jury trial rate contributed substantially to the disposition rate decline. The conviction rate was generally unaffected by the ban, although it became more consistent afterwards. It is concluded that the ban did affect the district courts' ability to move the felony docket efficiently. 4 Figures, 1 Appendix, 48 References. Adapted from the source document.

Hunt, Alan (Carleton U, Ottawa Ontario K1S 5B6), **Foucault's Expulsion of Law: Toward a Retrieval,** *Law & Social Inquiry,* 1992, 17, 1, winter, 1-38.

Comments, 39-55, **Rejoinder,** 57-62.

¶ Michel Foucault's own objectives prevented him from carrying out a complete & fruitful interrogation of the place of law in modernity, which is evident in the most distinctive feature of his account of the emergence of modernity: the expulsion of law from modernity. Foucault contends that law constituted the main form of power in the premodern era, but was supplanted by discipline & government as the key embodiments of modernity. Foucault's opposition of law & discipline is rejected, & it is maintained that a more adequate grasp of the place of law in modernity can be achieved by establishing that law & discipline are complementary & constitutive of the ubiquitous presence of regulation in modernity. In **Making a Place for Cultural Analyses of Law,** Susan S. Silbey (Wellesley Coll, Mass) argues that Hunt's explication of the structure/agency problem within Foucault's work marks a valuable contribution to sociolegal studies, but is critical of Hunt's reliance on concepts such as hegemony, strategy, & project in specifying the processes by which local action is aggregated. Also discussed are empirical & theoretical strategies in cultural studies that are useful in describing the mediating processes through which local practices are aggregated & condensed into systematic institutionalized power. In **"In Another Kind of Wood": Michel Foucault and Sociolegal Studies,** Jonathan Simon (U of Michigan, Ann Arbor) compliments Hunt, but is critical of his call for including interest, the state, & hegemony in microanalyses of power. It is asserted that Foucault's work on governmentality can, through further refinement, contribute to sociolegal studies' exploration of the role of law in the exercise of power. In **Law and the Condensation of Power,** Hunt elaborates on unclarified points in his article, & discusses the structure/agency dichotomy, the condensation of power, & the local processes by which the general thematics of law & power are instantiated. James, Adrian L. (Dept Social Policy & Professional Studies U Hull, HU6 7RX England), **An Open or Shut Case? Law as an Autopoietic System,** *Journal of Law and Society,* 1992, 19, 2, summer, 271-283.

¶ A response to recent writings by UK legal scholars, eg, Michael King, who, drawing on the work of constructivist legal theorists & sociologists of law have sought to analyze the relationship between child welfare & law & their respective discourses. This reflects the growing interest in such issues, by theoreticians & practitioners alike, in the wake of fundamental changes in UK family law brought about by the Children Act 1989. King's analysis (see, eg, "Child Welfare within Law: The Emergence of a Hybrid Discourse," *Journal of Law & Society,* 1991, 18, 303-322) leans heavily on the arguments of G. Teubner & Niklas Luhmann that the law is a closed, autopoietic social system that by its very nature cannot merge with other discourses. Welfare information is not incorporated into the legal discourse, but is reconstructed in the form of legal communications in order to fit in with the host discourse, becoming in the process an enslaved discourse. These basic assumptions are challenged here from a social-scientific perspective, drawing on recent research on the work of court welfare officers in order to challenge both the extent to which law can be legitimately defined as a closed system & the extent to which child welfare knowledge can be defined as scientific. It is asserted that the arguments constructing law as an autopoietic system reify the law & that law is, in essence, a social construct that depends on the changing social definitions of the issues with which it deals in order to discharge its normative functions. Kennedy, Duncan (School Law Harvard U, Cambridge MA 02138), **The Stakes of Law, or Hale and Foucault!,** *Legal Studies Forum,* 1991, 15, 4, 327-365.

¶ Personal reflections & the work of Robert Hale (eg, see *Freedom through Law: Public Control of Private Governing Power* New York: Columbia U Press, 1952) & Michel Foucault (eg, see *Discipline and Punish: The Birth of the Prison* Alan Sheridan, (Tr), London: Allen Lane, 1979) are drawn on to examine the role of law in the reproduction of social injustice in late-capitalist societies. The significance of legal rules for determining the distribution of income among social classes is discussed, & distributive justice between blacks & whites & men & women is explored. Foucault's transactional view of power is criticized for overestimating the signficance of the state & for underestimating the autonomy of actors. Hale's understanding of the role of law is deemed superior to that of Foucault. 35 References. W. Howard

Kleiman, Mark A. R. (John F. Kennedy School Government Harvard U, Cambridge MA 02138), **Neither Prohibition nor Legalization: Grudging Toleration in Drug Control Policy,** *Daedalus,* 1992, 121, 3, summer, 53-83.

¶ It is argued that both absolute prohibition & uncontrolled legalization have substantial disadvantages as ways of dealing with abusable drugs as well as other commodities & services with high propensity to induce com-

pulsive consumption ("vices"). Prohibitions create black markets & their related violence, theft, & disorder while uncontrolled legalization risks high levels of drug abuse, with bad results for some users & for third parties. An intermediate policy would be one of "grudging toleration," treating a drug neither as contraband nor as an ordinary article of commerce. Frequent elements of current regulatory regimes include discriminatory taxation, restrictions on advertising, & limits on times, places, & conditions of sale. A more thoroughgoing approach would make the right to use a drug conditional on a personal user license, subject to voluntary surrender & to revocation for misconduct, & impose an upper limit on the quantity any one user can purchase. Wise design of the details of a regulatory regime depends on a close study of the behavioral pharmacology of the drug involved & careful estimate of the costs, benefits, & limits of various regulatory tools. Whether a particular drug can be managed with a policy of grudging toleration depends on what proportion of its users engage in excessive use or in conduct that would lead to license revocation. Even when grudging toleration is technically workable, it may be politically & organizationally infeasible. The histories of alcohol & gambling illustrate a tendency to flip back & forth between complete prohibition & virtually complete legalization, a tendency supported by the material & ideological interests of the industry or public agency that markets the newly legalized vice. In any case, grudging toleration cannot abolish either drug abuse or the problems created by laws that restrict access to strongly desired commodities. At best, it can provide some of the advantages of prohibition with only some of its disadvantages. In many instances, this may be the least bad alternative. Modified AA

Lüdemann, Christian (Instit empirische angewandte Soziologie U Bremen, D-2800 33 Federal Republic Germany), **Der "deal" im Strafprozess und das Modell rationalen Handelns. Ergebnisse einer empirischen Studie über informelle Absprachen** (The "Deal" in the Penal Process and the Model of the Rational Act. The Results of an Empirical Study on Informal Refusals), *Zeitschrift für Rechtssoziologie*, 1992, 13, 1, June, 88-109. (GER)

¶ To investigate the application of rational choice theory to plea bargaining in criminal cases, interview data were obtained from 255 German judges, lawyers, & other legal professionals. Participants in the criminal justice system have two choices once a case begins: plea bargaining (cooperation) or a regular trial (noncooperation). Rational choice theory explains individual decisions for cooperation or noncooperation. Each behavior choice involves different cost/benefit outcomes for each party: eg, expected outcome is different for the judges & prosecuting attorneys than for the defense attorneys, leading to different procedural strategies. 7 Figures, 5 Charts, 59 References. Millard, Frances (School Social & Historical Studies Portsmouth Polytechnic, PO1 2QQ England), **The Context of Polish Constitutional Reform**, *International Journal of the Sociology of Law*, 1992, 20, 1, Mar, 17-28.

¶ The uneven development of the constitution in Poland following WWII up to the adoption of noncommunist government in 1989 is sketched. It is noted that as the communist elites lost power, the Marxist-Leninist policy of subordinating an empty set of constitutional laws to political ends has disappeared. Although its powers are limited, the current constitution reflects a more meaningful role for the legal system. Institutional innovations coupled with a formal commitment to an empowered legislative body aided in the transition from a socialist government. The shift to genuine constitutionalism along with limited governmental intervention raised new parliamentary challenges, & heightened tensions between other political actors. Changes in the elite structure, & the deployment of new political & legal institutions, were also problematic. 8 References. J. Sadler

Münch, Richard (Sozialwissenschaftliches Instit Heinrich-Heine-U, D-4000 Dusseldorf Federal Republic Germany), **Recht als Medium der Kommunikation** (Law as a Medium of Communication), *Zeitschrift für Rechtssoziologie*, 1992, 13, 1, June, 65-87. (GER)

¶ An analysis is presented of the conditions by which law is transformed into a medium of communication with its own specific dynamics. Key topics include: the disengagement of law from social reality in modern times, conditions establishing law as a means of communication, paradoxes of legal communication, & the dynamics of legal communication. The expansion of communication in our time is leading to a concomitant boom in the usage of law with inflationary consequences. The increasing frequency of popular demonstrations, violence, & terrorism reveals the growing discrepancy between the ideal & reality of law. The situation is further threatened by breakdowns in communication. 72 References. Adapted from the source document.

O'Malley, Pat (National Centre Sociolegal Studies La Trobe U, Bundoora Victoria 3083 Australia), **Risk, Power and Crime Prevention**, *Economy and Society*, 1992, 21, 3, Aug, 252-275.

¶ Actuarial or risk-based technologies of power make it possible for insurance technologies to be applied to social problems. It is argued that the place & form of emerging technologies of power are determined by the nature of political programs with which they are aligned. Thus, risk-based techniques are a more effective means of control than the discipline of neoconservative programs because they are noncoercive & less likely to generate resistance. Situational crime prevention is analyzed & broader theoretical implications explored. 59 References. Adapted from the source document.

93Z5644

Pintore, Anna (U Cagliari, I-09124 Sardinia Italy), **Law as Fact? MacCormick's Institutional Theory of Law: Between Legal Positivism and Sociological Jurisprudence**, *International Journal for the Semiotics of Law/Revue Internationale de Sémiotique Juridique*, 1991, 4, 12, 233-253.

¶ A critique of Neil MacCormick's institutional theory of law (MacCormick, Neil, & Weinberger, O., *An Institutional Theory of Law. New Approaches to Legal Positivism*, Dordrecht: Reidel, 1986). Attempting to reconcile two trends in legal philosophy, the theory is closer to Ronald Dworkin's sociological jurisprudence than to H. L. A. Hart's legal positivism. The theory tries to remove distinctions between prescriptive & descriptive at the legal, law doctrine, & metajurisprudential discourse levels. After a brief outline of the theory, which suggests that the middle ground between extreme normativism & legal realism is to treat law as institutional facts, it is noted that neither a semiotic nor an ontological interpretation supports a reduction of law to legal institutions in the philosophic sense. J. Sadler

93Z5645

Pocar, Valerio (Milan State U, I-20122 Italy), **Animal Rights: A Socio-Legal Perspective**, *Journal of Law and Society*, 1992, 19, 2, summer, 214-230.

¶ An examination of animals' rights in a strictly sociolegal perspective, arguing that human & animal rights are of the same nature because the force that sustains the protected interests is offered in both cases by individual or collective subjects other than the directly interested categories. These are "oblique rights," sustained & made effective by ideological forces. The ideological nature of these rights appears particularly evident in the case of animal rights, for whom the differences, conflict of interests, & disparity of the forces ranged is so unquestionable as to appear natural. After identifying the factual basis of the rights of living & feeling creatures in the interest of diminishing suffering, Italian & British legal contexts are used in an analysis of ethical standpoints adopted in

support of the impermissibility of unjustified suffering. It is concluded that the adoption of nondiscriminatory criteria in the relationship between human beings & other living creatures may contribute something toward establishing a more certain foundation for the rights of human beings. Pollock, Stewart G. (25 Market St, Trenton NJ 08625-0001), **Identifying Appropriate Decision-Makers and Standards for Decision,** IM *Law, Medicine and Health Care,* 1991, 19, 1-2, spring-summer, 63-65.

¶ Standards for identifying decisionmakers & making decisions in termination-of-medical-treatment cases are discussed. The US Supreme Court's (Nancy) *Cruzan* decision only describes state action that is constitutionally permissible; state courts have great latitude in resolving other related legal questions. This may well produce a state-by-state right-to-die checkerboard, with different states adopting different standards & families moving patients from one state to another to take advantage of laws that best meet their family needs. State courts have not lost their importance because of *Cruzan.* D. Generoli

93Z5647

Reuter, Peter, Hawks Ascendant: The Punitive Trend of American Drug Policy, IM *Daedalus,* 1992, 121, 3, summer, 15-52.

¶ Three central perspectives–supply-side, legalization, & demand-side–on how best to deal with the drug problem in the US are examined. Supply-side advocates seek continued expansion of efforts to imprison drug dealers & detect & punish drug users, while demand-side advocates argued that current funding for treatment & prevention programs are grossly inadequate & should be increased. Demand-side advocates contend that the war on drugs has proven a failure, & that the root of the drug problem lies in the initiation of new users in the US & the failure to provide quality treatment for addicts. Reasons why supply-side advocates have taken control of drug policy are discussed, & it is argued that supply-siders' emphasis on punishment is too expensive in terms of the human costs of incarcerating many people for relatively minor offenses. Drawing on the European "harm reduction" movement, it is argued that the country would be better served by punishing drug dealers less agressively & using the monies that would be saved for better treatment programs. 4 Tables. 93Z5648

Ross, H. Laurence (U New Mexico, Albuquerque 87131), **The Law and Drunk Driving,** *Law and Society Review,* 1992, 26, 1, 219-230.

¶ A review essay on four books by: Leonard Evans, *Traffic Safety and the Driver* (New York: Van Nostrand Reinhold, 1991); James B. Jacobs, *Drunk Driving: An American Dilemma* (Chicago: U of Chicago Press, 1988); Jerome S. Legge, Jr., *Traffic Safety Reform in the United States and Great Britain* (Pittsburgh: U of Pittsburgh Press, 1991); & R. Jean Wilson & Robert E. Mann (Eds), *Drinking and Driving: Advances in Research and Prevention* (New York: Guilford Press, 1990 [see listings in IRPS No. 66]). Evans offers a quantitative approach to the analysis of US highway accidents & their causes, including alcohol-impaired driving, & argues that behavior change, rather than technology, holds the greatest promise of reducing auto crashes. Jacobs discusses criminal sanctions in preventing drunk driving & their impact on criminal law & procedure, concluding that traditional standards of criminal jurisprudence do not fit well with such cases. Legge offers a somewhat optimistic picture of the effectiveness of deterrence-based drunk driving laws, providing evidence of reduction in drunk driving via interrupted time series analysis of traffic safety interventions such as increasing the certainty & severity of penalties for the offense. Wilson's & Mann's volume is eclectic, covering such topics as distinguishing characteristics of individuals who drive while impaired to the use of random breath testing for deterrence of drunk-driving to evaluation of treatment & prevention programs. 10 References. Sevenhuijsen, Selma (Women's Studies Rijks U Utrecht, NL-3508 TC Netherlands), **The Gendered Juridification of Parenthood,** *Social & Legal Studies,* 1992, 1, 1, Mar, 71-83.

¶ The recent shift in Dutch family law represented by a sentence ordering a man to legally recognize his offspring is explored. Legal recognition implies that the man must establish legal family ties to the child, a much stronger requirement than the simple economic maintenance ordered in a successful paternity suit. Men now do not have exclusive rights over entering into the legal status of fatherhood. Motivated by human rights arguments, the law is juridifying equal rights in traditionally patriarchal realms of family law. Legal change in the construction of parenthood has been neglected by the parliament, & has instead been guided & enforced by developments in case law. While legal discourse has an important degendering function, & appears to operate increasingly in a gender-neutral way, it still serves to generate & privilege gendered identities of parenthood. Feminist legal theory would benefit from a historicized & contextualized interpretation of the human problems of inequality in family law. 11 References. J. Sadler

Skolnick, Jerome H. (Law/Jurisprudence/Social Policy Program U California, Berkeley 94720), **Rethinking the Drug Problem,** IM *Daedalus,* 1992, 121, 3, summer, 133-159.

¶ It is argued that militaristic & punitive approaches to the drug problem in the US–which are based on the assumption that drug users are morally depraved–should be abandoned in favor of a perspective that centers on the complex etiology of drug abuse & its implications for public health & social issues. It is argued that the Bush administration's "war on drugs" failed for several reasons: it ignored the imperatives driving people to use & sell illegal drugs; it underestimated the dilemmas faced by law enforcement in controlling the use & distribution of drugs; & it was unaware of the implications of such a war for the character of the nation. Other issues discussed include the permeability of borders, whether the sale or use of drugs is more comparable to illegal betting or to armed robbery & homicide, & the ineffectiveness of criminal sanctions. W. Howard

93Z5652

Smart, Carol (U Warwick, Coventry CV4 7AL England), **The Woman of Legal Discourse,** *Social & Legal Studies,* 1992, 1, 1, Mar, 29-44.

¶ A discussion of feminist sociolegal theory & its unique intellectual & political problems, the responsibility for which rests with the "black letter" constituency–the liberal & certain feminist groups. The black letterists contend that theory has no relevance outside of courses on jurisprudence, while the liberals suggest that, since law has transcended sexual bias, a feminist theory of law is irrelevant. Finally, the pragmatic engagement of some feminists insists on the importance of a woman-oriented law practice instead of male-dominated theorizing. Despite these countervailing forces, feminist sociolegal theory has been developed based on questions of how law is gendered & how it promotes gendering strategies. Arguments are presented to support these questions, eg, the problematic legal category of a "bad mother" has evolved as a result of the gendering strategies of law. 25 References. J. Sadler

Sokolewicz, Wojciech (Instit State & Law Polish Academy Sciences, PO Box 24 Palace Culture & Science PL-00-901 Warsaw), **The Polish Constitution in a Time of Change,** *International Journal of the Sociology of Law,* 1992, 20, 1, Mar, 29-42.

Translated by Frances Millard.

¶ The Polish Constitution of 1952 has been amended by the postcommunist Parliament such that it has become a qualitatively different document, now providing the basis for democratic government. Nonetheless, a new constitution is necessary, both for practical & symbolic reasons. This could not be achieved by the Parliament elected in 1989, for it lacked the legitimacy conferred by fully free elections. The new *Sejm* elected in Oct 1991 possesses such legitimacy, but its extreme political fragmentation presents a major obstacle, for there exist profound differences of approach to major constitutional issues, including the position of the president, not only in relation to Parliament, but especially in relation to the government & the division of responsibilities. The problem is compounded by the president's lack of political responsibility, while the government is collectively responsible to Parliament. The creation of a stable, nonpartisan civil service will also prove difficult, given the likelihood of successive coalition governments tightly bound to political parties. The roles of politicians & administrators must be clearly differentiated. Government accountability to Parliament requires government confidence in the loyalty & obedience of the state administration. 6 References. AA

Stangl, Wolfgang (Instit Rechts- & Kriminalsoziologie, Museumstr 12 A-1016 Vienna Austria), **Die fortschreitende Verzauberung der Welt des Strafrechts: Kritisches zur Rationalisierungsthese Max Webers** (The World's Increasing Fascination with Penal Law: Criticism of Max Weber's Rationalization Thesis), *Zeitschrift für Rechtssoziologie*, 1992, 13, 1, June, 44-64. (GER)

¶ Max Weber's *Wirtschaft und Gesellschaft* ([Economics and Society] Tübingen, 1967) & other works maintain that law, as a part of Western society, is subject to a rationalization process. Examples from medieval & modern penal law, however, show that an opposite process occurred. The more that penal law placed its emphais on the prevention of crime, the more the effects of the law became irrational. Moreover, this trend is still intensifying, & a process of enchantment is occurring with respect to penal law. 68 References. Adapted from the source document.

Wing, Kenneth R. (School Law U Puget Sound, Tacoma WA 98416), **Speech, Privacy, and the Power of the Purse: Lessons from the Abortion "Gag Rule" Case,** UM *Journal of Health Politics, Policy and Law*, 1992, 17, 1, spring, 163-175.

¶ In further restricting the constitutional protection of abortion rights during its 1990/91 term, the US Supreme Court reaffirmed its view that the state & federal legislatures have virtually unlimited discretion in limiting social welfare programs. The "gag rule" regulations specifically forbade Title X programs from counseling their clients concerning the use of abortion, & prohibited family planning clinics from lobbying for legislation that would increase the availability of abortion. Given that the majority of government decisions concerning limits on social welfare programs are regarded as decisions to fund or not fund certain benefits, it is suggested that the gag rule decision should not have been unexpected. If the government is free to deny or limit services of any kind for any reason, then a decision to offer family planning services but deny abortion counseling or referral must satsify constitutional standards. What is troubling about the gag rule decision is not the court's articulation of these principles, but rather their application. The court refused to assess the impact of the regulations on either counselors or clients. Further, if First Amendment interests can be denied as a condition of participation, then any reimbursement limit or condition of participation that will exceed the constitutional limits on government discretion as currently defined is unlikely. It is concluded that the future of health policy, in terms of the nature & extent of government-financed health programs, will be determined largely by political, not constitutional, constraints. 1 Reference. S. Millett

93Z5658

Winn, Peter A., Legal Ritual, *Law and Critique*, 1991, 2, 2, autumn, 207-232.

¶ Examined is the role of ritual in legal systems & practice. Anthropological theories of ritual are discussed, & a theory of legal rituals, which sees them as institutional facts existing in the context of systems of constitutive rules, is presented. Legal rituals not only provide the framework within which regulative rules operate, but also can be instrumental in transforming & humanizing social conflicts. The theory is then applied to the *Miranda* rule in criminal procedure to: illustrate how ritual theory can aid in the evaluation of legal practice, & argue against the use of policy-based valuative tools in legal practice assessment. It is concluded that by establishing a structure for the use of force by police on citizens, the rituals of the criminal procedural revolution, especially *Miranda*, have helped to humanize the US legal system. W. Howard

93Z5659

Young, Iris Marion (Graduate School Public & International Affairs U Pittsburgh, PA 15260-0001), **Review Essay: Recent Theories of Justice,** UM *Social Theory and Practice*, 1992, 18, 1, spring, 63-79.

¶ A review essay on books by: Milton Fisk, *The State and Justice: An Essay in Political Theory* (New York: Cambridge U Press, 1989); Richard D. Mohr, *Gays/Justice: A Study of Ethics, Society and Law* (New York: Columbia U Press, 1988); Susan Moller Okin, *Justice, Gender, and the Family* (New York: Basic Books, 1989); & Jeffrey Reiman, *Justice and Modern Moral Theory* (New Haven: Yale U Press, 1990 [see listings in IRPS No. 66]). Reiman derives a theory of justice from the Hobbesian assumptions that human beings are rational & that rational human beings experience themselves & others as sovereign. Reiman is criticized for thinking that he can produce an unchanging & universal truth about justice from the nature of reason. Fisk presents an analysis of Marxist materialist theory of the state to argue that the primary function of the state is to reproduce society's economy. He also argues that the state & its pattern of justice express the accommodation of ruling groups to the demands of dominated groups who have conflicts of interest with the ruling elites. Fisk is criticized for developing his argument solely in terms of economic class. Okin criticizes previous theories of justice, & provides an analysis of issues of justice between men & women in the family. Okin is faulted for not attacking the heterosexism that lies at the heart of marriage. Mohr offers a collection of essays on legal & ethical aspects of homosexuality, & argues that homosexuality is perceived by Americans as the primary threat to the sacredness of marriage, & that enforced heterosexuality is the primary cause of women's oppression. Despite their faults, all four books are praised as significant tools with which to evaluate social injustices & theories of justice. W. Howard

53 police, penology, & correctional problems

93Z5660

Austin, James, Cuvelier, Steve & McVey, Aaron (National Council Crime & Delinquency, 77 Maiden Ln San Francisco CA 94108-5414), **Projecting the Future of Corrections: The State of the Art**, *Crime and Delinquency*, 1992, 38, 3, July, 285-308.

¶ An assessment of current policy impact analysis & the use of innovative projection models for evaluating short- & long-term consequences of proposed criminal justice policies on correctional systems. Projection models fall into four general categories–mathematical & statistical equations, stochastic parameter statistics, disaggregated flow models, & discrete event simulation. Though these are well suited to provide policymakers with accurate information, policymakers must assume a more proactive stance & researchers must develop a more comprehensive body of knowledge of how reforms are best implemented by criminal justice agencies. 3 Tables, 2 Figures, 19 References. 93Z5661

Bales, William D. & Dees, Linda G. (Florida Dept Corrections, 1311 Winewood Blvd Tallahassee 32399-6569), **Mandatory Minimum Sentencing in Florida: Past Trends and Future Implications**, *Crime and Delinquency*, 1992, 38, 3, July, 309-329.

¶ The relative effect of mandatory minimum sentences on the length & cost of imprisonment & the accumulative effect on prison capacity needs in Fla were examined through analysis of data from the State Dept of Corrections, 1979-1990, & projection trends to the year 2000. The number of inmates entering Fla prisons under mandatory minimum sentencing increased by 552% over this period: capital offenses showed moderate growth & drug traffickers & habitual offenders displayed dramatic increases. Length & cost of imprisonment rose at similar % rates. Admission projections indicate that the minimum mandatory sentencing prison population may grow by 50+% by the year 2000 & severely strain an already overtaxed system. 5 Tables, 10 References. Boritch, Helen (U Alberta, Edmonton T6G 2E1), **Gender and Criminal Court Outcomes: An Historical Analysis**, *Criminology*, 1992, 30, 3, Aug, 293-325.

¶ An examination of how the relationship of gender to court outcomes varies across different historical periods, using data on male & female (F) offenders committed to Middlesex County Jail, Ontario, during the urban reform era (1871-1920). Findings reveal an overall pattern of more severe dispositions for F offenders in the past, as well as considerable variablity in the impact of gender across different measures of sanction severity, various offender & offense attributes, & from the late nineteenth to the early twentieth century. Research in this area must be sensitive to the historically specific nature of the relations among gender roles, formal & informal control mechanisms, & criminal sanctions. 3 Tables, 1 Figure, 69 References. Chang, Dae H., Iacovetta, Ronald G. & Janeksela, Galan M. (Wichita State U, KS 67208), **A Comparison of Korean and American Security Officers' Perceptual Evaluation of Prison Inmates and Other Significant Status Groups**, UI *International Review of Modern Sociology*, 1990, 20, 1, spring, 113-125.

¶ Semantic differential scale data are used to compare South Korean (N = 199 in Suwon city) & American (N = 80 in the midwest) prison security officers' perceptions of themselves, each other, & significant other occupational groups, eg, medical doctors, professors, & lawyers hypothesizing that these perceptions may affect officers' duties in prison & have important implications for how they relate to other groups, including inmates. As hypothesized, both the Korean & American officers view themselves highly & view inmates negatively. It is argued that these latter perceptions create a negative rehabilitative atmosphere in the prisons. Unless inmates & security officers develop more positive perceptions of each other, reform efforts will be of limited value; education & training of guards are recommended. 5 Tables, 29 References. Coman, Greg & Evans, Barry (c/o Evans–Monash U, Clayton Victoria 3168 Australia), **Stressors Facing Australian Police in the 1990s**, UI *Police Studies*, 1991, 14, 4, winter, 153-165.

¶ In an investigation of the occupational stressors experienced by Australian police officers, 120 members of the Victorian Police & 151 members of the Australian Federal Police in Melbourne & in the Australian Capital Territory rated themselves on the frequency & stressfulness of work-related events using the police-specific Critical Life Events Scale. It is concluded that in addition to the organizational stresses reported by other work groups, police officers are additionally vulnerable to stress due to their daily exposure to dangerous & uncontrollable situations. 2 Tables, 57 References. Ekland-Olson, Sheldon, Kelly, William R. & Eisenberg, Michael (Dept Sociology U Texas, Austin 78712 (Tel: 512-471-1122)), **Crime and Incarceration: Some Comparative Findings from the 1980s**, *Crime and Delinquency*, 1992, 38, 3, July, 392-416.

¶ Statistical data on rates of incarceration, crime, & unemployment in Tex, Calif, & the US as a whole during the 1970s & 1980s are examined to explore the link between incarceration policies & crime rates. Despite different incarceration policies, there were few differences in violent crime rate trends between Tex & Calif, though property crimes increased in the former & decreased in the latter. These state differences across types of crime parallel findings across 4 successive parolee cohorts in Tex, where increases in repetitious property offending patterns were noted, & repetitious violent offending remained stable. Variations in incarceration rates & economic conditions are proposed as explanatory factors. 1 Table, 9 Figures, 39 References. Adapted from the source document. Fabelo, Tony, Making the Obvious Possible: Policy Research and the Building of Coalitions for Criminal Justice Reforms, *Crime and Delinquency*, 1992, 38, 3, July, 369-391.

¶ Reported is the response of the Tex political system to judicially mandated reforms since 1980 & the shifting political coalitions that have shaped correctional policies in the state. It is shown how information generated through policy research has been critical in channeling narrow constituencies into more pragmatic & compromising policies leading to systemic reforms. Policy research, impact statements, & prison population projections have obviated the need for & possibility of systemic reform. Policy research is essential to generate information to explicitly establish accountability in the political arena for the allocation of criminal justice resources. 61 References. Fox, Tricia A. (Faculty Education U Manitoba, Winnipeg R3T 2N2), **Prison Educators' Practice of Adult Education in Prison Education Programs: A Canadian Case Study,** *Australian Journal of Adult and Community Education,* 1990, 30, 3, Nov, 174-182.

¶ Though policy in Canada has advocated that education programs offered in federal prisons be based on principles of adult education, the implementation of such education in practice has generally been overlooked. Here, open-ended interview data from 10 prison educators are drawn on to explore their perceptions regarding the practice of adult education with respect to 2 principles: providing a conducive learning environment, & sharing the responsibility for the learning process. Based on these perceptions, problems experienced by prison educators in their efforts to implement adult education in 1 federal prison are described. 1 Table, 1 Appendix, 20 References. Fyfe, Nicholas R. (Dept Geography U Strathclyde, Glasgow G1 1XQ Scotland), **The Police, Space and Society: The Geography of Policing,** *Progress in Human Geography,* 1991, 15, 3, Sept, 249-267.

¶ The interrelationships between the police, space, & society are highlighted, first reviewing the histories of modern policing in the UK & US, focusing on how these explain the diffusion of police forces across the two nations. Following a consideration of the implications of the spatial organization of policing both at a national level (in terms of the political control of police forces) & at a local level (in terms of patterns of crime & community relations), ethnographic police research is reviewed, focusing on the identification of varations over space in police culture, & the social & political contexts of policing (defined at local, regional, & national levels) are discussed. The relationship between police, politics, & the state is explored, focusing on attempts to enhance the accountability of the police to local communities. It is concluded that policing is an inherently territorial activity, which both affects & is affected by the social & political environment. 4 Figures, 75 References. Gross, Peter R. (National Police Research Unit, PO Box 370 Marden SA 5070 Australia), **The Structure of Occupational Fears in Police Recruits,** *Police Studies,* 1991, 14, 4, winter, 176-179.

¶ To facilitate the prevention & treatment of chronic stress in police officers, 303 recruits from the Queensland Police Academy in Brisbane, Australia, completed a 26-item questionnaire to measure occupational fears. Factor analysis identified 5 factors related to fear: physical danger, mutilated/dead bodies, public crime, organizational fears, & court/interpersonal situations. Recruits reported that they were afraid of a diversity of situations encountered in their work. It is concluded that recruits who report intense & generalized fears may be at risk for the development of chronic stress. Further research is needed to determine whether fear can predict stress reactions in police officers. 2 Tables, 12 References. Adapted from the source document. Hatty, Suzanne E. & Burke, Stuart (Charles Sturt U, Bathurst New South Wales 2795 Australia), **The Vermin and the Virus: AIDS in Australian Prisons,** *Social & Legal Studies,* 1992, 1, 1, Mar, 85-106.

¶ In Western society, the classification of a disease as venereal (ie, sexually transmitted) arouses strong negative reactions; these diseases are thought to occur as a result of the violation of sexual norms, & may be viewed as a visible manifestation of punishment for sexual deviance. The advent of AIDS/HIV (acquired immune deficiency syndrome/human immunodeficiency virus) has generated an identifiable response within the social control apparatus of the state. Reminiscent of earlier fears about the polluting influence of the contaminated body on society, current anxieties are an elaboration of the connection between disease & criminality. The HIV-positive prisoner has become the repository of fear & prejudice concerning the contagious effects of deviance. Examined here is how the relationship between sin, sanction, & space is intensified in the case of AIDS/HIV & imprisonment, focusing on the recent upheaval in the prison system of New South Wales, Australia, as the result of an AIDS-related incident. Commentary is offered on the effective uses of stigma, & the significance of the medicalization of AIDS/HIV for discourses on pollution & the construction of dangerousness. 73 References. Holdaway, Simon & Mantle, Greg (Dept Sociological Studies U Sheffield, S10 2TN England), **Governing the Probation Service: Probation Committees and Policy-Making,** *Howard Journal of Criminal Justice,* 1992, 31, 2, May, 120-132.

¶ An investigation of the role of probation committees (PCs) in England as the statutory employers of all probation staff with a responsibility for the efficient running of area probation services. Interviews with PC members & chief probation officers (total N = 91) indicate that while the Home Office & probation professional associations have attempted to develop notions of systematic management, including the initiation, development, & implementation of policy, the role of probation committee members has been neglected. The assumptions that magistrate members of committees bring to their consideration of policy are of particular importance. The implication of these assumptions for race issues & crime prevention policies is analyzed. 34 References. Adapted from the source document. Johnston, Les (Centre Police & Criminal Justice Studies U Exeter, EX4 4PU England), **Regulating Private Security,** *International Journal of the Sociology of Law,* 1992, 20, 1, Mar, 1-16.

¶ The unregulated character of private security in GB is contrasted with that of other countries, making specific reference to the US, Belgium, France, & New Zealand. Also reviewed are two types of recent unsuccessful attempts to introduce legislation through the British Parliament: (1) proposals to give a statutory basis to existing forms of self-regulation already carried out through the security sector's own Inspectorates; (2) proposals for regulation by some independent body. Though self-regulation is widely regarded as ineffective & illegitimate, independent mechanisms should not be seen as a panacea. No system of regulation can work without economic, political, & organizational commitment. This debate is located in the wider context of changes in policing & regulation. 30 References. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Johnstone, Gerry (Law School U Hull, HU6 7RX England), **Between Permissiveness and Control: Community Treatment and Penal Supervision,** *Law and Critique,* 1991, 2, 1, spring, 37-61.

¶ The rationale of community treatment programs (CTPs) for offenders is examined & the effect of a proliferation of such programs on penal intervention in modern societies is assessed. The core components of CTP are identified through a case study of a program for habitual drunken offenders in GB during the 1960s & 1970s. It is argued that the distinctive feature of CTPs is their emphasis on a long-term, regular, participatory style of penal supervision. Specifically considered are: (1) the way the habitual drunkard problem was conceptualized by CTP practitioners; (2)

"rehabilitation hostels" that played a crucial role in CTPs; & (3) proposals for the establishment of a CTP that would ensure continuity of supervision & surveillance. It is concluded that while the proliferation of CTPs would lead to intensified regulation of certain social groups, it should not be opposed for that reason. An adequate evaluation of CTP must consider the objectives & methods of regulation employed. Modified AA

Lattimore, Pamela K. & Baker, Joanna R. (National Instit Justice, 633 Indiana Ave NW Washington DC 20531), **The Impact of Recidivism and Capacity on Prison Populations,** *Journal of Quantitative Criminology,* 1992, 8, 2, June, 189-215.

¶ Previous work on prison crowding is extended by developing a prison projection model to address the impact of time served, current prison population & future admissions, & the propensity & timing of individual recidivism on the limited prison capacity. This model is used to predict annual male prison commitments in NC for 1980-2000 under conditions of both unlimited & constrained prison capacities, & for 14 age/race groups of offenders. Under the constrained capacity conditions, reducing the time served generated almost 4,000 additional recidivist commitments over the time period. Tradeoffs between prison capacity, degree of punitiveness, & future criminality are discussed. 4 Tables, 6 Figures, 1 Appendix, 33 References. Adapted from the source document.

93Z5682

Lessan, Gloria T. (Dept Sociology & Criminal Justice Old Dominion U, Norfolk VA 23529), **Macro-Economic Determinants of Penal Policy: Estimating the Unemployment and Inflation Influences on Imprisonment Rate Changes in the United States, 1948-1985,** ꟾꟾꟾ *Crime, Law and Social Change,* 1991, 16, 2, Sept, 177-198.

¶ According to conflict theory, systemic economic distress generates problem populations, which require control via palliative & coercive means. Though most previous research has examined the unemployment-imprisonment relationship, a review of the literature suggests that other structural conditions that generate marginalization, as well as the state's placative control, must be considered to understand the linkage between economic-fiscal forces & penal policy. Here, annual time-series data 1948-1985 are used to examine the extent to which changes in imprisonment rates reflect (1) governmental attempts to offset the threat of unemployment & inflation, & (2) fiscal limitations placed by state expenditures on placative controls. Results support the conflict thesis, with inflation rates & annual fluctuations in black & white male unemployment rates exerting an independent positive effect on imprisonment-rate changes, after controlling for variations in violent crime rates, prison capacity, & age structure. Possible reasons for the lack of evidence regarding trade-offs between states' placative & coercive policies are discussed, & suggestions offered for further research. 2 Tables. Adapted from the source document.

Lyon, David (Queen's U, Kingston Ontario K7L 3N6), **Bentham's Panopticon: From Moral Architecture to Electronic Surveillance,** ꟾꟾꟾ *Queen's Quarterly,* 1991, 98, 3, fall, 596-617.

¶ The history of the idea of the panopticon is traced from Jeremy Bentham's 1791 plan for a model prison through Michel Foucault's sociological commentary on this prison architecture, to its application to contemporary surveillance of populations using electronic databases. It is suggested that the principles of the panopticon, especially the notion of unseen observation, have persisted & are clearly evident in some aspects of electronic surveillance. While Foucault was correct to see the panopticon as a watershed in the transition to modern punishments, he exaggerated its importance as a general paradigm. Bentham's prison plan was essentially a secular utopia, with the panopticon as a parody of divine omniscience. A critique of current electronic surveillance that starts from this insight is capable of transcending the limitations of both Bentham's & Foucault's work. 1 Photograph, 15 References. AA

Maguire, Brendan, Faulkner, William, Mathers, Richard, Rowland, Carol & Wozniak, John F. (Western Illinois U, Macomb 61455), **Rural Police Job Functions,** ꟾꟾꟾ *Police Studies,* 1991, 14, 4, winter, 180-187.

¶ The job functions of rural police in 28 Ill counties were explored 1987/88 via mail questionnaire (N = 151 officers), telephone interviews with 100 community residents, & field interviews with approximately 10 community leaders. Five job functions (patrol, administrative duties, community service, law enforcement, & keeping order) were surveyed, & the findings support the case for rural police officers as generalists, not specialists. It is contended that the idea that rural police have wide-ranging duties in their communities is not new, but is largely forgotten. It is hoped that those who administer police law enforcement programs, academies, & state training sessions will adjust their curricula to better reflect the reality of rural police work. 8 Tables, 21 References. Manning, Peter K. (Michigan State U, East Lansing 48824), **Technological Dramas and the Police: Statement and Counterstatement in Organizational Analysis,** *Criminology,* 1992, 30, 3, Aug, 327-346.

¶ Ethnographic fieldwork & interview data (N not provided), as well as published studies, are used to analyze intradepartmental tensions & shifts in role observed in urban US police departments after the introduction of computer-based information technologies for routine patrol & recordkeeping, including centralized call collection, computer-assisted dispatching, & related techniques. Developing the dramaturgical metaphor, it is suggested that changing dimensions of power & uncertainty accompanying shifts in role & social field create a sociotechnical drama. This drama unfolds within the organization dialectically as the selective use of messages produces symbolic statements in response to the new information technology, while symbolic counterstatements form the secondary reaction. Four symbolic meanings of technology centering on regulation, adjustment, reconstitution, & reintegration inform different versions of the drama. 1 Figure, 48 References. Adapted from the source document.

Olson, Glenn, Forecasting the Long-Term Impact of Washington's Sentencing Guidelines: A Roller Coaster Ride, *Crime and Delinquency,* 1992, 38, 3, July, 330-356.

¶ The impact of the 1981 Sentencing Reform Act (SRA) & related changes on prison populations in Wash is examined. The passage of the SRA presented forecasting challenges for the next ten years: (1) preparations for SRA-population growth anticipating stabilization, midrange forecasts 1982-1985; (2) implementation of SRA-population stabilization & decline, short-range forecasts 1986-1989; & (3) post-SRA-population growth & capital planning, long-range forecasts 1990/91. Different types of forecasting challenges were specific to each of the phases, but can be described along two dimensions--forecast horizon & level of detail. 2 Tables, 8 Figures, 16 References. Adapted from the source document.

93Z5687

Pitts, John (West London Instit Higher Education, England), **The End of an Era,** *Howard Journal of Criminal Justice,* 1992, 31, 2, May, 133-149.

¶ The end of the "nothing works" doctrine in conceptualizing control of reoffending in the UK was marked by the Home Office announcement that research in criminology proves that reoffending can be systematically reduced. The origins of the new "something works" doctrine are traced to the mid-1980s justice model adopted by the Thatcher government. Created by a previously marginal radical groups of juvenile justice pro-

fessionals, the model stresses reduction of children/youth imprisonment as a basis for combating reoffending. It is argued here that the model has not proven effective, & that its prospects are questionable; some alternative strategies are considered. 53 References. Adapted from the source document.

Rhodes, Susan L. (Workshop Political Theory & Policy Analysis Indiana U, Bloomington 47405), **Prison Reform and Prison Life: Four Books on the Process of Court-Ordered Change,** *Law and Society Review,* 1992, 26, 1, 189-218.

¶ A review essay on four books by: Ben M. Crouch & James W. Marquart, *An Appeal to Justice: Litigated Reform of Texas Prisons* (Austin: U of Texas Press, 1989); Bert Useem & Peter Kimball, *States of Siege: U.S. Prison Riots, 1971-1986* (New York: Oxford U Press, 1989); Robert C. Wood (Ed), *Remedial Law: When Courts Become Administrators* (Amherst: U of Massachusetts Press, 1990); & Larry Yackle, *Reform and Regret: The Story of Federal Judicial Involvement in the Alabama Prison System* (New York: Oxford U Press, 1989 [see listings in IRPS No. 66]). Crouch & Marquart offer a case study of organizational change in the Tex prison system, examining the impact of changes in prison life mandated by litigated administrative reform & suggesting that these reforms may have inadvertently worsened life for prisoners. Useem & Kimball examine prison riots in 5 states over a 15-year period, delineating stages of loss & reestablishment of control over a penal institution, with focus on the diversity of state correctional organizations & their response to riot challenges. Wood's edition describes the process of prison reform through litigation against government entities & its relationship to the broader movement for minority civil rights. However, the book suffers from a lack of clarity & failure to provide an assessment of reform failures & successes. Yackle also examines the relationship between litigated prison reform & the civil rights movement through a case study of two federal district cases that challenged the constitutionality of prison life in Ala. 44 References. Seekings, Jeremy (Research Unit Sociology Development U Stellenbosch, Cape Province Republic South Africa), **Review Essay: Social Control and Its Legitimation,** *South African Sociological Review,* 1991, 3, 2, Apr, 84-90.

¶ A review article on three books edited by: the journal *Acta Juridica, Policing and the Law* (Cape Town: Juta, 1989); Desirée Hansson & Dirk van Zyl Smit, *Towards Justice? Crime and State Control in South Africa* (Cape Town: Oxford U Press, 1990); & N. Chabanyi Manganyi & André du Toit, *Political Violence and the Struggle in South Africa* (Halfway House: Southern Books, 1990 [see listings in IRPS No. 66]). These collections demonstrate the rich contribution that psychologists, lawyers, criminologists, & political theorists are making to the study of sociological topics such as policing, the operation of state judicial structures, social control, violence, gangsterism, & crowd behavior. *Political Violence* discusses ways that prevailing discourses serve to underscore the authority of the state & to some extent legitimize state repression & power. Articles in *Policing & the Law* constitute the first wide-ranging & critical analysis of policing in South Africa, while *Towards Justice?* more broadly considers the mechanisms of state control in South Africa, focusing on its legal system. L. Dorn

93Z5693
Silberman, Matthew (Dept Sociology & Anthropology Bucknell U, Lewisburg PA 17837 [Tel: 717-524-1117]), **The Production of Violence in the American Prison: Historical, Structural, and Cultural Contexts,** *Legal Studies Forum,* 1992, 16, 1, 3-20.

¶ (A revised version of SA 38:6/90S24646/SSSP/1990/2978.) Violence in contemporary US prisons can be understood as a product of three converging forces: (1) the symbolic role of the penitentiary in the evolving discipline of modern industrial labor; (2) the prison as the expression of the state's coercive authority over law violators; & (3) the "frontier culture," which provides situational legitimation of violent behavior by US males. Historical & contemporary research on violence & incarceration trends in the nineteenth & twentieth centuries are examined. Recent legal cases concerning prisoners' rights have led to the decoupling of the state's formal system of social control & the inmates' informal power structure. The cultural legitimation of violent responses to disputes & the delegitimation of administrative regimes that coopt informal inmate control mechanisms have produced unstable prison conditions. This has resulted in relatively high levels of inmate violence, often organized around racially oriented prison gangs. 69 References. AA

Van der Spuy, Elrena (Dept Sociology U Stellenbosch, South Africa), **Recent Trends in Police Studies,** *South African Sociological Review,* 1989, 2, 1, Oct, 52-64.

¶ A review essay on books by: J. D. Brewer et al, *The Police, Public Order and the State* (London: Macmillan, 1988); M. Brogden, T. Jefferson, & S. Walklate, *Introducing Policework* (London: Unwin Hyman, 1988); G. Northam, *Shooting in the Dark: Riot Police in Britain* (London: Faber & Faber, 1988); Margaret Simey, *Democracy Rediscovered: A Study in Police Accountability* (London: Pluto Press, 1988) & Steven Uglow, *Policing Liberal Society* (Oxford: Oxford U Press, 1988 [see listings in IRPS No. 66]). These works illustrate that the exclusive focus in the GB literature of the 1970s on the dualistic conception of policing (authoritarian vs consensual) has been replaced by a larger concern with relations among the state, society, & policing. Uglow documents the changing dynamics of policing in priorities, tactics, & police-community relations. Brogden, Jefferson, & Walklate offer a general history of policing, while Northam chronicles the paramilitary shift in urban policing strategies. Brewer et al illustrate the similarities of public order policing across a range of political systems. With the increasing militarization of the police, the question of accountability & democratization is raised by Simey, who counteracts the longstanding romantic image of police. 61 References. M. Problems of Ethnography: The Case of the Police, *Reviewing Sociology (New Series)*, 1992, 8, 2, 26-32.

¶ A review article on books by: John D. Brewer (with Kathleen Magee), *Inside the RUC*, & Malcolm Young, *An Inside Job* (for both: Oxford, England: Clarendon Press, 1991 (see listings in IRPS No. 66)). While both books offer the prospect of an inside view of the police, they reveal just as much about ethnography as they do about the police. Brewer's work is the more conventional methodology, though undertaken in the unconventional setting of an ordinary police station in Northern Ireland, away from terrorist troublespots. The portrait of policing resembles that which might be found on the mainland & includes the use of offensive stereotypes of those with whom the police regularly come into contact, & a cynicism & distrust of their superiors & outsiders. The book displays important scholarship in dealing with issues of methodology. Young profoundly exposes the ethical problems of ethnography while making observations covertly among his police colleagues. Though he seeks to demonstrate that the best ethnography is done by those who are an inside member of the group, he succeeds in showing that such an insider ethnography is probably the least satisfactory approach. It is argued that an approach in which observations are recorded under theoretically predetermined categories (equivalent to a self-administered questionnaire) & that would allow some estimate of the frequency of occurrence would improve the credibility of ethnographic research. Procedures designed to systematically direct & record observations also serve to highlight another key problem of ethnography, the singular viewpoint of the observer. S. Millett

Wagner, R. Harrison (U Texas, Austin 78712), **Rationality and Misperception in Deterrence Theory,** *Journal of Theoretical Politics*, 1992, 4, 2, Apr, 115-141.

¶ A critical analysis of case studies of international conflict in which the frequency with which statesmen are suprised by how other governments respond to challenges is viewed as inconsistent with rational deterrence theory, & better explained by theories of cognitive or even affective psychology. The main issue raised by these critics is decisionmakers' use of available information, especially about the commitments of other governments, & their incentive to protect their reputations by carrying out their threats. Game-theoretic techniques have recently been developed that permit the formalization of theories of deterrence that incorporate incomplete information, learning, & the development of reputations. The degree to which misperception by foreign policy decisionmakers is consistent with rationality is reexamined here in light of these new developments in game theory. 3 Figures, 36 References. Adapted from the source document.

Young, Alison & McHale, Jean V. (U Lancaster, LA1 4YW England), **The Dilemmas of the HIV Positive Prisoner,** *Howard Journal of Criminal Justice*, 1992, 31, 2, May, 89-104.

¶ An examination of the approach taken to the care of HIV (human immunodeficiency virus) positive prisoners in England in light of arguments about prisoners' rights. Four areas are examined in detail: testing for HIV infection; confidentiality of information concerning HIV positive prisoners; the contrast in care facilities provided to those with HIV inside & outside prison; & the involvement of HIV positive prisoners in experimental drug trials. The role of a rights-based analysis when determining policies of care for these prisoners is discussed. 50 References. Adapted from the source document.

Bergman, Helen R., Case Comment: ***Moore* v. *Regents of the University of California*,** *American Journal of Law and Medicine*, 1992, 18, 1-2, spring-summer, 127-145.

¶ The impact of property rights relating to human tissue on developing technology is examined through review of *Moore* v. *Regents of the University of California*, in which a cancer patient, John Moore, sued his doctor for using his surgically removed spleen for research purposes withouht his informed consent. The Calif Supreme Court rejected the property rights claim on the basis of public policy, case law, statutes, & patent law, but found in favor of the plaintiff on the issue of informed consent. The property rights approach is misleading & unanswerable in this issue. To protect the rights of patients, the legislature should consider passing laws to eliminate trade in human tissues & require doctors to inform their patients of any research interests. D. Generoli (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Efmertová, Marcela (Instit Theory & History Science CSAV, Jilská 1 CS-11000 Prague 1 Czechoslovakia), **Czech Physicist Jaroslav Šafránek and His Television,** *Social Studies of Science*, 1992, 22, 2, May, 283-300.

¶ Drawing on archival material, the contribution of Czech physicist Jaroslav Šafránek (1890-1957) to the social acceptance & recognition of the importance of TV, & the causes leading to the failure to introduce regular TV broadcasting in Czechoslovakia at the end of the 1930s, are examined. Šafránek designed a visual transmission system of low-line mechanical TV, making possible the production of an authentic spatial impression of the picture. However, the publicly acclaimed innovation failed to find practical application in Czechoslovakia at that time, given the red tape in state bureaucracy, internal political quarrels, the political situation prior to WWII, & subsequent postwar development. The example of Šafránek's fruitless endeavors documents the fact that successful implementation & the interest of the public are necessary for a technical innovation to succeed. In this case, political circumstances had a decisive & adverse impact on the fate of a researcher & his invention. 3 Figures. Adapted from the source document. Fox, Mary Frank & Firebaugh, Glenn (Dept Sociology Pennsylvania State U, University Park 16802), **Confidence in Science: The Gender Gap,** *Social Science Quarterly*, 1992, 73, 1, Mar, 101-113.

¶ Overall trends in public confidence in science 1973-1989, & variation in confidence by gender & over time, are examined using General Social Survey data (N = 17,806 respondents). The findings show no overall change with respect to confidence in science during this period, but indicate that women express less confidence in science, & that the gender gap in confidence has widened slightly. The gap does not appear, however, to be a product of gender-related response sets & patterns. Results are explained in terms of women's attitude toward the utility of science (represented by space exploration), work status, & religiosity, which together account for 43% of the gender gap. 3 Tables, 1 Figure, 27 References. Gardner, William (School Medicine U Pittsburgh, PA 15216), **The Electronic Archive: Scientific Publishing for the 1990s,** *Psychological Science*, 1990, 1, 6, Nov, 333-341.

Comments, 342-358, **Reply,** 359, **Comment,** 360-361.

¶ After describing an electronic journal publishing program for psychologists–the electronic archive–& offering some rationales for its use, three critical principles are outlined: (1) it must retain the readability of traditional printed journals; (2) it must be both accessible & attractive to all members of a discipline, whether or not they are involved with computers; & (3) it must provide improved facilities for information retrieval while continuing to function as a permanent archive of the American Psychological Society, providing a platform of programs embodying knowledge about the field & the intellectual goals of individual users to facilitate text retrieval. How the dynamic branching & graphical display capabilities of the computer allow the archive to present texts in ways unavailable with print are demonstrated. In **Scholarly Skywriting and the Prepublication Continuum of Scientific Inquiry,** Stevan Harnad (Princeton U, NJ) argues that the potential of the electronic network extends far beyond the provision of searchable electronic archives, & explores its applications to the vast prepublication phase of scientific investigation. In **The Personalized Journal,** Walter Kintsch (Instit of Cognitive Science, U of Colorado, Boulder) discusses one aspect of scientific publishing that would not be affected by electronic archives–the editorial process, including peer review. In addition, special concerns are raised about hypertext capabilities. In **People, Pitfalls, and the Electronic Archive,** Earl Hunt (U of Washington, Seattle) delineates three constraints facing the creation & use of electronic archives: technological, socioeconomic, & psychological, but insists that they can be largely overcome within a decade. In **Three Pieces of the Puzzle: Wide-Area Hypermedia, Information Agents and On-Line Reference Works,** Nicole Yankelovich (Instit for Research in Information & Scholarship, Brown U, Providence, RI) focuses on two applications of the electronic archive mentioned in Gardner's scenarios–hypertext connectivity & information retrieval–& suggests an additional one–integration of reference works–focusing on the role of users. In **Archiving Secure Interactions,** David S. Stodolsky (Roskilde U Center, Denmark) questions the appropriateness of Gardner's model on the grounds of both organization & efficiency, argues that the centralization of resources is "antithetical to a fundamental principle of science," & illuminates the qualitative changes that can result from reduced distribution costs using the example of a computer news group. In **How to Proceed toward Electronic Archives and Publishing,** Edward A. Fox (Virginia Polytechnic Instit & State U, Blacksburg) praises Gardner's general overview of the future of the publication process, but criticizes his: (1) narrow focus on psychology, (2) call for a centralized archive, & (3) failure to clearly define the objectives & strategies of groups working toward the creation of electronic archives. In **Forward to the Electronic Archive,** Gardner is encouraged by the general consensus among these commentators regarding the need for an electronic archive, & responds to each of their criticisms in turn. In **Electronic Publishing: A Scorecard and an Agenda,** William K. Estes (Harvard U, Cambridge, Mass) presents a balance sheet weighing the strengths & weaknesses of the electronic archive in terms of its impacts on the consumer & scientific community, & offers suggestions regarding quality control, distribution of hard copies of documents, & archival storage. 2 Figures, 60 References. Gorman, Michael E. (School Engineering & Applied Science U Virginia, Charlottesville 22903), **Using Technology to Model Technoscience,** *Social Studies of Science*, 1992, 22, 2, May, 407-411.

¶ A review essay on a book edited by J. Shrager & P. Langley, ***Computational Models of Scientific Discovery and Theory Formation*** (San Mateo, Calif: Morgan Kaufmann Publishers, Inc, 1990 (see listing in IRPS No. 66]). In this volume on machine learning, Shrager & Langley provide a comprehensive overview of computational ap-

proaches & discussion of their limitations. Two main problems are identified: embodiment & embedding. Embodiment is addressed at greater length through an extended series of experiments: Thagard & Nowak discuss the role of their *ECHO program in the plate tectonics revolution* in geology; Kulkarni's & Simon's KEKADA program focuses on "surprises & anomalies"; Rajamoney describes his work in COAST in detecting anomalies & revising the theory to account for them; Darden derives heuristics for resolving anomalies from historical examples in genetics; Klahr, Dunbar, & Fay develop a number of heuristics from fine-grained observations of subjects' performance in experiments; Pazzani & Flowers combine historical examples & computational simulations to demonstrate that the first step of hypothesis & theory formation is noticing & selecting worthwhile data; & Tweney raises five provocative questions for computationalists, based on his experimental simulations of science & his cognitive historical studies of Michael Faraday. Adapted from the source document.

Hacking, Ian (Victoria Coll U Toronto, Ontario M5S 1A1), **"Style" for Historians and Philosophers,** *Studies in History and Philosophy of Science,* 1992, 23, 1, Mar, 1-20.

¶ A new research strategy–philosophical technology–is presented to bridge the divide between historians & philosophers of science. Derived from the work of A. C. Crombie (*Style of Scientific Thinking in the European Tradition: The History of Argument and Explanation Especially in the Mathematical and Biomedical Sciences and Arts,* 3 vols, London: Duckworth, forthcoming), philosophical technology is an analytical tool that examines ways that styles of reasoning provide stable knowledge & become, not the uncoverers of objective truth, but rather, the standards of objectivity. This approach can be used to specify the social conditions within which a scientific style emerged & assumed new stabilizing techniques. W. Howard

93Z5707

James, Lawrence R. (413 Stokely Management Center U Tennessee, Knoxville 37996), **Testing Hypotheses in the Context of the Unmeasured Variables Problem,** *Human Resource Management Review,* 1991, 1, 4, winter, 273-291.

¶ Rather than debating the merits of current models accounting for job performance, building new & better models that concentrate on previously unmeasured variables is in order. Possible effects of unmeasured variables on modeling restrictiveness of climate in selection research in industrial-organizational psychology & human resources management are presented, illustrating how failure to consider unmeasured causes provides not only alternative explanations for a given set of results, but may also point to these results as spurious. Combining trait & situational models as illustrated should be more productive in explaining work behavior. 2 Figures, 57 References. Adapted from the source document.

93Z5708

Janssen, Paul (Philosophisches Seminar U Köln, D-5000 41 Federal Republic Germany), **Lebenswelt, Wissen und Wissenschaft-Möglichkeiten ihrer Konstellation** (Daily Life, Knowledge, and Science–The Possibilities for Their Constellation), *Protosoziologie,* 1992, 3, July, 3-18. (GER)

¶ The world of everyday life, considered as the product of the acquisition & use by cultural beings of a certain level of knowledge, is examined as a subject of philosophy. Its interest to scientific researchers remains rather low. It is suggested that more attention should be paid to the relationship between science & everyday common knowledge & experience. The effects for the social sciences of such a shift include providing a sound basis for research, justifying present ideas, & opening up new problem areas. A true scientific, descriptive method must be employed. Adapted from the source document as translated by M. Meeks.

93Z[illegible]

[illegible]k, C. (Centre données stellaires Observatoire astronomique Strasbourg 11, rue l'Université F-67000 France), **The "Visibility" of West European Astronomical Research,** *Scientometrics,* 1992, 23, 3, Mar-Apr, 377-393.

¶ In a comparative analysis of publications & citations of five West European astronomical communities (Switzerland, Sweden, Germany, France, & Spain), based on international data bases, it is shown that a large proportion of astronomers are sparsely cited or not cited at all, which implies that estimations of the number of scientists based on citation statistics are underestimated. Publication rates are similar but citation rates very dissimilar, in the five countries. No clear explanation of these differences is found, except for Spain. A plea is made for the use of citation, rather than publication, statistics for evaluation. 5 Tables, 3 Figures, 13 References. Adapted from the source document.

93Z5710

Kane, Jeffrey S. (School Business & Economics U North Carolina, Greensboro 27412), **Toward a Modernized Model of Science,** *Human Resource Management Review,* 1991, 1, 4, winter, 245-251.

¶ Despite long-standing criticisms of the model by philosophers of science, logical positivism has continued to guide human resource management (HRM) & its allied fields. Here, a hybrid model of science is developed that embodies the desirable features of past models to serve as an interim basis for modernizing the way science is conducted in HRM. This model emphasizes the role of theory & theorizing in expressing current knowledge, advancing knowledge, & setting the agenda for research. The types of conceptualizing & their roles in theorizing are also reviewed. 14 References. Adapted from the source document.

Keay, C. S. L. (U Newcastle, New South Wales 2308 Australia), **Physics, Psychology and Respectability,** *Scientometrics,* 1992, 23, 3, Mar-Apr, 355-359.

¶ Quantitative measures of the respectability of ideas in science are rather rare. A unique set of statistics is presented that clearly demonstrates the gain in respectability of a phenomenon when a false rationalization for its occurrence is superseded by a provable explanation. The phenomenon of "whooshing" sounds occasionally perceived by observers of very bright meteor fireballs, while they are still in sight, lacked a satisfactory physical explanation until 1980, before which it was dismissed by meteor scientists as being purely psychological. However, the publication of reports of such fireballs increased by a factor of seventeen after 1980, indicating that the subject had gained respectability, & such reports had become acceptable. 1 Figure, 9 References. AA

Latour, Bruno, L'Anthropologie des sciences de Boyle et Hobbes (The Anthropology of the Sciences of Boyle and Hobbes), *Critique (FR),* 1991, 47, 534, Nov, 882-904. (FRE)

¶ A review article on a book by Steve Shapin & Simon Schaffer, *Leviathan and the Airpump: Hobbes, Boyle and the Experimental Life* (Princeton U Press, 1985 [see listing in IRPS No. 66]). It is contended that, while writing an anthropology of sciences involves concessions to both anthropology & the concept of science, Shapin & Schaffer demonstrate that the approach of anthropologizing our rationality is valuable for both disciplines. The novel examination of Robert Boyle & Thomas Hobbes shows how they contributed to creating both the science & its context, using Boyle's scientific work & Hobbes's political theories–areas neglected by previous research. Leaving the confines of intellectual history, Shapin & Schaffer address argumentation & laboratory experimentation, achieving, for the first time, a combined study of scientific practice & its religious, political, & cultural context. I. Shagrir

93Z5713

Lie, Reidar K. (Center Medical Ethics U Oslo, N-0371 3 Norway), **Patterns of Theory Change in Biomedicine: A Case Study from Cardiology,** *Synthese,* 1991, 89, 1, Oct, 75-88.

¶ In a historical case study of the development toward acceptance of the coronary theory of angina pectoris, it is shown that the arguments against the theory were not answered at the time the theory was accepted. Further, the experimental & practical success of the theory cannot be used to support the initial choice because, in the subsequent development, researchers became preoccupied with new questions & problems. While the field of angina research has progressed, it remains difficult to characterize in what sense this is the case. 19 References. Adapted from the source document.

Long, J. Scott (Dept Sociology Indiana U, Bloomington 47405), **Measures of Sex Differences in Scientific Productivity,** ⅢI *Social Forces,* 1992, 71, 1, Sept, 159-178.

¶ Sex differences in scientific productivity are examined via an analysis of data from *Science Citation Index* for 556 male (M) & 603 female (F) biochemists. Analysis indicates that sex differences in the numbers of publications & citations increase during the first decade of the career, but are reversed later in the career. The lower productivity of Fs results from their overrepresentation among nonpublishers & their underrepresentation among the extremely productive. Among biochemists who publish, differences cannot be explained by patterns of collaboration, which are nearly identical for Ms & Fs, with one expection: Fs are much more likely to collaborate with a spouse. The smaller number of citations received by Fs results from the fewer number, not the quality of their publications. Papers by Fs on average receive more citations than those by Ms. Future directions for research on such sex differences are outlined. 1 Table, 8 Figures, 25 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5715

Mellican, R. Eugene (Dept Philosophy U Lowell, MA 01854), **From Fusion Frenzy to Fraud: Reflections on Science and Its Cultural Norms,** *Bulletin of Science, Technology and Society,* 1992, 12, 1, 1-9.

¶ From the glare of the 1989 cold fusion episode in Utah being played out in full public view, to numerous, well-publicized cases of scientific misconduct, science has presented itself as something other than the social image conveyed by the traditional ethos of science, ie, a methodical, objective, dispassionate search for truth. Examined here are: (1) the transformations within the culture of science that these events represent, from science-by-press-conference to scientist-entrepreneurs selling not proven products, but merely possibilities of research; (2) the extent to which the traditional standards & bounds of scientific research no longer seem adequate; & (3) the social & economic forces giving rise to these changes. Focus is on the kind of response the scientific community itself has given to these issues & the implications this has for the public perception & control of science. 36 References. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5716

Miller, David Philip (School Science & Technology Studies U New South Wales, Kensington 2033 Australia), **Values Redivivus?,** *Social Studies of Science,* 1992, 22, 2, May, 419-427.

¶ A review article on a book edited by Tore Frangsmyr, *Solomon's House Revisited: The Organization and Institutionalization of Science* (Canton, Mass: Science History Publications, 1990 (see listing in IRPS No. 66)). The overall effect of this volume, comprised of papers presented at a symposium of historians of science, is a provoking revisionist view of the part of the social history of science, which deals with scientific institutions & organization broadly conceived. The agonistic fields & military reconceptualizations of scientific activity associated variously with historians, sociologists, & anthropologists of science are challenged, & the ideological transformation from the scientific cosmopolitanism of the eighteenth century ancien régime to the scientific nationalism of the Napoleonic period is traced, painting a convincing picture of the importance of prestige, status, & symbolism in French science. A commentary by Pancaldi laments the lack of attention to features specific to science, suggesting that the leveling approach to science as an institution has gone too far in reacting against older traditions that placed it on a pedestal. It is concluded that one of the most important & potentially productive tasks facing the social history of science lies at the interface between the study of institutions as traditionally conceived vs in the sense of stable, but open-ended, sets of linguistic, social, & material practices. S. Millett (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5717

Niiniluoto, Ilkka (Dept Philosophy U Helsinki, SF-00170 Finland), **Realism, Relativism, and Constructivism,** *Synthese,* 1991, 89, 1, Oct, 135-162.

¶ A critical evaluation of the philosophical presuppositions & implications of two current schools in the sociology of knowledge: the "strong program" of David Bloor & B. Barnes; & the constructivism of Bruno Latour & K. Knorr-Cetina (references not specified). Bloor's arguments for his externalist symmetry thesis (ie, scientific beliefs must always be explained by social factors) are found to be incoherent or inconclusive. Latour's story about the social construction of facts in scientific laboratories is found to be misleading or incredible. It is concluded that critical scientific realism, developed with the concept of truthlikeness, is compatible with the thesis that scientific beliefs or knowledge claims may be relative to various types of cognitive & practical interests. However, the realist denies, with good reasons, the stronger type of relativism, which takes reality & truth to be relative to persons, groups, or social interests. 2 Figures, 79 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

93Z5718

Roche, M. & Freites, Y. (Instit Venezuelano Investigaciones Científicas, Apdo 21827 Caracas), **Rise and Twilight of the Venezuelan Scientific Community,** *Scientometrics,* 1992, 23, 2, Feb, 267-289.

¶ The erratic evolution of the Venezuelan scientific community is traced. After years of development, this community of researchers reached maturity in the late 1970s, enjoying full-time employment, relative job satisfaction, & appropriate research facilities. Economic events in Venezuela starting in 1982, primarily inflation & currency devaluation, prompted the migration of scientists to other countries & a transfer of personnel to industry & technological research. Interviews conducted 1976-1978 with 473 researchers randomly selected from the Caracas, Venezuela, metropolitan area are cross-referenced to a 1978 country-wide study of 384 scientists, & a 1980 report on 136 provincial investigators. A variety of information is sampled, including gender, age, marital status, national origin, social class, education, time spent on research vs teaching, job satisfaction, expectations, religious & political affiliations, aspects of lifestyle, & production & flow of scientific information, eg, publishing research. 5 Tables, 1 Figure, 37 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Rubio, A. Villagrá A. (Instit Información & Documentación Ciencias Sociales & Humanidades, E-28006 Madrid Spain), **Scientific Production of Spanish Universities in the Fields of Social Sciences and Language,** *Scientometrics,* 1992, 24, 1, May, 3-19.

¶ The scientific research output of 3,000 professors at Spanish universities in the areas of social science & linguistics was examined by analyzing 1986-1988 data from the ESOSOC ([acronym not defined] a database that compiles articles from all journals published in Spain), the government's official bibliography of books, & 11 other worldwide databases. Net scientific productivity in both fields increased over this period. Almost 50% of Spanish scientific production was generated from universities in the Madrid area, & there was a low number of publishing authors; coauthorship evolved slowly. There was limited publication in foreign journals, & there was imbalance in the thematic distribution of the publications, with a high % of publications in economics & a low % in demography, ecology, & political science. New lines of study for identifying the factors determining these patterns are discussed. 5 Tables, 9 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Samelson, Franz, Rescuing the Reputation of Sir Cyril [Burt], ⅢI *Journal of the History of the Behavioral Sciences,* 1992, 28, 3, July, 221-233.

¶ A review article on books by: Robert B. Joynson, *The Burt Affair* (London: Routledge, 1989); & Ronald Fletcher, *Science, Ideology, and the Media: The Cyril Burt Scandal* (New Brunswick, NJ: Transaction Press, 1991 (see listings in IRPS No. 66]). These books examine the scholarly career of British psychologist Cyril L. Burt, whose controversial work on the heritability of intelligence sparked vehement debate in the 1960s & 1970s & led to charges of scientific fraud. The Joynson book reports on an eight-year study that supports Burt's findings that intelligence is genetically transmitted, & accuses Burt's critics of unfairly damaging his reputation. Fletcher offers a similar defense of Burt, but attacks a broader range of his detractors, including a blatantly one-sided 1984 British Broadcasting Co documentary. Both books are criticized for failing to offer a sound historical study of Burt's writings & actions, & despite their defenses, it is concluded that the many inconsistencies in Burt's publications suggest that he did in fact fabricate data. Schmaus, Warren, Segerstrale, Ullica & Jesseph, Douglas (Dept Humanities Illinois Instit Technology, Chicago 60616), **Symposium on the 'Hard Program' in the Sociology of Scientific Knowledge: A Manifesto,** *Social Epistemology*, 1992, 6, 3, July-Sept, 243-265.
Comments, 267-313, **Reply,** 315-320.

¶ The "hard program" (HP) rejects the tendency to conduct a sociology of scientific knowledge without consideration of the cognitive value commitments of scientists, which, it is maintained, play a crucial role in scientific practice & cannot be reduced to noncognitive social factors. The work of several sociologists of science–Bruno Latour, Harry Collins, David Bloor–is critiqued to show the uniqueness of the HP. In **Replies and Objections,** Randall Collins (U of California, Riverside) compliments the HP for its emphasis on the sociological difference between external organizations of the social world & the social organization of groups within the scientific community. The HP is criticized, however, for drawing too heavily on Parsonian functionalism. In **Value Commitment and Scientific Change,** Kyung-Man Kim (Sogang U, Seoul, Korea) agrees with the HP's argument that the relativist/constructivist sociology of science is inadequate, but is skeptical of its claim that cognitive norms & values should be considered in analyses of scientific change. In **Hard, Soft, or Satisfying?** Helen Longino (Rice U, Houston, Tex) argues the the HP's emphasis on cognitive norms & values is misguided because it fails to return science studies to the sociological. In **Cognitive Commitment and the Strong Program,** Cassandra L. Pinnick (U of Hawaii Manoa, Honolulu) argues that the HP in the sociology of knowledge commits one to inconsequentialism, ie, the view that cognitive commitments have no relevance for the explanation of scientific belief. In **The Chronogeography of Persuasion: Normative Prospects in Constructivist Science Studies,** Ger Wackers (U of Limburg, Netherlands) presents an outline of the dispute between the Hard & Soft programs in the sociology of knowledge, focusing on the rhetoric of each, & calls for more interdisciplinary cooperation & less factionalism in the study of science. In **Words of Welcome to Our New Allies,** Schmaus, Segerstrale, & Jesseph answer criticisms raised by their interlocutors & defend their position that an appreciation of scientists' cognitive commitments is crucial to understanding the production of scientific knowledge. 49 References. Sexter, Richard, Jr. (Central Michigan U, Mount Pleasant 48859), **State Government Funding of Research on Science and Technology: A Report on Michigan,** *Sociological Focus*, 1992, 25, 1, Feb, 51-75.

¶ An investigation of factors that explain the decisions of state governments to fund research on science & technology. Three models of explanation are proposed–budget incrementalism, a rational model, & a power model–& evaluated in a case study of a Mich state government program. The rational model best explains the state's selection of some proposals out of all those submitted by each state university for funding. The power model best explains the overall allocation of program funds among public universities. The budget incrementalism model helps explain the considerable annual stability in funding both for the entire program & for each university's share. 1 Table, 4 Panels, 49 References. Adapted from the source document.

Taylor, Charles Alan (Indiana U, Bloomington 47405), **Defining the Scientific Community: A Rhetorical Perspective on Demarcation, UI** *Communication Monographs*, 1991, 58, 4, Dec, 402-420.

¶ It is proposed that scientists & other social actors, in the framework of a particular scientific discipline, rhetorically negotiate the boundaries of science, ie, what constitutes true scientific practice, as a matter of pragmatism. A review of past studies notes how this proposal departs from previous philosophical & sociological theories demarcating science according to normative, universal criteria. Illustrated by the controversial 1989 announcement of the supposed discovery of cold fusion by U of Utah chemists B. Stanley Pons & Martin Fleischmann, the rhetorical demarcation of science was implicitly constructed as the professional physicist community contended that flaws in their research were a violation of the norm of universalism, amid numerous methodological errors. This norm was embodied in the working definitions of science developed in formal published responses refuting their findings. 112 References. Adapted from the source document.

Thorngate, Warren (Carleton U, Ottawa Ontario K1S 5B6), **The Economy of Attention and the Development of Psychology,** *Canadian Psychology/Psychologie Canadienne*, 1990, 31, 3, July, 262-271.
Comments, 272-288, **Response,** 288-291.

¶ Methods for personal management of the progressively greater production of information in psychology research involve an analysis of attention & the mechanics of attentional economics that shape information exchange. The ideal allocation of attention is compromised in a variety of ways, eg, specialization in one field, focus on new research over old studies, reliance on abstracts rather than reading complete articles, & emphasis on improved methodologies over original analysis. Part of the responsibility lies with the academic dictum of "publish or perish," by which psychologists quantitatively build credentials based on number of papers published. Another factor is the popularization of the subject matter. Proposed solutions to the problem include reintegration of the increasingly fragmented discipline, & reforms in the structure of an academic rewards system. In **The Economy of Attention: Is There a Problem? Is It Psychology's? Is Any Solution Provided?,** Richard C. Tees (U of British Columbia, Vancouver V6T 1W5) concurs, but explains that there is a widespread, irreversible information explosion in all areas; specialized psychology journals will fail as integrative journals retake the market. In **Coping with Increased Literature,** John G. Adair (U of Manitoba, Winnipeg R3T 2N2) discusses the value of computerized literature searches & urges elimination of poor quality publications. Based on an informal survey of biology faculty, Joan E. Grusec (U of Toronto, Ontario M5S 1A1) confirms Thorngate's theses in **A View from Elsewhere and Some Suggestions for Change.** She suggests improvement of the less than adequate class of psychology publication, a renewed emphasis on article reviewing, & development of large-scale academic collaborations, but disagrees with a division between teaching & research professors. Kurt Danziger (York U, Ontario M3J 1P3), in **Malthus for Psychology?,** highlights the parallel between Thomas Malthus's pessimistic program for feeding the masses & Thorngate's solution, differentiating between the production of scientific information & scientific knowledge. In **Publication, Specialization, and Fragmentation: Psychology in the Academy,** Leendert P. Mos (U of Alberta, Edmonton T6G 2E1) proposes that the problem is itself rooted in rationalist constructivism, & agrees with Thorngate's assessment of overspecialization in psychology. **The "So What" and "Who Cares" Responses to Thorngate's Problem: No One Will Read This Anyway** by Henderikus J. Stam (U of Calgary, Alberta R2N 1N4) formulates two responses to the problems: "so what" is the reply to the dissolution of psychology, while "who cares" is aimed at the ambiguous development of the discipline of psychology. Vaira Vikis-Freibergs (U of Montreal, Quebec H3C 3J7), in **On Sustainable Growth in the Future of Psychology,** underscores the questionable morality of producing articles addressed to academia concerning trivial subjects. Thorngate replies in *Got a Minute? Attentional Limits Revisited* by noting the reviewers' consensus on the information growth in psychology, & disagreements on their causes & relevance. He disagrees with Tees's prediction of self-correction in psychology, & applauds Adair's empirical contributions, but questions their relevance. 21 References. J. Sadler

Todd, Edmund N. (Dept History U New Haven, West Haven CT 06516), **Electric Ploughs in Wilhelmine Germany: Failure of an Agricultural System,** *Social Studies of Science*, 1992, 22, 2, May, 263-281.

¶ Historians & sociologists of technology have developed approaches to explain success & failure symmetrically; eg, electric ploughs failed because tractors succeeded. Electric ploughs held great promise in Germany prior to WWI for their capability of deep ploughing. However, unlike tractors, electric ploughs were not flexible enough to fit the varied conditions of German agriculture, & further, required too much reshaping of society & supporting technology. 1 Figure. Ulfig, Alexander (Philosophisches Seminar Johann Wolfgang Goethe U, D-6000 Frankfurt Federal Republic Germany), **Lebenswelt und Reflexion Anhang: Lebenswelt als Fundament der Wissenschaft** (Lifeworld and Related Reflections: Lifeworld as the Basis of Science), *Protosoziologie*, 1992, 3, July, 19-41. (GER)

¶ A literature review is presented of various conceptualizations of *Lebenswelt* (lifeworld) in twentieth-century philosophy with special attention to: Edmund Husserl's *Ideen zu einer Phänomenologie und phänomenologische Philosophie* ([Ideas for a Phenomenology and Phenomenological Philosophy] Vol. 1, 1950); Martin Heidegger's *Sein und Zeit* ([Being and Time] 1927), Ludwig Wittgenstein's *Philosophische Grammatik* ([Philosophical Grammar] 1969); & J. R. Searle's *Intentionalität* ([Intentionality] 1987). The first two are interesting for their treatment of validity, while the second two present insights into the philosophy of language. Special attention is given to the natural-ontological & transcedental-phenomenological aspects of lifeworld. Implications for modern science are discussed. Adelman, Jeremy (U Essex, Wivenhoe Park Colchester CO4 3SZ England), **The Social Bases of Technical Change: Mechanization of the Wheatlands of Argentina and Canada, 1890 to 1914, UI** *Comparative Studies in Society and History*, 1992, 34, 2, Apr, 271-300.

¶ An infusion of foreign labor & capital helped to convert the empty grasslands of Argentina & Canada into bread baskets for the world. However, the two countries' economic development & the eventual mechanization of their wheatlands differed considerably. A comparison of the wheat boom in these countries 1890-1914 illustrates the decisive role of social institutions, specifically property relations, in shaping different patterns of economic development. 7 Tables. L. Dorn

93Z5729

Bardmann, Theodor M., Dollhausen, Karin & Kleinwellfonder, Birgit (Instit Soziologie, D-5100 Aachen Federal Republic Germany), **Technik als Parasit sozialer Kommunikation: Zu einem konstruktivistischen Ansatz sozialwissenschaftlicher Technikforschung** (Technology as a Parasite of Social Communication: Toward a Constructivist Theory of Social Science Technology Research), *Soziale Welt*, 1992, 43, 2, 201-216. (GER)

¶ Technology is an active, prejudicial, nonmaterial force, & should not be viewed as a strategy of class stuggle. A literature review shows that many sociologists view technology as either an artifact linked to cultural symbols, or a form of social communication. However, using principles of radical reconstructivism, technology is viewed simultaneously as a parasite & host of social communication systems, which are oriented toward self-maintenance & autoreproduction, & use the different varieties of parasite technology to build their own concept of technology. 32 References. Barns, Ian (Instit Science & Technology Policy Murdoch U, Perth Western Australia 6150), **Post-Fordist People?: Cultural Meanings of New Technoeconomic Systems,** *Futures*, 1991, 23, 9, Nov, 895-914.

¶ The interpretations of four authors on the emergence of a post-Fordist social order as a result of new technoeconomic systems are reviewed. Morton Schoolman, in "The Moral Sentiments of Neo-Liberalism" (*Political Theory*, 1987, 15, 2, May, 205-224), writes that personal agency will be restored through greater civic control & cooperation over production. This neoliberal interpretation seeks the fusion of the US political science debate between communitarians & liberals, & considers how to reindustrialize technologically. Schoolman prefers to speak of the change from mass production systems to flexible specialization systems. "Brave New World" (*Marxism Today*, 1988, Oct, 24-29) is Stuart Hall's optimistic, culturally critical Marxist vision of the synthesis of cultural meanings of post-Fordism & post-Modernism. Also from a Marxist perspective, but more cautious about the emancipatory possibilities of Hall's vision, is David Harvey's "Flexible Accumulation through Urbanization: Reflections of 'Post-Modernism' in the American City" (see SA 36:4/88T7990), which focuses on the direct representation of the post-modern cultural consequences of the post-Fordist experience. Harvey considers the cultural opportunity inherent in flexible accumulation uncertain. Donna Haraway's "A Manifesto for Cyborgs: Science, Technology and Socialist Feminism in the 1980s" (*Australian Feminist Studies*, 1987, 4, autumn, 1-42) foresees the socialist-feminist-based implications of a technological transformation from human to humanoid/cyborg reconstructed out of communication technologies & biotechnologies. It is suggested that a flourishing public communitarian life can support a new identity faced with changing sociotechnology. Adapted from the source document.

Boehm de Lameiras, Brigitte, Las consecuencias individualizantes de la modernización (The Individualizing Consequences of Modernization), *Nueva Antropología*, 1991, 11, 39, June, 89-98. (SPA)

¶ A historical-anthropological analysis of change in the nineteenth century in Ciénega de Chapala, a rural farming village in Jalisco, Mexico, noting the importance of methodological issues in such studies. Some ethnologies claiming to adopt the farmer's viewpoint only elaborate idealized versions of the farmer & miss the agrarian reality. The goal of democracy in the process of modernization is lost for farmers living in a stratified system that prevents them from consensual community action & trivializes their decision-making ability. Historical factors leading to this situation are explored. Observations of farmers' behavior today belies their incapacity to benefit from their work, & to develop their human potential, exemplifying "loyalties of submission." 5 References. J. Sadler

Braun, Hans-Joachim (U Bundeswehr Hamburg, D-2000 70 Federal Republic Germany), **The Chrysler Automotive Gas Turbine Engine, 1950-80,** *Social Studies of Science*, 1992, 22, 2, May, 339-351.

¶ The Chrysler Corp's dealings with the automotive gas turbine engine, particularly the efforts of George J. Huebner, Jr., & his colleagues, are investigated. As head of the research & development (R&D) team at Chrysler, Heubner optimistically championed the low maintenance needs, multifuel capability, low emission levels, & absence of vibrations associated with this new technology. However, poor fuel economy at part-load, slow acceleration response, high manufacturing cost, & the lack of appropriate (ceramic) materials for extremely high temperatures handicapped the engine's success. In spite of R&D work in various countries, the fate of the automotive gas turbine is not certain. While there are hopes that appropriate ceramic materials can be developed, the R&D & possible application in cars will undoubtedly require another decade or more. 5 Figures. Adapted from the source document.

Braun, Hans-Joachim (U Bundeswehr Hamburg, D-2000 70 Federal Republic Germany), **Introduction,** *Social Studies of Science*, 1992, 22, 2, May, 213-230.

¶ An introduction to a special issues of papers presented at a symposium on "Failed Innovations" held in Hamburg, West Germany, in 1989 (see abstracts in SA 41:1). The history of technology largely conveys a story of winners, & the modern ideology of progress rests on a naive faith in objective science, economic rationality, & the wisdom of the market. It has been suggested that this narrow view of technical & economic factors deciding the fate of an innovation is misleading in that it disregards "real" people, power, institutions, competing values, or differing dreams. In analyzing technological development, failed innovations are just as important as, & possibly even more so than, successful ones. Success is, however, not always obvious & is sometimes hard to quantify. Whether an innovation can be called a success or failure depends on the firm's business intentions. Various ways of establishing rules for innovational failures, as well as reasons for failure (eg, technical, production, economic, & manufacturing problems), are discussed, & the stages of the innovation process at which failure occurs examined. S. Millett

Buchanan, R. A. (Centre History Technology U Bath, Claverton Down BA2 7AY England), **The Atmospheric Railway of I. K. Brunel,** *Social Studies of Science*, 1992, 22, 2, May, 231-243.

¶ Atmospheric propulsion, a principle that had been convincingly demonstrated in models & small-scale operation, & offered advantages on the heavy railway gradients between Exeter & Pymouth, England, was recommended by I. K. Brunel for use on the South Devon Railway in 1844. It was abandoned in 1848, however, when it proved a costly failure due to problems involved in scaling up the atmospheric system for mainline operation (eg, the maintenance of the pressure tube & its seal, & the provision of adequate pumping engines). Also working against the system were improvements in steam locomotion &, eventually, electric traction. It is suggested that atmospheric railways had no opportunity to succeed when the technical limitations had been overcome by superior technological innovations. 2 Figures. Adapted from the source document.

Chave, Daniel & Simon, Peter (Groupe recherches sociologiques CNRS, F-75700 Paris France), **Chronique d'un transfert dans la transition hongroise** (Chronicle of a Transfer during the Transitional Phase in Hungary), UM *Sociologie du Travail*, 1992, 34, 2, 275-289. (FRE)

¶ A discussion of the political & economic problems relating to a technology transfer during Hungary's transition from a communist to a democratic regime. In 1987, the former regime allowed a Hungarian electronics group to purchase a French license to manufacture modern color TVs, which finally began production in 1989, a year before the collapse of the state political system. Although technical goals were successfully reached, sales of the new product, needed to fund futher technological development, were poor. There were difficulties in marketing the TV sets in a remilitarized economy & in acquiring supplies for its manufacture. The reorganization of the Hungarian group into several autonomous businesses resulted in saturation of the market, which hurt overall sales. Other constraints placed on Hungarian firms are detailed. 8 References. Adapted from the source document as translated by J. Sadler.

Durand, Claude (Groupe sociologie travail CNRS, F-75700 Paris France), **Les Transferts internationaux de technologie** (The International Transfer of Technology), UM *Sociologie du Travail*, 1992, 34, 2, 139-151. (FRE)

¶ In an introduction to a special issue on the international transfer of technology (see related abstracts in SA 41:1), it is suggested that a sociological analysis of such transfer must consider the roles of the various actors, the confrontation of differing interests, & the relations of power. Those involved include: the actual participants in the transfer, the recipients, advising/consulting organizations, financial organizations, & government bodies. Most technology transfer revolves around the establishment of new economic markets, modernization, development, etc–all viewed differently by the participants according to their interests. Balance of economic interests & control of development are made easier by adoption of an industrial politics. The modalities of adaptation of new technologies depend in part on the cultural factors of knowledge in the receiving countries. These issues are discussed in a series of global economic studies of Latin America, the Far East, & China, with five monographs on specific instances of technology transfer. AA Tr & Modified by S. Stanton.

Forge, Simon (Butler Cox/Tour Akzo, 164 rue Ambroise Croizat Saint Denis F-93204 France), **Why the Computer Industry Is Restructuring Now,** *Futures*, 1991, 23, 9, Nov, 960-977.

¶ Market segmentation & open systems–a mix of industry & public standards for marketing all segments of the computer system–are major forces challenging the computer industry today. There is greater demand for variety in the mass market today than can be readily supplied by manufacturers. Technology-driven lower costs of hardware systems is reflected in the personal computer's greater market share, part of the overall downsizing trends. Before, proprietary systems limited the flexibility of a computer package through extreme specialization, but today, open systems, supported by the powerful applications software market, have created a highly competitive mass commodity market. The large share of the market held by the government has influenced computer vendors to create open systems according to public standards for computing. These forces are causing computer companies to change their business & investment structure to resemble car companies, in which specialized knowledge is maximally outsourced. 4 Figures. Adapted from the source document.

Freudenburg, William R. & Pastor, Susan K. (Dept Rural Sociology U Wisconsin, Madison 53706), **Public Responses to Technological Risks: Toward a Sociological Perspective,** UM *The Sociological Quarterly*, 1992, 33, 3, fall, 389-412.

¶ A sociological perspective on public responses to technological risks is developed that focuses on how the study of risk can contribute to the production of sociological knowledge. Particularly relevant for sociology are risk studies that go beyond a narrow focus on individuals' risk perceptions to include analyses of the behaviors & interests of societal institutions entrusted with risk management. Using an explicitly sociological perspective, a conceptual scheme that focuses on the framing of risk debates by institutional actors is offered. The scheme implies that, given the rapid growth of technological efficacy, the management of technological risk is likely to become increasingly problematic for sociology & society. 2 Figures, 164 References. Adapted from the source document.

93Z5739

Gipouloux, François (Groupe sociologie travail CNRS, F-75700 Paris France), **Un Transfert de technologie dans les télécommunications en Chine** (A Transfer of Telecommunications Technology to China), UM *Sociologie du Travail*, 1992, 34, 2, 245-261. (FRE)

¶ An analysis of national & regional development policies affecting the transfer of electronic commutator (telecommunications) technology to China. Issues discussed include the corporate policy of the French industrial, the reorganization of hierarchized work routines & positions in China, & the necessity of China's modernization. The roles of the state & its various regional & central administrators in acquiring foreign technology are also important. Modernization of the telecommunications system is long overdue, but the existence of central planning & administrative bureaucracies impedes technological progress. In particular, conflicts between Chinese ministries, the lack of autonomy of Chinese businesses, & the assignment of unqualified persons to key positions hinder cooperative advancement. Increased productivity & development of new products/techniques are signals that cooperation is working. Adapted from the source document as translated by J. Sadler.

Hacker, Barton C. (1821 Mill Springs Common #313, Livermore CA 94450), **The Gemini Paraglider: A Failure of Scheduled Innovation, 1961-64,** *Social Studies of Science*, 1992, 22, 2, May, 387-406.

¶ Expanding on the "flexible kite" patented in 1951 by Gertrude & Francis Rogallo, the new National Aeronautics & Space Administration (NASA) developed a lightweight parachute-wing hybrid called the "paraglider" to be used as a spacecraft landing system. NASA attempted (1961-1964) to convert the paraglider into a practical landing system for the Gemini spacecraft: the vehicle would remain safely stowed during most of the mission; deployed & inflated only after reentry, it would then allow the crew to fly their suddenly winged spacecraft to an airfield landing. However, the Gemini program failed after three attempts to deploy a half-scale wing in flight, resulting in wreckage. It is concluded that the paraglider's failure resulted from intransigent technology, as well as deficient human & capital resources, in general, & bureaucratic friction & internal politics, rigid schedules, competing demands for resources, & clashing institutional & national priorities, in particular. 1 Figure. Adapted from the source document.

Hammer, Eliot R. (School Business Howard U, Washington DC 20059), **Foundations of Technology-Structure Research,** *Social Science Information/Information sur les Sciences Sociales*, 1990, 29, 1, Mar, 55-100.

¶ A discussion of the historical roots of technology-structure study. First literature is reviewed that debates the matter of a technological impera-

tive. Arguments on both sides of the issue are examined with respect to such empirical matters as: levels of analysis, types of measures, variant operationalization, & use of contextual variables. It is concluded that, while much of the technology-structure literature appears to have shifted away from analyses of any technological imperative, areas of contention over the matter are far from being resolved. Also addressed is the debate over dimensions of technology, centering on C. Perrow's two-dimensional typology presented in "A Framework for the Comparative Analysis of Organizations" (see SA 15:6/67C7313) & work that builds on Perrow. Beyond matters of levels of analysis & types of measures, arguments are examined regarding such empirical issues as: sample selection, statistical application, variant operationalization, & the interpretation of results. It is concluded that, while there is a good amount of work being done in this area, questions regarding the valid application of the Perrow scheme continue to emerge; therefore, much more work on validating two-dimensional technology is needed. 40 References. Henkin, Alan B. & Davis, James H. (U Iowa, Iowa City 52242), **Perceived Organizational Support for Innovation in the High Technology Sector,** IM *International Review of Modern Sociology,* 1991, 21, 1, spring, 73-91.

¶ Demographic variables & other factors associated with perceived organizational support for technological innovation were examined via a questionnaire survey of 514 employees of a large, high-technology electronics corporation. Gender was one such variable with males perceiving more organizational support for innovation than did females. Graduate-degree employees tended to perceive lower support for innovation than did bachelor-degree employees. Knowledge of innovation, corporate administrative position, & supervisory position were significantly related to perceived support. Employees in the finance & planning departments & those with longer tenure at the firm perceived less organizational support for innovation. Age was not a significant factor. 9 Tables, 35 References. Adapted from the source document.

Hochgerner, Josef (Kammer Arbeiter & Angestellte Wien, Prinz Eugen Str 20-22 A-1040 Austria), **Social Security as a Prerequisite for a Socio-Technological Design,** *Innovation,* 1992, 5, 1, 61-65.

¶ The relationship between community security & technological progress is examined. More than creating functional efficiency, the technological production process creates such negative side effects as stress & health injuries, waste materials potentially damaging to the social & ecological environment, & energy consumption. The production of these side effects ensures that technological design policies are not independent of social policy issues & makes the equation of technological policy with technological promotion untenable. Technological policy of the future must acknowledge the interdependence of technological & social development. Two approaches that may lead to this acknowledgement are increased participation of staff members in decision making & discussion of the obsolete distinction between free & working time. 9 References. Adapted from the source document.

Hult, Jan (Center History Technology Chalmers U Technology, S-41296 Gothenburg Sweden), **The Itera Plastic Bicycle,** *Social Studies of Science,* 1992, 22, 2, May, 373-385.

¶ In the early 1980s, a Swedish innovation generated by the 1974 oil crisis departed from conventional bicycle design & production technology to produce the Itera bicycle, whose plastic-fiber-composite materials replaced the customary steel or aluminum. All essential parts (eg, frame, wheels, fork, & handlebar) were designed to be produced by automatic injection moulding, which requires very little subsequent finishing. The venture ended in a complete failure in the marketplace despite intense advertising & unusually high media interest. Respondents to a 1981 consumer survey (N not specified) reported that the Itera was relatively expensive & heavier than many steel bicycles, & that its frame felt too flexible & gave a sense of insecurity. Most importantly, the difference between the archetypical bicycle & the Itera was too great, & potential customers rejected its styling as too unconventional. 3 Figures. Adapted from the source document

Lewis, W. David & Trimble, William F. (Dept History Auburn U, AL 36849), **The Airmail Pickup System of All American Aviation: A Failed Innovation?,** *Social Studies of Science,* 1992, 22, 2, May, 301-315.

¶ Between 1939 & 1949 All American Aviation (AAA) implemented a unique nonstop airmail pickup & delivery system, invented by Lytle S. Adams & later modified for commercial use. While it was initially used to deliver airmail to small communities scattered throughout rugged terrain in western Pa & WVa, the system was replicated in WWII to tow gliders & to rescue personnel trapped behind enemy lines. The system lost its economic viability & was abandoned in 1949 because of the introduction of mobile postal vehicles on improved highway systems & because federal officials would not permit its combination with passenger operations. While the AAA pickup system must ultimately be regarded as a failed commercial venture, it provided the basis for important military applications that enabled a successor firm to thrive. 6 Figures. Adapted from the source document.

93Z5747

McCutcheon, Robert T. (Dept Civil Engineering U Witwatersrand, Johannesburg 2050 South Africa), **Science, Technology and the State in the Provision of Low-Income Accommodation: The Case of Industrialized House-Building, 1955-77,** *Social Studies of Science,* 1992, 22, 2, May, 353-371.

¶ Evidence is presented refuting predictions that industrialized building of low-income accommodation would result in considerable improvement in quantity produced, cost reduction, construction time, & quality. In fact, many industrialized dwellings have serious defects, & sophisticated systems have been economically competitive only for high-rise flats, which have proved unsuitable for low-income families. Industrialized buildings may be viewed as a failed innovation from this perspective. The fact that major improvement was not achieved led protagonists to lower their short-term expectations, & their criteria for success became simply whether industrialized building could compete with traditional methods of building. It is contended that theory & discussion of industrialized building has changed over time in an almost Kuhnian way. Despite the failure of the original innovation to fulfill its manifest objectives, the technology was still developed & used. It is suggested that it failed in different degrees depending on the socioeconomic framework within which it was implemented. 1 Table. Adapted from the source document.

Mestries, Francis (Dept Sociología U Autónoma Metropolitana, Azcapotzalco 02000 Mexico DF), **Los posibles impactos de la biotecnología en la agricultura mexicana** (The Possible Impact of Biotechnology in Mexican Agriculture), *Sociológica,* 1990, 5, 13, May-Aug, 59-98. (SPA)

¶ A consideration of the implications of biotechnological innovations for Mexican agriculture. Advances in biotechnology are described, with focus on their effects on the division of labor both nationally & internationally. It is argued that, while biotechnology could revitalize the economy, its utilization in agriculture would result in the displacement of small producers as well, making Mexican agriculture dependent on the developed nations that produce such innovations. The wave of biotechnology is compared to the Green revolution of the 1960s, & environmental impacts are considered. It is urged that the diffusion of biotechnology be carefully controlled & regulated so that it enhances Mexican autonomy. 1 Table, 40 References. Adapted from the source document as translated by J. Taylor.

Miles, Ian (PREST U Manchester, M13 9PL England), **Measuring the Future: Statistics and the Information Age,** *Futures,* 1991, 23, 9, Nov, 915-934.

¶ A review of the quantification of progress in the field of information technology (IT). Current assessments of IT development concentrate on the information workforce, but do not address the role of information in economic life. Here, a different approach detailing the production, distribution, & application of new IT is proposed, based on an extensive literature review & statistical analysis. After distinguishing four classes of IT products, current British, Swedish, & Japanese statistical data about IT are examined. While these user surveys point to patterns of IT use & clarify uncommon activities, they do not identify broad socioeconomic patterns of IT diffusion. Other studies show that rates of IT diffusion are rapid & vary considerably according to industry type, location, size, & ownership. Other IT statistics center on research & development issues, the production & final consumption of IT, & IT's social implications. Challenges for statistical analysis posed by the continually changing IT field are discussed. 1 Table. Adapted from the source document.

(SPA)

¶ A systematic review of social studies of technology made by Latin American authors over the last three decades. Focus is on the development of this field of study over time, noting its changing emphases & theoretical approaches. The articulation of different disciplines in the construction of the field is also described. Modified AA

93Z5752

Rahimi, Mort A. (Wayne State U, Detroit MI 48202), **Cable Technology to Enhance Service to a Metropolitan Area,** *Metropolitan Universities,* 1992, 3, 1, summer, 28-34.

¶ The steps taken to create a cable & wireless cable system for use by educational institutions in metropolitan Detroit, Mich, are examined. Two obstacles facing the creation of a cable system in a metropolitan area are: (1) securing access to all available cable systems within the area, even those in competition with local educational institutions; & (2) finding an inexpensive method to get the TV signal to the head ends of the cable systems. In Detroit, these problems were solved by the sharing of resources through the establishment of a consortium by seven previously competing organizations & the agreement to operate the TV transmission facilities jointly. A nonprofit corporation provided the vehicle for the effort, & funding was obtained through grant applications. The arrangement allowed for an increase in the number of available channels, elimination of unhealthy competition, sharing of operational costs, reduction of costs to participants, more flexible programming, & increased potential for gifts & grant awards. Rammert, Werner (Stubenrauchstr 65, D-1000 Berlin 41 Federal Republic Germany), **Wer oder was steuert den technischen Fortschritt? Technischer Wandel zwischen Steuerung und Evolution** (Who or What Is Steering Technical Progress? Technical Change between Regulation and Evolution), *Soziale Welt,* 1992, 43, 1, 7-25. (GER)

¶ The course of technical change is neither controlled by a logic of evolution beyond the scope of social actors nor regulated by any social actor according to his intentions & interests. After reviewing macro & micro approaches to technical progress, a social evolutionary approach is proposed to explain technical change, illustrating its strength with empirical examples. Micro processes of local variation–actors' definitions & closings of technological projects–are coupled with macro processes of global selection between different paths of technological development. Within this frame, the guiding question is answered: if we assume that it is during the early phases of generation when a type of technology is endowed with its characteristic genetic make-up, then it is the research system's social embedment & the scientists' & engineers' cultural concepts that influence the course of technical change more than other social forces. 77 References. Reinicke, Helmut, Maschinen und Räume. Mentalitätsformen der Technikbegeisterung in der Entwicklung der Aviation (Machines and Space. Mentality Forms for the Technological Inspiration of Advances in Aviation), *Sociologia Internationalis,* 1992, 30, 1, 61-82. (GER)

¶ In early twentieth-century Germany, the birth of aeronautics initiated a wave of excitement about technology, closely linked to exuberant feelings about national unification, sacrifice, celebration, heroism, & imperialism. The zeppelin became a symbol of technological & cultural progress. This initial euphoria turned to mourning, however, after the explosion of the Z-3 on 5 Aug 1908. In France the biplane became the center of attention, & pilots were treated as heroes at various festivals & aircraft shows. Ultimately this intoxication with technology became a factor leading to WWI. The war ironically took the heroism away from the technology. 8 Illustrations, 36 References. Stranges, Anthony N. (Dept History Texas A&M U, College Station 77843-4236), **Farrington Daniels and the Wisconsin Process for Nitrogen Fixation,** *Social Studies of Science,* 1992, 22, 2, May, 317-337.

¶ In taking up pebble-bed research, Farrington Daniels (1889-1972), a professor of physical chemistry at the U of Wisconsin in Madison, became a pioneer in what scientists & engineers today call "appropriate technology." He believed that, in underdeveloped countries, the small, relatively inexpensive pebble-bed furnaces would be far more appropriate for fertilizer production than the larger, complicated Haber high-pressure plants. During WWII, Daniels worked with Chinese industrialists hoping that the process would find wide application, but economically, it could not compete with the older Haber process. The plant closed in 1954, & the process became a failed innovation; its history demonstrates that simplicity does not guarantee economic success. 4 Figures. Adapted from the source document.

Szostak, Rick (Dept Economics U Alberta, Edmonton T6G 2H4), ***Technology and Culture* Revisited,** *Social Studies of Science,* 1992, 22, 2, May, 412-418.

¶ A review essay on books by: John Staudenmaier, *Technology's Storytellers: Reweaving the Human Fabric* (Cambridge, Mass: MIT Press, 1985); & Marcel C. Lafollette & Jeffrey K. Stines (Eds), *Technology and Choice: Readings from Technology and Culture* (Chicago, Ill: U of Chicago Press, 1991 [see listings in IRPS No. 66]). In an analysis of articles published in *Technology & Culture,* 1959-1980, Staudenmaier develops a complex typology of the methodology employed in the history of technology & categorizes each article to quantitatively reflect the trends in scholarly discourse in the discipline. He contends that the scholarly community must not adhere to the idea that technological evolution has a life of its own, & that its effects are always beneficial, & he notes with disappointment the limited ties between the history of technology & other disciplines. However, Staudenmaier fails to extend his previous discussion of the relative importance of technological vs environmental factors to the study of transmission. The collected articles from *Technology & Culture* edited by Lafollette & Stines illustrate the facts that innovation involves choices, & need not always yield a positive re-

sult. The papers focus on a broad range of issues, eg, the interaction of technology & public policy, political meddling in technical decision making associated with the US space program, & the question of labor-management relations with respect to West Coast fish canning. Two themes meriting particular attention in the volume focus on the interrelatedness of aesthetic & technical considerations, & the role of women. S. Millett

Targowski, Andrew S. (Dept Business Information Systems Western Michigan U, Kalamazoo 49008), **Strategies and Architecture of the Electronic Global Village,** *The Information Society,* 1990, 7, 3, 187-202.

¶ A depiction of the aggregated architecture of the electronic global village with its components of global culture, information societies, economies, & utilities, wired cities, a global marketplace, & cross-cultural communication. Goals & strategies for each component are formulated. Analysis of the functional architecture illustrates a key role of electronic highways & teleports as they interconnect the wired globe & the wired nation with the wired city via computer networks. Issues of the globalization process discussed are: the electronic frontier, to build or not to build, & to inform or not to inform. A future option of programmed, democratic, global knowledge is mentioned. 1 Table, 3 Figures, 33 References. Adapted from the source document.

Torrens, Hugh S. (Dept Geology U Keele, Staffordshire ST5 5BG England), **A Study of 'Failure' with a 'Successful' Innovation': Joseph Day and the Two-Stroke Internal-Combustion Engine,** *Social Studies of Science,* 1992, 22, 2, May, 245-262.

¶ An analysis of why history failed to recognize English engineer Joseph Day (1855-1946), the inventor of the crank-chamber scavenge two-stroke cycle gas engine, & of how a signficant innovation can fail because its innovator failed. Day's invention brought high hopes that it would succeed in English engine markets, which had just been liberalized by the lapse of the Otto four-stroke patent. However, English shareholds dismissed this new technology in favor of the hegemony of the steam engine, & the English market for a lightweight electricity generator also failed to materialize. After Day was forced into bankruptcy in 1893, the engine finally emerged as a perfect power unit for motor boats, but only as patent protection on the valveless engine was about to lapse. When the Day engine started to sell under license, Day attempted to find oil from shales in England. This speculation proved risky & ill-fated, ultimately forcing Day to abandon engineering. The case history of Day demonstrates the problems that historians have in documenting such failures, since, as a result of his final failure, Day left no archives. 3 Figures. Abella, Manolo I. (Regional Office Asia & Pacific International Labour Organization, Bangkok 10501 Thailand), **Structural Change and Labour Migration within the Asian Region,** *Regional Development Dialogue,* 1991, 12, 3, autumn, 3-19.
Comment, 20-21.

¶ A review of how the import of unskilled labor has affected the economies of Southeast Asian countries in the last two decades. It is suggested that increasing regional interdependencies & rapid economic growth have prompted the need for imported unskilled laborers in Japan, Hong Kong, Singapore, & Malaysia. Although Hong Kong employers urge the liberalization of immigration policy, the government contends that a slower industrial restructuring would result, along with increased social problems. Refusing to authorize import of unskilled workers, Japan's approach is to force industries to correct their labor shortages by rationalizing with investment in advanced technology & overseas production at lower costs. Besides using fiscal incentives, wage policies, & manpower development programs, Singapore's guest worker program is geared to cyclical changes in the work market. Malaysia's segmented labor market & unrestricted immigration policy reflect complex adjustments. In **Comment,** Ronald Skeldon (U of Hong Kong) comments that while Abella provides a useful survey of the development of cross-national labor immigration to meet structural changes, the only clear example is in Singapore; Abella also fails to focus on the integration of demographic & economic factors. 7 Tables, 2 References. Anguiano, María Eugenia, Jornaleros agrícolas migrantes en Baja California y **California** (Migrant Farmworkers in Baja California and California), *Nueva Antropología,* 1991, 11, 39, June, 155-167. (SPA)

¶ A review of studies of farmworkers migrating from central Mexico to Baja California, Mexico, & Calif, reveals differences in group composition of the undocumented migrants working the US & farmworkers migrating within Mexico. Factors influencing the organization & composition of the farmworkers include variations in skill level & resources necessary for migratory existence, forms of work organization, concepts of rights of field workers, daily lifestyles, & type & stability of the farmer-employers who hire them. Strategies of family reproduction & organization are also key factors. 9 References. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Archdeacon, Thomas J. (U Wisconsin, Madison 53706), **Reflections on Immigration to Europe in Light of U.S. Immigration History,** UM *International Migration Review,* 1992, 26, 2(98), summer, 525-548.

¶ A review of literature on past immigration to the US suggests that immigration is least problematic when a country needs an immigrant workforce, its economy is growing, & when society does not perceive itself as responsible for individuals' welfare. Assimilation succeeds when immigrants adopt dominant culture, & when the receiving nation has a confident cultural awareness. Historical examples of US immigration since the seventeenth century illustrate these conditions. However, implications for the contemporary US & Europe are problematic, since conditions are now different. Both the US & Europe need to form new ways to integrate diverse expressed ethnicities, & to shape immigration policies as part of long-term planning. 52 References. I. Basok, Tanya (U Windsor, Ontario N9B 3P4), **Soviet Immigration to Canada: The End of the Refugee Program?,** *Innovation,* 1992, 4, 3-4, 139-155.

¶ Immigration & other statistical data supplemented by in-depth interviews with lawyers advising Soviet refugee claimants, directors of Jewish Immigrant Aid Services & the Canadian Jewish Congress, & representatives of the Dept of Refugee Affairs (Ns not specified) are used to analyze Canadian policy toward Soviet refugees before & after 1990, at which time several changes occurred: the relaxed criteria under which Soviet citizens used to be admitted to Canada as refugees were removed. Since then most Soviets have been coming as economic immigrants or under the family reunification program. Factors that explain why, between 1979 & 1990, Soviet refugees received preferential treatment, compared to those coming from Latin America & Africa, are identified: foreign policy priorities, ideological concerns, economic conditions, responsibilities vis-à-vis the international community, & pressure from domestic interest groups. Recent policy initiatives are related to changes in these factors. 4 Tables, 17 References. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Benifand, Alexander (Centre Refugee Studies York U, North York Ontario M3J 1P3), **Jewish Emigration from the USSR in the 1990s,** *Innovation,* 1991, 4, 3-4, 35-50.

¶ Survey data obtained from activists representing 67 Jewish organizations from various regions of the USSR in May 1989 are drawn on to explore the sociopolitical conditions that motivate Jews to leave the USSR, including fear of anti-Semitic attacks, mounting economic problems, political instability, environmental pollution & disasters, & the rising crime rate. Among these, anti-Semitism is the major factor prompting Jews to emigrate. From a historical perspective, it is demonstrated that many anti-Semitic arguments raised in the nineteenth century have resurfaced today. Mikhail Gorbachev's policy of *glasnost* has been a mixed blessing for Soviet Jews: on the one hand, the Jewish culture has experienced revival, but on the other, racist voices have been allowed to be heard openly. The growing social, political, & economic crisis in the country has contributed to the growth of anti-Jewish sentiments, since Jews are blamed for the problems faced by the Soviet population. Rumors of possible pogroms were widely spread at the end of 1989, & the state did nothing to protect the Jews or stop the rumors; indeed it may actually have had an interest in spreading pogrom rumors. The size of the Jewish emigration from the USSR & of the remaining Jewish population is estimated. 1 Table. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)
